ಮುಕ್ತ ಐಚ್ಛಿಕ : ೦೪ ಕ್ರೆಡಿಟ್

ಒಟ್ಟು ಟ್ಯೂಟೋರಿಯಲ್ ಮತ್ತು ಪ್ರಾಯೋಗಿಕ ತರಗತಿಗಳು : ೭೬ ಕ್ರೆಡಿಟ್

ಆಯಾ ಪತ್ರಿಕೆಗಳಿಗೆ ಅನುಸಾರವಾಗಿ ಈ ಕೆಳಗಿನ ಪ್ರಾಯೋಗಿಕ ಅಭ್ಯಾಸಗಳನ್ನು ಪತ್ರಿಕೆಗಳು ಒಳಗೊಂಡಿರುತ್ತವೆ.

೧. ಪದ್ಯ ಓದುವ ಕ್ರಮ, ಅರ್ಥೈಸುವ ಕ್ರಮ, ವಿಶ್ಲೇಷಣೆ ಮತ್ತು ವಿಮರ್ಶೆ,
೨. ಭಾವನಾಸ್ಮಾರಸ್ಯ, ಸಂಭಾಷಣಾ ಕೌಶಲ, ಸನ್ನಿವೇಶಗಳ ಪರಿಚಯ
೩. ವಸ್ತು, ಪಾತ್ರ, ಭಾಷೆ ಬಳಕೆ, ರಚನೆ, ತಂತ್ರಗಾರಿಕೆ

**ಮೊದಲನೆಯ ವರ್ಷ ಎಂ.ಎ ಕನ್ನಡ  
ಮೊದಲನೆಯ ಚತುರ್ಮಾಸ (ಆಗಸ್ಟ್-ಡಿಸೆಂಬರ್ ೨೦೨೨)  
ಪ್ರಧಾನ ವಿಷಯಗಳು (Hard Core)**

**KNA \_\_\_\_\_ : ಪತ್ರಿಕೆ: ೧ ಪ್ರಾಚೀನ ಕನ್ನಡ ಸಾಹಿತ್ಯ : ಪಠ್ಯ (೩:೧=೪ ಕ್ರೆಡಿಟ್)**

ನಾಗಚಂದ್ರ : ಹಿನ್ನೆಲೆ, ಇತಿವೃತ್ತ, ಕೃತಿಗಳು

ಪಠ್ಯ: ಪಂಪರಾಮಾಯಣ ಸಂಗ್ರಹ - ತಿರುವಳ್ಳೂರ್ ಶ್ರೀನಿವಾಸರಾಘವಾಚಾರ್, ಡಿ.ಎಲ್. ನರಸಿಂಹಚಾರ್, ಪ್ರಸಾರಾಂಗ,  
ಮೈಸೂರು ವಿ.ವಿ., ಮೈಸೂರು

ಪರಾಮರ್ಶನ ಕೃತಿಗಳು:

೧. ನಾಗಚಂದ್ರ	: ವಿಜಯಾದಿಭೈ
೨. ಮಲ್ಲಿನಾಥ ಪುರಾಣ	: ಸಿ.ಪಿ. ಕೃಷ್ಣ ಕುಮಾರ್
೩. ನಾಗಚಂದ್ರ	: ಸಿ.ಪಿ. ಕೃಷ್ಣ ಕುಮಾರ್
೪. ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚರಿತ್ರೆ	: ರಂ.ಶ್ರೀ. ಮುಗಳಿ
೫. ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚರಿತ್ರೆ ಸಂ: ೧,೨,೩	: ಕನ್ನಡ ಅಧ್ಯಯನ ಸಂಸ್ಥೆ, ಮೈವಿವಿ, ಮೈಸೂರು
೬. ಸಮಗ್ರ ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚರಿತ್ರೆ	: ಬೆಂಗಳೂರು ವಿಶ್ವವಿದ್ಯಾಲಯ

**KNA \_\_\_\_\_ : ಪತ್ರಿಕೆ: ೨ ಪ್ರಾಚೀನ ಮತ್ತು ಮಧ್ಯಕಾಲೀನ ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಹಿನ್ನೆಲೆ**

(೨:೧=೩ ಕ್ರೆಡಿಟ್)

೧. ಭೌಗೋಳಿಕ ಮತ್ತು ಸಾಮಾಜಿಕ ಹಿನ್ನೆಲೆ

- ಅಷ್ಟಾದಶ ವರ್ಣನೆಗಳು, ಭೌಗೋಳಿಕ ಪರಿಸರ
- ಸಾಹಿತ್ಯ ರೂಪಗಳು, ತಂತ್ರಗಳು

೨. ಧಾರ್ಮಿಕ ಹಿನ್ನೆಲೆ

- ಬೌದ್ಧಧರ್ಮ, ಜೈನ ಧರ್ಮ
- ಶೈವಧರ್ಮ, ವೈಷ್ಣವ ಧರ್ಮ

೩. ರಾಜಕೀಯ ಹಿನ್ನೆಲೆ

- ಬಾದಾಮಿ ಚಾಲುಕ್ಯರು, ರಾಷ್ಟ್ರಕೂಟರು, ಗಂಗರು, ಹೊಯ್ಸಳರು, ವಿಜಯನಗರದ ಅರಸರ ಕಾಲದ ರಾಜಕೀಯ ಪರಿಸರ
- ಪ್ರಭುತ್ವ ಮತ್ತು ಸಾಹಿತ್ಯ ಸಂಬಂಧ
- ಸಮಾಜ ಜನಮುಖಿ ಸಾಹಿತ್ಯ

೪. ಇತರ ಭಾಷೆಗಳ ಪ್ರಭಾವ ಪ್ರೇರಣೆ

- ಸಂಸ್ಕೃತ, ಪ್ರಾಕೃತ
- ತಮಿಳು, ತೆಲುಗು

**ಪರಾಮರ್ಶನ ಕೃತಿಗಳು:**

೧. ಕನ್ನಡ ಅಧ್ಯಯನ ಸಂಸ್ಥೆಯ ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚರಿತ್ರೆಯ ಸಂಪುಟಗಳು ೧, ೨ ಮತ್ತು ೩  
 ೨. ಸಮಗ್ರ ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚರಿತ್ರೆ ಸಂಪುಟಗಳು, ಬೆಂಗಳೂರು ವಿಶ್ವವಿದ್ಯಾನಿಲಯ  
 ೩. ಕನ್ನಡ ನಾಡಿನ ಧರ್ಮಗಳು : ಶಿ.ಬಿ. ನಂದೀಮಠ  
 ೪. ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ ಸಮೀಕ್ಷೆ : ಎಚ್. ತಿಪ್ಪೇರುದ್ರಸ್ವಾಮಿ  
 ೫. ಕನ್ನಡ ಶಾಸನಗಳ ಸಾಂಸ್ಕೃತಿಕ ಅಧ್ಯಯನ : ಎಂ.ಚಿದಾನಂದಮೂರ್ತಿ  
 ೬. ಜೈನಧರ್ಮ : ಮಿರ್ಜಿ ಅಣ್ಣರಾಯ  
 ೭. ಭಾರತೀಯ ಸಂಸ್ಕೃತಿ : (ಸಂ) ಅ.ನ.ಕೃಷ್ಣರಾಯ  
 ೮. ಕರ್ನಾಟಕ ಪರಂಪರೆ : ಭಾಗ ೧ ಮತ್ತು ೨, ಕನ್ನಡ ಮತ್ತು ಸಂಸ್ಕೃತಿ ಇಲಾಖೆ  
 ೯. ಚಂಪೂ ಸಾಹಿತ್ಯ : ಪಿ.ವಿ. ನಾರಾಯಣ  
 ೧೦. ಕರ್ನಾಟಕ ಸಾಹಿತ್ಯ ಅಕಾಡೆಮಿಯ ಕನ್ನಡ ಸಾಹಿತ್ಯ ಪುನರ್ ಮೌಲ್ಯೀಕರಣ ಮಾಲೆಯ ಸಂಪುಟಗಳು  
 ೧೧. ಕನ್ನಡ ಸಾಹಿತ್ಯ ಚಾರಿತ್ರಿಕ ಬೆಳವಣಿಗೆ (ಮಧ್ಯಕಾಲೀನ) : ಸಿ.ವೀರಣ್ಣ

**KNA \_\_\_ : ಪತ್ರಿಕೆ: ೩ ಕನ್ನಡ ಭಂದಸ್ಸಿನ ಅಧ್ಯಯನ : ಪಠ್ಯ ( ೩:೧=೪ ಕ್ರೆಡಿಟ್)**

- ೧-೩. ಪಠ್ಯ: ನಾಗವರ್ಮನ ಭಂದೋಂಬುಧಿ, ಸಂ: ಡಾ. ಟಿ.ವಿ. ವೆಂಕಟಾಚಲಶಾಸ್ತ್ರಿ

## ಉಪ ಪ್ರಧಾನ ವಿಷಯಗಳು (Soft Core)

### KNB 210: ಪತ್ರಿಕೆ: ೫.೧

### ಭಾಷಾವಿಜ್ಞಾನ ಅಧ್ಯಯನ: ಕನ್ನಡ ವ್ಯಾಕರಣಗಳ ತೌಲನಿಕ ಸಮೀಕ್ಷೆ

(೩:೧=೪ ಕ್ರೆಡಿಟ್)

ಈ ಕೆಳಗಿನ ಪಠ್ಯ ವಿವರಗಳನ್ನು ಮಾತ್ರ ಪ್ರಧಾನವಾಗಿ ಶಬ್ದಮಣಿದರ್ಪಣದ ತತ್ಸಂಬಂಧಿತ ಸೂತ್ರಗಳನ್ನು ಅಧರಿಸಿ ಅಭ್ಯಾಸ ಮಾಡಬೇಕು. ಇತರ ವ್ಯಾಕರಣಗಳ ಸೂತ್ರಗಳನ್ನು ಅನುಷಂಗಿಕವಾಗಿ ಪ್ರಸ್ತಾಪಿಸಬೇಕು.

೧. ಹಳಗನ್ನಡ ವ್ಯಾಕರಣಗಳು : ಕರ್ತೃ, ಕಾಲ, ಸ್ವರೂಪ, ಸ್ಥಾನ, ವೈಶಿಷ್ಟ್ಯ  
 ಕನ್ನಡ ವರ್ಣಸಮಾಪ್ತಿಯ- ಮಹಾಪ್ರಾಣಗಳು - ಁಁ-ಕುಳ-ಕ್ಷಳ ವಿಚಾರ, ಶಿಥಿಲದ್ವಿತ್ವ
೨. ಸ್ವರಸಂಧಿ - ವ್ಯಂಜನಸಂಧಿ:  
 ಲಿಂಗ: ಲಕ್ಷಣ, ಸ್ವರೂಪ;  
 ವಚನ : ಲಕ್ಷಣ, ಸ್ವರೂಪ,  
 ಪ್ರತ್ಯಯಗಳು; ವಿಭಕ್ತಿ : ಲಕ್ಷಣ, ಸ್ವರೂಪ, ಪ್ರತ್ಯಯಗಳು.
೩. ಸಮಾಸ : ಲಕ್ಷಣ, ಸ್ವರೂಪ-ತತ್ಪುರುಷ, ಕರ್ಮಧಾರೆಯ, ದ್ವಿಗು,  
 ಅಂಶಿ, ಬಹುವ್ರೀಹಿ, ಧ್ವಂಧ್ಯ, ಗಮಕ ಮತ್ತು ಕ್ರಿಯಾ ಸಮಾಸ
೪. ಆಖ್ಯಾತ ಪ್ರತ್ಯಯ, ಪುರುಷತ್ರಯ, ಕಾಲತ್ರಯ - ತದ್ವಿತ - ಸಮಸಂಸ್ಕೃತ - ಅಪಭ್ರಂಶ, ತತ್ಸಮ

### ಪರಾಮರ್ಶನ ಕೃತಿಗಳು:

- ೧ ಪೀಠಿಕೆಗಳು, ಲೇಖನಗಳು : ಡಿ.ಎಲ್. ನರಸಿಂಹಾಚಾರ್  
 ೨ ಆಲೋಕ : ಎಚ್.ಎಸ್. ಬಿಳಿಗಿರಿ  
 ೩ ಪ್ರಾಚೀನ ಕನ್ನಡ ವ್ಯಾಕರಣಗಳು : ಎಂ.ವಿ. ಸೀತಾರಾಮಯ್ಯ  
 ೪ ವ್ಯಾಕರಣಗಳು : ವಿ. ಸೀತಾರಾಮಯ್ಯ

೫ ಕನ್ನಡ ವ್ಯಾಕರಣ ಪರಂಪರೆಯ ಮೇಲೆ ಸಂಸ್ಕೃತದ ಪ್ರಭಾವ	: ಪಿ. ಶ್ರೀಕೃಷ್ಣಭಟ್

(೩:೧=೪ ಕ್ರೆಡಿಟ್)

೧. ಶಂ.ಬಾ.ಜೋಷಿ	: ಕಂನುಡಿಯ ಒಳ್ಳಂಪು
೨. ಎ.ಆರ್.ಕೃಷ್ಣಶಾಸ್ತ್ರಿ	: ಇಂದಿನ ಜನಜೀವನದಲ್ಲಿ ಕನ್ನಡ
೩. ಡಿ.ಎಲ್.ಎನ್	: ಪದಗಳ ಹುಟ್ಟು ನಾವು
೪. ಕುವೆಂಪು	: ಸಂಸ್ಕೃತಿ ಕರ್ನಾಟಕ
೫. ಜಿ.ಎಸ್.ಎಸ್.ಶಿವರುದ್ರಪ್ಪ	: ಕನ್ನಡ ನಾಹಿತಿ ಮತ್ತು ಕನ್ನಡ
೬. ಜಿ. ವೆಂಕಟಸುಬ್ಬಯ್ಯ	: ಇಗೋ ಕನ್ನಡ
೭. ಯು.ಆರ್.ಅನಂತಮೂರ್ತಿ	: ಕನ್ನಡದ ಮೂರು ಹಸಿವುಗಳು
೮. ಕೆ.ವಿ.ನಾರಾಯಣ	: ತಂತ್ರಜ್ಞಾನ ಮತ್ತು ಕನ್ನಡ
೯. ಕೆ.ವಿ. ತಿರುಮಲೇಶ್	: ಕನ್ನಡತನ ನನ್ನ ದೃಷ್ಟಿಯಲ್ಲಿ
೧೦.ಬರಗೂರು ರಾಮಚಂದ್ರಪ್ಪ	: ಕನ್ನಡಾಭಿಮಾನ

**ಪಠ್ಯ ಮೂಲ :**

೧. ಶಂ.ಬಾ.ಜೋಷಿ	: ಕಂನುಡಿಯ ಹುಟ್ಟು, ಸಮಾಜ ಪುಸ್ತಕಾಲಯ, ಧಾರವಾಡ :೧೯೪೫
೨. ಎ.ಎರ್.ಕೃಷ್ಣಶಾಸ್ತ್ರಿ	: ಭಾಷಣಗಳು ಲೇಖನಗಳು, ಶಾರದಾ ಮಂದಿರ, ಮೈಸೂರು
೩. ಡಿಎಲ್‌ಎನ್	: ಪೀಠಿಕೆಗಳು ಲೇಖನಗಳು
೪. (ಸಂ) ಶಿವಾರೆಡ್ಡಿ	: ಕುವೆಂಪು ಸಮಗ್ರ ಗದ್ಯ, ಕನ್ನಡ ವಿಶ್ವವಿದ್ಯಾಲಯ, ಹಂಪಿ
೫. ಸಂ.ರಹಮತ್ ತರೀಕೆರೆ	: ಮಾತು ತಲೆಯೆತ್ತುವ ಬಗೆ, ಸಂಪುಟಗಳು ೧, ಕವಿವಿ, ಹಂಪಿ ೨೦೧೧
೬. ಸಂ. ಎನ್.ಎಸ್. ತಾರಾನಾಥ	: ಶತಮಾನದ ಸಂಶೋಧನೆ, ಕರ್ನಾಟಕ ಸಾಹಿತ್ಯ ಅಕಾಡೆಮಿ, ಬೆಂ
೭. ಯು.ಆರ್. ಅನಂತಮೂರ್ತಿ	: ವಾಲ್ಮೀಕಿಯ ನೆಪದಲ್ಲಿ
೮. ಕೆ.ವಿ. ನಾರಾಯಣ	: ಕನ್ನಡ ಜಗತ್ತು :ಅರ್ಥಶತಮಾನ, ಕನ್ನಡ ವಿವಿ
೯. ಕೆ.ವಿ. ತಿರುಮಲೇಶ್	: ನಮ್ಮ ಕನ್ನಡ
೧೦. ಹೆಚ್.ಎಸ್.ಬಿಳಿಗಿರಿ	: ಮೂರು ದತ್ತಿ ಉಪನ್ಯಾಸಗಳು

**KND 210: ಪತ್ರಿಕೆ : ೫.೨**

**ಜಾನಪದ ಅಧ್ಯಯನ : ಕನ್ನಡದ ಜನಪದ ಸಾಹಿತ್ಯ (ಆಯ್ದ ಪಠ್ಯಗಳು)**

**(೩:೧=೪ ಕ್ರೆಡಿಟ್)**

೧. ತಾತ್ವಿಕ : ಜಾನಪದ ಸಾಹಿತ್ಯ ಪ್ರಕಾರಗಳ ಕುರಿತು ಈವರೆಗೆ ನಡೆದ ಅಧ್ಯಯನದ ಸ್ವರೂಪ, ಪ್ರತಿಯೊಂದು ಸಾಹಿತ್ಯ ಪ್ರಕಾರದಲ್ಲಿ ಅಧ್ಯಯನ ಮಾಡಿದ ಪ್ರಮುಖ ವಿದ್ವಾಂಸರ ಪರಿಚಯ

**ಪಠ್ಯಗಳು:**

೧. ಅ) ಕನ್ನಡ ಜನಪದ ಕತೆಗಳು : ಜಿ.ಶಂ.. ಪರಮಶಿವಯ್ಯ (ಪ್ರತಿ ಗುಂಪಿನ ಮೊದಲ ಎರಡು ಕತೆಗಳು)
  - ಆ) ಗರತಿಯ ಹಾಡು : ಹಲಸಂಗಿ ಗೆಳೆಯರು
೨. ಅ) ಗರಿಗದರಿದ ನವಿಲು : (ಸಂ) ಕಾಳೇಗೌಡ ನಾಗವಾರ - ಜಿ.ವಿ. ಆನಂದಮೂರ್ತಿ
  - ನಿಗದಿತ ಭಾಗ ಪುಟ ೧ ರಿಂದ ೧೦೭ ಮತ್ತು ೨೫೧ ರಿಂದ ೩೦೦ ರವರೆಗೆ)
೪. ಅ) ನಮ್ಮ ಸುತ್ತಿನ ಗಾದೆಗಳು : ಸುಧಾಕರ
  - ಆ) ಸಾವಿರದ ಒಗಟುಗಳು : ಸೋಮಶೇಖರ ಇಮ್ಮಾಪುರ

**KND 210 : ಪತ್ರಿಕೆ:೫.೩ ಚಾರಿತ್ರಿಕ ಅಧ್ಯಯನ: ಕರ್ನಾಟಕ ಸಂಸ್ಕೃತಿ: ಆಯ್ದ ಪಠ್ಯಗಳು**

೧. ಕವಿರಾಜಮಾರ್ಗಂ : ನಾಡು-ನುಡಿ ವರ್ಣನೆ
  - (ಆಶ್ವಾಸ-೧, ಪಠ್ಯಗಳು ೧ ರಿಂದ ೪೩, ಆಶ್ವಾಸ -೨೨ ಪಠ್ಯ ೨೮)
೨. ವಡ್ಡಾರಾಧನೆ : ಭದ್ರಬಾಹು ಭಟಾರರ ಕಥೆ
೩. ಅಜಿತಪುರಾಣ : ಅತ್ತಿಮಬ್ಬ ವೃತ್ತಾಂತ

(ಆಶ್ವಾಸ-೧, ಪದ್ಯಗಳು ೨೦ ರಿಂದ ೭೫)

೪. ಬಸವಣ್ಣನವರ ನಿಗದಿತ ೧೨ ವಚನಗಳು

೧. ಸಗಣಿಯ ಬೆನಕನ ಮಾಡಿ
೨. ಲೋಕದ ಡೊಂಕ ನೀವೇಕೆ
೩. ಹಬ್ಬಕ್ಕೆ ತಂದ ಹರಕೆಯ ಕುರಿ
೪. ಹಾವು ತಿಂದವರ ನುಡಿಸಬಹುದು
೫. ದೇವಲೋಕ ಮರ್ತ್ಯಲೋಕವೆಂಬುದು
೬. ಮರ್ತ್ಯಲೋಕವೆಂಬುದು ಕರ್ತಾರನ ಕಮ್ಮಟವಯ್ಯ
೭. ವ್ಯಾಧನೊಂದು ಮೊಲನ ತಂದರೆ
೮. ಕಲ್ಲನಾಗರ
೯. ವೇದಕ್ಕೆ ಒರೆಯನಿಕ್ಕುವೆ
೧೦. ಅಪ್ಪನು ಡೋಹರ ಕಕ್ಕಯ್ಯ
೧೧. ಉತ್ತಮ ಕುಲದಲಿ ಹುಟ್ಟಿದನೆಂಬ
೧೨. ಅರಸರ ಮನೆಯಲ್ಲಿ ಅರಸಿಯಾಗಿಪ್ಪುದರಿಂದ

೧. ಕೇಶಿರಾಜ ದಣ್ಣಾಯಕರ ರಗಳೆ (ಹರಿಹರ)

೨. ಸಿದ್ಧರಾಮ ಚಾರಿತ್ರ್ಯ : ನಾಲ್ಕನೆಯ ಸಂಧಿ

೩. ಬಸವಪುರಾಣ : ಸುಗ್ಗಲದೇವಿ ಹಾಗೂ ದಾಸಿಮಯ್ಯನ ಕತೆ (ಸಂಧಿ ೫೧)

೪ ರಾಮಧಾನ್ಯ ಚರಿತೆ : ಕನಕದಾಸ

೫. ರಾಮನಾಥ ಚರಿತೆ : ಶೂಲದಹಬ್ಬ (ಆಶ್ವಾಸ ೬, ಸಂಧಿ ೨, ಪದ್ಯ ೧ ರಿಂದ ೧೦೪)

೬. ರಾಜಾವಳಿ ಕಥಾಸಾರ : ನವಮಾಧಿಕಾರ

೭. ಪ್ಲೀಟರು ಸಂಗ್ರಹಿಸಿದ ಐದು ಐತಿಹಾಸಿಕ ಲಾವಣಿಗಳು : ಹಲಗಲಿಯ ಬೇಡರು

೮. ಕೈಫಿಯತ್ತು : ಉಪ್ಪಲಿ ಬಣಜಿಗರ ಕೈಫಿಯತ್ತು

**ಆಂತರಿಕ ಮೌಲ್ಯಮಾಪನ: (೩೦ ಅಂಕಗಳು)**

ಪ್ರತಿ ಚತುರ್ಮಾಸ ವಿದ್ಯಾರ್ಥಿಗಳ ಇಡೀ ತಂಡಕ್ಕೆ ಒಂದೇ ರೀತಿಯ ಮೌಲ್ಯಮಾಪನ ಚಟುವಟಿಕೆಗಳು ಮತ್ತು ಮಾನದಂಡಗಳನ್ನು ಅನುಸರಿಸಬೇಕು

ಟೆಸ್ಟ್	ಅವಧಿ	ಅಂಕಗಳು
ಟೆಸ್ಟ್-1	ಪ್ರತಿ ಚತುರ್ಮಾಸ 2ನೆ ತಿಂಗಳ ಅಂತ್ಯದಲ್ಲಿ (ಒಂದು ಗಂಟೆ)	10
ಟೆಸ್ಟ್-2	ಪ್ರತಿ ಚತುರ್ಮಾಸ 4ನೆ ತಿಂಗಳ ಅಂತ್ಯದಲ್ಲಿ (ಒಂದು ಗಂಟೆ)	10
	ಪ್ರತಿ ಚತುರ್ಮಾಸ ಆರಂಭದ ಎರಡು ತಿಂಗಳ ಅವಿರತ ಮೌಲ್ಯಮಾಪನ (ಟ್ಯುಟೋರಿಯಲ್)	05
	ಪ್ರತಿ ಚತುರ್ಮಾಸ ಅಂತಿಮ ಎರಡು ತಿಂಗಳ ಅವಿರತ ಮೌಲ್ಯಮಾಪನ (ಟ್ಯುಟೋರಿಯಲ್)	05
	<b>ಒಟ್ಟು</b>	<b>30</b>

3. ವಿಚಾರಗೋಷ್ಠಿ / ಚರ್ಚಾಗೋಷ್ಠಿ / ಪ್ರದರ್ಶನ - ಇಂತಹ ಸದೃಶ ಚಟುವಟಿಕೆಗಳು

ವಿಷಯ ಸಂಗ್ರಹಣೆ, ಪ್ರಬಂಧ ರಚನೆ, ಮಂಡನೆ ಮತ್ತು ಚರ್ಚೆಯಲ್ಲಿ ಭಾಗವಹಿಸುವಿಕೆ - ಗರಿಷ್ಠ 5 ಅಂಕಗಳು

1. ಮೌಲ್ಯಮಾಪನ ಘಟಕ : 3 : ವಿಶ್ವವಿದ್ಯಾನಿಲಯ ಚತುರ್ಮಾಸ ಅಂತ್ಯದಲ್ಲಿ ಮೂರು ಗಂಟೆ ಅವಧಿಯ ಗರಿಷ್ಠ 70 ಅಂಕಗಳ ಪರೀಕ್ಷೆ ನಡೆಸುತ್ತದೆ.

2. ಅ) ಅವಧಿಕ ಕಾರ್ಯ / ಮೈನರ್ ಪ್ರಾಜೆಕ್ಟ್ (4 ಕ್ರೆಡಿಟ್ ಗಳು) ಮೌಲ್ಯಮಾಪನ ಕ್ಷೇತ್ರಕಾರ್ಯ, ಮಾಹಿತಿ ಸಂಗ್ರಹಣೆ ಮತ್ತು ವರದಿ

ಘಟಕ 1: ಅ) ಅವಧಿಕ ಪ್ರಗತಿ ಮತ್ತು ವರದಿ - 7.5 ಅಂಕಗಳು  
ಆ) ವಿಚಾರಗೋಷ್ಠಿ / ಚರ್ಚೆ / ಪ್ರದರ್ಶನ - 7.5 ಅಂಕಗಳು

ಘಟಕ 2: ಅ) ಕರಡು ವರದಿ - 7.5 ಅಂಕಗಳು  
ಆ) ಫಲಿತಾಂಶಗಳು ಹಾಗೂ ಅಂತಿಮ ವರದಿ - 7.5 ಅಂಕಗಳು

ಘಟಕ 3: ಚತುರ್ಮಾಸ ಅಂತ್ಯದಲ್ಲಿ ವರದಿಯ ಮೌಲ್ಯಮಾಪನ ಮತ್ತು ಮೌಖಿಕ ಪರೀಕ್ಷೆಯನ್ನು ಒಬ್ಬ ಆಂತರಿಕ ಹಾಗೂ ಒಬ್ಬ ಬಾಹ್ಯ ಪರೀಕ್ಷಕರನ್ನೊಳಗೊಂಡಂತೆ ಸಮಿತಿ ನಡೆಸುತ್ತದೆ-70 ಅಂಕಗಳಿಗೆ

ಘಟಕ 4: ವಿದ್ಯಾರ್ಥಿಯು ಮೂರನೆಯ ಚತುರ್ಮಾಸದಲ್ಲಿ ವಿಭಾಗದ ಅಧ್ಯಾಪಕರೊಂದಿಗೆ ಚರ್ಚಿಸಿ ವಿಷಯ ಆಯ್ಕೆ ಮಾಡಿಕೊಂಡು ನಾಲ್ಕನೆಯ ಚತುರ್ಮಾಸ ಅಂತ್ಯದಲ್ಲಿ ವಿಭಾಗಕ್ಕೆ ಸಲ್ಲಿಸಬೇಕು. ಎ-4

ಅಳತೆಯ ಕಾಗದದಲ್ಲಿ 14 ಪಾಯಿಂಟ್ ಅಕ್ಷರಗಳಲ್ಲಿ 50 ಪುಟಗಳಿಗೆ ಕಡಿಮೆ ಇಲ್ಲದಂತೆ ಮತ್ತು 80 ಪುಟಗಳಿಗೆ ಮೀರದಂತೆ ಅವಧಿಕ ಕಾರ್ಯವಿರಬೇಕು

ಘಟಕ 5: ಚತುರ್ಮಾಸ ಅಂತ್ಯದಲ್ಲಿ ವರದಿಯ ಮೌಲ್ಯಮಾಪನ ಮತ್ತು ಮೌಖಿಕ ಪರೀಕ್ಷೆಯನ್ನು ಅಧ್ಯಯನ ಮಂಡಳಿ / ಅಧ್ಯಯನ ವಿಭಾಗ / ಪರೀಕ್ಷಾ ಮಂಡಳಿ ಅಧ್ಯಕ್ಷರು ಅಥವಾ ಅವರ ನಾಮಾಂಕಿತರು ಮೇಲ್ವಿಚಾರಕರು ಹಾಗೂ ಇತರ ವಿಶ್ವವಿದ್ಯಾಲಯ / ಉದ್ಯಮ / ಸಮಾಜ / ಸಮುದಾಯದಿಂದ ಆಹ್ವಾನಿತರಾದ ಒಬ್ಬ ಬಾಹ್ಯ ಪರೀಕ್ಷಕರನ್ನೊಳಗೊಂಡ ಸಮಿತಿ ನಡೆಸುತ್ತದೆ.- 10 ಅಂಕಗಳು (60+10=70)

4ನೇ ಚತುರ್ಮಾಸದ ವಿಷಯವಾದ 'ಅವಧಿಕ ಕಾರ್ಯ' ಬರಹದ ಮೌಲ್ಯಮಾಪನವನ್ನು 60 ಅಂಕಗಳಿಗೆ ನಡೆಸಲಾಗುವುದು. 10 ಅಂಕಗಳಿಗೆ ಮೌಖಿಕ ಪರೀಕ್ಷೆಯನ್ನು ನಡೆಸಲಾಗುವುದು.

\*\*\*\*\*

ಮಾದರಿ ಪ್ರಶ್ನೆ ಪತ್ರಿಕೆ

2022-23 ನೇ ಸಾಲಿನ ಸ್ನಾತಕೋತ್ತರ ಎಂ.ಎ ಕನ್ನಡ ಚತುರ್ಮಾಸ ಪರೀಕ್ಷೆಗಳು

(ಸಿಬಿಸಿಎಸ್-ಸಿಎಜಿಪಿ ಮಾದರಿ)

ಪತ್ರಿಕೆಯ ಶೀರ್ಷಿಕೆ:

ಸಮಯ: 3 ಗಂಟೆಗಳು

ಅಂಕಗಳು: 70

ಸೂಚನೆ : ಎಲ್ಲಾ ಪ್ರಧಾನ ಪ್ರಶ್ನೆಗಳು ಕಡ್ಡಾಯ

(ಎ) ಅಥವಾ (ಬಿ)

ಅಂಕಗಳು : 14

(ಸಿ) ಅಥವಾ (ಡಿ)

ಅಂಕಗಳು : 14

(ಇ) ಅಥವಾ (ಎಫ್)

ಅಂಕಗಳು: 14

(ಜಿ) ಅಥವಾ (ಎಚ್)

ಅಂಕಗಳು : 14

ಯಾವುದಾದರೂ ಏಳು ಪ್ರಶ್ನೆಗಳಿಗೆ ಉತ್ತರಿಸಿ

ಅಂಕಗಳು: 7X2=14

(ಐ) (ಒ)

(ಜೆ) (ಪಿ)

(ಕೆ) (ಕ್ಯೂ)

(ಎಲ್) (ಆರ್)

(ಎಮ್) (ಎನ್)

(ಎನ್) (ಟಿ)

ಪ್ರಶ್ನೆಗಳನ್ನು ಪಠ್ಯಕ್ರಮದ ಎಲ್ಲಾ ಘಟಕಗಳನ್ನು ಒಳಗೊಂಡಂತೆ ತಯಾರಿಸುವುದು.

JSS MAHAVIDYAPEETA  
**JSS COLLEGE OF ARTS, COMMERCE & SCIENCE**  
(Affiliated to University of Mysore)  
Autonomous, NAAC 'A' grade and College with Potential for Excellence  
B N Road, Mysuru – 570025

**PROPOSED SCHEME of INSTRUCTION**  
and  
**SYLLABI**  
for  
**M.Sc. MATHEMATICS**  
under  
**CHOICE BASED CREDIT SYSTEM (CBCS)**

**PG DEPARTMENT OF MATHEMATICS**  
**2017 – 18**

1. **Scheme of Admission:**

- 50% seats of the total intake for M.Sc. Mathematics Programme of the College will be filled by the University of Mysore through Centralized Admission Cell as per University regulations.
- Remaining 50% seats will be filled by the College under College Quota.

2. **Eligibility:** B.Sc. degree with Mathematics as Major/Optional subject with 45% or B.Sc.Ed., degree of Regional Institute of Education with Mathematics as a special subject.

3. **Scheme of Examination:**

- (i) Theory paper of 03 hours duration (C<sub>3</sub> component) : **70 marks**
- (ii) Internal Assessment: **30 marks**  
(C<sub>1</sub> Component: 15 marks, C<sub>2</sub> Component: 15 marks)

4. **Pattern of Question Paper: Theory paper:** There are 5 questions. All questions must be answered. Each question carries 14 marks.

5. **Minimum Marks for Securing Credits:** 40% (with minimum of 30% in C<sub>1</sub> and C<sub>2</sub> and minimum of 30% in C<sub>3</sub>).

6. **Minimum Credits for getting the M.Sc. Mathematics degree:** 76 credits.

7. **Scheme of study for Masters:**

Total No. of credits to be earned	76 credits
Minimum No. of credits to be earned from Hard Core papers	44 credits
Minimum No. of credits to be earned from Soft Core papers	28 credits
Minimum No. of credits to be earned from Open elective papers	4 credits

11	MAC 010	HC	Elements of Functional Analysis	3 : 1 : 0	4	5
12	MAC 020	HC	Topology I	3 : 1 : 0	4	5
13	MAC 210	SC	Commutative Algebra	3 : 1 : 0	4	5
14	MAC 220	SC	Theory of Numbers	3 : 1 : 0	4	5
15	CSC/MCC/ZOC/ BTC/BOC/BCC 580	OE (For others)	Basic Mathematics	3 : 1 : 0	4	5
<b>FORTH SEMESTER</b>						
16	MAD 010	HC	Measure and Integration	3 : 1 : 0	4	5
17	MAD 020	HC	Topology-II	3 : 1 : 0	4	5
18	MAD 220	SC	Theory of Partitions	3 : 1 : 0	4	5
19	MAD 230	SC	Differential Geometry	3 : 1 : 0	4	5
Total Credits					76	

## **Program Outcomes**

PO1 : Apply the underlying unifying structures of mathematics (i.e. sets, relations and functions, logical structure) and the relationships among them

PO2 : To include methods of facilitating learning such as projects, group work and participative learning.

PO3 : To Innovate, invent and solve complex mathematical problems using the knowledge of pure and applied mathematics.

PO4 : To impart knowledge of some basic concepts and principles of the discipline.

PO5 : To establish inter-disciplinarily between mathematics and other subjects from Humanities and the Social Sciences.

PO6 : To encourage collaborative learning through group activities and hands-on learning.

PO7 : To provide in-service training for school teachers. To learn to apply mathematics to real life situations and help in problem solving

## **Program Specific Outcomes**

PSO1 : Explain the importance of mathematics and its techniques to solve real life problems and provide the limitations of such techniques and the validity of the results

PSO2 : Propose new mathematical and statistical questions and suggest possible software packages and/or computer programming to find solutions to these questions

PSO3 : Continue to acquire mathematical and statistical knowledge and skills appropriate to professional activities and demonstrate highest standards of ethical issues in mathematics

PSO4 : Ability to use computer calculations as a tool to carry out scientific investigations and develop new variants of the acquired methods, if required by the problem at hand.

PSO5 : Crack lectureship and fellowship exams approved by UGC like CSIR – NET and SLET.

PSO6 : Apply knowledge of Mathematics, in all the fields of learning including higher research and its extensions.

## First Semester

<b>Course Code MAA 010</b>	<b>Algebra I</b>
----------------------------	------------------

### Course Outcome

Students are able to

- CO1 Define and interpret the concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization
- CO2 Apply the Law of Quadratic Reciprocity and other methods to classify numbers as primitive roots, quadratic residues, and quadratic non-residues
- CO3 Assess properties implied by the definitions of groups.
- CO4 Analyze Permutation groups
- CO5 Uses various canonical types of groups and canonical types of rings
- CO6 Analyze and demonstrate examples of subgroups, normal subgroups and quotient groups.
- CO7 Use the concepts of isomorphism and homomorphism for groups
- CO8 Demonstrate knowledge of conjugates, the Class Equation and Sylow theorems.

## COURSE CONTENT

### Unit I

Number theory - Congruences, residue classes, theorems of Fermat, Euler and Wilson, linear congruences, elementary arithmetical functions, primitive roots, quadratic residues and the law of quadratic reciprocity.

### Unit II

Groups - Lagrange's Theorem, homomorphism and isomorphism, normal subgroups and factor groups.

### Unit III

The fundamental theorem of homomorphism, two laws of isomorphism.

### Unit IV

Permutation groups and Cayley's theorem, Sylow's theorems.

**Books for Reference:**

1. D. M. Burton – Elementary Number Theory, Tata McGraw-Hill, New Delhi, 6th Ed.,
2. I. Niven, H. S. Zuckerman and H. L. Montgomery – An Introduction to the Theory of Numbers, New York, John Wiley and Sons, Inc., 2004, 5th Ed.,
3. G. A. Jones and J. M. Jones – Elementary Number Theory, Springer, 1998.
4. Thomas W. Hungerford – Algebra, Springer International Edition, New York.
5. Michael Artin – Algebra, Prentice-Hall of India, New Delhi.
6. J. A. Gallian – Contemporary Abstract Algebra, Narosa Publishing House, 4th Ed.,
7. D. S. Dummit and R. M. Foote – Abstract Algebra, John Wiley and Sons, 1999.
8. I. N. Herstein – Topics in Algebra, Vikas Publishing House, New Delhi.
9. J. B. Fraleigh – A First course in Abstract Algebra, Addison-Wesley,
10. N. S. Gopalakrishnan – University Algebra, New Age International, 2nd Ed.

<b>Course code MAA020</b>
---------------------------

<b>Real Analysis I</b>
------------------------

**Course Outcome**

Students are able to

- CO1 Describe fundamental properties of the real numbers that lead to the formal development of real analysis
- CO2 Describe the real line as a complete ordered field
- CO3 Acquire knowledge extended real number system, the n-dimensional Euclidean space
- CO4 Study the types of mean inequalities and application
- CO5 Use the definitions of convergence as they apply to sequences, series, and functions
- CO6 Use the definitions of convergence as they apply to re-arrangements. Double series, infinite products

**COURSE CONTENT****Unit I**

The extended real number system, the n-dimensional Euclidean space, the binomial inequality, the inequality of the arithmetic and geometric means, the inequality of the power means, Cauchy's, Holder's inequality and Minkowski's inequality.

## Unit II

Numerical sequences, convergent sequences, Cauchy sequences, upper and lower limits.

## Unit III

Series of real numbers series of non-negative terms, the number 'e', tests of convergence.

## Unit IV

Multiplications of series, re-arrangements. Double series, infinite products.

### Books for Reference:

1. W. Rudin – Principles of Mathematical Analysis, International Student edition, McGraw Hill, 3rd Ed.
2. T. M. Apostol – Mathematical Analysis, Addison Wesley, Narosa, New Delhi, 2nd Ed.
3. R. R. Goldberg – Methods of real Analysis, Oxford and IBH, New Delhi.
4. Torence Tao – Analysis I, Hindustan Book Agency, India, 2006.
5. Torence Tao – Analysis II, Hindustan Book Agency, India, 2006.
6. Kenneth A. Ross – Elementary Analysis: The Theory of Calculus, Springer International Edition, 2004.

<b>Course code MAA 030</b>	<b>Real Analysis II</b>
----------------------------	-------------------------

### Course Outcome

Students are able to

- CO1 Determine the basic topological properties of subsets of the real numbers
- CO2 Analyze Sets and functions , distinguish between finite, countable and uncountable sets
- CO3 Determine the Riemann integrability and the Riemann-Stieltjes integrability of a bounded function and prove a related of theorems concerning integration
- CO4 Apply the Mean Value Theorem and the Fundamental Theorem of Calculus to

problems in the context of real analysis

CO5 Prove Taylor's theorem, determine maxima and minima, study the Functions of bounded variation

CO6 Produce rigorous proofs of results that arise in the context of real analysis.

## **COURSE CONTENT**

### **Unit I**

Finite, countable and uncountable sets, the topology of the real line.

### **Unit II**

Continuity, uniform continuity, properties of continuous functions, discontinuities, monotonic functions.

### **Unit III**

Differentiability, **mean value theorems**, L' Hospital rule, Taylor's theorem, maxima and minima, Functions of bounded variation.

### **Unit IV**

The Riemann-Stieltje's integral, criterion for integrability. Properties of the integral, classes of integrable functions. The integral as the limit of a sum. First and second mean value theorems. Integration and differentiation.

### **Books for Reference:**

1. W. Rudin – Principles of Mathematical Analysis, International Student edition, McGraw-Hill, 3rd Ed..
2. Torence Tao – Analysis I, Hindustan Book Agency, India, 2006.
3. Torence Tao – Analysis II, Hindustan Book Agency, India, 2006.
4. T. M. Apostol – Mathematical Analysis, Addison Wesley, Narosa, 2nd Ed.,
5. R. R. Goldberg – Methods of real Analysis, Oxford and IBH Publishing Company, New Delhi.
6. Kenneth A. Ross – Elementary Analysis: The Theory of Calculus, Springer International Edition, 2004.

## **Course Outcome**

Students are able to

- CO1 Represent complex numbers algebraically and geometrically,
- CO2 Define and analyze limits and continuity for complex functions as well as consequences of continuity
- CO3 Apply the concept and consequences of analyticity and the Cauchy-Riemann equations and of results on harmonic and entire functions including the fundamental theorem of algebra
- CO4 Analyze sequences and series of analytic functions and types of convergence.
- CO5 Apply Cauchy's theorem for disk and the integral formula.
- CO6 Understand Local properties of Analytic functions

## **COURSE CONTENT**

### **Unit I**

Algebra of complex numbers, geometric representation of complex numbers. Riemann sphere and Stereographic projection, Lines, Circles. Limits and Continuity.

### **Unit II**

Analytic functions, Cauchy-Riemann equations, Harmonic functions, Polynomials and Rational functions. Elementary theory of power series - sequences, series, uniform convergence of power series, Abel's limit theorem, The elementary functions.

### **Unit III**

Topology of the complex plane. Linear fractional transformations, Cross-ratio, Symmetry, Elementary conformal mappings. Complex integration – Line integrals, Rectifiable arcs.

### **Unit IV**

Cauchy's theorem for a rectangle. Cauchy's theorem in a Circular disk, Cauchy's integral formula. Local properties of analytic functions.

### **Books for Reference:**

1. L. V. Ahlfors – Complex Analysis, McGraw-Hill, Kogakusha, 1979.
2. J. B. Conway – Functions of one complex variable, Narosa, New Delhi.
3. R. P. Boas – Invitation to Complex Analysis, The Random House, 1987
4. B. C. Palka – An Introduction to Complex Function Theory, Springer, 1991.
5. S. Ponnusamy – Foundations of Complex Analysis, Narosa, 1995.

<b>Course code MAA 210</b>	<b>Linear Algebra</b>
----------------------------	-----------------------

### **Course Outcome**

Students are able to

- CO1 Solve systems of linear equations,
- CO2 Analyze vectors in  $\mathbb{R}^n$  geometrically and algebraically,
- CO3 Recognize the concepts of the terms span, linear independence, basis, and dimension, and apply these concepts to various vector spaces and subspaces,
- CO4 Use matrix algebra and the related matrices to linear transformations,
- CO5 Compute and use determinants, and use eigenvectors and eigenvalues,
- CO6 Determine and use orthogonality, have thorough understanding of the Linear Transformations
- CO7 Study Inner Products and Norms, The Gram-Schmidt Orthogonalization Process and Orthogonal Complements.
- CO8 Analyze the elementary canonical forms, rational and Jordan forms, Apply the inner product space

### **COURSE CONTENT**

#### **Unit I**

Vector Spaces, Subspaces, Linear Combinations and Systems of Linear Equations, Linear Dependence and Linear Independence, Bases and Dimension, Maximal Linearly Independent Subsets; Linear Transformations, Null Spaces, and Ranges, The Matrix Representation of a Linear Transformation, Composition of Linear Transformations and Matrix Multiplication, Invertibility and Isomorphisms, The Change of Coordinate Matrix, The Dual Space; Elementary Matrix Operations and Elementary Matrices, The Rank of a Matrix and Matrix Inverses, Systems of Linear Equations.

### **Unit II**

Properties of Determinants, Cofactor Expansions, Elementary Operations and Cramer's Rule, Eigenvalues and Eigenvectors, Diagonalizability, Invariant Subspaces and the Cayley-Hamilton Theorem; Inner Products and Norms, The Gram-Schmidt Orthogonalization Process and Orthogonal Complements.

### **Unit III**

The Adjoint of a Linear Operator, Normal and Self-Adjoint Operators, Unitary and Orthogonal Operators and Their Matrices, Orthogonal Projections and the Spectral Theorem; Bilinear and Quadratic Forms;

### **Unit IV**

The Diagonal form, The Triangular form; The Jordan Canonical Form; The Minimal Polynomial; The Rational Canonical Form.

### **Books for Reference:**

1. S. Friedberg, A. Insel, and L. Spence - Linear Algebra, Fourth Edition, PHI, 2009.
2. Jimmie Gilbert and Linda Gilbert – Linear Algebra and Matrix Theory, Academic Press, An imprint of Elsevier.
3. I. N. Herstein – Topics in Algebra, Vikas Publishing House, New Delhi.
4. Hoffman and Kunze – Linear Algebra, Prentice-Hall of India, 1978, 2nd Ed.,
5. P. R. Halmos – Finite Dimensional Vector Space, D. Van Nostrand, 1958.
6. S. Kumeresan – Linear Algebra, A Geometric approach, Prentice Hall India, 2000.

## **SECOND SEMESTER**

<b>Course code MAB 010</b>	<b>Algebra II</b>
----------------------------	-------------------

### **Course Outcome**

Students are able to

- CO1 Assess properties implied by the definitions of rings.
- CO2 Analyze and demonstrate examples and properties of ideals and quotient rings
- CO3 Demonstrate knowledge of polynomial rings and associated properties
- CO4 Derive and apply Gauss Lemma, Eisenstein criterion for irreducibility of rationals
- CO5 Demonstrate the characteristic of a field and the prime subfield.

## **COURSE CONTENT**

### **Unit I**

Rings, Integral domains and Fields, Homomorphisms, Ideals and Quotient Rings, Prime and Maximal ideals.

### **Unit II**

Euclidean and principal ideal rings, Polynomials, Zeros of a polynomial, Factorization, Irreducibility criterion.

### **Unit III**

Adjunction of roots, algebraic and transcendental extensions, Finite fields.

### **Unit IV**

Separable and inseparable extensions, Perfect and imperfect fields. Theorem on the primitive element.

### **Books for Reference:**

1. Thomas W. Hungerford – Algebra, Springer International Edition, New York.
2. Michael Artin – Algebra, Prentice-Hall of India, New Delhi.
3. Joseph A. Gallian – Contemporary Abstract Algebra, Narosa, 4th Ed.,
4. D. S. Dummit and R. M. Foote – Abstract Algebra, John Wiley and Sons, 1999, 2nd Ed.,
5. I. N. Herstein – Topics in Algebra, Vikas Publishing House, New Delhi.
6. J. B. Fraleigh – A First course in Abstract Algebra, Addison-Wesley,
7. N. S. Gopalakrishnan – University Algebra, New Age International, 2nd ed.,

## **Course Outcome**

Students are able to

- CO1 Understand the concept of sequences and series with respect to the real numbers system and establish whether a given series/ sequences is convergent/ divergent at a specified point or interval
- CO2 Recognize the difference between pointwise and uniform convergence of a sequence/series of functions
- CO3 Illustrate the effect of uniform convergence on the limit function with respect to continuity, differentiability, and integrability
- CO4 Derive and apply properties of convergence of power series.
- CO5 Analyze Functions of several variables, partial derivatives, continuity and differentiability
- CO6 Understand the importance of the Implicit function theorem, Taylor's theorem, the Maxima and Minima, Lagrange's multipliers

## **COURSE CONTENT**

### **Unit I**

Sequences and series of functions, Uniform convergence, Uniform convergence and continuity, Uniform convergence and integration, Uniform convergence and differentiation.

### **Unit II**

Power series, The exponential and logarithmic functions, The trigonometric functions. Improper integrals and their convergence.

### **Unit III**

Functions of several variables, partial derivatives, continuity and differentiability, the chain rule, Jacobians.

### **Unit IV**

The Implicit function theorem, Taylor's theorem, the Maxima and Minima, Lagrange's multipliers.

**Books for Reference:**

1. W. Rudin – Principles of Mathematical Analysis, International Student edition, McGraw-Hill, 3rd Ed.,
2. T.M. Apostol – Mathematical Analysis, Addison Wesley, Narosa, 2nd Ed.,
3. R.R. Goldberg – Methods of Real Analysis, Oxford and IBH, New Delhi.
4. D.V. Widder – Advanced Calculus, Prentice Hall of India, New Delhi, 2nd Ed.,
5. Torence Tao – Analysis I, Hindustan Book Agency, India, 2006.
6. Torence Tao – Analysis II, Hindustan Book Agency, India, 2006.
7. Kenneth A. Ross – Elementary Analysis: The Theory of Calculus, Springer International Edition, 2004.

<b>Course code MAB 030</b>	<b>Complex Analysis II</b>
----------------------------	----------------------------

**Course Outcome**

Students are able to

- CO1 Classify singularities and poles, find residues and evaluate complex integrals using the residue theorem.
- CO2 Apply the Cauchy integral theorem in its various versions, and the Cauchy integral formulas
- CO3 Evaluate complex contour integrals directly and by the fundamental theorem
- CO4 Study Residue theorem and the argument principle
- CO5 State and prove the Cauchy Riemann Equation and use it to show that a function is Analytic
- CO6 Represent functions as Taylor, power and Laurent series
- CO7 Study properties of Partial fractions, Infinite products, Canonical products, The Gamma and Beta functions

**COURSE CONTENT**

## Unit I

The Calculus of Residues – The residue theorem, argument principle, Evaluation of definite integrals.

## Unit II

Harmonic functions – Definition and basic properties, mean value property, Poisson's formula, Schwarz's theorem, reflection principle.

## Unit III

Power series expansions – The Weierstrass theorem, The Taylor series, The Laurent series.

## Unit IV

Partial fractions and factorization – Partial fractions, Mittag - Leffer's theorem, Infinite products, Canonical products, The Gamma and Beta functions, Sterling's formula. Entire functions – Jensen's formula, Hadamard's theorem.

### Books for Reference:

1. L. V. Ahlfors – Complex Analysis, McGraw-Hill, Kogakusha, 1979.
2. J. B. Conway – Functions of one complex variable, Narosa, New Delhi.
3. R. P. Boas – Invitation to Complex Analysis, The Random House, 1987.
4. B. C. Palka – An Introduction to the Complex Function Theory, Springer, 1991.
5. S. Ponnusamy – Foundations of Complex Analysis, Narosa, 1995.

<b>Course code MAB 210</b>	<b>Ordinary and Partial Differential Equations</b>
----------------------------	--

### Course Outcome

Students are able to

- CO1 Solve problems in ordinary differential equations, dynamical systems, stability theory, and a number of applications to scientific and engineering problems
- CO2 Study of Differential focuses on the existence and uniqueness of solutions also emphasizes the rigorous justification of methods for approximating solutions in pure and applied mathematics.

- CO3 Implement solution methods using appropriate technology
- CO4 Investigate the qualitative behavior of solutions of systems of differential equations
- CO5 Recognize the major classification of PDEs and the qualitative differences between the classes of equations
- CO6 Solve linear PDEs using classical solution methods.
- CO7 Solve differential equations widely used in formulating many fundamental laws of physics and chemistry.

## **COURSE CONTENT**

### **Unit I**

Linear Second Order Equations - Initial value problem, Existence and Uniqueness by Picard's Theorem, Wronskian, separation and comparison theorems, Poincare phase plane, variation of parameters.

### **Unit II**

Power series solutions - Solution near ordinary and regular singular point. Convergence of the formal power series, applications to Legendre, Bessel, Hermite, Laguerre and hypergeometric differential equations with their properties.

### **Unit III**

Partial differential equations - Cauchy problems and characteristics, Classification of Second order PDE's, reduction to canonical forms, derivation of the equations of mathematical physics and their solutions by separation of variables.

### **Unit IV**

Boundary value problems - Transforming Boundary value problem of PDE and ODE, Sturm - Liouville system, eigen values and eigen functions, simple properties, expansion in eigen functions, Parseval's identity, Green's function method.

### **Books for Reference:**

1. E. A. Coddington and N. Levinson – Theory of Ordinary Differential equations, Tata McGraw-Hill, New Delhi.
2. R. Courant and D. Hilbert – Methods of Mathematical Physics, Vol. I. & II, Tata McGraw-Hill, New Delhi, 1975.

3. G. F. Simmons – Differential Equations with applications and Historical Notes, Tata McGraw-Hill, New Delhi, 1991.
4. I. N. Sneddon – Theory of Partial differential equations, McGraw-Hill, International Student Edition.
5. S. G. Deo and V. Raghavendra – Ordinary Differential Equations and Stability Theory, Tata McGraw-Hill, New Delhi.

<b>Course code MAB 230</b>	<b>Graph Theory</b>
----------------------------	---------------------

### **Course Outcome**

Students are able to

- CO1 Construct examples and proofs pertaining to the basic theorems.
- CO2 Understand the definitions of cut vertex, bridge, blocks and Automorphism group of a graph.
- CO3 Study the properties of trees and connectivity
- CO4 Discuss and understand the importance of the concepts Matchings and Menger's theorem

### **COURSE CONTENT**

#### **Unit I**

Types of Graphs, Walk and connectedness, degrees, Extremal graphs, Intersection graph, Operations on graphs.

#### **Unit II**

Cutpoints, Bridges and Blocks, Block graphs and cutpoints.

#### **Unit III**

Characterization of trees, Centers and Centroids, Spanning Tree .

#### **Unit IV**

Connectivity and line connectivity, Menger's theorem, Coverings Independence, Critical points and lines.

### **Books for Reference:**

1. F. Harary – Graph Theory, Addition Wesley Reading Mass, 1969.
2. N. Deo – Graph Theory With Applications to Engineering and Computer Science, Prentice Hall of India, 1987.
3. K. R. Parthasarathy – Basic Graph Theory, Tata McGraw-Hill, New Delhi, 1994.
4. G. Chartand and L. Lesniak – Graphs and Diagraphs, Qwadsworth and Brooks, 2nd Ed.,
5. Clark and D. A. Holton – A First Look at Graph Theory, Allied publishers.
6. D. B. West – Introduction to Graph Theory, Pearson Education Inc., 2001, 2nd Ed.,
7. J. A. Bondy and U. S. R. Murthy – Graph Theory with applications, Elsevier, 1976.

### **THIRD SEMESTER**

<b>Course code MAC 010</b>	<b>Elements of Functional Analysis</b>
----------------------------	--

#### **Course Outcome**

Students are able to

- CO1 Explain the fundamental concepts of functional analysis.
- CO2 Understand the approximation of continuous functions.
- CO3 Understand concepts of Hilbert and Banach spaces
- CO4 Understand the definitions of linear functional and prove the Hahn-Banach theorem, open mapping theorem, uniform boundedness theorem, etc.
- CO5 Define linear operators, self adjoint, isometric and unitary operators on Hilbert spaces.

#### **COURSE CONTENT**

##### **Unit I**

Metric completion. Banach's contraction mapping theorem and applications, Baire' category theorem, Ascoli - Arzela theorem.

##### **Unit II**

Linear spaces and linear operators, Norm of a bounded operator, The Hahn – Banach extension theorem, Stone - Weirstrass theorem.

### **Unit III**

Open mapping and Closed Graph theorems. The Banach - Steinhaus Principle of Uniform Boundedness.

### **Unit IV**

Hilbert spaces- The orthogonal projection, Nearly orthogonal elements, Riesz's lemma, Riesz's representation theorem.

#### **Books for Reference:**

1. G. F. Simmons – Introduction to Topology and Modern Analysis, Tata McGraw-Hill, New Delhi.
2. A. E. Taylor – Introduction to Functional Analysis, Wiley, New York, 1958.
3. A. Page and A. L. Brown – Elements of Functional Analysis.
4. George Bachman and Lawrence Narici – Functional Analysis, Dover Publications, Inc., Mineola, New York.
5. J. B. Conway – A Course in Functional Analysis, GTM, Vol. 96., Springer, 1985.

<b>Course code MAC 020</b>	<b>Topology I</b>
----------------------------	-------------------

### **Course Outcome**

Students are able to

- CO1 Define and illustrate the concept of topological spaces and continuous functions
- CO2 Provide precise definitions and appropriate examples and counter examples of fundamental concepts in topology.
- CO3 Define and illustrate the concept of product topology, metric and quotient topology
- CO4 Prove a selection of theorems concerning topological spaces, continuous functions product topologies, and quotient topologies
- CO5 Define connectedness and compactness, and prove a selection of related theorems

## **COURSE CONTENT**

### **Unit I**

Set theoretic preliminaries. Topological spaces and continuous maps - topological spaces, basis for a topology, the order topology, the product topology on  $X \times X$ , the subspace topology.

### **Unit II**

Closed sets and limit points, continuous functions, the product topology, the metric topology, the quotient topology.

### **Unit III**

Connectedness - connected spaces, connected sets on the real line, path connectedness.

### **Unit IV**

Compactness - compact spaces, compact sets on the line, limit point compactness, local compactness.

### **Books for Reference:**

1. J. R. Munkres – A First Course in Topology, Prentice Hall India, 2000, 2nd Ed.,
2. G. F. Simmons – Introduction to Topology and Modern Analysis, McGraw-Hill, Kogakusha, 1968.
3. S. Willard – General Topology, Addison Wesley, New York, 1968.
4. J. Dugundji – Topology, Allyn and Bacon, Boston, 1966.
5. J. L. Kelley – General Topology, Van Nostrand and Reinhold Co., New York, 1955.

<b>Course code MAC 210</b>	<b>Commutative Algebra</b>
----------------------------	----------------------------

### **Course Outcome**

Students are able to

- CO1 Know the basic definition of commutative rings, local rings, prime and maximal Ideals over commutative rings
- CO2 Explain basic concepts of The prime spectrum of a ring, the nil radical and Jacobson radical
- CO3 Study the operation on ideals and extension and contraction

- CO4 Be Familiar with the notions of Noetherian and Artinian modules
- CO5 Discuss and understand the Free modules Finitely generated modules, Simple modules, Exact sequences of modules
- CO6 Know how to localize rings and modules, and familiar with important applications of localization
- CO7 Know basic theory of Noetherian rings and study the Hilbert basis theorem .

## **COURSE CONTENT**

### **Unit I**

Rings and ideals - Rings and ring homomorphisms, Ideals, Quotient rings, zero-divisors, nilpotent elements, units, prime ideals and maximal ideals.

### **Unit II**

The prime spectrum of a ring, the nil radical and Jacobson radical, operation on ideals, extension and contraction.

### **Unit III**

Modules - Modules and modules homomorphisms, submodules and quotient modules, Direct sums, Free modules Finitely generated modules, Nakayama Lemma, Simple modules, Exact sequences of modules.

### **Unit IV**

Modules with chain conditions - Artinian and Noetherian modules, modules of finite length, Artinian rings, Noetherian rings, Hilbert basis theorem.

### **Books for Reference:**

1. M. F. Atiyah and I. G. Macdonald – Introduction to Commutative Algebra, Addison-Wesley.
2. C. Musili – Introduction to Rings and Modules, Narosa Publishing House.
3. Miles Reid – Under-graduate Commutative Algebra, Cambridge University Press.
4. N. S. Gopalakrishnan, Commutative Algebra, Oxonian Press.

<b>Course code MAC 220</b>	<b>Theory of Numbers</b>
----------------------------	--------------------------

### **Course Outcome**

Students are able to

- CO1 Define and interpret the concepts of divisibility, congruence, greatest common

divisor, prime, and prime-factorization

- CO2 Apply the Law of Quadratic Reciprocity and other methods to classify numbers as primitive roots, quadratic residues, and quadratic non-residues
- CO3 Produce rigorous arguments (proofs) centered on the material of number theory, most notably in the use of Mathematical Induction and/or the Well Ordering Principle in the proof of theorems
- CO4 Know the diophantine equations, irrational numbers, continued fractions

## **COURSE CONTENT**

### **Unit I**

Prime numbers, The Fundamental theorem of Arithmetic, The series of Reciprocals of primes, The Euclidean Algorithm. Fermat and Mersenne numbers. Farey series, Farey dissection of the continuum, Irrational numbers-Irrationality of  $m^{\text{th}}$  root of  $N$ ,  $e$  and  $\pi$ .

### **Unit II**

Arithmetical Functions – The Mobius function, The Euler' function and Sigma function, The Dirichlet product of Arithmetical functions, Multiplicative functions. Averages of Arithmetical functions – Euler summation formula, Some elementary asymptotic formulas, The average orders of  $d(n)$ ,  $\sigma(n)$ ,  $\varphi(n)$ ,  $\mu(n)$ . An application to the distribution of lattice points visible from the origin.

### **Unit III**

Approximation Irrational numbers, Hurwitz's Theorem, Representation of a number by two or four squares, Definition  $g(k)$  and  $G(k)$ , Proof of  $g(4) < 50$ , Perfect numbers. The series of Fibonacci and Lucas.

### **Unit IV**

Continued fractions - Finite continued fractions, Convergent of a continued fraction, Continued fractions with positive quotients. Simple continued fractions, The representation of an irreducible rational fraction by a simple continued fraction. The continued fraction algorithm and Euclid's algorithm. The difference between the fraction and its convergents, Infinite simple continued fractions, the representation of an irrational number by an infinite continued fraction, Equivalent numbers and periodic continued fractions, some special quadratic surds.

### **Books for Reference:**

1. G. H. Hardy and E. M. Wright – An Introduction to Theory of Numbers, Oxford University Press, 1979, 5th Ed.,

2. I. Niven, H. S. Zuckerman and H. L. Montgomery – An Introduction to the Theory of Numbers, New York, John Wiley and Sons, Inc., 2004, 5th Ed.,
3. Bruce C. Berndt – Ramanujan's Note Books Volume-1 to 5, Springer.
4. G. E. Andrews – Number Theory, Dover Books, 1995.
5. T. M. Apostol – Introduction to Analytic Number Theory, Narosa Publishing House, New Delhi.

**OPEN ELECTIVE (For others)**

<b>Coursecode</b> MCC/BCC/BTC/BOC/ZOC/CSC 580	<b>Basic Mathematics</b>
--	--------------------------

**Course Outcome**

Students are able to

- CO1 Write an argument using logical notation and determine if the argument is or is not valid
- CO2 Identify sets as well defined collections, represents sets in roster and set builder form, conversion from set builder form to roster form and vice versa.
- CO3 Understand the meaning of equal and equivalent sets and differentiate between equal and equivalent sets.
- CO4 Identify the subsets of the given sets, find the complement of a subset of a given Set, within a given universe. Represent venn diagram using sets.
- CO5 Use the simple method to solve small linear programming models by hands, given a basic feasible point
- CO6 Solve a two dimensional linear programming problem graphically
- CO7 Understand the definitions of graphs, path, connectedness, cut vertex, bridge, blocks of a graph.
- CO8 Study the properties of trees and matrix of a graph

**COURSE CONTENT**

**Unit I**

Mathematical Logic: Connection – Normal Forms – Theory of Inferences – Predicate Calculus.

**Unit II**

Set Theory: Operations on Sets – Basic Set Identities – Relations and Orderings, Functions.

### **Unit III**

Introduction: formulation of LP problems, Graphical solution of LP problems. Introduction to Simplex, revised simplex methods and Dual simplex, Game theory.

### **Unit IV**

Graph Theory: Basic Concepts of Graph Theory- Paths – Connectedness – Matrix Representation of Graphs – Trees – List structures and Graphs

#### **Books for Reference:**

1. C. L. Liu – Elements of Discrete Mathematics, McGraw-Hill, 1986.
2. Kenneth H. Rosen – Discrete Mathematics and its Applications, McGraw-Hill, 2002.
3. F. Harary – Graph Theory, Addition Wesley Reading Mass, 1969.
4. N. Deo – Graph Theory With Applications to Engineering and Computer Science, Prentice Hall of India, 1987.
5. K. R. Parthasarathy – Basic Graph Theory, Tata McGraw-Hill, New Delhi, 1994.
6. G. Chartand and L. Lesniak – Graphs and Diagraphs, wadsworth and Brooks, 2<sup>nd</sup> Ed.,
7. Clark and D. A. Holton – A First Look at Graph Theory, Allied publishers.
8. D. B. West – Introduction to Graph Theory, Pearson Education Inc.,2001, 2nd Ed.,
9. J. A. Bondy and U. S. R. Murthy – Graph Theory with applications, Elsevier, 1976.
10. S. D Sharma- Operations Research.

### **Fourth Semester**

<b>Course code MAD 010</b>	<b>Measure and Integration</b>
----------------------------	--------------------------------

#### **Course Outcome**

Students are able to

- CO1 Understand the fundamental concepts of Mathematical Analysis and the classical theorems in Advanced Real Analysis
- CO2 Be familiar with measurable sets and functions

- CO3 Discuss the Integration a measurable function
- CO4 Discuss theorems on monotonic functions, functions of bounded variation, differentiation of an integral, absolute continuity
- CO5 Understand the fundamentals of measure theory and be acquainted with the proofs of the fundamental theorems underlying the theory of integration.
- CO6 Learn about measure theory of Signed measures, product measures

## **COURSE CONTENT**

### **Unit I**

Lebesgue measure - outer measure, measurable sets and Lebesgue measure, a nonmeasurable set, measurable functions.

### **Unit II**

The Lebesgue integral – the Lebesgue Integral of a bounded function over a set of finite measure, the integral of a non-negative function, the general Lebesgue integral.

### **Unit III**

Differentiation and integration - Differentiation of monotonic functions, functions of bounded variation, differentiation of an integral, absolute continuity.

### **Unit IV**

Measure and integration - Measure spaces, Measurable functions, integration, Signed measures, the Radon - Nikodym theorem, Measure and outer measure, outer measure and measurability, the extension theorem, product measures.

### **Books for Reference:**

1. H. L. Royden – Real Analysis, Prentice Hall, 3rd Ed.,
2. G. de Barra – Measure Theory and Integration, Wiley Eastern Limited.
3. Inder K. Rana – An Introduction to Measure and Integration, Narosa, 1997.

<b>Course code MAD 020</b>	<b>Topology II</b>
----------------------------	--------------------

### **Course Outcome**

Students are able to

- CO1 Define and illustrate the concepts of the countability and separation axioms.
- CO2 Appreciate the beauty of deep mathematical results like Uryzohn's lemma and Tietze's extension theorem and understand the dynamics of the proof techniques.
- CO3 Discuss Tychonoff's theorem, locally compact spaces, Compactness of metric spaces
- CO4 Study Stone-Weierstrass theorems
- CO5 Describe different examples distinguishing general, geometric, and algebraic topology.
- CO6 Construct of the fundamental group of a topological space and applications to covering spaces and homotopy theory.

## **COURSE CONTENT**

### **Unit I**

Countability and Separation axioms - the countability axioms, the separation axioms, normality of a compact Hausdorff space.

### **Unit II**

Urysohn's lemma, Tietze's extension theorem, Urysohn's metrization theorem, Partitions of unity.

### **Unit III**

Tychonoff's theorem on the product of compact spaces. Local finiteness, Paracompactness, Normality of a paracompact space.

### **Unit IV**

The Fundamental group and the Fundamental group of a circle, The Fundamental group of the punctured plane, Essential and Inessential Maps, The Fundamental Theorem of Algebra.

### **Books for Reference:**

1. James R. Munkres - A First Course in Topology , Prentice Hall India, 2000, 2<sup>nd</sup> Ed.,
2. G. F. Simmons – Introduction to Topology and Modern Analysis, McGraw-Hill, Kogakusha, 1968.
3. S. Willard – General Topology, Addison Wesley, New York, 1968.
4. J. Dugundji – Topology, Allyn and Bacon, Boston, 1966.

5. J. L. Kelley – General Topology, Van Nostrand and Reinhold Co., New York, 1955.

<b>Course code MAD 230</b>	<b>Differential Geometry</b>
----------------------------	------------------------------

### **Course Outcome**

Students are able to

- CO1 Define and analyze the basic concepts of space curves and plane curves
- CO2 Introduce the fundamentals of differential geometry primarily by focusing on the theory of curves and surfaces in three space.
- CO3 Compute quantities of geometric interest such as curvature, as well as develop a facility to compute in various specialized systems
- CO4 Understand the global properties of curves such as the four vertex theorem.
- CO5 Know the theory of surfaces introduces the fundamental quadratic forms of a surface, intrinsic and extrinsic geometry of surfaces, and the Gauss theorem.
- CO6 Introduce the method of the moving frame and over determined systems of differential equations as they arise in surface theory.

## **COURSE CONTENT**

### **Unit I**

Plane curves and Space curves – Frenet-Serret Formulae. Global properties of curves – Simple closed curves, The isoperimetric inequality, The Four Vertex theorem. Surfaces in three dimensions – Smooth surfaces, Tangents, Normals and Orientability, Quadric surfaces.

### **Unit II**

The First Fundamental form – The lengths of curves on surfaces, Isometries of surfaces, Conformal mappings of surfaces, Surface area, Equiareal Maps and a theorem of Archimedes.

### **Unit III**

Curvature of surfaces – The Second Fundamental form, The Curvature of curves on a surface, Normal and Principal Curvatures.

### **Unit IV**

Gaussian Curvature and The Gauss' Map – The Gaussian and The mean Curvatures, The Pseudo sphere, Flat surfaces, Surfaces of Constant Mean Curvature, Gaussian Curvature of Compact surfaces, The Gauss' Map.

**Books for Reference:**

1. A. Pressley – Elementary Differential Geometry, Under-graduate Mathematics Series, Springer.
2. T. J. Willmore – An Introduction to Differential Geometry, Oxford University Press.
3. D. Somasundaram – Differential Geometry: A First Course, Narosa, 2005.

<b>Course code MAD 220</b>	<b>Theory of Partitions</b>
----------------------------	-----------------------------

**Course Outcome**

Students are able to

- CO1 Know the definitions of partitions
- CO2 Apply the q-binomial theorem and Ramanujan  ${}_1\psi_1$  - summation formula
- CO3 Know the congruence of partition
- CO4 Apply the q-series

**COURSE CONTENT**

**Unit I**

Partitions - partitions of numbers, the generating function of  $p(n)$ , other generating functions, two theorems of Euler, Jacobi's triple product identity and its applications.

**Unit II**

${}_1\psi_1$  - summation formula and its applications, combinatorial proofs of Euler's identity, Euler's pentagonal number theorem, Franklin's combinatorial proof.

**Unit III**

Congruence properties of partition function, the Rogers - Ramanujan Identities.

**Unit IV**

Elementary series - product identities, Euler's, Gauss', Heine's, Jacobi's identities. Restricted Partitions – Gaussian, Frobenius partitions.

**Books for Reference:**

1. G. H. Hardy and E. M. Wright – An Introduction to Theory of Numbers, Oxford University Press, 1979, 5th Ed.,

2. I. Niven, H. S. Zuckerman and H. L. Montgomery – An Introduction to the Theory of Numbers, New York, John Wiley and Sons, Inc., 2004, 5th Ed.,
3. Bruce C. Berndt – Ramanujan's Note Books Volumes-1 to 5.
4. G. E. Andrews – The Theory of Partitions, Addison Wesley, 1976.
5. A. K. Agarwal, Padmavathamma, M. V. Subbarao – Partition Theory, Atma Ram & Sons, Chandigarh, 2005.

**JSS MAHA VIDYAPEETHA**

**JSS College of Arts, Commerce and Science**

**Ooty Road, Mysuru - 570 025**

**Department of Master of Computer Applications**

**OVERALL COURSE GRID OF  
Master of Computer Applications**

**2021-2022**

# **Master of Computer Applications**

**2 Years / 4 Semesters**

## **1. Introduction:**

MCA is Masters of Computer Application is a PG course of two years and has it is a master Course in Computer Application the MCA subjects are related to computer languages computer software and the MCA syllabus is divided into 4 semesters has the MCA subjects consists 5 number but their brief knowledge is given in two years so the MCA syllabus is made in such a way that the students learn MCA subjects in two years in such a pattern that the gain all the knowledge

The MCA course includes classroom teaching, practical assignments, and project work which is a mandate in the MCA course syllabus. MCA course syllabus emphasis the latest programming languages and tools to develop better and faster applications. Some colleges encourage students to spend a full semester working in the industry to explore and understand how IT works.

To train MCA course subjects offered by the universities are Data Structures and files using C, Project Visual C++, Computer Networks and Java programming etc. MCA syllabus varies from university to university and some of them are- Internet & JAVA Programming, Modeling and Simulation, Computer and 'C' Programming, Management Information System, and many others.

The MCA course list also emphasis certain specialization topics like Troubleshooting, System Engineering, Software Development, Hardware Technology, etc.

## **2. Lecture-Practical/Project-Tutorial (L-P-T)**

A course shall have either or all the three components, i.e. a course may have only lecture component, or only practical/project component or a combination of any two/three components

Lecture (L): Classroom sessions delivered by faculty in an interactive mode. It should be conducted as per the scheme of lectures indicated in respective course.

Practical/Project(P): Practical / Project Work consisting of Hands-on experience /Field Studies / Case studies that equip students to acquire the much required skill component. Besides separate Practical/Project course, three course in each semester include few practical assignment and it will be evaluated under internal evaluation

Tutorial (T): Session consisting of participatory discussion/ self-study/ desk work/ brief seminar presentations by students and such other novel methods that make a student to absorb and assimilate more effectively the contents delivered in the Lecture sessions

A Mini project is an assignment that the student needs to complete at the end of every semester in order to strengthen the understanding of fundamentals through effective application of the courses learnt. The details guidelines have been given in the course structure.

The Project Work to be conducted in the FINAL Semester and evaluated at the end of the semester. The detail guidelines have been in the respective course structure.

The teaching / learning as well as evaluation are to be interpreted in a broader perspective as follows:

- i) Teaching – Learning Processes: Classroom sessions, Group Exercises, Seminars, Small Group Projects, Self-study, etc.
- ii) Evaluation: Tutorials, Class Tests, Presentations, Field work, Assignments, competency based Activity, etc.

The MCA Programme is a combination of:

- a. Four-Credit Courses (100 Marks each): 4 Credits each
- b. One-Credit Courses (50 Marks each):

Following are the session details per credit for each of L-P-T model

- 1) Every ONE-hour session per week of L amounts to 1 credit per Semester,
- 2) Minimum of TWO hours per week of P amounts to 1 credit per Semester
- 3) Minimum of ONE hours per week of T amounts to 1 credit per Semester

## Scheme and Syllabus

Semester I					
Course Title	Course Code	Credits	Contact hours	EXT	INT
Java Programming	IT11	4:0:0	4	70	30
Data Structure and Algorithms	IT12	4:0:0	4	70	30
Computer Organisation and Architecture	IT13	4:0:0	4	70	30
Operating System Concepts	IT14	4:0:0	4	70	30
Computer Networks	IT15	4:0:0	4	70	30
Management Information System	BT11	4:0:0	4	70	30
Mathematical foundations	MT11	4:0:0	4	70	30
Java Programming Lab	IT11L	0:0:1	2	30	20
Data Structure and Algorithms Lab	ITC11	0:0:1	2	30	20
	<b>TOTAL</b>	30	32	550	250

Semester II						
Sl. No.	Course Title	Course Code	Credits	Contact Hours	EXT	INT
1	Python Programming	IT21	4:0:0	4	70	30
2	Software Architecture	IT22	4:0:0	4	70	30
3	Optimization Techniques	MT21	4:0:0	4	70	30
4	Advanced Internet Technologies	IT23	4:0:0	4	70	30
5	Analysis and Design of Algorithms	IT24	4:0:0	4	70	30

## Semester I

Course Code: IT-11

Course Name: Java Programming

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

Course Description:

### **COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

CO1: Demonstrate and implement programs using components and constructs of a Java language

CO2: Identify classes, objects, members of a class and use packages and interfaces appropriately.

CO3: Demonstrate for Java program for multithread, synchronization and exception handling concepts.

CO4: Use the concept of string, event handling, simple data structures like arrays and members of classes of Java API in application development

CO5: Design and develop Java based UI and Networking applications using applets, swing components and networking concepts.

### **TOPICS COVERED:**

#### UNIT 1 – Java Basics 10 Hours

History of Java, Java buzzwords, data types, variables, scope and life time of variables, arrays, operators, expressions, control statements, type conversion and casting, simple java program, concepts of classes, objects, constructors, methods, access control, this keyword, garbage collection, overloading methods and constructors, parameter passing, recursion, nested and inner classes, exploring string class

## UNIT 2 – OOP Concepts in Java, Packages and Interfaces 10 Hours

Hierarchical abstractions, Base class object, subclass, subtype, substitutability, forms of inheritance- specialization, specification, construction, extension, limitation, combination, benefits of inheritance, costs of inheritance. Member access rules, super uses, using final with inheritance, polymorphism- method overriding, abstract classes, the Object class.

Defining, Creating and Accessing a Package, Understanding CLASSPATH, importing packages, differences between classes and interfaces, defining an interface, implementing interface, applying interfaces, variables in interface and extending interfaces. Exploring java.io.

## UNIT 3 - Exception Handling and Multi Threading 10 Hours

Concepts of exception handling, benefits of exception handling, Termination or presumptive models, exception hierarchy, usage of try, catch, throw, throws and finally, built in exceptions, creating own exception sub classes. String handling, Exploring java.util.

Differences between multi threading and multitasking, thread life cycle, creating threads, thread priorities, synchronizing threads; inter thread communication, thread groups, daemon threads. Enumerations, auto boxing, annotations, generics.

## UNIT 4 - String and Event Handling 10 Hours

String fundamentals, String Constructors, Three string related language features, The Length() method, Obtaining the characters within the string, String comparison, using index Of() and lastIndexOf(), changing the case of the characters within the string, String buffer and String builder.

Events, Event sources, Event classes, Event Listeners, Delegation event model, handling mouse and keyboard events, Adapter classes. The AWT class hierarchy, user interface components- labels, button, canvas, scrollbars, text components, check box, check box groups, choices, lists panels – scroll pane, dialogs, menu bar, graphics, layout manager – layout manager types – border, grid, flow, card and grid bag.

## UNIT 5 – Applets, Swings and Networking with Java.Net 12 Hours

Concepts of Applets, differences between applets and applications, life cycle of an applet, types of applets, creating applets, passing parameters to applets.

Swings- Introduction, limitations of AWT, MVC architecture, components, containers, exploring swing- JApplet, JFrame and JComponent, Icons and Labels, text fields, buttons – The JButton class, Check boxes, Radio buttons, Combo boxes, Tabbed Panes, Scroll Panes, Trees, and Tables.

Networking fundamentals, Networking Classes & Interfaces, The InetAddress class, The Socket class, URL class, URL connection class, Http URL connection class, Exploring collection framework, Collection overview, Collection classes and interfaces, Array class.

Course Code: IT-12

Course Name: Data Structure and Algorithms

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

- CO1: Design and analyze programming problem statements.
- CO2: Choose appropriate data structures and algorithms, understand the ADT/libraries, and use it to design algorithms for a specific problem.
- CO3: Apply mathematical abstraction to solve problems.
- CO4: Demonstrate various methods of organizing large amounts of data.
- CO5: Analyze algorithms and to determine algorithm correctness and time efficiency class.
- CO6: demonstrate linear data structures linked list, stack and queue (apply)
- CO7: implement tree, graph, hash table and heap data structures (apply)
- CO8: apply brute force and backtracking techniques (apply)
- CO9: demonstrate greedy and divide-conquer approaches (apply)
- CO10: implement dynamic programming technique (apply)

UNIT 1 - Introduction and overview of C Programming

12 Hours

Introduction to C programming, Variables, Data types, Constants, Declarations, Operators, Precedence, Associativity, Order of evaluation. Input and output statements; Control Statements, Arrays – Single dimension, Two dimensional, Multi dimensional Arrays, Strings. Functions, Categories of functions. Examples Pointers, Pointer arithmetic, Call by value, Pointer Expression, Pointer as function arguments, recursion, passing strings to functions, Call by reference, Functions returning pointers, Pointers to functions, Programming Examples. Structures and Unions.

UNIT 2 - Introduction to Data Structures 8 Hours

Information and its meaning: Abstract Data Types, Sequences as Value Definitions, ADT for Varying length character Strings, pointers and review of Pointers, Dynamic Memory Allocation - definition, malloc, calloc, and realloc, free. Data Structures: Array as an ADT, Arrays as Parameters, String as an ADT.

### UNIT 3 - The Stack

12 Hours

Definition and examples, Primitive operations, Example, The stack as an ADT, Representing stacks, Implementing the pop, push operations using function overloading, Examples for infix, postfix, and prefix expressions, Basic definition and Examples. Applications of Stacks: Expression Evaluations, Expression conversion, Recursion as application of stack, Properties of recursive definition or algorithm. Binary search, Towers of Hanoi problem.

### UNIT 4 - Queues and Linked List

12 Hours

The queue and its sequential representation, the queue as ADT, Basic operations using polymorphism and inheritance, Priority queue, Array implementation of a priority queue. Linked lists, inserting and removing nodes from a list, Linked implementations of stacks, Linked implementation of queues, linked list as a data Structure. Example of list operations.

### UNIT 5 - Linked Lists and Trees

8 Hours

Other list structures: Circular lists, Stack as circular lists, doubly linked lists. Application of linked lists: Stacks, Queues, double-ended queues, priority queues. Sorting and Searching: Applications and implementation with function overloading. Tree: Definition and representation, Types of trees, Basic operations on Tree.

Course Code: IT-13

Course Name: Computer Organisation and Architecture

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

Upon Successful Completion of this Course, Student will know

CO1: Computer Architecture-Hardware, software

CO2: Design of Interfaces

CO3: Addressing Modes

#### **UNIT-1**

**12 Hours**

Principles of Computer design - Software, hardware interaction layers in computer architecture. Central processing unit. Machine language instructions, Addressing modes, instruction types, Instruction set selection, Instruction cycle and execution cycle.

#### **UNIT-2**

**12 Hours**

Control unit, Data path and control path design, Microprogramming V s hardwired control, RISC Vs CISC, Pipelining in CPU design: Superscalar processors.

#### **UNIT-3**

**12 Hours**

Memory system, Storage technologies, Memory array organization, Memory hierarchy, interleaving, cache and virtual memories and architectural aids to implement these.

#### **UNIT-4**

**8 Hours**

Input-output devices and characteristics. Input-output processing, bus interface, data transfer techniques, I/O interrupts, channels.

#### **UNIT-5**

**8 Hours**

Performance evaluation - SPEC marks, Transaction Processing benchmarks.

#### **TEXT BOOKS/ REFERENCES :**

2. Rajaraman, V., and Radhakrishnan, T., "Introduction to Digital Computer Design" (4th edition). Prentice Hall of India, New Delhi, 1997.
3. Stallings. W, "Computer Organization and Architecture, (2nd edition) Prentice Hall of India, New Delhi

Course Code: IT-14

Course Name: Operating System and Linux

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

**CO1:** Recognize the structure of operating system, interaction of an operating system and application programs.

**CO2:** Analyze the various programming paradigms viz., multi-process and multi-threaded programming.

**CO3:** Examine the various resource and memory management techniques.

**CO4:** Distinguish the different features of real time and mobile operating systems.

**CO5:** Identify current issues in system security; demonstrate various factors can influence the overall performance of an operating system.

**TOPICS COVERED:**

**UNIT 1- Computer and Operating Systems Structure            11 Hours**

Basic Elements, Processor Registers, Instruction Execution, The Memory Hierarchy, Cache Memory, I/O Communication Techniques, Introduction to Operating System, Mainframe Systems, Desktop Systems, Multiprocessor Systems, Distributed Systems, Clustered Systems, Real - Time Systems, Handheld Systems, Feature Migration, Computing Environments.

System Structures: System Components, Operating – System Services, System Calls, System Programs, System Structure, Virtual Machines, System Design and Implementation, System Generation

**UNIT 2 - Process Management and Mutual Execution            10 Hours**

Process, Process States, Process Description, Process Control, Execution of the Operating System, Security Issues, Processes and Threads, Symmetric Multiprocessing(SMP), Micro kernels, CPU Scheduler and Scheduling. Principles of Concurrency, Mutual Exclusion: Hardware Support, Semaphores, Monitors, Message Passing, Readers/Writes Problem.

UNIT 3 - Deadlock and Memory Management

11 Hours

Principles of Deadlock, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, An Integrated Deadlock Strategy, Dining Philosophers Problem Memory Management: Swapping, Contiguous Memory Allocation, Paging, Segmentation, Segmentation with Paging, Demand Paging, Process Creation, Page Replacement, Allocation of Frames, Thrashing

UNIT 4 - File System and Secondary Storage

10 Hours

File Concept, Access Methods, Directory Structure, File System Mounting, File Sharing, Protection, File – System Structure, File – System Implementation, Directory Implementation, Allocation Methods, Free–Space Management, Disk Structure, Disk Scheduling, Disk Management.

UNIT 5 - Computer Security and Case study of Linux Operating system

10 Hours

The Security Problem, User Authentication, Program Threats, System Threats. Linux System Linux history, Design Principles, Kernel modules, Process, management, scheduling, Memory management, File systems, Input and output, Inter-process communications.

Course Code: IT-15

Course Name: Computer Networks

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

**CO1:** Analyze and distinguish the basic concepts, principles and techniques of data communication along with the layers of OSI and TCP/IP model.

**CO2:** Independently understand and distinguish the concept of links, nodes and data transmission issues in the network.

**CO3:** Capability to categorize wired LANs: Ethernet, IPv4 addresses and performance of The network-layer.

**CO4:** Design and demonstrate the services of TCP and UDP.

**CO5:** Ability to summarize and interpret the basic concepts of Application-Layer paradigms and standard client-server protocols.

**TOPICS COVERED:**

UNIT 1 - Basics of Data Communications and Physical Layer      10 Hours

Data Communications: Components, Data Representation, Data Flow, Networks; Network Criteria, Physical Structures, Network Types: LAN, WAN, Switching, Network Models: Protocol Layering: Principles of Protocol Layering, Logical Connections, TCP/IP Protocol Suite: Layered Architecture, Layers in the TCP/IP Protocol Suite, Encapsulation and Decapsulation, Addressing, Multiplexing and Demultiplexing, The OSI Model; OSI versus TCP/IP, Lack of OSI Model's Success, Introduction to Physical Layer, Data and Signals, Periodic Analog Signals, Digital Signals, Transmission Impairment, Data Rate Limits, Performance, Switching: Circuit-Switched Networks, Packet Switching, Datagram Networks, Virtual Circuit Networks.

UNIT 2 - Data Link Layer      10 Hours

Introduction to Data-Link Layer, Link-Layer Addressing: Address Resolution Protocol (ARP), Error Detection and Correction: Introduction, Types of Errors, Redundancy, Detection versus Correction, Coding, Block coding: Error Detection, Cyclic Code: Cyclic Redundancy Check,

Polynomials, Cyclic Code Analysis and its Advantages, Checksum, Forward Error Correction: Using Hamming Distance, Using XOR, Chunk Interleaving.

### UNIT 3 - LANs and Network Layer 10 Hours

Ethernet Protocol, Standard Ethernet: Characteristics, Addressing, Access Method, Efficiency of Standard Ethernet, Implementation, Changes in the Standard, Fast Ethernet (100 MBPS): Access Method, Physical Layer, 10 Gigabit Ethernet, Introduction to Network Layer, Network- Layer Services: Packetizing, Routing and Forwarding, Packet Switching: Datagram Approach, Virtual-Circuit Approach, Network Layer Performance: delay Throughput, Packet loss, Congestion Control, IPv4 addresses.

### UNIT 4 - Transport Layer 10 Hours

Introduction to Transport-Layer: Transport-Layer Services; Transport-Layer Protocols: Port Numbers, User Datagram Protocol: User Datagram, UDP Services, UDP Applications, Transmission Control Protocol: TCP Services, TCP Features, Segment, A TCP Connection, State Transition Diagram, Windows in TCP, Flow Control, Error Control, TCP Congestion Control, TCP Timers.

### UNIT 5 - Application Layer and Standard Client-Server Protocols 12 Hours

Introduction to Application Layer, Services, Application-Layer Paradigms, Client-Server Programming: Application Programming Interface, Using Services of the Transport Layer, Iterative Communication using UDP, Iterative Communication using TCP, Concurrent Communication, World Wide Web and HTTP: FTP: Two Connections, Control Connection, Data Connection, Security for FTP, E-Mail: Architecture, Web-Based Mail, TELNET: Local versus Remote Logging, Secure Shell (SSH): Components, Applications, Domain Name System (DNS): Name Space, DNS in the Internet, Resolution, Caching, Resource Records, DNS Messages, Registrars, DDNS, Security of DNS.

Course Code: BT-11

Course Name: Management Information System

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30			70	100

Course Description:

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

CO1: Apply the different strategies for the management of business to formulate business process.

CO2: Analyze the need for business process re-engineering, and the process of making.

CO3: Analyze and examine business information needs to facilitate evaluation of strategic alternatives.

CO4: Apply Management Information Systems knowledge and skills learned to facilitate the acquisition, development, deployment, and management of information systems.

CO5: Effectively communicate strategic alternatives to facilitate decision-making.

**TOPICS COVERED:**

UNIT 1- Systems Engineering, Information and Knowledge

12 Hours

System concepts, system control, types of systems, handling system complexity, Classes of systems, General model of MIS, Need for system analysis, System analysis for existing system & new requirement, system development model, MIS & system analysis. Information concepts, classification of information, methods of data and information collection, value of information, information: A quality product, General model of a human as information processor, Knowledge, Introduction of MIS: MIS: Concept, Definition, Role of the MIS, Impact of MIS, MIS and the user, Management as a control system, MIS support to the management, Management effectiveness and MIS, Organization as system. MIS: organization effectiveness.

UNIT 2- Decision Making and DSS 10 Hours

Decision making concepts; decision making process, decision-making by analytical modeling, and Behavioral concepts in decision making, organizational decision-making, Decision structure, DSS components, and Management reporting alternatives

Technology of Information System : Introduction, Data processing, Transaction processing, Application processing, information system processing, TQM of information systems, Human factors & user interface, Strategic nature of IT decision, MIS choice of information technology.

UNIT 3- Electronic Business systems            10 Hours

Enterprise business system – Introduction, cross-functional enterprise applications, real world case, Functional business system, - Introduction, marketing systems, sales force automation, CIM, HRM, online accounting system, Customer relationship management, ERP, Supply chain management (real world cases for the above)

E-business Technology: Introduction to E-business, model of E-business, internet and World Wide Web, Intranet/Extranet, Electronic, Impact of Web on Strategic management, Web enabled business management, MIS in Web environment.

UNIT 4- Strategic Management of Business & Developing Business/IT Strategies /IT Solutions 10 Hours

Concept of corporate planning, Essentiality of strategic planning, Development of the business strategies, Type of strategies, short-range planning, tools of planning, MIS: strategic business planning. Planning fundamentals (real world cases), Organizational planning, planning for competitive advantage, (SWOT Analysis), Business models and planning. Business/IT planning, identifying business/IT strategies, Implementation Challenges, Change management., Developing business systems, (real world case), SDLC, prototyping, System development process, implementing business system .

UNIT 5: E-Commerce Introduction 10 Hours

Introduction to e-commerce, E-commerce Business Models and Concepts, Ecommerce Infrastructure: The Internet and World Wide Web, Web design, JavaScript Internet Information Server (IIS); Personal Web Server (PWS).

E-Commerce techniques and Issues: Introduction to Active Server Pages (ASP), Building an E-Commerce Web Site, E-Commerce Payment Systems, E-Commerce Marketing Techniques, Building product catalogue, Search product catalogue, Web Spider and search agent, Ethical, Social and Political Issues in E-Commerce.

Course Code: MT-11

Course Name: Mathematical Foundations

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30			70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

**CO1:** Implement statistical measures and explore its applications

**CO2:** Analysis of computational errors and design of algorithms to solve a set of linear equations.

**CO3:** Applying the concepts of vector and linear functions in real time applications.

**CO4:** Apply the notion of relations on finite structures, like strings and analyze algorithms using the concept of functions.

**CO5:** Explore the properties of Graph theory and its applications in computer science.

**TOPICS COVERED:**

UNIT 1- Statistics 10 hours

Univariate data – different measures of location, dispersion, relative dispersion, skewness and kurtosis, Moments, Measures based on them – comparison with moment measures, Correlation and Regression Analysis.

UNIT 2 – Number Systems and Vector & Matrix Algebra 10 hours

Errors in Numerical Computations, Types of Errors, Analysis and Estimation of Errors, Vector Algebra: Vector spaces with real field, Basis and dimension of a vector space, Orthogonal vectors, Properties of Matrices and Determinants: Matrix Operations, Elementary Matrices, Inverse Matrix, Diagonal Matrix, Symmetric Matrix, and Determinant Matrix.

UNIT 3 - Linear Algebraic Systems 11 hours

Numerical methods for Linear Systems, Direct Methods for Linear Systems: Cramer's Rule, Gauss Elimination Method, Gauss Jordan Elimination Method, Pivoting Strategies, Gauss- Jordan Method, LU Decomposition Method, Tridiagonal Systems of Linear Equations, Iterative Methods

for Solving Linear Systems, Jacobis Iteration Method, Gauss-Seidel Iterative Method, Convergence Criteria, Eigen Values and Eigen Vectors.

#### UNIT 4 – Relations and Functions 10 hours

Cartesian products and Relations, Properties of Relations, Functions: Plain and One-to-One, Onto Functions: Stirling Numbers and the Second Kind, Special functions, The Pigeon-hole principle, Function composition and inverse functions.

#### UNIT 5 - Graph Theory 11 Hours

Definitions and Examples, Subgraphs, Complements, and Graph Isomorphism, Vertex Degree: Euler Trails and Circuits, Planar Graphs, Hamilton Paths and Cycles, Graph Coloring and Chromatic Polynomials.

Course Code: IT11L

Course Name: Java Programming Practicals

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
--	3 Hrs./Week	1		50		50	100

Upon successful completion of this course, students will be able to:

CO1: Demonstrate and implement programs using components and constructs of a Java language

CO2: Identify classes, objects, members of a class and exhibit use packages and interfaces appropriately.

CO3: Demonstrate for Java program for multithread, synchronization and exception handling concepts.

CO4: Use the concept of string, event handling, simple data structures like arrays and members of classes of Java API in application development

CO5: Design and develop Java based UI and Networking applications using applets, swing components and networking concepts.

**LIST OF PROGRAMS TO BE COVERED:**

1. Display Hello world
2. Check entered number is ODD or EVEN
3. Find factorial of number
4. Find the sum of the digits of a given number
5. Swap two numbers without using a temporary variable
6. Accept a name and display the name with greeting message using Class.
7. Generate a salary for an employee using class, object, constructors, methods and access control. Different parameters to be considered are Emp\_No, Emp\_Name, Age, Basic, DA, HRA, CA, PT, IT.
8. Generate a sales report for a sales executive using class, object, constructors, methods and access control. Different parameters to be considered are Emp\_No, Emp\_Name, Sales\_Q1, Sales\_Q2, Sales\_Q3, Sales\_Q4.
9. Demonstrate Constructor Overloading and Method Overloading.
10. Implement Inner class and demonstrate its Access protection.
11. Write a program in Java for String handling which performs the following:
  - a. Checks the capacity of String Buffer objects.
  - b. Reverses the contents of a string given on console and converts the resultant string in upper case.
  - c. Reads a string from console and appends it to the resultant string of ii.
12. Demonstrate Inheritance.

13. Simple Program on Java for the implementation of Multiple inheritance using
  - a. interfaces to calculate the area of a rectangle and triangle.
14. Write a JAVA program which has
  - a. A Class called Account that creates account with 500Rs minimum balance, a deposit() method to deposit amount, a withdraw() method to withdraw amount and also throws Less Balance Exception if an account holder tries to withdraw money which makes the balance become less than 500Rs.
  - b. A Class called Less Balance Exception which returns the statement that says withdraw amount ( Rs) is not valid.
  - c. A Class which creates 2 accounts, both account deposit money and one account tries to withdraw more money which generates a Less Balance Exception take appropriate action for the same.
15. Write a JAVA program using Synchronized Threads, which demonstrates Producer Consumer concept.
16. Write a JAVA program to implement a Queue using user defined Exception Handling (also make use of throw, throws.).
17. Complete the following:
  - a. Create a package named shape.
  - b. Create some classes in the package representing some common shapes like Square,
  - c. Triangle and Circle. Import and compile these classes in other program.
18. Write a JAVA Program
  - a. Create an enumeration Day of Week with seven values SUNDAY through SATURDAY. Add a method is Workday( ) to the Day of Week class that returns true if the value on which it is called is MONDAY through FRIDAY. For example, the call Day Of Week SUNDAY is Workday ( ) returns false.
19. Write a JAVA program which has
  - a. A Interface class for Stack Operations
  - b. A Class that implements the Stack Interface and creates a fixed length Stack.
  - c. A Class that implements the Stack Interface and creates a Dynamic length Stack.
  - d. A Class that uses both the above Stacks through Interface reference and does the Stack operations that demonstrates the runtime binding.
20. Print a chessboard pattern.
21. Write a JAVA Program which uses File Input Stream / File Output Stream Classes.
22. Demonstrate utilities of Linked List Class.
23. Write a JAVA applet program, which handles keyboard event.
24. Write a JAVA Swing program, to design a form.
25. Create a simple Student Registration application using Swings, JDBC and MySQL.
26. Write a JAVA program which uses Datagram Socket for Client Server Communication.

Course Code: IT12L

Course Name: Data Structure and Algorithms Practicals

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
--	3 Hrs./Week	1		50		50	100

### **COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

CO1: Design and analyze programming problem statements.

CO2: Choose appropriate data structures and algorithms, understand the ADT/libraries, and use it to design algorithms for a specific problem.

CO3: Apply mathematical abstraction to solve problems.

CO4: Demonstrate various methods of organizing large amounts of data.

CO5: Analyze algorithms and to determine algorithm correctness and time efficiency class.

### **LIST OF EXPERIMENTS COVERED:**

#### PROGRAMS ON C.

1. Programs to learn and explore C data types, looping and decision making structures. {mean, median, lcm, gcd, min max}
2. Calculate the salary of an employee given his basic pay, HRA = 10% of basic pay, TA=5% of his basic pay and deductions IT = 2.5% of his basic pay.
3. Solve quadratic equations to find the roots of the equation.
4. Programs to implement arrays and structures. {Ex: Students marks calculation, matrix operations}
5. Calculate the average marks of the student test marks and display the result using structure.
6. Programs to implement dynamic memory allocation: malloc, calloc, realloc and free.

#### STACK

7. Write a C program to evaluate the validity of an expression
8. Write a C program to evaluate a postfix expression.
9. Write a C program to convert an expression from infix to postfix.
10. Write a C program to implement multiple stack of integers.

#### QUEUES

11. Write a C program to perform basic operations on queue of integers, the program should provide the appropriate message to handle all concerned conditions
12. Write a C program to perform basic operations on list of students information stored in circular queue.

Let student information include regno, course title, year of study

13. Write a C program to implement dual queue.

#### LINKED LIST

14. Write a C program to implement stack operations using linked list.

15. Write a C program to implement queue operations using linked list.

16. Write a C program to create the students mark list based on the rank. Let the student record contain student-id, name, total marks.

17. Write a C program to perform operations.

a. Creation of list.

b. Insertion of new element [At Front, from rear, based on the position]

c. Deletion of a node [At Front, from rear, based on the position]

d. Display the list.

e. Replace the content of one element by another element.

f. Swap two nodes

18. Write a C program to perform the following operations on doubly linked list.

a. Creation of list by :

Insertion [ At beginning, At end, In between ] Deletion [ At beginning, At end, In between ]

b. Display all the nodes.

c. Swap two nodes based on specific criteria.

#### TREES

19. Write a C program to perform / implement the binary tree using array and hence perform the following

a. To print the left and right child of specified node

b. To print all the ancestors of a specified node

c. To print all the node in a specific level

d. To print only the leaf node

20. Write a C program to perform / implement the binary tree using linked list and hence perform the following

a. To print the left and right child of specified node

b. To print all the ancestors of a specified node

c. To print all the node in a specific level

d. To print only the leaf node

21. Write a C program with recursive routines to traverse the binary tree in all possible orders

a. Create a tree

b. Pre-Order traversal

c. In-Order traversal

d. Post-Order traversal

22. Write a C program to construct a heap of n integers and hence sort them using heap sort Algorithm

23. Implement the search techniques

- a. Linear Search
- b. Binary Search

Text Books :

1. Programming in ANSI C, Third Edition, E. Balaguruswamy. 6th Edition (2013).
2. Data Structures Using C and C++ by Aaron.M. Tenenbaum, Yedidyah Langsam and Moshe J. Augustine , PHI, Edition, 2011.

Reference Books :

1. Data structures, Algorithms and Applications in C++, S. Sahani, University Press (India) Pvt Ltd, 2nd Edition.
2. The complete reference C, Herbert Schildt, Fifth Edition, Tata McGraw Hill.

1. <http://www.tutorialspoint.com/Data-Structures-in-C-Online-Training/classid=13>

## Semester II

Course Code: IT-21

Course Name: Python Programming

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30			70	100

### COURSE OUTCOMES:

Upon successful completion of this course, students will be able to:

CO1: Design and apply a solution clearly, accurately in a program using python.

CO2: Comprehend and Apply knowledge in real time situational problems and think creatively about solutions.

CO3: Apply the best features of mathematics, engineering and natural sciences to program using python.

CO4: Apply object-oriented programming concepts to develop dynamic interactive Python applications.

CO5: Demonstrate how to build and package python modules for reusability.

### TOPICS COVERED:

#### UNIT 1 - Introduction to Python

10 Hours

Python Basics: Data Types, Operators, Input/Output Statements, Creating Python Programs, Python Flow Control statements: Decision making statements, Indentation, Conditionals, loops, break, continue, and pass statements. Strings, lists, Tuples, Dictionaries

#### UNIT 2 - Python Functions

10 Hours

Defining functions, DOC strings, Function parameters: default, keyword required and variable length arguments, key-word only parameters, local and global variables, pass by reference versus value, Anonymous functions, Recursion. Functional Programming: Mapping, Filtering and Reduction, Lambda Functions, List Comprehensions.

### UNIT 3 - Object Oriented Programming

10 Hours

Definition and defining a class, Constructor, Destructor, self and del keywords, Access to Attributes and Methods, getattr and setattr attributes, Data Attributes and Class Attributes, Data Hiding, Inheritance, Static Members. Regular Expressions: Defining Regular Expressions and String Processing.

### UNIT 4 - File Handling and Python GUI Programming

10 Hours

File object attributes, Read and Write into the file, Rename and Delete a File, Exceptions Handling: Built-in Exceptions and User defined Exceptions GUI Programming, Introduction to Python GUI Programming, Tkinter Programming, Tkinter widgets, Events and Bindings

### UNIT 5 - Working with Django 12 Hours

Rendering Templates into HTML and Other Formats, Understanding Models, Views, and Templates, Separating the Layers (MVC) - Models, Views, Templates, Overall Django Architecture, Defining and Using Models, Using Models, Templates and Form Processing, Setting up the Database, Using a Database Server, Using SQLite, Creating the Tables

#### **TEXT BOOKS / REFERENCES:**

Text books:

1. Timothy A. Budd: Exploring Python, Tata McGraw-Hill, 2011.
2. Jeff Forcier, Paul Bissex, Wesley Chun: Python Web Development with Django, Addison-Wesley, 2008.

Course Code: IT-22

Course Name: Software Architecture

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30			70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

CO1: Comprehend the need and importance of software architectures.

CO2: Differentiate various architectural styles based on requirement.

CO3: Implement system qualities during architecture development for the application.

CO4: Apply pattern oriented architecture by understanding patterns and their descriptions.

CO5: Design and document the software architecture.

**TOPICS COVERED:**

**UNIT 1 - Introduction, Architectural Styles 12 Hours**

The Architecture Business Cycle: Where do architectures come from? Software processes and the architecture business cycle; What makes a “good” architecture? What software architecture is and what it is not; Other points of view; Architectural patterns, reference models and reference architectures; Importance of software architecture; Architectural structures and views.

Architectural styles; Pipes and filters; Data abstraction and object-oriented organization; Event-based, implicit invocation; Layered systems; Repositories; Interpreters; Process control; Other familiar architectures; Heterogeneous architectures.

**UNIT 2 - Understanding and Achieving Quality Attributes 10 Hours**

Functionality and architecture; Architecture and quality attributes; System quality attributes; Quality attribute scenarios in practice; Other system quality attributes; Business qualities; Architecture qualities.

Achieving Quality: Introducing tactics; Availability tactics; Modifiability tactics; Performance tactics; Security tactics; Testability tactics; Usability tactics; Relationship of tactics to architectural patterns; Architectural patterns and styles.

**UNIT 3 - Architectural Patterns – From Mud to Structures, Distributed Systems 12 Hours**

Introduction: From mud to structure: Layers, Pipes and Filters, Blackboard. Distributed Systems: Broker; Interactive Systems: MVC, Presentation-Abstraction-Control.

UNIT 4 - Adaptable Systems & Other systems            08 Hours

Adaptable Systems: Microkernel; Reflection. Structural decomposition: Whole – Part; Organization of work: Master – Slave; Access Control: Proxy.

UNIT 5 - Designing and Documenting Software Architecture            10 Hours

Architecture in the life cycle; Designing the architecture; Forming the team structure; Creating a skeletal system. Uses of architectural documentation; Views; Choosing the relevant views; Documenting a view; Documentation across views.

**TEXT BOOKS / REFERENCES:**

3. <https://leanpub.com/software-architecture-for-developers/read>
4. <http://www.hillside.net/patterns/>

Course Code: MT-21

Course Name: Optimization Techniques

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30			70	100

Prerequisite: Basic mathematical knowledge is essentials.

Course Objectives:

1. To understand the role and principles of optimization techniques in business world.
2. To understand the process of problem statement formulation of the business scenario.
3. To understand the implementation of various decision-making techniques in the process of decision making.
4. To gain the techniques and skills on how to use optimization techniques to support the decision making in business world.

Course Outcomes:

Student will be able to

CO1: Understand the role and principles of optimization techniques in business world (Understand)

CO2: Demonstrate specific optimization technique for effective decision making (Apply)

CO3: Apply the optimization techniques in business environments (Apply)

CO4: Illustrate and infer for the business scenario (Analyze)

CO5: Analyze the optimization techniques in strategic planning for optimal gain. (Analyze)

UNIT 1 Linear Programming

10 Hours

Various definitions, statements of basic theorems and properties, Advantages and Limitations

application areas of Linear programming ,Linear Programming – Concept

Formulation of Linear programming, Solution of LPP using Graphical method

Simplex Method and Problems, Two Phase Simplex Method and problems

UNIT 2 Markov Chains & Simulation Techniques:

12 Hours

Markov chains: Applications related to technical functional areas,

Steady state Probabilities and its implications, Decision making based on the inferences Monte Carlo Simulation. Application of Markov chain in Queuing theory, Simulation techniques used in Machine learning and bioinformatics.

### UNIT 3 Sequential model and related Problems

10 Hours

Processing  $n$  jobs through 2 machines ,Processing  $n$  jobs through 3 machines  
Processing  $n$  jobs through  $m$  machine. PERT and CPM: Basic differences between PERT and CPM. Network diagram:Time estimates (Forward Pass Computation, Backward Pass Computation ,Critical Path,Probability of meeting scheduled date of completion, Calculation on CPM network. Various floats for activities, Event Slack: calculation on PERT network. Application of schedule based on cost analysis and crashing Case study-based problems

### UNIT 4 Game Theory

12 Hours

Introduction, $n \times m$  zero sum game with dominance ,Solution using Algebraic, Arithmetic and Matrix strategy

Decision Analysis

Introduction to Decision Analysis, Types of Decision-making environment

Decision making under uncertainty and under risk, Concept of Decision Tree.

Text Books:

1. Operations Research by Pannerselvam
2. Operations Research Theory and Application by J. K. Sharma –Mac-Millan Publication
3. Statistical and Quantitative Methods – Mr. Ranjit Chitale

Reference Books:

1. Statistical Methods – S.P.Gupta, Sultan Chand, New Delhi
2. Operation Research by V. k. Kapoor
3. Operations Research by Kanti Swaroop, P. K. Gupta and Man Mohan
4. Introduction to Operations Research by Hiller & Lieberman, Tata Mc Graw Hill
5. Operations Research by H. A. Taha
6. Operation Research by Hira & Gupta
7. What is Game Theory?, David K. Levine, Economics, UCLA

Practicals to be conducted on the following topics. It is expected that, Applications to be covered using Python and /or R

1. Linear Programming
2. Markov Chain and Simulation Techniques
3. Sequential models and related problems
4. CPM and PERT
5. Game Theory
6. Decision Analysis

Course Code: IT-23

Course Name: Advanced Internet Technologies

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30	-	-	70	100

Course Description:

Course Outcomes:

Student will be able to

CO1: Outline the basic concepts of Advance Internet Technologies (Understand)

CO2: Design appropriate user interfaces and implements webpage based on given problem Statement (Apply)

CO3: Implement concepts and methods of NodeJS (Apply)

CO4: Implement concepts and methods of Angular (Apply)

CO5: Build Dynamic web pages using server-side PHP programming with Database Connectivity (Apply)

Course Structure:

#### UNIT 1 Introduction to HTML5

Basics of HTML5 – Introduction, features, form new elements, attributes and semantics in HTML5, <canvas>, <video>, <audio>.

Introduction to Scalable Vector Graphics (SVG), Introduction to Version compatibility  
Installation of Apache Tomcat (Xampp/Lampp/MySQL)

#### UNIT 2 Introduction to CSS3

Architecture of CSS, CSS Modules, CSS Framework, Selectors and Pseudo Classes, Fonts and Text Effects, Colors, Background Images, and Masks, Transitions, Transforms and Animations Embedding Media, Gradients, Bootstrap

#### UNIT 3 Node JS

introduction and how it works, installation of node js, REPL, NPM, How modules work, Webserver Creation, Events

Extra Reading: Node.js with MySQL

#### UNIT 4 Angular (Latest Stable Version)

Introduction (Features and Advantage), Type Script , Modules, Components, Directives, Expression, Filters, Dependency Injection, Services, Routing, SPA (Single Page Application)

#### UNIT 5 PHP

##### Installing and Configuring PHP

Introduction, PHP and the Web Server Architecture, PHP Capabilities, PHP and HTTP, Environment Variables, Variables, Constants, Data Types, Operators  
Working with Arrays, Decision Making, Flow Control and Loops, Introduction to Laravel, Creating a Dynamic HTML Form with PHP, Database Connectivity with MySQL, Performing basic database operations (CRUD), Using GET, POST, REQUEST, SESSION, and COOKIE Variables

Extra Reading: Sending Emails, PHP with AJAX and XML, Payment Gateway Integration

#### Text Books:

1. Complete reference HTML, TMH
2. HTML5 & CSS3, Castro Elizabeth 7th Edition
3. Beginning Node.js by Basarat Ali Syed
4. Angular: Up and Running- Learning Angular, Step by Step by Shyam Seshadri
5. Beginning PHP, Apache, MySQL web development Reference Books
6. Introducing HTML5 - Bruce Lawson, Remy Sharp
7. Node.js in Action, 2ed by Alex Young, Bradley Meck
8. Mastering Node.js by Pasquali Sandro
9. Angular Essentials by Kumar Dhananjay Complete Ref. PHP

Course Code: IT-24

Course Name: Advanced DBMS

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Course Description:

### 1. Introduction DBMS – Concepts & Architectures

Database and Need for DBMS, Characteristics of DBMS

Database 3-tier schema (ANSI/SPARC) and system architecture of DBMS

Views of data- Schemas and instances, Data Independence

Centralized, Client-Server system, Transaction servers, Data servers, Cloud based servers

Indexing and Hashing - Basic concepts of indexing, ordered index, B+ tree index, B+ tree extensions, Multiple key access, Hashing concepts, types of hashing, Bitmap indices.

### 2. Data Modelling and Relational Database Design

Data Modelling using ER Diagram: Representation of Entities, Attributes, Relationships and their Type, Cardinality, Generalization, Specialization, Aggregation.

Relational data model: Structure of Relational Database Model, Types of keys, Referential Integrity Constraints, Codd's rules, Database Design using E-R, E-R to Relational

Normalization – Normal forms based on primary (1 NF, 2 NF, 3NF, BCNF)

Note: Case studies based on E-R diagram & Normalization

Extra Reading: Database languages - Relational Algebra, Relational database languages, Data definition in SQL, Views and Queries in SQL, Joins, specifying constraints and Indexes in SQL, Specifying constraints management systems Postgres/ SQL/MySQL.

### 3. Transaction and Concurrency control

Concept of transaction, ACID properties, States of transaction

Concurrency control, Problems in concurrency controls

Scheduling of transactions, Serializability and testing of serializability

Lock-based Protocol and Time stamp-based ordering protocols, Deadlock Handling

### 4. Parallel Databases

Introduction to Parallel Databases, Parallel Database Architectures  
I/O parallelism, Inter-query and Intra-query parallelism  
Inter-operational and Intra-operational parallelism  
Key elements of parallel database processing: Speed-up, Scale-up Synchronization and Locking

## 5. Distributed Databases

Introduction to Distributed Database System, Homogeneous and Heterogeneous Databases, Distributed data storage (Fragmentation and Replication), Distributed transactions, Concurrency control schemes in DDBMS  
Commit protocols 2 phase and 3 Phase Commit Protocol

## 6. Object Oriented Databases & Applications

Overview of Object- Oriented Database concepts & characteristics  
Database design for OODBMS – Objects, OIDs and reference type  
Spatial data and Spatial indexing (Any two techniques)  
Mobile Database: Need, Structure, Features, Limitations and Applications  
Temporal databases, temporal aspects valid time, transaction time or decision time  
Multimedia Database: Architecture, Type and Characteristics.

## 7. Crash Recovery and Backup, Failure classifications, Recovery & Atomicity, Log based recovery, Checkpoint and Shadow Paging in Data recovery, Database backup and types of backups

## 8. Security and Privacy

Database security issues, Discretionary access control based on grant & revoking privilege, Mandatory access control and role-based access control for multilevel security, Encryption & public key infrastructures

## 9. NO-SQL Database

Introduction, Types of NOSQL, Need of NoSQL databases, Use Cases

Recommended Books:

1. Introduction to database systems C.J. Date, Pearson.
2. Fundamentals of Database Systems by Elmasri Navathe
3. Principles of Database Management James Martin, PHI
4. Database System Concepts by Abraham Silberschatz, H. Korth, Sudarshan

Reference Books:

Database Management System by Raghu Ramakrishnan / Johannes Gherke

Database Management System (DBMS) A Practical Approach. By Rajiv Chopra

Database system practical approach to design, implementation & management by Connolly & Begg,

NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence Martin Fowler

List of Practicals (if any)

To install and configure database software (ORACLE/MYSQL)

To design a database (logical & physical database)

To Perform all SQL operations and queries on designed physical database

To install and configure NO-SQL database and practice for core operations

To perform experiments on database crash and recovery

To perform experiments on database Backup – restoring operations on database server

To perform some operations on Object oriented databases

Course Code: IT-25

Course Name: Analysis and Design of Algorithms

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

**CO 1:** Apply object oriented techniques to solve bigger computing problems

**CO 2:** Explore the knowledge of computational complexity, approximation and randomized algorithms

**CO 3:** Analyze the range of the algorithm and the notion of tractable and intractable problems

**CO 4:** Design and analyze a wide range of searching and sorting algorithms

**CO 5:** Implementation of graph and matching algorithms

**TOPICS COVERED:**

**UNIT 1 - Introduction and overview of C++ Programming 12 Hours**

C++ Class Overview- Class Definition, OOPs concepts ,Objects, Class Members, Access Control, Class Scope, Inheritance and Polymorphism ,Constructors and destructors, parameter passing methods, Inline functions, static class members, this pointer, friend functions, dynamic memory allocation and deallocation (new and delete), Exception handling.

**UNIT 2 - Introduction and the fundamentals of the Analysis of Algorithm Efficiency 12 Hours**

Notion of Algorithm, Fundamentals of Algorithmic Problem Solving, Important Problem Types, Fundamental data Structures. Analysis Framework, Asymptotic Notations and Basic efficiency classes, Mathematical analysis of Recursive and Non-recursive algorithms, Examples

**UNIT 3 - Brute Force and Divide and Conquer 10 Hours**

Selection Sort and Bubble Sort, Sequential Search and String Matching, Exhaustive Search, Merge- sort, Quick-sort, Binary Search, Binary tree Traversals and related properties.

#### UNIT 4 - Decrease-and-Conquer, Transform-and-Conquer 10 Hours

Insertion Sort, Depth First search and Breadth First Search, Topological sorting, Algorithms for Generating Combinatorial Objects. Presorting, Balanced Search Trees, Heaps and Heap sort, Problem Reduction.

#### UNIT 5 - Space and Time Tradeoffs and Dynamic Programming 10 Hours

Sorting by Counting, Input Enhancement in String Matching, Computing a binomial coefficient, Warshall's and Floyd's Algorithms, The Knapsack Problem and Memory Functions.

#### Text Book:

1. Anany Levitin: Introduction to the Design and Analysis of Algorithms, Pearson Education, 2003.
2. Herbert Schildt: The Complete Reference C++, 6th Edition, Tata McGraw Hill 2013.

#### References:

1. Cormen T.H., Leiserson C.E., and Rivest R.L.: Introduction to Algorithms, PHI, 1998.
2. Horowitz E., Sahani S., Rajasekharan S.: Computer Algorithms, Galgotia Publications, 2001.

#### ADDITIONAL LEARNING SOURCES:

1. [https://www.tutorialspoint.com/data\\_structures\\_algorithms/](https://www.tutorialspoint.com/data_structures_algorithms/)
2. <http://nptel.ac.in/courses/106101060/>

Course Code: IT-21L

Course Name: Practicals

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
-	10 Hrs./Week	5	-	75	-	50	125

Course Description:

This Practical course contains 2 sections. –

1. List of Practicals – Python Programming
2. List of Practicals – Advanced Internet Technologies

Course Outcomes:

Student will be able to

CO1: implement python programming concepts for solving real life problems. (Apply)

CO2: Implement Advanced Internet Technologies (Apply)

Course Structure:

List of Practicals – Python Programming

Note:

- Recommended IDE for python – IDLE
- Exception handling concepts should be used with file handling programs.
  1. Python installation and configuration with windows and Linux
  2. Programs for understanding the data types, control flow statements, blocks and loops
  3. Programs for understanding functions, use of built in functions, user defined functions
  4. Programs to use existing modules, packages and creating modules, packages
  5. Programs for implementations of all object-oriented concepts like class, method, inheritance, polymorphism etc. (Real life examples must be covered for the implementation of object- oriented concepts)
  6. Programs for parsing of data, validations like Password, email, URL, etc.
  7. Programs for Pattern finding should be covered.
  8. Programs covering all the aspects of Exception handling, user defined exception, Multithreading should be covered.
  9. Programs demonstrating the IO operations like reading from file, writing into file from different file types like data file, binary file, etc.
  10. Programs to perform searching, adding, updating the content from the file.
  11. Program for performing CRUD operation with MongoDB and Python

12. Basic programs with NumPy as Array, Searching and Sorting, date & time and String handling
13. Programs for series and data frames should be covered.
14. Programs to demonstrate data pre-processing and data handling with data frame
15. Program for data visualization should be covered.

#### List of Practicals – Advanced Internet Technologies

1. Program to implement Audio and Video features for your web page.
2. Program to design form using HTML5 elements, attributes and Semantics.
3. Programs using Canvas and SVG.
4. Programs to demonstrate external and internal styles in the web page using font, text, background, borders, opacity and other CSS 3 properties.
5. Implement Transformation using Translation, Rotation and Scaling in your web page.
6. Program to show current date and time using user defined module
7. Program using built-in modules to split the query string into readable parts.
8. Program using NPM which will convert entered string into either case
9. Write a program to create a calculator using Node JS. (Install and configure Node JS and Server)
10. Write Program for Form validation in Angular.
11. Program to demonstrate the ngif, ngfor, ngswitch statements.
12. Create angular project which will demonstrate the usage of component directive, structural directive and attribute directives
13. Create angular project which has HTML template and handle the click event on click of the button (Installation of Angular and Bootstrap 4 CSS Framework)
14. Program for basic operations, array and user interface handling.
15. Program to demonstrate session management using various techniques.
16. Program to perform the CRUD Operations using PHP Script.

Course Code: ET-21

Course Name: Artificial Intelligence and Robotics

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Upon successful completion of this course, students will be able to:

**CO1:** Find appropriate idealizations for converting real world problems into AI problems formulated using the appropriate search algorithm.

**CO2:** Formulate and implement the appropriate search algorithms to find the solutions for real time and heuristics problems.

**CO3:** Represent and debug knowledge in an appropriate first order logic representation with the understanding of the fundamentals of knowledge representation.

**CO4:** Choose and Implement the appropriate algorithms for a real world supervised learning problem.

**CO5:** Inculcate the basic knowledge of Robotics along with the Artificial Intelligence

TOPICS COVERED:

UNIT: 1 – Introduction to AI, Informed Search and Exploration 10 Hours

Intelligent Agents: Agents and environment; Rationality; the nature of environment; the structure of agents. Problem-solving: Problem solving agents; Example problems; Searching for solution; uninformed search strategies.

Informed search strategies; Heuristic functions; On-line search agents and unknown environment.

UNIT: 2 - Constraint Satisfaction, Adversial Search, Logical Agent 10 Hours

Constraint satisfaction problems; Backtracking search for CSPs. Adversial search: Games; Optimal decisions in games; Alpha-Beta pruning. Knowledge-based agents; The wumpus world as an example world; Logic; propositional logic Reasoning patterns in propositional logic; Effective propositional inference; Agents based on propositional logic.

UNIT: 3 - First-Order Logic, Inference in First-Order Logic:  
Hours

12

Representation revisited; Syntax and semantics of first-order logic; Using first-order logic; Knowledge engineering in first-order logic. Propositional versus first-order inference; Unification and lifting; Forward chaining; Backward chaining; Resolution.

UNIT: 4 - Knowledge Representation and Learning, AI: Present and Future 10 Hours

Ontological engineering; Categories and objects; Actions, situations, and events; Mental events and mental objects; The Internet shopping world; Reasoning systems for categories; Reasoning with default information; Truth maintenance systems.

Learning: Forms of Learning; Inductive learning; Learning decision trees; Ensemble learning; Computational learning theory. AI: Present and Future: Agent components; Agent architectures; Are we going in the right direction? What if AI does succeed? Game theory.

UNIT: 5 – Introduction to Robotics :

10 Hours

Introduction; Robot Hardware: sensors and Effectors; Robotic Perception: localization, mapping, other types of perception; Planning to Move: configuration space, cell decomposition methods and skeletonization methods; Planning uncertain movements: robust methods; Moving: dynamics and control, potential field control and reactive control; Robotic Software: architectures, subsumption architecture , three-layer architecture and robotic programming languages ; Application domains.

#### TUTORIALS:

1. Program to design tic-tac-toe game.
2. Program for breadth first and depth first search.
3. Program to N-Queens Problem.
4. To implement max-min problem.
5. To implement simulated Annealing Algorithm.
6. Write a program to implement A\* program.
7. To implement Hill-Climbing Algorithm.

Text Book / References:

Text Book:

1. Stuart Russel, Petr Norvig: Artificial Intelligence A Modern Approach, 2nd Edition, Pearson Education, 2003.

Course Code: ET-22  
 Course Name: NOSQL

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Upon successful completion of this course, students will be able to :

- CO1:** Demonstrate competency in describing how NoSQL databases differ from relational databases from a theoretical perspective.
- CO2:** Demonstrate competency in designing NoSQL database management systems
- CO3:** Use of a number of NoSQL databases to store and retrieve data and perform aggregation functions
- CO4:** Demonstrate competency in selecting a particular NoSQL database for different applications.
- CO5:** Execute various CRUD operations with MongoDB.

**TOPICS COVERED:**

**UNIT 1 – An Overview and Characteristics of NoSQL      10 Hours**

Introduction to NoSQL : An Overview of NoSQL , Defining NoSQL, History, What NoSQL is and what it is not, Why NoSQL?, List of NoSQL Databases. Characteristics of NoSQL: Application, RDBMS approach, Challenges, NoSQL approach.

**UNIT 2 – NoSQL Storage Types      12 Hours**

Modifying and managing NOSQL, Data stores, Indexing and ordering datasets (MongoDB/ CouchDB / Cassandra) NoSQL Storage Types : Storage types, Column-oriented databases, Document store, key-value store, graph store, multi-storage type databases, comparing the models.

**UNIT 3 – Advantages and Drawbacks      10 Hours**

Advantages and Drawbacks : Transactional application, Computational application, Web-scale application. Performing CURD operations : Creating records, accessing data, updating and deleting data.

**UNIT 4 - Querying SQL      10 Hours**

Querying NoSQL stores : similarities between NoSQL and MongoDB query features. Managing data stores and managing evolutions.

## UNIT 5 – Indexing and Ordering 10 Hours

Indexing and ordering data sets: Essential concepts behind database index, indexing and ordering in MongoDB, indexing and ordering in CouchDB, Comparative Study of NoSQL Products Comparison: Technical comparison, Implementation language, Engine types, Speed, Features, Limits, Bulk operations, Bulk read, Bulk insert, Bulk update, Bulk delete, Query options.

### TUTORIAL

#### Case Study

1. Application definition, Requirement analysis, Implementation using MongoDB, Features and constraints.
2. Database design, Database queries, Database modeling, Schema definition, Writing queries.
3. Queries for a single entity, simple result, Queries for a single entity, Aggregate, Queries for a one to one relationship.
4. Queries for a one to many relationship, Queries for a many to many relationship, Miscellaneous queries.
5. Pagination, Limiting items in an array in result set.
6. Plug-in and dynamic data support, Model refinements.
7. Reference using non-ID property, Demoralizations and document embedding.
8. Complete document embedding and Partial document embedding.
9. Bucketing, Cache document approach, Miscellaneous changes.

Course Code: ET-23

Course Name: Enterprise Resource Planning

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to,

CO1: Comprehend the basics and concepts of ERP

CO2: Apply different ERP related technologies

CO3: Implement ERP system by utilizing various concepts of ERP

CO4: Analyze different business models of ERP

CO5: Analyze the present and future trends of ERP.

**TOPICS COVERED:**

**UNIT 1 - Introduction 10 Hours**

Enterprise—An Overview, Business Processes, Introduction to ERP, Basics ERP Concepts, Justifying ERP Investments, Risks of ERP, Benefits of ERP.

**UNIT 2 - ERP and Technology 10 Hours**

ERP and Related Technologies, Business Intelligence (BI) and Business Analytics (BA), E-Commerce and E-Business, Business Process Reengineering (BPR), Data Warehousing and Data Mining, On-line Analytical Processing (OLAP).

**UNIT 3 - ERP and Technology 10 Hours**

Product Life Cycle Management (PLM), Supply Chain Management (SCM), Customer Relationship Management (CRM), Geographic Information System (GIS), Advanced Technology and ERP Security.

**UNIT 4 - ERP Implementation 10 Hours**

To be or not to be..., Implementation Challenges, ERP Implementation (Transition) Strategies, ERP Implementation Life Cycle, Pre Implementation Tasks: Getting Ready, Requirements Definition, Implementation Methodologies, ERP Development Methods, Process Definition, Contracts with Vendors, Consultants and Employees, Training and

Education, Data Migration, Project Management and Monitoring, Post-Implementation Activities, Success and Failure Factors of an ERP Implementation

UNIT 5 - The Business Modules      12 Hours

Business Modules of an ERP Packages, Financials, Manufacturing (Production), Human Resource Management, Plant Maintenance, Materials Management, Quality Management, Marketing, Sales, Distribution and Services.

## Semester III

Course Code: IT-31

Course Name: Mobile Applications

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Upon successful completion of this course, students will be to:

**CO1:** Gain broad understanding of the discipline of Mobile Application Development using J2ME Technology.

**CO2:** Develop User Interface for a J2ME application

**CO3:** Manage data on both service-side components and client-side applications and Address Portability and Compatibility issues between PDA'S and Cell phones.

**CO4:** Implement the design using Android SDK.

**CO5:** Implement the design using Objective C and Ios

TOPICS COVERED:

### Unit 1 - J2ME Overview, Architecture and Development Environment      12 Hours

Java 2 micro edition and the world of java, inside J2ME, J2ME and wireless devices. small computing technology: wireless technology , radio data networks, microwave technology, mobile radio Networks, messaging, personal digital assistants.

J2ME architecture, small computing device requirements, run time environment, midlet programming, java language for J2ME, J2ME software development kits, hello world J2ME style, multiple midlets in a midlet suite, J2ME wireless toolkit.

### Unit 2 - J2ME Best Practices and Patterns      10 Hours

The reality of working in a J2ME world, best practices commands, items, and event processing: J2ME user interfaces , display class, the palm OS emulator, C command class, item class, exception handling. high level display screens: screen class, alert class, form class, item class, list class, text box class, ticker class. low-level display canvas:

The Canvas, User Interactions, Graphics, Clipping Regions, Animation.

### Unit 3 - Record Management System 10 Hours

Record storage, writing and reading records, record enumeration, sorting records, searching records, record listener. JDBC objects: The concept of JDBC, JDBC driver types, JDBC packages, overview of the JDBC process, database connection, statement objects, result set, transaction processing, metadata, data types, and exception.

#### Unit 4 - Technology-I Android-12

10 Hours

Introduction – establishing the development environment – android architecture – activities and views

– interacting with UI – persisting data using SQLite – packaging and deployment – Interaction with server side applications – Using Google Maps, GPS and Wifi – Integration with social media applications.

#### Unit 5 - Technology-II IOS-12

10 Hours

Introduction to objective C – iOS features – UI implementation – Touch frameworks – Data persistence using Core Data and SQLite – Location aware applications using Core Location and Map Kit – Integrating calendar and address book with social media application – Using Wifi - iPhone marketplace.

Course Code: IT-32

Course Name: Software Testing and Practices

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Course Description:

Upon successful completion of this course, students will be able to: CO1: Gain knowledge on basics of Software Testing, Test case selection and creation . CO2: Illustrate various perspectives of testing with examples. CO3: Use by differentiating boundary value testing, Equivalence class testing, Decision table based testing. CO4: Implement Path testing and Data flow testing based on the requirements CO5: Comprehend different levels of testing, Integration testing and Fault based testing.
TOPICS COVERED:

UNIT 1- Basics of Software Testing 12 Hours

Humans, Errors and Testing, Software Quality; Requirements, Behavior and Correctness, Correctness Vs Reliability; Testing and Debugging; Test Metrics; Software and Hardware Testing; Testing and Verification; Defect Management; Execution History; Test Generation Strategies; Static Testing; Test Generation from Predicates.

Basic Principles, Test case selection and Adequacy

Sensitivity, Redundancy, Restriction, Partition, Visibility and Feedback, Test Specification and cases, Adequacy Criteria, Comparing Criteria

UNIT 2- A perspective on Testing, Examples 8 Hours

Basic definitions, Test cases, Insights from a Venn diagram, Identifying test cases, Error and fault taxonomies, Level of testing, Examples: Generalized pseudocode, The triangle problem, theNextDate function, The commission problem, The SATM (Simple Automation Teller Machine) problem, The currency converter, Saturn windshield wiper.

UNIT 3 - Boundary value, Equivalence class and Decision table based testing 8 Hours

Boundary value analysis, Robustness testing, Worst-case testing, special value testing, Examples, Random testing, Equivalence classes, Equivalence test cases for triangle problem, Next Date function and commission problem, Guidelines and observations, Decision tables, Test cases for triangle problem.

UNIT 4 - Path Testing, Data flow testing, Levels and Integration Testing 12 Hours

DD Paths, Test coverage metrics, Basis path testing, guidelines and observations, Definition Use testing, Slice based testing, Guidelines and observations. Traditional view of testing

levels, Alternative life cycle models, the SATM systems, separating integration and system testing, Guidelines and observations.

#### UNIT 5 - Fault Based Testing

12 Hours

Assumptions in fault-based testing, Mutation Analysis, Fault-based Adequacy Criteria; Variations on mutation Analysis; From Test case specification to Test Cases, Scaffolding, Generic vs specific Scaffolding, Test Oracles, Self checks as oracles, Capture and Replay.

#### Agile Testing

Definition and description, how is it different from traditional testing, ten principals for testers, business-facing the test that support the testing.

Course Code: IT-33

Course Name: Cloud Computing

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

CO1: Interpret the basic concepts, principles and techniques of data mining.

CO2: Apply knowledge discovery techniques while mining the data; recognize & fixing the issues in data mining.

CO3: To apply the techniques of clustering, classification, association finding, feature selection and visualization of real world data.

CO4: Demonstrate the real world problem has a data mining solution.

CO5: Apply evaluation metrics to select data mining techniques.

**Topics Covered:**

**UNIT 1- Introduction to Cloud Computing**

11 Hours

Defining Cloud Computing, Cloud types, The NIST model, The Cloud Cube Model, Deployment models, Service models, Examining the Characteristics of Cloud Computing, paradigm shift, Benefits of cloud computing, Disadvantages of cloud computing, Assessing the role of open standards. Assessing the Value Proposition: Measuring the Cloud's Value, Early adopters and new application, The laws of clouconomics, Cloud computing obstacles, Behavioral factors relating to cloud adoption, Measuring cloud computing costs, Avoiding Capital Expenditures, Right-sizing, Computing the total cost of ownership, Specifying service level agreements, Defining licensing models. Understanding Cloud Architecture: Exploring the cloud computing stack, Composability, Infrastructure, Platforms. Virtual Appliances, Communication Protocols, Applications, Connecting to the Cloud, The Jolicloud Netbook OS, Chromium OS: The browser as an Operating System.

**UNIT 2- Understanding Service and Application by Type**

10 Hours

Defining Infrastructure as a service (IaaS), Defining Platform as a Service (PaaS), Defining Software as a Service (SaaS), Defining Identity as a Service (IDaaS), and Defining Compliance as a Service (CaaS). Understanding Abstraction and Virtualization: Using Virtualization technologies, Load Balancing and Virtualization, Understanding Hypervisors,

Understanding Machine Imaging, Porting Applications. Capacity Planning: Capacity Planning, Defining Baseline and Metrics, Network Capacity, Scaling.

UNIT 3 - Exploring Platform as a Service

10 Hours

Defining Services, Using PaaS Application Frameworks Using Google Web Services: Exploring Google Applications, Surveying the Google Application Portfolio, Exploring the Google Toolkit, Working with the Google App Engine. Managing the Cloud: Administrating the Clouds, Cloud Management Products, Emerging Cloud Management Standards.

UNIT 4 - Understanding Cloud Security

10 Hours

Securing the cloud, Securing data, Establishing identity and Presence. Moving Application to the Cloud: Application in the Cloud, Applications and cloud APIs. Working with cloud-based storage: Measuring the digital universe, Provisioning Cloud Storage, Exploring Cloud Backup Solutions, Cloud Storage Interoperability.

UNIT 5: Using Webmail Services

10 Hours

Using Webmail Services: Exploring the cloud Mail Services, Working with syndication services. Communicating with the cloud: Exploring instant messaging, Exploring collaboration technologies, Using social networks. Working with Mobile Devices: Defining the Mobile Market, Using Smart phones with the Cloud.

Course Code: IT-34

Course Name: Data Warehousing

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

**CO1:** Design a data warehouse or data mart to present information needed by management in a form that is usable for management client & Comprehend several data preprocessing methods.

**CO2:** Ability to do Conceptual, Logical, and Physical design of Data Warehouse

**CO3:** Able to produce and document dimensional models for a data warehouse based on an informal domain description.

**CO4:** Utilize the concept of data warehouse and OLAP for data Warehousing and tools.

**CO5:** xtrapolate knowledge and skills to design a data warehouse to support and provide business solutions

**TOPICS COVERED:**

**Unit 1 - Introduction 12 Hours**

Introduction to Data Warehouse. A Multidimensional Data Model, Data Warehouse Architecture, Data Warehouse Implementation, Data Cube Technology, From Data warehousing to Data Mining. The need for data warehousing, paradigm shift, business problem definition, operational and informational data stores, characteristics. Overview of client/server architecture, server specialization in client/server computing environments, server functions, server hardware architecture, system considerations, risc versus cisc, multiprocessor systems.

**Unit 2 - Data Warehousing Components 10 Hours**

Overall Architecture, data warehouse database, sourcing, acquisition, cleanup and transformation tools, metadata, access tools, data marts, data warehouse administration and management. Business Considerations, design considerations, technical considerations, implementation considerations, benefits of data warehousing.

**Unit 3 - Mapping the data warehouse 10 Hours**

Relational database technology for data warehouse, types, database architectures for parallel processing, parallel RDBMS features, alternative technologies, parallel dbms vendors, data layouts for best access, multidimensional data models, bitmapped indexing, complex data types.

Unit 4 - Data Extraction, Cleanup and Transformation Tools 12 Hours

Tool requirements, vendor approaches, access to legacy data, vendor solutions, transformation engines. Meta data: defined, meta data interchange initiative, metadata repository, metadata management, implementation examples, meta data trends. Need for OLAP, OLAP Guidelines, Categorization of OLAP Tools.

Unit 5 - Business Analysis 08 Hours

Tool Categories, Need for applications, cognos impromptu, applications, methodology, business intelligence market definition, situation overview, future outlook, essential guidance.

Tutorials:

Case Studies:

1. Data Warehousing Solution for One of Europe's Largest Financial Services Groups.
2. Data Warehousing for a Health Benefits Company
3. Data warehousing solution for banking system.
4. Data warehousing solutions for tax fraud with advanced analytics.
5. Data warehousing solutions for international satellite TV service provider.
6. Data warehousing solutions for Correlating data across the business.
7. Business Reporting & Customer Information Datamart Architecture Setup & Roll-out for a global technology company.
8. Global Planning Data Automation.
9. COTS-Anti Money Laundering.
10. Management Information System for Trade Finance.

Course Code: IT-35

Course Name: NET Technologies

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, the student will be able to:

CO1: Develop application using the concept of .NET framework and basics of C# .NET. CO2: Create server side applications using C#.NET.

CO3: Develop web applications using the ASP.NET.

CO4: Comprehend ASP.NET web form, state management and error handling mechanism.

CO5: Access and manipulate data in a database by using Microsoft ADO.NET

**TOPICS COVERED:**

**UNIT 1 –Introduction to .NET and Basics of C#.NET 12 Hours**

The .NET Framework: The Evolution of Web Development-HTML and HTML Forms, Server-Side Programming, Client-Side Programming. The .NET Framework - C#, VB, and the .NET Languages, The Common Language Runtime, The .NET Class Library, Visual Studio. The .NET Languages, C# Language Basics, Case Sensitivity, Commenting, Statement Termination, Blocks, Variables and Data Types-Assignment and Initializes, Strings and Escaped Characters, Arrays, Enumerations, Variable Operations- Advanced Math, Type Conversions. Object-Based Manipulation- String, DateTime and TimeSpan Types, The Array Type. Conditional Logic-The if, switch Statement. Loops- The for, foreach, while loop, Methods-Parameters, Method Overloading, Optional and Named Parameters, Delegates.

**UNIT 2 – C#.NET Types, Objects, and Namespaces10 Hours**

The Basics About Classes-Static Members, A Simple Class, Building a Basic Class-Creating an Object, Adding Properties, Automatic Properties, Adding a Method, Adding a Constructor, Adding an Event, Testing the Product Class. Value Types and Reference Types-Assignment Operations, Equality Testing, Passing Parameters by Reference and by Value, Reviewing .NET Types. Understanding Namespaces and Assemblies- Using Namespaces, Importing Namespaces, Assemblies. Advanced Class Programming-Inheritance, Static Members, Casting Objects, Partial Classes, Generics.

### UNIT 3 - Developing ASP.NET Applications 10 Hours

Visual Studio: Creating Websites-Creating an Empty Web Application, Websites and Web Projects, The Hidden Solution Files, The Solution Explorer, Adding Web Forms, Designing a Web Page-Adding Web Controls, The Properties Window, and The Anatomy of a Web Form-The Web Form Markup, The Page Directive, The Doctype, The Essentials of XHTML. Writing Code-The Code-Behind Class, Adding Event Handlers, Outlining, IntelliSense, Code Formatting and Coloring, Visual Studio Debugging-The Visual Studio Web Server, Single-Step Debugging, Variable Watches, The Anatomy of an ASP.NET Application-ASP.NET File Types, ASP.NET Application Directories. Introducing Server Controls-HTML Server Controls, Converting an HTML Page to an ASP.NET Page, View State, The HTML Control Classes, Adding the Currency Converter Code, Event Handling, Error Handling

### UNIT 4 – ASP.NET Web Form Basics, State Management & Error Handling 10 Hours

ASP.NET Configuration- The web.config File, Nested Configuration, Storing Custom Settings in the web.config File, The Website Administration Tool (WAT), Web Controls-Basic Web Control Classes, The Web Control Tags, Web Control Classes, List Controls, Table Controls, Web Control Events and AutoPostBack, A Simple Web Page. The Problem of State-View State, Transferring Information Between Pages, Cookies, Session State, Session State Configuration, Application State, An Overview of State Management Choices. Error Handling, Logging, and Tracing-Common Errors, Exception Handling-The Exception Class, The Exception Chain, Handling Exceptions, Throwing Your Own Exceptions, Logging Exceptions, Page Tracing.

### UNIT 5 – ADO.NET Fundamentals 10 Hours

Understanding Databases, Configuring Your Database-SQL Server Express, Browsing and Modifying Databases in Visual Studio, The *sqlcmd* Command-Line Tool. SQL Basics - Running Queries in Visual Studio, The Select, Update, Insert, Delete statement. The Data Provider Model: Direct Data Access-Creating a Connection, The Select Command, The DataReader, Putting It All Together, Updating Data. Disconnected Data Access-Selecting Disconnected Data, Selecting Multiple Tables, Defining Relationships. Introducing Data Binding-Types of ASP.NET Data Binding, How Data Binding Works, Single-Value Data Binding, Repeated-Value Data Binding, Data Source Controls.

Course Code: IT-36

Course Name: Cryptography and Network Security

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Upon successful completion of this course, students will be able to:

**CO 1:** Explore the need for computer security concepts.

**CO 2:** Apply the principles and techniques of symmetric key encryption and public key encryption.

**CO 3:** Demonstrate the specifics of message authentication codes and hash algorithms.

**CO 4:** Analyze the facts of e-mail security and IP security evolution.

**CO 5:** Comprehend Web Security, Secure Electronic Transaction, Intruder detection and Firewalls.

TOPICS COVERED:

#### UNIT 1 – Introduction and Classical Encryption Technique

9 Hours

Computer Security Concepts, OSI Security Architecture, Security Attacks, Security Services, Security Mechanism, Model for Network Security. Symmetric Cipher Model, Substitution Techniques, Transposition Techniques.

#### UNIT 2 - Block Ciphers, Public Key Cryptography and Key Management

11 Hours

Traditional Block Cipher Structure, The Data Encryption Standard, A DES Example, The strength of DES, Block Cipher Design Principles, AES Structure, AES Transformation Functions, AES Key Expansion, An AES Example, Principles of Public Key Cryptosystem, The RSA Algorithm, Key Management, Diffie Hellman Key Exchange.

#### UNIT 3 - Cryptographic Hash Functions, Message Authentication Codes

12 Hours

Applications of Cryptographic Hash Functions, Message Authentication, Digital Signatures, Two Simple Hash Functions, Requirements and Security, Security Requirements for Cryptographic Hash Functions, Brute-Force Attacks, Cryptanalysis, Hash Functions Based on Cipher Block Chaining, Secure Hash Algorithm (SHA), SHA-3, Message Authentication Requirements, Message Authentication Functions, Requirements for Message Authentication Codes, Security of MACs.

UNIT 4 – Electronic Mail Security and IP Security

10 Hours

Pretty Good Privacy (PGP), S/MIME, IP Security Overview; IP Security Architecture; Authentication Header; Encapsulating Security Payload; Combining Security Associations.

UNIT 5 - User Authentication Protocols and Entity Authentication

10 Hours

Web Security Considerations; Secure Socket Layer (SSL) and Transport Layer Security (TLS); Secure Electronic Transaction (SET), Intruders, Intrusion Detection, Firewall Design Principles- Characteristics, Types of Firewall and Firewall Configuration.

Course Code: ET-31

Course Name: Soft Computing

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

Upon successful completion of this course, students will be able to,

**CO1:** Identify and describe soft computing techniques and their roles in building intelligent machines.

**CO2:** Recognize the feasibility of applying a soft computing methodology for a particular problem.

**CO3:** Apply fuzzy logic and reasoning to handle uncertainty and solve engineering problems.

**CO4:** Apply genetic algorithms to combinatorial optimization problems.

**CO5:** Apply neural networks to pattern classification and regression problems .

TOPICS COVERED:

#### UNIT 1 - Introduction 10 Hours

Artificial neural network: Introduction, characteristics- learning methods – taxonomy – Evolution of neural networks- basic models – important technologies – applications. Fuzzy logic: Introduction – crisp sets- fuzzy sets crisp relations and fuzzy relations: Cartesian product of relation – classical relation, fuzzy relations, tolerance and equivalence relations, non-iterative fuzzy sets. Genetic algorithm- Introduction – biological background – traditional optimization and search techniques – Genetic basic concepts.

#### UNIT 2 - Neural Networks 10 Hours

McCulloch-Pitts neuron – linear separability – hebb network – supervised learning network: perceptron networks adaptive linear neuron, multiple adaptive linear neuron, BPN, RBF, TDNN- associative memory network: auto- associative memory network, hetero-associative memory network, BAM, hopfield networks, iterative autoassociative memory network & iterative associative memory network – unsupervised learning networks: Kohonenself organizing feature maps, LVQ – CP networks, ART network.

#### UNIT 3 - Fuzzy Logic 10 Hours

Membership functions: features, fuzzification, methods of membership value assignments- Defuzzification: lambda cuts – methods – fuzzy arithmetic and fuzzy measures: fuzzy arithmetic – extension principle – fuzzy measures – measures of fuzziness -fuzzy integrals –

fuzzy rule base and approximate reasoning : truth values and tables, fuzzy propositions, formation of rules-decomposition of rules, aggregation of fuzzy rules, fuzzy reasoning- fuzzy inference systems-overview of fuzzy expert system-fuzzy decision making.

#### UNIT 4 – Genetic Algorithm 10 Hours

Genetic algorithm and search space – general genetic algorithm – operators – Generational cycle – stopping condition – constraints – classification genetic programming – multilevel optimization – real life problem- advances in GA.

#### UNIT 5 – Hybrid Soft computing Techniques and Applications 12 Hours

Neuro-fuzzy hybrid systems – genetic neuro hybrid systems – genetic fuzzy hybrid and fuzzy genetic hybrid systems – simplified fuzzy ARTMAP – Applications: A fusion approach of multispectral images with SAR, optimization of traveling salesman problem using genetic algorithm approach, soft computing based hybrid fuzzy controllers.

#### TUTORIALS:

Solving simple programs using MATLAB in the following areas:

1. FUZZY Logic techniques.
2. Neural networks techniques.
3. Genetic Algorithm techniques.
4. Hybrid Soft Computing Techniques.

#### TEXT BOOKS / REFERENCES:

Text books:

Course Code: ET-32

Course Name: Big data Analytics

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be

**CO1:** Demonstrate the knowledge, significance structure and sources of Big Data.

**CO2:** Ability to think critically in making decisions based on data analytics, specific to Big Data.

**CO3:** Apply the technical skills in predicative and perspective modelling to support business decisions.

**CO4:** Comprehend decision tools and techniques for data streaming using various algorithms.

**CO5:** Demonstrate the Knowledge gained on mining social network data.

**TOPICS COVERED:**

**UNIT 1 - Introduction to Big Data**

**12Hours**

What is big data? Is the "big" part or the "data" part more important? How is big data different? How is big data more of the same? Risks of big data -why you need to tame big data -the structure of big data- exploring big data, most big data doesn't matter- filtering big data effectively -mixing big data with traditional data- the need for standards-today's big data is not tomorrow's big data. Web data: the original big data -web data overview -what web data reveals -web data in action? A cross-section of big data sources and the value they hold.

**UNIT 2 : Data Analysis**

**08 Hours**

Evolution of analytic scalability – convergence – parallel processing systems – cloud computing – grid computing – map reduce – enterprise analytic sand box – analytic data sets – analytic methods – analytic tools – cognos – microstrategy - pentaho. Analysis approaches – statistical significance – business approaches – analytic innovation – traditional approaches – iterative

**UNIT 3 - Mining Data Streams**

**10 Hours**

Introduction to streams concepts, stream data model and architecture, stream computing, sampling data in a stream, filtering streams, counting distinct elements in a stream, estimating

moments, counting oneness in a window, decaying window, realtime analytics platform(rtap) applications, case studies, real time sentiment analysis, stock market predictions.

#### UNIT 4 - Frequent Item sets and Clustering

10 Hours

Mining frequent itemsets - market based model – apriori algorithm – handling large data sets in main memory – limited pass algorithm – counting frequent itemsets in a stream – clustering techniques – hierarchical – k- means – clustering high dimensional data – clique and proclus – frequent pattern based clustering methods – clustering in non-euclidean space – clustering for streams and parallelism.

#### UNIT 5 : Frameworks and Visualization

10 Hours

Mapreduce – hadoop, hive, mapr – sharding – nosql databases - s3 - hadoop distributed file systems –visualizations - visual data analysis techniques, interaction techniques; systems and applications.

#### TUTORIALS

Case Studies:

1. Medicare and Medicaid Services : Integrity of health care data and secure payment processing.
2. Tesco PLC.
3. American Express Co.
4. Mobile Telecom Harnesses Big Data with Combined Actuate and Hadoop Solution.
5. Re-engineering a Telecom Market Share Analytical Application.
6. Telco Case Study: Vodafone and Argyle Data on using big data to combat fraud.
7. MTS India relies on HP Vertica in a highly competitive telecom market.
8. McLaren’s Formula One racing team : real time car sensor data during car races.

Course Code: ET-33

Course Name: SOFTWARE PROJECT MANAGEMENT

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to:

CO1: Comprehend software project management basics and approaches

CO2: Analyze different project management initiation techniques

CO3: Apply proper project planning and scheduling techniques

CO4: Execute software projects with efficient control mechanisms

CO5: Decide on closure of projects using standard and agile methodologies

**TOPICS COVERED:**

**UNIT 1 -Software Project Basics**

10 Hours

Introduction, Types of Software Projects, Classifications of Software Projects, Based on Software Development Life Cycle, Approach Driven, Maintenance, Web Application, Agile Development, Conclusion

Approaches to Software Project Management:Alignment of Software Engineering Methodology with Project Management Methodology, The Ad Hoc Methods-Based Approach, The Process-Driven Approach, So, What Is the Right Approach?, The Ad Hoc Approach, The Process-Driven Approach, But Is a Process-Driven Approach the Right Choice?, In a Process-Driven Approach: What Process and How Much?

Software Project Acquisition:From an External Client, The Request for Proposal, The Proposal, Negotiation, Contract Acceptance, From an Internal Client, The Feasibility Study, Preparing the Proposal, Finalizing the Proposal, Reference.

**UNIT2 -Software Project Initiation**

10 Hours

Introduction, Initiation Activities, Project Management Office-Level Activities, Identifying the Software Project Manager, Preparing/Handing Over the Project Dossier to the Software Project Manager, Coordinating Allocation of Project Resources, Assisting the Software Project Manager in Obtaining Necessary Service Level, Agreements from Departments in the Organization, Assisting the Software Project Manager with the Project Kickoff Meeting, Software Project Manager-Level Activities, Ensuring that Project Specifications Are

Complete, Reviewing Estimates and Revisions/Updates of Estimates, Identifying Necessary Resources and Raising Requests, Preparing Project Plans, Setting Up the Development Environment, Arranging for Project-Specific Skill Training, Organizing the Project Team, Training the Project Team on the Project Plans, Conducting a Project Kickoff Meeting, Arranging for a Phase-End Audit, Common Pitfalls in Project Initiation, Identifying the Wrong Software Project Manager, Identifying Inappropriate Resources, Incurring Delays in Software Project Initiation Activities.

#### UNIT3 -Software Project Planning 10 Hours

Introduction, Planning Defined, Plans Prepared in Software Project Management, The Project Management Plan, Resources, Skill Sets, Computer Systems, Project Management Method, The Configuration Management Plan, Naming Conventions, Change Management, The Quality Assurance Plan, The Schedule Plan, The Induction Training Plan, The Risk Management Plan, The Build Plan, The Deployment Plan, The User Training Plan, The Handover Plan, The Software Maintenance Plan, The Documentation Plan, Roles in Planning.

Scheduling: Introduction, The Initial Work Breakdown Structure, A Work Breakdown Structure with Predecessors Defined, A Work Breakdown Structure with Initial Dates, A Work Breakdown Structure with Resource Allocation, Scheduling in Practice, Graphic Representation of a Schedule

#### UNIT 4 -Software Project Execution 10 Hours

Introduction, Work Management, Work Registers, De-allocation, Configuration Management, Information Artifacts, Code Artifacts, Configuration Registers, Configuration Management Tools, Quality Management, Verification Techniques, Validation Techniques, Product Testing, Allocation of Quality Assurance Activities, Productivity Management, Stakeholder Expectations Management, Product Integration Management.

Software Project Execution Control: Introduction, Aspects of Control in Project Execution, Scope Control, Cost Control, Schedule/Progress Control, Quality Control, Effort Control, Productivity Monitoring, Control Mechanisms, Progress Assessment: Earned Value Analysis.

#### UNIT 5 - Software Project Closure 12 Hours

Introduction, Identifying Reusable Code Components, Documenting the Best Practices, Documenting the Lessons Learned, Collecting/Deriving and Depositing the Final Project Metrics in the Organizational Knowledge Repository, Conducting Knowledge-Sharing Meetings with Peer Software Project Managers, Depositing Project Records with the Project Management Office, Depositing Code Artifacts in the Code Repository, Conducting the Project Postmortem, Releasing the Software Project Manager, Closing the Project, The Role of the Organization in Project Closure, The Project Management Office, The Configuration Control Board, The Systems Administration Department, Reference.

Agile Project Management: Introduction, Project Management Roles, Agile Project Management Characteristics, Metaphor, Teamwork and Collaboration, Guiding Principles, Open Information, Use a Light Touch, Monitoring and Adjustment, The Nuts and Bolts of Agile Project Management, Planning the Work, Controlling the Work, Process Improvement, Reference.

#### TUTORIALS:

Writing Cases for the following.

1. Writing requirement Proposal.
2. Writing Negotiation Proposal.
3. Writing Feasibility Study Proposal.
4. Software Project Planning Proposal.
5. Software Project Execution Control Proposal.
6. Writing Schedules
7. Software Project Closure

#### TEXT BOOKS / REFERENCES:

Text books:

Course Code: BM-41

Course Name: BUSINESS INTELLIGENCE

Credit Scheme			Evaluation Scheme				
Lecture	Practical	Credit	Internal			External	Total
			Written	Practical	Tutorial		
4 Hrs./Week	-	4	30		-	70	100

**COURSE OUTCOMES:**

Upon successful completion of this course, students will be able to,

CO1: Comprehend the basics and fundamentals of BI with its business and technical needs

CO2: Use the requirements and architectural framework of BI

CO3: Know and differentiate different components of the BI framework

CO4: Design BI concepts by understanding the requirement needs

CO5: Analyze and implement advanced BI techniques and analytics

**TOPICS COVERED:**

**UNIT 1-The Business Demand for Data, Information, and Analytics**

**10 Hours**

Just One Word:Data, Welcome to the Data Deluge, Data Volume, Variety, and Velocity, Taming the Analytics Deluge, The Importance of Analytics, Analytics Challenge, Analytics Strategy, Too Much Data, Too Little Information, The Difference Between Data and Information, The Role of BI in Creating Actionable Information, The Information Backbone, Data Capture versus Information Analysis, The Roles of BI and Operational Systems, Operational BI Blurs the Lines, Where Data Warehousing Fits in, The Five Cs of Data, Common Terminology from Our Perspective, References.

Justifying BI: Building the Business and Technical Case:Why Justification is Needed, Building the Business Case, Review Organization's Business Initiatives and Processes, Solicit BI Sponsorship, Enlist BI Stakeholders, Identify Business Processes Affected by BI, Document Business Benefits, Determine Business Value(Tangible Benefits), Business the Technical Case, Technology and Product Short Lists, Convincing Business People, Convincing the Technologists, Assessing Readiness, Data and Data Quality, Expertise and Experience, Organizational and Cultural Change, Financial and Resource Commitment, Creating a BI Road Map, Developing Scope, Preliminary Plan and Budget, Project Scope, Project Plan, Project Budget, Calculating Benefits and ROI, Obtaining Approval, Common Justification Pitfalls, Overzealous Business Sponsor, CIO is Sole Sponsor, Intangible or Too High-Level Benefits, Confusion Between BI Technology and Business Value.

**UNIT 2-Defining Requirements-Business, Data and Quality**

**10 Hours**

The Purpose of Defining Requirements, Goals, Deliverables, Roles, BI Team Participants, Business Participants, Other IT Participants, Defining Requirements Workflow, Business Requirements, Data (and Data Quality) Requirements, Functional Requirements, Regulatory/Compliance Requirements, Technical Requirements, Reverse Engineering (When Necessary), Putting It All Together, Prioritizing Requirements, Interviewing, Preparation for Interviews, Conducting the Interviews, Reviewing Interview Content, Interview Follow-ups, Documenting Requirements.

Architecture Framework: The Need for Architectural Blueprints, Architectural Framework, Information Architecture, Data Architecture, The Rise of the Enterprise Data Warehouse, Data Warehousing Replaces the Data Warehouse, Technical Architecture, Business Intelligence, Data Warehouse and BI Data Stores, Data Integration, Source Systems, BI Technology Keeps Evolving, Product Architecture, Metadata, What is It?, What to do About It, Security and Privacy, Getting Started, Implementing the Plan, Avoiding Accidents with Architectural Planning, The Signs of Accidental Architectural Planning, Recovering from an Accidental Architecture, Do Not Obsess over the Architecture.

#### UNIT 3-Information Architecture

10 Hours

The Purpose of an Information Architecture, Data Integration Framework, DIF Information Architecture, Data Preparation, Data Franchising, BI and Analytics, Data Management, Metadata Management, Operational BI versus Analytical BI, Shift All Reporting to the Application-Specific Environment, Shift All Reporting to the DW- Based BI Environment, Blend Application-Specific and DW BI Environments, Master Data Management, Identify the Data, Find the Problem Areas, Assess a Solution.

Data Architecture: The Purpose of a Data Architecture, History, Prehistory, In the Beginning, Data Warehousing Goes Public, The Data Mart, Multiple Data Marts, Operational Data Store (ODS), Federated DWs, BI Accidental Architecture, Hub-and-Spoke, Data Architectural Choices, Data Categories, Selecting a Data Architecture, The Same But Different, Analytical Data Architecture (ADA), Data Integration Workflow, Data Integration Workflow— Hub-and-Spoke, Data Workflow of the System of Integration (SOI), Data Workflow of the System of Analysis (SOA), Data Workflow— Rise of EDW Again, Operational Data Store, The Relational for an ODS, ODS Reexamined, ODS is Dead, Long Live ODS, References.

#### UNIT 4-Technology & Product Architectures

10 Hours

Where are the Product and Vendor Names?, Evolution Not Revolution, Technology Platforms, Enterprise Applications, Data Management, Technology Architecture, Business Intelligence and Analytics, Information Access and Data Integration, Databases, Product and Technology Evaluations, BI Product Vendors, Dazed and Confused, Technology and Product Evaluations, Product Migration.

Business Intelligence Applications: BI Content Specifications, Revise BI Applications List, BI Personas, Casual Consumers, Analyst, Power Users, Data Scientists, BI Design Layout—

Best Practices, Focus on the Purpose, Design Layout, Data Design for self-Services BI, The Last Data Preparation Step, When Inconsistency is Reintroduced, OLAP Cubes and In-Memory Columnar Databases, Matching types of analysis to Visualizations, Comparative Analysis, Time-series or Trending Analysis, Contribution Analysis, Correlation Analysis, Geographic Data, Distribution Analysis.

#### UNIT 5-BI Design and Development

12 Hours

BI Design, BI User Interface(UI) Standards, Create Privacy, Security and Access Standards, Designing Each BI Application, BI Development, Prototyping Lifecycle, BI Application Development Tasks, BI Application Testing.

Advanced Analytics: Advanced Analytics Overview and Background, The Window to the Future, Don't Ignore the Past, Advanced Analytics in Action, Predictive Analytics and Data Mining, Setting Up a Predictive Analytics or Data Mining Program, Tasks for Developing and Using Models, Selecting Tools, Architecture for Predictive Analytics and Data Mining, Techniques for Predictive Analytics and Data Mining, Resources and Skills, Roadblocks to Success, Analytical Sandboxes and Hubs, Analytical Sandboxes, Analytical Hubs, Hub and Sandbox Design Principles, Hub and Sandbox Architecture Options, Advice for Hubs and Sandboxes, Big Data Analytics, Scope, The Program, Hybrid Architecture, The Big Data Team, Big Data Analytics Worst Practices, Data Visualization, Why Data Visualization is Needed, Why Data Visualization is Not, References.

#### TUTORIALS:

1. Case study on requirement specification.
2. Defining a requirement workflow.
3. Writing technical requirement specification.
4. Prioritizing the requirements.
5. Writing a BIE roadmap.
6. Writing & Defining scope objectives & outcomes.
7. Writing a plan & budget.
8. Writing Data Management techniques.
9. Creating data marts & operational data stores.
10. Creating OLAP Cubes.

# MASTER OF SOCIAL WORK

---

MSW

## **SYLLABUS**

**CREDIT BASED, CHOICE BASED CONTINUOUS ASSESSMENT PATTERNED  
EDUCATION SYSTEM**

(Regulations, Scheme of Examination and Course Content)

To be effective from the Academic Year 2022-23

**DEPARTMENT OF STUDIES IN SOCIAL WORK  
JSS COLLEGE OF ARTS, COMMERCE AND  
SCIENCE, OOTY ROAD, MYSORE**

# JSS College of Arts, Commerce and Science

(Autonomous)

Ooty Road, Mysore

## Master of Social Work Programme

### DISTRIBUTION OF COURSE CONTENT AND CREDITS

MSW- I Semester

Compulsory additional papers for non BSW students

Sl. No.	Code No.	Paper Title	L	T	P	Credits
1	NSW-1	Social Science Perspectives for Social Work Practice	-	-	-	-
2	NSW-2	Term Project	-	-	-	-

1. A bridge course will be conducted for a period of 5 days covering the required course input. There are no credits allotted to this course and no written examination too. However, attendance of 75% is compulsory.

2. Paper code: NSW2 : **Term project:**

The term project is a team-exercise consisting 3 to 5 students. The team is expected to select a theme relevant to current social issues in consultation with the supervisor and make an exhaustive survey of literature on the chosen theme including empirical studies made on the same.

Further, the group shall also collect the experiences or opinions of people on the issues and make a detailed presentation. Flexibility is accorded in planning and executing the term project. Creative and analytical approaches are to be carried out under the direct supervision of a faculty supervisor.

The report of the term project has to be submitted before the end of theory examination of the first semester. The term project is offered only for the non-BSW students. However, students with BSW background are also encouraged to opt for the term project, as an innovative approach in social work, if they desire so.

### **DISTRIBUTION OF CREDITS**

<b>Sl. No.</b>	<b>Course Type</b>	<b>Credits</b>
<b>1</b>	<b>HARD CORE (HC)</b>	<b>52</b>
<b>2</b>	<b>SOFT CORE (SC)</b>	<b>20</b>
<b>3</b>	<b>OPEN ELECTIVE (OE)</b>	<b>04</b>
	<b>TOTAL</b>	<b>76</b>

**Semester- wise Distribution of Course Content and Credits**

**I Semester**

<b>Sl. No.</b>	<b>Course Code</b>	<b>Course Title</b>	<b>L:T:P</b>	<b>Credits</b>
1.	SWA HC-1	Social Work - History and Ideologies	2:1:0	3
2.	SWA HC-2	Work with Individuals and Families	2:1:0	3
3.	SWA HC-3	Work with Groups	2:1:0	3
4.	SWA HC-4	Work with Communities	2:1:0	3
5.	SWA HC-5	Human Growth and Development	2:1:0	3
6.	SWA HC-6	Social Work Practicum – I	0:1:2	3
		<b>Total</b>		<b>18</b>

## II Semester

<b>Sl. No.</b>	<b>Course Code</b>	<b>Course Title</b>	<b>L:T:P</b>	<b>Credits</b>
1.	SWB HC-7	Management of Developmental and Welfare Services	2:1:0	3
2.	SWB HC-8	Social Work Research and Statistics	2:1:0	3
3.	SWB HC-9	Social Work Practicum – II ( Social Work Camp and Summer Placement)	0:0:3	3
4.	SWB HC-10	Social Work Practicum - III	0:1:2	3
5.	SWB SC-1	Communication and Counselling / Gandhian Approach to Welfare and Development	3:1:0	4
6.	SWB SC-2	Personal and Professional Growth/ Population and Environment	2:1:0	3
			<b>Total</b>	<b>19</b>

### III Semester

Sl. No.	Course Code	Course Title	L:T:P	Credits
1.	SWC HC-11	Human Resource Management	2:1:0	3
2.	SWC HC-12	Social Work Practicum – IV	0:1:2	3
3.	SWC SC-3	Social Work with Tribal and Rural communities/Organizational Behavior and Organizational Development	2:1:0	3
4.	SWC SC-4	Preventive and Social Medicine and Medical Social Work /Rehabilitation and After Care Services	2:1:0	3
5.	SWC SC-5	Social Policy, Planning and Development/ Legal System in India	2:1:0	3
6.	SWC OE	Gerontological Social Work / Social Work Practice with Children	4:0:0	4
			<b>Total</b>	<b>19</b>

#### IV Semester

Sl. No.	Course Code	Course Title	L:T:P	Credits
1	SWD HC-13	Employee Relations and Legislation	2:1:0	3
2	SWD HC-14	Mental Health and Psychiatric Social Work	2:1:0	3
3	SWD HC-15	Major Project	0:2:4	6
4	SWD HC-16	Social Work Practicum – V	0:1:2	3
5	SWD HC-17	Social Work Practicum – VI ( Block Placement)	0:0:2	2
6	SWD SC-6	Human Resource Development and Employee Wellness/Case Studies	3:1:0	4
			<b>Total</b>	<b>21</b>

**Note:** In a Semester for only one Soft Core Course, there can be two choices.

#### **Objectives of the Course (Master of Social Work):**

1. To provide education and training in social work to those desirous of making a career in social work practice.
2. To provide opportunities through intensive field practicum to work with variety of people in their development and provide service to those who are in need of it.
3. To provide inter-disciplinary collaboration for better understanding of human problems, services and issues related to human development.
4. To link theory with practice in every sphere of human service.
5. To develop requisite knowledge, skills and values in working with people.
6. To promote among learners a sense of responsibility and commitment to work with different sections of people and especially of the vulnerable sections of the society
7. To promote opportunities and to create awareness for personal growth
8. To acquire knowledge and skills in undertaking practice-based research and to administer human service organizations

**Name of the Course:**

The course shall be called ' **Master of Social Work**' (MSW).

**Duration of the Course:**

The Course of study **for MSW Degree** shall extend over a period of four semesters spreading over two academic years.

**Regulations:**

**ELIGIBILITY FOR ADMISSION TO MSW COURSE**

Candidates who have passed BSW/ BA/ B.Sc. / B.Com. / BBM/ B.C.A / LLB of the University of Mysore or any other university recognized as equivalent there to are eligible for admission to MSW course. Candidates will be selected for admission as per the general guidelines issued from the University of Mysore from time to time. The Department/University shall conduct entrance examination for admission to the course.

The examination is of two hour duration and the question paper comprises of 100 objective type questions - 20% questions from general knowledge and current social issues, 60% from science & social sciences, and another 20% questions will be from reasoning and numerical ability. Merit will be assessed on the basis of performance in the entrance examination and performance in the undergraduate examination on equal weightage.

### **PATTERN OF QUESTION PAPER**

#### **Pattern 3**

(The Question paper comprising of 3 parts: A,B and C as follows)

#### **PART – A**

There are 8 questions and a candidate has to answer any 5 questions. Each question carries 2 marks. This part covers all units of the syllabus.

#### **PART – B**

There are 8 questions and a candidate has to answer any 5 questions. Each question carries 5 marks. This part covers all units of the syllabus.

#### **PART –C**

There is a single question such as case study (may contain sub questions) covering entire syllabus carrying 15 marks. No choice.

### **ASSESSMENT OF SOCIAL WORK PRACTICUM**

A viva-voce examination shall be conducted for each candidate in all semesters. The performance of the candidate shall be assessed by a committee consisting of three members as follows.

1. Chairperson of the Department
2. One Senior Member of the Faculty
3. One External Examiner

### **SOCIAL WORK PRACTICUM**

The practicum with different learning opportunities is designed to provide scope to develop and enhance professional practice skills. Learning is aided through observation, analysis of social realities and experience of participation in designing and providing social work intervention.

The tasks are organized to help the learner acquire beginning skills, practice those already acquired, and master them from simple to complex. The learner is gradually encouraged to become an independent worker during the course of study.

## Objectives

The objectives are met by providing a variety of experiences to learners to:

1.
  - i. Develop the ability to observe and analyze social realities. Understand the characteristics of social systems and their dynamics. Appreciate society's response to people's needs, problems and social issues.
  - ii. Develop critical understanding of the application of legislation, legal process, and social policy.
2.
  - i. Develop the ability to examine the process of programme management and participate in the effort at various levels.
  - ii. Develop the ability to recognize the need for newer programs, initiate and Participate in them.
  - iii. Use Human Rights tools, understanding of gender justice, and need for equity in all intervention.
  - iv. Develop an understanding of organizational structure, resource management, and day-to-day administration for human service programmes - developmental and welfare programmes
  - v. Develop the capacity to integrate knowledge and practice-theory by participating in intervention.
3.
  - i. Clarify and imbibe values which sustain positive attitude and professional ethics.
  - ii. Develop the capacity for self-direction, growth and change through self awareness.
4.
  - i. Enhance writing skills to document practice appropriately. Recordings to be viewed as an expression of interest, motivation and involvement in practice and as evidence of enrichment in the process of professional growth.

To meet these outcomes, several opportunities with specific objectives are designed. The different sets of opportunities with details of content and related tasks are listed separately.

**Paper code: NSW -1**

**Paper Title: SOCIAL SCIENCE PERSPECTIVES FOR SOCIAL WORK PRACTICE**

## **INTRODUCTION**

This course provides the learners basic understanding of relevant concepts from social sciences to help the learners to study and understand social phenomenon. Further, it helps the learner develop skills for social analysis and understand developmental processes.

## **OBJECTIVES**

- a. Understand the concepts to examine social phenomenon.
- b. Develop skills to analyse Indian society and change.
- c. Understand change and conflict.
- d. Understand the system for economic order.
- e. Develop skills for social analysis.
- f. Understand the development and its impact.

## **Course Content**

### **UNIT I**

Sociology and its relationship to other disciplines: Meaning, scope and significance - Its relationship with other social sciences such as History, Economics, Politics, Psychology, Anthropology and Social work.

Society and Culture: Society as a system of relationship - Social Structure: Meaning, status and roles - Culture: Meaning and contents-Tradition, customs, values, norms, folklore and mores.

Indian Society: Composition of Indian Society: the concept of unity amidst diversity - Social classification in India: Tribal, rural and urban divisions - Social stratification in India: Meaning, caste, class divisions.

Socialization: Meaning, process of socialisation - The development of self - Agencies of socialisation.

### **UNIT II**

Social Groups, Social Institutions and Social Control - Meaning and types: Primary and Secondary groups, in-groups and out-groups, reference groups - Types of social institutions: Marriage, Family, Religion, State and Law.

Meaning and Functions: Social Control exercised through the social institutions

Social Change: Meaning, characteristics and factors inducing change with reference to India.

Social Movements in India: Meaning, factors essential for a Movement - Dominant social movements in India - Social reform movement and contributions of social reforms - Peasant movement - Trade Union movement - Social movements and social change in India.

### **UNIT III**

Development - A Human Right Perspective: Social Ideals of Indian Constitution - Fundamental Rights - Human Rights.

Socio-economic order and comparative economic system: Capitalism, Socialism and Mixed economy, their features, merits and demerits - Marxian political economy.

Social Analysis: Significance of social analysis: A brief analysis of socioeconomic, political and cultural systems - Inter-linkages in the Indian context.

### **UNIT IV**

Under-development and its causes and Contemporary Development Dynamics: A historical overview with reference to developing countries of Asia, Africa and Latin America - North-south relations, world trades, Multinational corporations and their influences on Third World economics - Trends and counter trends (Paradoxes) in the global, political, economic, military, ecological and socio-cultural spheres.

Theories of Economic Development, Globalisation and its impact on Developing Countries: Stages of growth theory - Structural internationalist theory Privatization, liberalization and structural adjustment programmes - Role of international financial institutions.

### **TERM PROJECT**

The term project is a team-exercise consisting 3 to 5 students. The team is expected to select a theme relevant to current social issues in consultation with the supervisor and make an exhaustive survey of literature on the chosen theme including empirical studies made on the same.

Further, the group shall also collect the experiences or opinions of people on the issues and make a detailed presentation.

Flexibility is accorded in planning and executing the term project. Creative and analytical approaches are to be carried out under the direct supervision of a faculty supervisor.

The report of the term project has to be submitted before the end of theory examination of that semester to the Department of Social Work, University of Mysore, Mysore through the supervisor and Chairman/Principal of the college.

The term project is offered only for the non-BSW students. However, students with BSW background are also encouraged to opt for the term project, as an innovative approach in social work, is they desire so.

Evaluation of the term project will be done along with the viva-voce examination by the viva-voce committee, constituted for the assessment of social work practicum or similar committee may be constituted, if required.

**Paper Title: WORK WITH INDIVIDUALS AND FAMILIES**

## **INTRODUCTION**

This course aims to develop simple to complex skills of working with individuals and families in various situations like crisis, preventive, facilitative and developmental.

## **OBJECTIVES**

- a. Understand casework as a method of social work, and appreciate its place in social work practice.
- b. Understand the values and principles of working with individuals and families.
- c. Develop the ability to critically analyse problems of individuals and families and factors affecting them.
- d. Enhance understanding of the basic concepts, tools and techniques in working with individuals and families, in problem-solving and in developmental work.
- e. Develop appropriate skills and attitudes to work with individuals and families.

## **Course Content**

### **UNIT I**

Social case work: Definitions, scope, historical development - Influence of psychoanalysis on casework - Introduction of casework as a method of social work - Concepts of adjustment and maladjustment - Philosophical assumptions and casework values.

Principles of casework: Individualization, acceptance, non-judgmental attitude, participation, relationship, effective communication of feeling, client self-determination, and confidentiality.

Components of social casework: The person, the problem, the place and the process.  
Process in casework: Study, assessment, intervention, evaluation, follow-up, and termination.

### **UNIT II**

Types of problems faced by Individuals and families; individual differences and needs - Family assessment in casework practice.

Theories and approaches: Psycho-social approach, Functional approach, Problem-solving approach, Crisis Theory, Family intervention, Behavioural modification, Transactional analysis and Holistic approach.

### UNIT III

Tools for Help: Case work tools: Interview, home visit, observation, listening, communication skills, rapport building.

Records: Nature, purpose and principles of recording.

Techniques of casework: Supportive, resource enhancement and counseling.

Self as a professional: Professional self - Conflicts and dilemmas in working with individuals and families.

### UNIT IV

Application of Method: Primary and secondary settings - Application of methods in family, women, and child welfare settings, marriage counselling centres, schools settings, medical and psychiatric settings, correctional institutions, and industry.

**Paper Title: WORK WITH GROUPS**

## **INTRODUCTION**

This course aims at developing the understanding of Group Work as a method, developing skills for intervention, and gaining knowledge of the scope of this method in various settings.

## **OBJECTIVES**

- a. Develop awareness about the specific characteristics of Group Work and its contributions as a method of social work intervention,
- b. Gain knowledge about group formation and the use of a variety of group approaches.
- c. Develop understanding of concepts, dynamics and small group theory in relation to all types of groups, e.g. family, staff, committee, long-term client groups.
- d. Identify the various situations and settings where the method could be used in the context of social realities of the country.

## **Course Content**

### **UNIT I**

Introduction and history of Group Work: Understanding of groups - Characteristics and significance of group - Definition of Social Group Work - Characteristics of Social Group Work - Purpose of Social Group Work; Historical evolution of group work with special emphasis on the Indian Context.

Type of Groups: Types and approaches based on objectives and purpose - Type of membership - Time duration - Social group work in different settings and analysis of group processes.

Values and Principles in group work and Characteristics of Group formation: Values in social group work- Principles in group work - Assumptions underlying social group work - Factors of group formation - Formulation of goals - Identification of problems for work.

Pre-group and Initial Phase: Planning model - Characteristics of pre group phase - Group structures - Facilitation skills and role of worker in pre-group and initial phase.

## UNIT II

Group Processes and Group Dynamics: Importance of group processes - Typical patterns - Processes in different type of groups - Worker's skills in identifying and understanding processes - Bond, sub-groups, role.

Leadership - Isolation - Decision making - Conflict - Communication - Relationships.

## UNIT III

Middle Phase and Use of Program: Characteristics of middle phase - Group structures - Group dynamics - Facilitation skills - Role of group workers - - Comparison across phases - Concept and principles - Program planning - Skills in program planning

Facilitation: Knowledge of skills and techniques for effective work with groups/problem solving.

Recordings in Group work: Importance of recording in social group work - Principles of recording - Recording structure - Types of recording.

## UNIT IV

Evaluation in Groups and Termination Phase : Importance of evaluation - Types of evaluation - Methods of evaluation - Need for termination - Types of termination - Characteristics of termination phase - Worker's skills.

Application of Group Work: Application in health settings, school settings, family welfare settings, industrial settings, women and child welfare settings.

**Paper Title: WORK WITH COMMUNITIES**

## **INTRODUCTION**

Community organization / development, as a method of social work practice, is seen as a means to facilitate communities towards self-directed change. It takes as its basis the inequalities in society manifested through processes of marginalization, discrimination or disempowerment of groups, which have resulted in the loss of control over resources, be they tangible or intangible. The strategies of Community Organisation practice being addressed as part of the course cover a range spanning different ideologies, from those being people-initiated, and those that are initiated by the elite. Community organization is seen as a means as well as an end, where collective processes are to sustain the community's capacity to bring about change.

## **OBJECTIVES**

- a. Understand the critical elements of community organisation practice.
- b. Enhance critical understanding of the models and strategies for community organisation practice.
- c. Make the micro-macro connections between the range of complex issues in practice.
- d. Develop attitudes conducive to participatory activities for civil society.

## **Course Content**

### **UNIT I**

Community: Concept, characteristics, types and functions.

Understanding of community organisation practice: Definition of community organisation, values and principles of Community Organisations, ethics of community organisation practice.

Community Organisation Practice: Community work within social work, Understanding Human Rights in community organisation practice.

Historical development of community organisation practice.

Power: Concept of power - The range of perspectives - Dimensions of power relevant to community organization.

Empowerment: Concept of Empowerment - Barriers to, process and cycle of empowerment.

Gender and Empowerment: Gender sensitive community organization practice

## UNIT II

Models and Strategies of Community Organization - Locality Development Model - Social Planning Model - Social Action Model - Select methods of public interest mobilization, litigation, protests and demonstrations, Dealing with authorities, Public Relations, Planning, Monitoring and Evaluation - Roles in different models attributes and attitude.

## UNIT III

Community Organization as a Method: Relevance of community organisation as a method across different spheres of social work intervention and relook at own attitudes.

Skills of Community Organization Practitioner: Problem analysis, resource mobilization, conflict resolution, organizing meetings, writing and documentation, networking, training.

## UNIT IV

Strategy and Roles: Unionization as a strategy - Advocacy in community organization.

Current debates in Community Organisation Practice: Emerging issues - Impact of macro policies.

**Paper Title: HUMAN GROWTH AND DEVELOPMENT**

## **INTRODUCTION**

The course aims to introduce the learners to the development of the individual across the life span, in a system and an ecological perspective. It also provides an understanding of human development and behaviour, in contextual influences, including individuals in disadvantaged or special contexts. The theoretical inputs are to enhance the understanding of people's growth, health, and development at various stages as bio-psycho-socio-spiritual being over the life span.

## **OBJECTIVES**

- a. Develop an overall understanding of the principles of growth; their relevance and application to behaviour at various phases in the life span.
- b. Understand the twin roles of individual's heritage and environmental influences in growth and development.
- c. Understand interactional nature of growth and behaviour at various stages in the life span: infancy, childhood, adolescence, youth, adulthood and old age, and impact of cultural aspects.
- d. Develop sensitivity towards needs, developmental tasks and health status along with need for developmental programmes for the same.
- e. Apply the information of growth, development and health in social work practice in general and individuals, groups and communities in particular.

## **Course Content**

### **UNIT I**

Life Span: Beginning of life - Human reproductive system; Fertilization and Foetal development - Delivery and pre-natal and post-natal care and their importance in development.

Principles of growth and development - Methods of studying human behaviour, - Role of heredity and environment - Social customs traditions, values in parenting and child rearing practices, deprivation and development during stages of life span. Understanding of the Indian concept of life span stages.

### **UNIT II**

Developmental periods: Infancy, babyhood, childhood, puberty, adolescence -. Growth, hazards, lifestyle effects

Adulthood - Growth, personal and social adjustment, health, sexuality, vocational and marital adjustment.

Aging - Characteristics, hobbies, adjustment, physical and mental health, death, dying and bereavement.

Special focus is on psychosocial development, moral development, and personality development vis-a-vis the influence of the contexts of development., (The contexts here refers to gender, family, significant others, neighbourhood: peers, school, community, work place and other larger contexts like the society and culture. Emphasis is placed on the Indian context of development, variations from the

normal patterns of development and views on the stages)

### UNIT III

Theories of Human Development: A critical look at the theories of human development - Freud's psychosexual theory, Erikson's psychosocial theory, learning theories.

### UNIT IV

Basic human needs: Physical, psychological and intellectual needs, stress - Coping and social support.

Motivation, frustration and conflicts - Emotions and emotional behaviour.

Personality: Definition, nature, types and assessment of personality.

Intelligence: Concept, levels of intelligence, influence of heredity and environment, assessment of intelligence.

Relevance of Psychology to social work practice across the stages of development, period specific needs, tasks and challenges.

**Title: SOCIAL WORK PRACTICUM - I**

**Orientation** provides information regarding.

- i. the importance and place of the practicum in the educational programme.
- ii. the purpose, functions and ethics in professional practice.

In the first four weeks, the learners may make a local directory to include emergency numbers of Hospitals/ PHCs/ Police/ Panchayath Office and Network Agencies along with references to other developmental and welfare services in the location.

**Visits** - provide an exposure to and understanding of the services provided in responses to people's needs. (Agencies in health setting, education, community, institutional services, criminal justice system, civic administration, rehabilitation etc.)

**Structured experience laboratory** - is a classroom activity, which provides opportunities through the games/activities, to form the involvement of self in various practice skills. These laboratory experiences are designed in small groups to encourage participation, sharing of the experience and aid in examining learning and applications of skills. These sessions have a specific objective of experiencing self, and applying /using self in practice. (Relationship skills, Communication skills etc., will be focused)

**Concurrent practice learning of two-days a week** - on going learning of practice is an opportunity to develop intervention skills in reality situations. This entails learning social work practice for two, or two and a half days or its equivalent, each week of the semester.

The learners may be placed in agencies or in communities to initiate and participate in direct service delivery. Practice learning is a vital component of the educational opportunity to be provided to the learner. The teaching-learning process must be designed to help the learner to move on the mastering strategies, skills and techniques to practice social work.

Paper Title: MANAGEMENT OF DEVELOPMENTAL AND WELFARE SERVICES

### INTRODUCTION

The course aims to develop management competencies to function in organizations, participate as a team member and understand the role of a social work programmes manager.

### OBJECTIVES

- a. Understand the overall environment and its impact on the nature, structure and development of organizations in corporate, public and voluntary sectors in the context of social work profession.
- b. Understand policies and procedures involved in establishing and maintaining human service organizations.
- c. Acquire skills to network and participate in the management of resources - human, material and environmental.
- d. Develop skills to participate in management of programmes, as a part of the inter-disciplinary team and initiate as well as develop new programmes.
- e. Develop ability to analyse the practices applied in specific settings.

### Course Content

#### UNIT I

Social Services: Need for welfare and developmental organisations, Factors determining social welfare programmes, Development and Welfare organizations' response to societal needs; role of state, voluntary and corporate sector.

Management services: Types of settings, organizational characteristics like origin, nature, size, structure, and design, organizational climate and impact of socio-political environment - Management process: Vision, Planning, Organizing, Directing, Staffing, Coordination, Reporting, Budgeting.

Establishment: Registration, different types of legislations, legal status, constitution, rules and procedure, goals - Financial resources: Organizational Budget, Sources of finance, Fund Raising, Records, Audit.

#### UNIT II

Physical: All activities related to acquiring, hiring and maintaining importable structure and infrastructure, maintenance of premises and daily upkeep.

Enhancing the involvement and the potential of people in organization's executive boards, committees; professionals and other staff-relationship, communication, team work, and facilitating team building, supervision, and participation in training.

### **UNIT III**

Programme Development: Programme management: long term, short term, and Documentation.

Project proposals based on felt-needs, nature of resources, eligibility criteria, records, evaluation and research.

Impact analysis - Qualitative and quantitative.

### **UNIT IV**

Public Relations: Public relations need and its promotion by all in the organisation. Representing the organization, networking, public, corporate and voluntary sector, resource building, accountability, transparency, use of media for publicity.

Change and its Management: Understand and manage change, innovation in a rapidly changing social environment: for policy programmes and structure.

Organizational understanding: Conflict, conflict resolution, creating positive climate.

**Paper Title: SOCIAL WORK RESEARCH AND STATISTICS**

## **INTRODUCTION**

This course is to equip learners to utilize, and conduct research as service managers to improve services, evaluate, and develop new services and intervention methods: strategies and techniques and also, be an effective consumer of other researches.

## **OBJECTIVES**

- a. Develop an understanding of scientific approach to human inquiry in comparison to the native or common sense approach in various aspects, and its process.
- b. Understand major research strategies, meaning, scope and importance of social work research.
- c. Develop an ability to see the linkages between practice, research, theory and their role in enriching one another.
- d. Develop ability to conceptualize, formulate and conduct simple research projects/exercises (This would include a broad range of basic research skills such as conceptualization of a research strategy and problem; writing a research proposal; developing tools for collecting data; use of sampling, strategies; data collection, processing, presentation, analysis and interpretation; and writing research report etc).
- e. Make informed assessment and judicious use of research studies and findings.
- f. Develop skills for use of library and documentation services for research.

## **Course Content**

### **UNIT I**

Science - Meaning and assumptions, scientific approach in comparison to the native or common sense approach.

Scientific attitude; Scientific method; application of scientific method for the study of social phenomena.

Research: Definition and objectives, Social Work Research: Meaning, objectives, functions and limitations; Scope of social work research in India; Agencies sponsoring and conducting social work research, ethics in research.

Problem identification: Criteria for the selection of research problem; Problem formulation.

Concepts, constructs, variables, conceptual and operational definitions. Hypothesis: Meaning, importance, uses and requirements.

## **UNIT II**

Design of research: Definition and importance; types of research design; exploratory, descriptive, experimental, evaluative design, participatory research and action research.

Source and Types of Data: Primary and secondary, objective and subjective, qualitative and quantitative.

Sampling: Sample and population: Rationale and Characteristics of sampling; methods of sampling, general considerations in the determination of sample size.

Methods of collection of primary data:

Observation: Structured and unstructured; participant and non-participant. Questionnaire, interview schedule and interview guide. Pilot study and Pre-testing.

Scales: Need for scales, some prominent scaling procedures.

Case study: Meaning, uses, steps.

Secondary data: Official data, personal documents, problem in the use of secondary data

## **UNIT III**

Processing of data: Content, editing, coding data classification, manual and mechanical tabulation of data; frequency distribution, diagrammatic and graphic presentation - use of computers.

Issues related to Social Work Research: Interpretation of data, research reporting; contents of research report: foot-note, references, bibliography, preparation of abstract; the art of making book review.

## **UNIT IV**

Statistics: Definition, functions and importance

Measures of Central Tendency; Measures of Dispersion.

Chi-square, Correlation Coefficient, 't' distribution; Analysis of Variance and 'F' distribution.

SPSS package.

**Title: SOCIAL WORK PRACTICUM - II:**

**SOCIAL WORK CAMP:**

Rural/ Tribal camps with a duration of 7 - 10 days - provide opportunities to experience rural life, analyze rural dynamics, and observe the functioning of local self government and voluntary organisations. This experience aids peer participation in planning for activities for own group and those for local people. It also helps develop skills to carry out, evaluate, and report the experience.

**SUMMER PLACEMENT:**

Summer Placement - provides an opportunity to experience day-to-day work in a setting. The learner gets involved with direct practice with the client system and with the ongoing management operations of the setting. The time frame recommended for this experience is about three weeks, after the first year of the post-graduate programme. The learner may use the same setting for data collection of research project, if such an arrangement is part of the plan.

Code: SWBHC -10

**Title : SOCIAL WORK PRACTICUM - III**

Concurrent practice learning of two-days a week - on going learning of practice is an opportunity to develop intervention skills in reality situations. This entails learning social work practice for two, or two and a half days or its equivalent, each week of the semester. The learners may be placed in agencies or in communities to initiate and participate in direct service delivery. Practice learning is a vital component of the educational opportunity to be provided to the learner. The teaching-learning process must be designed to help the learner to move on the mastering strategies, skills and techniques to practice social work.

**Paper title: COMMUNICATION AND COUNSELING**

**INTRODUCTION**

This paper relates the relevance of components of communication and counseling in social work practice.

**OBJECTIVES**

- a. Understand the meaning and importance of communication in day-to-day life.
- b. Focus on interpersonal communication of interviewing and allied aspects.
- c. Develop holistic understanding of counseling as a tool for help.
- d. Acquire knowledge of various approaches: their theoretical under-pinnings for goals, values, processes and techniques,
- e. Develop skills of application to real life situations.

**Course Content**

**UNIT I**

Communication: Meaning and importance of communication.

Process of communication: Key elements in the communication process - Communication, message, audience; channel of communication. Verbal and non-verbal communication.

Basics of Communication.

Education and communication for national development.

Interpersonal communication: Interviewing - Objectives, principles of interviewing; listening, qualities of effective communicator.

Seminars, conferences, lectures, group discussion, panel discussion, symposium, workshop, role playing, simulation exercises, written communication, report writing, letter writing, article/essay writing, games, brain storming, street play, field work exposure.

## **UNIT II**

Visual aids in communication: Poster making, use of notice boards, flip charts, charts, flash cards, photographs, pamphlets, slide shows.

Mass Communication: Television, exhibition, newspapers and magazines, advertisements, radio, film, VCD/ DVD, e-mail, internet.

Impact of mass communication on society, family, marriage and child development.

Communication Analysis and Planning: Planning and executing a communication campaign on an issue using various methods of communication.

## **UNIT III**

Counseling: Definition, nature and goals, areas of counseling; Historical background and origins of counseling, ethical nature of counseling, qualities of an effective counselor.

Counseling Situations: Developmental, preventive, facilitative, and crisis.

Counseling and Psychotherapy - Skills in counseling - Establishing the relationship.

Process of Counseling.

Approaches to Counseling: Approaches; Theoretical base, thrust, goals, key concepts, techniques - Approaches like person-centered, rational-emotive, behavioural approaches, gestalt, existential approaches, Egans three stage model, eclectic model.

Indigenous Approach: Indigenous approaches of help and self-help like yoga, reflection. Act of Prayashchit.

## **UNIT IV**

Couple and Family Counseling: Issues in such counseling, its process and stages.

Crisis Counseling

Group Counseling: Counseling for groups - Process, advantages and disadvantages of group counseling.

Practice of counseling in family counseling centres, family courts, counseling bureau - Premarital and marital counseling, vocational counseling centres, mental health centres, child guidance clinics, correctional institutions, deaddiction and rehabilitation centres, educational institutions.

**Paper title: PERSONAL AND PROFESSIONAL GROWTH.**

## **INTRODUCTION**

The course aims at enhancing personal and professional effectiveness by developing a continuous awareness and deeper insight into one's being. It encourages value clarification, upholding of professional ethics, and ability to make effective choices for integration. It provides opportunities to understand stress, stressors and methods to handle stress experienced.

## **OBJECTIVES**

- a. Understand self as a being, as one in the process of becoming and experience self-awareness.
- b. Examine own values and attitudes and explore choices made to express self in own environment.
- c. Develop positive life skills and practice self-help methods for integration and for stress reduction.
- d. Understand and uphold professional values and ethics.

## **Course Content:**

### **UNIT I**

Self and Self Awareness: Understand self through a cognitive construct/paradigm (two/three models from among those available may be offered as workshops). Suggested approaches are: Rational Emotive Therapy, Gestalt Approach, Transactional Analysis, Reality Therapy, Yoga for Therapy, Meditation Techniques.

Explore self as being, and understand the process of becoming. (through observation)

Practice consciously measures to sustain and experience continuous awareness.

Observation and Reflection: Theory and techniques.

Communication Choices: Communication mode and patterns and effectiveness, Interpersonal communication, nature of choices made.

## UNIT II

Emotions and their Expression: Emotions, nature of expression.

Understand own pattern of communication, choices made to express emotions, modes used, examine need for change.

Communication: Informal and knowledge and skills of rapid reading, writing, creative writing, report writing and public speaking.

## UNIT III

Creativity and Self: Understand brain functions: Creativity, need and development

Life Style: Conscious life style - enhanced life skills: Communication, decision making, empathy, critical thinking, use of time and money, building and sustaining bonds-relational, collegial and personal.

Self defeating behaviour - nature and impact. Choices for change.

## UNIT IV

Values, Attitude and Professional Ethics: Values and attitudes - their role in life, Value conflict - its impact, value clarification.

Integration: Through Eastern and Western approaches experience the processes of integration. Approaches recommended are: Yoga as a science, meditation (tool for meditation - own choice).

Stress / Burn out - Self help Methods: Stress, Stressors, nature and impact of stress, its expression, and burnout.

Spirituality and Growth.

**Paper Title: POPULATION AND ENVIRONMENT**

## **INTRODUCTION**

The content has two aspects to it. Population dynamics and its relatedness to the environment, natural resources, utilization and their preservation.

## **OBJECTIVES:**

- a. Understand characteristics, determinants of population growth.
- b. Examine population policy, plan and initiatives.
- c. Understand inter-relatedness of human life, living organisms and environment.
- d. Examine utilization and management of resources.
- e. Develop skills to participate in activities related to the two areas.

## **Course Content**

### **UNIT I**

Characteristics of population: Population, determinants of growth, global concerns - Characteristics of Indian Population - Distribution by age, sex, literacy and occupation - Fertility trends - Birth and death ratio.

Population Policy, World Action Plan, Population Policy of India- Implementation; Initiatives - Government and NGO.

### **UNIT II**

Family Planning: Objectives, scope, methods, implementation, mechanisms and progress.

Concept and Scope of Population education, family life education, sex education, and family planning education.

Population and Environment: Interrelatedness of human life, living organisms; Environment and natural resource - Environment, lifestyle, degradation. Environment management, maintaining, improving, enhancing - Current issues of Environment.

### **UNIT III**

Natural Resources and Diversity: Utilisation and management - Forest, land, water, air, energy sources - Pollution - Sources, treatment, prevention - Soil, water, air, noise - Waste matter - disposal, recycling, renewal, problems, issues - Programmes for forest, land and water management.

### **UNIT IV**

Environment Protection Laws and Role of Social Worker: Acts related to environmental protection - Forest conservation- Water pollution - Standards and tolerance levels - Unplanned urbanization- Environmental movements in India - Role of NGOs in Environmental issues - Government agencies in environmental protection - Social work initiatives at different levels.

## **odd semester (III Semester)**

Odd Semester

**Paper code: SWCHC-11**

**Paper Title: HUMAN RESOURCE MANAGEMENT**

### **INTRODUCTION**

The main objective of this course is to prepare young graduates for management and administrative positions in various industrial, business, governmental/non-governmental organisations and service sector organisations.

### **OBJECTIVES**

- a. Develop managerial skills in different functional areas of management with practical focus on HRM.
- b. Develop the competence to evolve the problem-solving approaches by applying conceptual and behavioural skills.
- c. Develop interpersonal skills/ competence and leadership qualities to work in a group with team building approach.
- d. Develop sound theoretical base in various concepts and theories to enable the student to develop a broad perspective of the management field.
- e. Distinguish the strategic approach to Human Resources from the traditional functional approach.
- f. Understand the relationship of HR strategy with overall corporate strategy.

### **Course Content**

#### **UNIT I**

Human Resource Management: Concept, scope, philosophy and objectives; Evolution; Approaches, Structure and Functions; Line and staff relations of HRM; HRM Model. Hierarchy, formal and informal structure, Organization chart/reporting structure.

Human Resource Planning: Concept and objectives; Human resource inventory; Human resource planning process; job analysis; job description; job specification; job design; career planning and career paths; job rotation.

#### **UNIT II**

Talent Acquisition: Goals; policies, sources and methods. Selection: Concept, process. Talent Acquisition Tests, Theories and issues in psychological testing, Intelligence testing - theoretical background, Aptitude Testing, Personality Assessment, MBTI. Placement, Induction and socializing the new employee. Talent retention: Concept, importance and methods.

### UNIT III

Compensation Management: Factors influencing compensation plans and policies; Job evaluation - Fixation of salary, components of salary. Pay for performance - Incentive Schemes, principles and types, Employee Stock Option Plan, compensation survey / review

### UNIT IV

Strategic Human Resource Management (SHRM): Business strategy and organizational capability, SHRM: aligning HR with Corporate strategy, Strategic HR planning and Development, Change Management and restructuring and SHRM, Corporate Ethics, Values and SHRM, Competencies of HR professional in a SHRM scenario.

**Odd semester**

**Code: SWCHC-12**

**Title: SOCIAL WORK PRACTICUM - IV**

Workshops: Skills Development - help learners acquire specific skills for situations encountered during practice and acquire skills for intervention. These may be for problems/ concerns, issues or situations like work with alcoholics, HIV/AIDS affected persons, adolescents for life skills development, youth for leadership development and couples for marital relationship and enrichment work with elderly. These workshops are to enhance skills/ develop new skills for practice in specific situation, specific problems and issues.

Concurrent practice learning of two-days a week -on going learning of practice is an opportunity to develop intervention skills in reality situations. This entails learning social work practice for two, or two and a half days or its equivalent, each week of the semester. The learners may be placed in agencies or in communities to initiate and participate in direct service delivery. Practice learning is a vital component of

the educational opportunity to be provided to the learner. The teaching-learning process must be designed to help the learner to move on the mastering strategies, skills and techniques to practice social work

Odd semester

**Paper code : SWCSC-3**

**Paper Title : SOCIAL WORK WITH TRIBAL AND RURAL COMMUNITIES.**

## **INTRODUCTION**

This course aims at introducing the learner the programmes of tribal and rural development, and the importance of social work practice with tribal and rural communities.

## **OBJECTIVES**

- a. Develop an understanding of tribal and rural communities.
- b. Understand the characteristics and problems of tribal and rural communities.
- c. Acquire knowledge about the contribution of Governmental and Non-governmental Organisations to tribal and rural development.
- d. Develop an understanding of the functions of Panchayath Raj Institutions with particular reference to Karnataka.
- e. Gain knowledge about the application of social work in tribal and rural development programmes.

## **Course Content**

### **UNIT I**

Tribe in relation to caste and nation - Nature and Characteristics of Primitive Cultures- Tribes in India and their ecological distribution.

Emerging Trends in Tribal Social Institutions - Family and Kinship Systems, Jati Structure, Economic Structure, Political organisations.

Characteristics of Tribal Society - Economic, Social, Political and Cultural Problems of Tribal Life.

## UNIT II

Government Programmes since Independence and their Impact on Tribal Societies - Programmes of Voluntary Agencies and their Impact on Tribal Societies.

Analysis and Assessment of Tribal Community Problems - Special Problems of the Tribals in a particular area.

Social Work Practice in Tribal Development: Community organisation as a method of intervention, Participatory Rural Appraisal (PRA), Logical Framework Approach/Analysis (LFA), techniques of intervention and its scope in tribal community development.

## UNIT III

Rural Society and Poverty - Historical perspective - Dynamics in the village society - Caste/class relationships - Control and Power, Conflict and Integration. Poverty in the rural context - Its nature and manifestations. Analysis of Basic Problems - Issues faced by the rural poor such as indebtedness, Bonded labour, Low wages, Unemployment, Underemployment, and other forms of exploitations.

## UNIT IV

Current Rural Development Programmes in India: Council for the Advancement of People's Action and Rural Technology (CAPART) and other Rural Development Statutory Bodies.

Panchayath Raj System in Karnataka and its role in rural and tribal development.

Role of social worker in tribal and rural development programmes. **REFERENCES:**

**Paper code SWCSC-3**

**Paper Title: ORGANIZATIONAL BEHAVIOUR AND ORGANIZATIONAL DEVELOPMENT**

**INTRODUCTION**

The course aims to provide an understanding of human behavior at work so that the learner may acquire the skills required to analyze problems and develop a problem-solving approach.

**OBJECTIVES:**

- a. To impart knowledge about individual, group and organizational dynamics and their consequences,
- b. To make clear the concepts and approaches that help in developing models or systems that support human ingenuity.
- c. To acquaint the students with the knowledge of theories and practices that govern human behavior at work,
- d. To help the learner understand the value and worth of human resources in an organization.
- e. To enable the students to become aware of their communication skills and sensitize them to their potential to become successful managers.
- f. To gain self-confidence and healthy self-respect while retaining respect for other's rights.
- g. To understand the application of Transactional Analysis in several areas of employee management.

## **Course content**

### **UNIT I**

Conceptual Framework: Organization Behavior: Definition, concept, approaches and scope, historical background of Organization Behavior.

Introduction to Enneagram, personality types according to Enneagram. Emotional Intelligence; Attitude, Values, Personality; Job satisfaction, Employee Morale : Meaning, influences and outcomes - Measuring job satisfaction.

Assertiveness Training: Benefits of assertiveness - components of assertive behavior, measuring assertiveness, handling fear, handling anger, handling depression, developing assertive behavior skills, assertiveness on the job, assertiveness in interpersonal relations.

### **UNIT II**

Transactional Analysis ( TA), TA and self awareness, Winners and Losers, Structural analysis, Life positions, transactions, games and strokes, Life scripts, TA applications in motivation, Leadership and Teamwork, TA in counseling.

Motivation: Concept and theories, techniques of motivation, role of reinforcement and punishment, motivation and organization reward system, awards, employee empowerment and engagement.

### **UNIT III**

Leadership: Meaning, roles, skills, and styles, leadership theories, types of leadership, powerful persuasion strategies.

Group dynamics: Concept, types of groups, dynamics of group formation, decision making in groups.

Organization Development: Concept, emerging approaches and techniques, Foundations of OD, Organizational Diagnosis, OD interventions - An overview, individual and interpersonal interventions, team/group interventions, comprehensive interventions, organizational transformation, success and failure of OD, Planned Organizational change, feedback and OD.

### **UNIT IV**

Organizational Conflict: Concepts, causes and types, conflict-resolution strategies.

Organizational change: Concept, forces of change and resistance to change, managing organizational change and diversity, facilitating creative and divergent thinking, planned organizational change.

Stress and Burn Out: Concepts, causes, consequences and coping strategies.  
Managerial Ethics: Individual ethics, ethical dilemmas in management, Ethical practices of Indian Managers, Corporate ethics.

**Paper Title: PREVENTIVE AND SOCIAL MEDICINE AND MEDICAL SOCIAL WORK**

## **INTRODUCTION**

This course introduces the basic health issues and the application of social work in health setting both in hospital and community.

## **OBJECTIVES**

- a. Understand the concept and dimensions of health.
- b. Understand the issues related to the prevention, clinical features and treatment of major communicable and non-communicable diseases.
- c. Trace the historical development of medical social work in India and abroad.
- d. Understand the nature of medical social work services.
- e. Understand the tenets of National Health Policy of India and modernization of community based health care services. .
- f. Understand the health care services at different levels.

## **COURSE CONTENT**

### **UNIT I**

Concept of health : Physical, social, mental and spiritual dimensions of health - Positive health - Determinants of health - Health and development - Indicators of health. Concept of Prevention: Levels of prevention - Hygiene, public health, preventive medicine, community health, social medicine, community medicine. Health Care of the Community; Concept of health care - Levels and principles of health care.

## UNIT II

Communicable and Non-communicable Diseases: Leprosy, Tuberculosis, Sexually Transmitted Diseases (STDs), HIV/AIDS. Cancer, Hypertension, Accidents, Diabetes, Blindness, Neurological problems, Mental illnesses.

Maternal and Child Health Services - Immunization - Integrated Child Development Services (ICDS) Scheme - School health programmes.

## UNIT III

Medical Social Work: Meaning, Definition and Scope - Historical background and nature: Medical Social Work in India and Abroad - Team work and Multidisciplinary approach in health care; Organization and administration of medical social work departments in hospitals.

Patient as a person and Role of Social Worker: Understanding the patient as a person; Illness behaviour and treatment behaviour of the patient - Impact of illness on the patient and family.

Role of social worker with patients and their families - Rehabilitation.

## UNIT IV

National Health Policy of India, Directorate General of Health Services, Indian Council of Medical Research (ICMR), Health as a concurrent subject.

Health System in India - at the Centre, at the State level, at the district level, and village level. Health Education and Communication.

Voluntary Health Agencies in India - International health - World Health Organisation (WHO), UNICEF, UNDP, FAO, ILO, World Bank.

Non - governmental and other Agencies - Ford Foundation, CARE, International Red Cross, Indian Red Cross.

**Paper Title: REHABILITATION AND AFTER CARE SERVICES**

## **INTRODUCTION**

Rehabilitation of differently abled people is a noble and worthy endeavor, requiring the combined knowledge of the psycho-social theory and practical skills and techniques of social work. The current paper facilitates social work students to work with the specific group of clientele suffering from various types of disabilities and impart application of specific professional social work methods to cater to the needs of this population.

### **OBJECTIVES:**

- a. To understand the concept of handicap, rehabilitation and the scope for practice.
- b. To identify the specific client categories requiring the rehabilitation services, problem specificity and rehabilitation service interventions.
- c. To acquaint oneself with different rehabilitation settings, different therapeutic approaches to rehabilitation process.
- d. To acquire the social work skills adapted to facilitate the process of rehabilitation, the rights and legal provisions provided for differently abled people and assimilate the knowledge of social work practice to disability specific client service.

### **Course Content**

#### **UNIT I**

Rehabilitation: Definition and scope for social work interventions; definition of Impairment, Disability, Handicap; causes of Handicap - heredity, acquired, Major illnesses - physical, neurological and psychiatric Stress, vulnerability, coping and competence to deal with handicaps; Need for comprehensive rehabilitation - psycho-social rehabilitation

#### **UNIT II**

History, philosophy and principles of psycho-social rehabilitation; specific problem areas - physical handicap - vision, hearing, orthopedic, speech and language difficulties, mental retardation and others; neurological, psychiatric problems, disasters, alcohol and drug usage, terminal illnesses and any other.

Intervention in rehabilitation: Assessment, planning, intervention, evaluation, tools for assessment, follow-up services.

### UNIT III

Rehabilitation Settings: Hospital based, day-care, night-care, quarter-way home, half-way-home, group home, hostels, long-stay homes, vocational guidance centre,

sheltered workshop, occupational therapy centre, community based rehabilitation centre, home care, inclusive education and others

Approaches: Therapeutic community, behavior modifications, transactional analysis and eclectic approach

### UNIT IV

**Paper code: SWCSC-5**

**Paper Title: SOCIAL POLICY, PLANNING AND DEVELOPMENT**

## **INTRODUCTION**

The course introduces the learner as to how policy is a link between Constitutional Principles, Development Plans, Legislative and Executive Actions. The analysis of these processes is to enable utilization of the knowledge to improve social work practice.

Further, it provides a critical and analytical framework to understand key concepts, development processes and current issues, pertaining to different parts of the world, with specific reference to India. This course is expected to provide the social work students with a context for micro-level interventions.

## **OBJECTIVES**

- a. Gain knowledge of policy analysis and the policy formulation process.
- b. Acquire skills in critical analysis of social policies and development plans.
- c. Develop an understanding of social policy in the perspective of national goals as stated in the Constitution, particularly with reference to Fundamental Rights and the Directive Principles of State Policy.
- d. Critically understand the concept, content and process of social development.
- e. Develop the capacity to identify linkages among social needs, problems, development issues and policies.
- f. Locate strategies and skills necessary for social development and reinforce values of social justice, gender justice and equality.

## **Course Content**

### **UNIT I**

Social Policy and Constitution: Concept of social policy, sectoral policies and social services - Relationship between social policy and social development-- Values underlying social policy and planning based on the Constitutional provisions (i.e. the Directive Principles of State Policy and Fundamental Rights) and the Human Rights - Different models of social policy and their applicability to the Indian situation.

## UNIT II

Sectoral Social Policies in India: Evolution of social policy in India in a historical perspective-Different sectoral policies and their implementation, e.g. Policies concerning education, health, social welfare, women, children, welfare of backward classes, social security, housing, youth, population and family welfare, environment and ecology, urban and rural development, tribal development and poverty alleviation.

## UNIT III

Social Planning: Concept of social planning - Scope of social planning - the popular restricted view as planning for social services and the wider view as inclusive of all sectoral planning to achieve the goals of social development - Indian planning in a historical perspective - The Constitutional position of planning in India. Niti Ayog - Coordination between Centre and State, need for decentralization - Panchayath Raj - people participation.

## UNIT IV

Social Development: Concept of social development - Current debates of development - Approaches to development - Development indicators.

Social Development in India: The historical and social context of development in India - Demographic transitions - Rural development: Agrarian and land reforms; Green Revolution - Industrialization and urban development - Labour relations-Gender issues - Environmental issues (land, water, forest) - Education - Health.

**Paper code: SWDHC-14**

**Paper Title: MENTAL HEALTH AND PSYCHIATRIC SOCIAL WORK**

## **INTRODUCTION**

This course is to provide awareness about mental health and mental health problems and also application of social work in mental health settings.

## **OBJECTIVES**

- a. Understand the concepts 'mental health' and 'mental illness'.
- b. Understand the signs and symptoms, etiology, diagnosis and treatment of mental health problems.
- c. Understand different services for the care of mentally ill.
- d. Understand historical background of psychiatric social work in India and abroad. Understand the nature of psychiatric social work services and relevance of team work.
- e. Understand the nature of collaboration with voluntary organisations for the welfare of mentally ill.
- f. Identify the issues related to psychiatric social work department in hospitals and community mental health settings.

## **Course Content**

### **UNIT I**

Concept of mental health and mental illness - Mental health as a part of general health - Misconceptions about mental illnesses. General approaches to the mentally ill - International Classification of Mental Disorders.

Signs, symptoms, etiology, diagnosis, prognosis and management of the following:

- Neuroses
- Psychoses
- Psycho physiologic disorders
- Personality disorders
- Psychiatric disturbances in children and adolescents
- Organic psychotic conditions
- Mental retardation.

## **UNIT II**

Introduction to Psychiatric Social Work: Meaning and Scope - Historical background of psychiatric social work in India and abroad - Reasons for its development as a specialty. Application of social work methods and other related techniques used in the field - Multi-disciplinary approach and team work in mental health care - Problems of hospitalization - Impact of mental illness on the patient, family and community.

Practice of Social Work: Importance of home visit and visit to the place of work - Role of family in the treatment of mentally ill - Preparing the family and community for the return of the affected individual, follow-up.

## **UNIT III**

Care of mentally ill: Day-care centre, night-care centre, half-way-home, sheltered workshop, Occupational therapy units - Role of social worker and role of voluntary organisations.

Role of voluntary organisations, governmental-agencies and paraprofessionals in the welfare of mentally ill.

Role of social worker in mental health centers, departments of psychiatry in general hospitals, child guidance clinics, community mental health units, correctional institutions, industries, and family welfare centres.

Role of social worker with head injured, paraplegics and epileptics.

Role of social worker in the management of substance abuse - Educational avenues in psychiatric social work - Research avenue in the field of mental health for social workers.

## **UNIT IV**

Organisation of psychiatric social work department - Functions; and collaboration with other departments.

Community mental health and social work, NMHP, Innovations like Satellite clinics, district mental health programme etc.

Rehabilitation and Acts: Occupational therapy - Principles and practice - Psychosocial rehabilitation.

Mental Health Act, 1987.

The Persons with Disabilities (Equal Opportunities, Protection of Rights and Full Participation) Act, 1995.

**Code SWDHC -15**

**Title: MAJOR PROJECT**

Students are given broad guidelines for undertaking empirical evidence-based project in the fourth semester. In case of group project work, the group will be formed by the college or the university department by adopting random method of selection. The project shall comprise of selection of the topic, methodological details, analysis, interpretation and deductions made. The department will prepare a set of guidelines for presenting the report.

Evaluation of the Project will be done along with the viva-voce examination by the viva-voce committee constituted for the assessment of social work practicum.

Even semester

Code: **SW DHC-6**

Title : **SOCIAL WORK PRACTICUM - V**

Concurrent practice learning of two-days a week - on going learning of practice is an opportunity to develop intervention skills in reality situations. This entails learning social work practice for two, or two and a half days or its equivalent, each week of the semester. The learners may be placed in agencies or in communities to initiate and participate in direct service delivery. Practice learning is a vital component of the educational opportunity to be provided to the learner. The teaching-learning process must be designed to help the learner to move on the mastering strategies, skills and techniques to practice social work.

Even semester

Code: **SWDHC-17**

**Title: SOCIAL WORK PRACTICUM - VI: (BLOCK PLACEMENT)**

Block Placement - enables learners to integrate learning and generate newer learning by participating in the intervention process over a period of 6 weeks continuously, in a specific agency. Usually, block field work is provided at the end of the two-year programme. There shall be a professionally qualified worker in the setting willing to plan orientation and provide consultation, when needed.

**Paper code: SWDSC-6**

**Paper Title: HUMAN RESOURCE DEVELOPMENT AND EMPLOYEE WELLNESS**

## **INTRODUCTION**

The purpose of this course is to provide practical exposure and knowledge in behavioural science to develop skills not only to understand and analyse problems but also to develop a problem-solving approach to issues.

## **OBJECTIVES**

- a. To develop multi facets of the personality and to build self confidence.
- b. To develop a spirit of continuous learning and innovation.
- c. To strengthen the competency base of individuals, teams and organization and also familiar with the organizational culture.
- d. Understand and further the organization culture.
- e. To appreciate the importance of bottom-line focus to the Human Resource function and trend toward HR Accountability.
- f. To understand the various approaches to and techniques of measuring HR issues.
- g. To create awareness of different types of information systems in an organization so as to enable the use of computer resources efficiently, for effective decision- making.

## **Course Content**

### **UNIT I**

**Human Resource Development (HRD):** Concept, origin and needs for HRD; Overview of HRD as a Total system; Approaches to HRD; human capital approach; social psychology approach and poverty alleviation approach; HRD and its dimensions, Competency Mapping.

## UNIT II

**HRD Interventions:** Performance Measurement Systems - Fundamental issues. Feedback sessions. Organizational goal setting process, Key Result Area (KRA) and Key Performance Indicator (KPI), Coaching, Mentoring, career planning, career development, reward system, quality of work life. HRIS: - Computers and computer based Information Systems. Measuring HR : Changing role of HR, HR as a strategic partner, the need for measuring HR. Approaches to measuring HR: - Competitive Benchmarking, HR Accounting, HR Auditing, HR Effectiveness Index, HR Key Indicators, HR MBO (Management by Objectives).

Instructional Technology: Learning and HRD; Building Learning Organization: measuring learning - the intellectual capital, architecting a learning organization, Organizational Learning, models and curriculum; factors and principles of learning; group and individual learning; HRD trends; behavioural sciences; transactional analysis; Concepts of continuous learning, behavior modeling and self-directed learning; evaluating the HRD effort; data gathering; analysis and feedback; HRD experience in Indian organizations; future of HRD - Organization culture and development.

## UNIT III

**Talent Development:** Concept and importance; Training Need Analysis, process of training, designing and evaluating training and development programs. Use of information technology, Types and Methods of Training: Training within industry (TWI), External; on the job and off the job; Training methods; lecture, incident process, role play, structured and unstructured discussion, in-basket exercise, simulation, vestibule, training, management games, case study, programmed instruction, team development, and sensitivity training; review of training programs.

## UNIT IV

**Employee Wellness:** Concept, philosophy, principles and scope; Importance and relevance of wellness programs, Role of Welfare Officer as per the Factories Act 1948. Relevance - with reference to Accidents, Absenteeism, Alcoholism, Domestic Violence: Preventive and remedial measures.

Employee Counseling. Role of Counselor in Organizations. Corporate Social Responsibility (CSR): CSR as a business strategy.

Environmental management systems ISO 14001, ISO 26000: Social responsibility guidance standard, environmental impact assessment.

**Title: CASE STUDIES**

Every Candidate is expected to take up five cases, study them in depth and present the intervention, if any. Case refers to a unit of study - an individual, an institution, a community or an incident. The candidate has to work under the guidance of faculty member and submit the report on or before the date prescribed.

The university or the college concerned can develop guidelines for undertaking case studies. However, the students are encouraged to start his/her work on case studies from the beginning of the course.

Evaluation of the case study will be done along with the viva-voce examination by the viva-voce committee constituted for the assessment of social work practicum or similar committee may be constituted, if required.

### **Scheme of Assessment**

1. First Theory and Practical Internal Assessment tests (for C1) will be conducted after 8<sup>th</sup> week of the semester comprising 50% of the syllabus.
2. Second Theory and Practical Internal Assessment tests (for C2) will be conducted in the 16<sup>th</sup> week of the semester comprising remaining 50% of the syllabus.
3. The Theory C1 and C2 Internal Assessment tests evaluation will be an aggregate of written test, assignments, seminar by the corresponding Course teacher/teachers.
4. Practical Internal Assessment tests C1 and C2 will be assessed based on the performance of the student in the given Lab experiment, Record writing and viva by the corresponding Course teacher/teachers.
5. A student will be eligible for C3 semester end examination, if he/she has scored a minimum of 30% which is the sum total of C1 test and C2 test.
6. C3 semester end examination for theory Courses (papers) will be conducted in 18<sup>th</sup> week of the Semester. Three sets of question papers will be set by both internal and external Examiners, who were chosen from the panel of examiners approved by the Board of Studies for each Course. The Board of Examination convened well before the C3 semester end examination will scrutinise and approve the question papers sets and submit the same to Controller of Examination.. From each of the sets, one question paper is randomly chosen by Chief Controller of Examination.
7. C3 semester end Laboratory examination for practical Courses will be conducted conveniently before or after C3 semester end examination for theory Courses. The Laboratory examination will be conducted by both internal and external examiners.
8. Overall grade will be based on marks scored in C1, C2 and C3 examination

The details of the allotment of marks for evaluation of the theory and practical question papers of C1, C2 and C3 examinations were also prepared on the recommendations and approval of Board of Studies. The pattern of evaluation is provided below:

#### **Theory Examination : C1+C2+C3=100 Marks**

Theory	Unit 1	Unit 2	Unit 3	Problems from the three units	Average Score	Assignment	Seminar	Total Marks
<b>C1</b>	<b>10</b>	<b>10</b>	<b>10</b>	-	<b>10</b>	<b>5</b>	-	<b>15</b>
<b>C2</b>	<b>10</b>	<b>10</b>	<b>10</b>	-	<b>10</b>	-	<b>5</b>	<b>15</b>
<b>C3</b>	<b>18</b>	<b>18</b>	<b>18</b>	<b>16</b>	<b>--</b>	-	-	<b>70</b>

#### **Practical Examination: C1+C2+C3=100 Marks**

Practical	Experiment	Record	Viva	Total Marks
<b>C1</b>	<b>7</b>	<b>5</b>	<b>3</b>	<b>15</b>
<b>C2</b>	<b>7</b>	<b>5</b>	<b>3</b>	<b>15</b>
<b>C3</b>	<b>50</b>	-	<b>20</b>	<b>70</b>

### **Programme Outcomes:**

- PO1. Identify, formulate and analyze complex problems using first principles.
- PO2. A research oriented learning to develop analytical problem-solving approaches.
- PO3. Awareness of ethical issues and regulatory considerations.
- PO4. Understand the basic concepts, fundamental principles and the scientific Theories.
- PO5. Acquire skills in handling scientific instruments, planning and performing in laboratory experiments.
- PO6. Think creatively in explaining solutions to the problems.
- PO7. Realize developments in science subject and interdisciplinary approach.
- PO8. Develop scientific outlook towards all aspects of life.
- PO9. Effective influence, which inspires in new scientific theories and inventions.
- PO10. To Imbibe ethical, moral and social values in personal and social life and develop Positive attitude that leads to successful life.

### **PROGRAMME SPECIFIC OUTCOMES:**

- PSO1. Acquire substantial knowledge in Physics, basic knowledge in Mathematics and computer science
- PSO2. Specialisation in Solid State Physics/Nuclear Physics provides special expertise.
- PSO4. Provide hands-on research experience in a specific field of Physics, through the supervised project.
- PSO5. Familiarise with contemporary research within various fields of Physics.
- PSO6. Provides the candidate knowledge with general competence and analytical skills needed in research, education, industry, consultancy and public administration.
- PSO7. Develop interdisciplinary approach.
- PSO8. Critically assess and evaluate research methods and results.
- PSO9. Understands the role of Physics in society and ethical problems.
- PSO10. To avail Global research opportunities.

## Syllabus for the 4-Semester M.Sc., (Physics) Choice Based Credit Scheme (CBCS)

### PHA 120: Classical Mechanics

#### Course Outcome:

- Students who have completed this course should be able to
- C01. Solve the Newton equations for simple configurations
  - C02. Use conservation to solve dynamics problems.
  - C03. Represent the equations of motion for complicated mechanical systems
  - C04. Derive and solve the equations of motions for systems subject to the Principle of Least Action
  - C05. Calculate conserved quantities from symmetries
  - C06. Acquire a deep knowledge of the Lagrangean and Hamiltonian formalism
  - C07. Understand theory of small oscillations

**Mechanics of a system of particles:** Conservation of linear and angular momenta in the absence of (net) external forces and torques using centre of mass. The energy equation and the total potential energy of a system of particles using scalar potential (**Goldstein H**).

**The Lagrangean method:** Constraints and their classifications. Generalized coordinates. Virtual displacement, D'Alembert's principle and Lagrangean equations of the second kind. Examples of (1) single particle in Cartesian, spherical polar and cylindrical polar coordinate systems, (2) Atwood's machine, (3) a bead sliding on a rotating wire in a force-free space and (4) Simple pendulum. Derivation of Lagrange equations from Hamilton principle (**Goldstein H**).

**Central forces:** Reduction of two particle equations of motion to the equivalent one-body problem, reduced mass of the system. Conservation theorems (First integrals of the motion). Equations of motion for the orbit, classification of orbits, conditions for closed orbits. The Kepler problem (inverse-square law of force) (**Aruldas G, Goldstein H, Srinivasa Rao K.N**). **[16 hours]**

**Hamilton's equations:** Generalised momenta. Hamilton's equations. Examples - simple harmonic oscillator, charged particle moving in an electromagnetic field. Hamiltonian for a free particle in different coordinates. Cyclic coordinates. Physical significance of the Hamiltonian function. Derivation of Hamilton's equations from a variational principle (**Goldstein H**).

**Canonical transformations:** Definition, Generating functions (Four basic types). Examples of Canonical transformations. The harmonic Oscillator. Infinitesimal contact transformation. Poisson brackets; properties of Poisson brackets, angular momentum and Poisson bracket relations. Equation of motion in the Poisson bracket notation. The Hamilton-Jacobi equation; the example of the harmonic oscillator treated by the Hamilton-Jacobi method (**Goldstein H**). **[16 hours]**

**Mechanics of rigid bodies:** Degrees of freedom of a free rigid body. Angular momentum and kinetic energy of rigid body. Moment of inertia tensor, principal moments of inertia, products of inertia, the inertia tensor. Euler equations of motion for a rigid body. Torque free motion of a rigid body. Precession of earth's axis of rotation, Euler angles, angular velocity of a rigid body (**Goldstein H**).

**Small oscillations of mechanical system:** Introduction, types of equilibria, Quadratic forms of kinetic and potential energies of a system in equilibrium. General theory of small oscillations, secular equation and eigenvalue equation. Small oscillations in normal coordinates and normal modes, examples of two coupled oscillators. Vibrations of a linear triatomic molecule (**Goldstein H**). **[16 hours]**

**Total work load**

**48 hours**

## PHA 130: Mathematical Methods of Physics 1

### Course Outcome:

Upon completion of the course students should be

- CO1. Familiar with mathematical methods for solving advanced problems in physics.
- CO2. Familiar with Tensors, algebra of tensors and Tensor Calculus and its applications in applied sciences and engineering;
- CO3. Able to solve abstract mathematical problems, recognize real-world problems and to formulate mathematical models for such problems.
- CO4. Familiar with Hermite and Laguerre polynomials solutions
- CO5. Familiar with generating function of the polynomials
- CO6. Able to Use Legendre polynomials, associated Legendre polynomials in Physics
- CO7. Able to Use Bessel functions, Spherical harmonics in Physics

**Curvilinear coordinates and Tensors:** Curvilinear coordinates in the Euclidean 3-space, Orthogonal curvilinear coordinates. Differential vector operators; Grad, divergence, curl and Laplacian in arbitrary curvilinear coordinates. Circular cylindrical coordinates, spherical polar coordinates (**Arfken & Weber**).

**Tensors:** Tensors of rank  $r$  as a  $r$ -linear form in base vectors. Transformation rules for base vectors and tensor components. Tensor algebra, contraction, Raising and lowering of indices, Associated tensors, quotient rule. Mention of pseudo tensor, dual tensor and non-cartesian tensor. Metric tensor, Covariant and contravariant components of the metric tensor, Christoffel symbols. Tensor derivative operators, Covariant differentiation. The contracted Christoffel symbol (**Arfken & Weber**). **[16 hours]**

**Differential equations, Hermite function and Laguerre functions:** Differential equations: Partial differential equations, Separation of variables - Helmholtz equations in Cartesian, circular cylindrical coordinates Spherical polar coordinates. Regular and irregular singular points of a second order ordinary differential equation. Series solution-Frobenius power series method, Examples of Harmonic oscillator and Bessel's equation. Linear dependence and independence of solutions-Wronskian. Non-homogeneous equations-Green's function, examples (**Arfken & Weber**).

**Hermite functions:** Hermite's differential equation and its Solution, Hermite polynomials, Generating functions, Recurrence relations, Rodrigues representation, Orthogonality (**Arfken & Weber**).

**Laguerre functions:** Laguerre differential equation and its solution, Laguerre polynomials, Generating function, Recurrence relations, Rodrigues representation, Orthogonality. Associated Laguerre functions: Definition, Generating function, Recurrence relations and Orthogonality (**Arfken & Weber**). **[16 hours]**

**Special functions:** Sturm - Liouville theory - Self adjoint ODE's, Hermitian operators, completeness of eigenfunction, Green's function—eigenfunction expansion (**Arfken & Weber**).

**Bessel functions:** Bessel functions of the first kind  $J_\nu(x)$ , Bessel differential equation, generating function for  $J_\nu(x)$ , Integrals for  $J_0(x)$  and  $J_\nu(x)$ , recurrence formulae for  $J_\nu(x)$ , orthogonal properties of Bessel polynomials (**Arfken & Weber**).

**Legendre functions:** Legendre differential equation, Legendre polynomials, generating functions, recurrence formulae, Rodrigues representation, Orthogonality. Associated Legendre polynomials; The differential equation, Orthogonality relation (**Arfken & Weber**).

**Spherical harmonics:** Definition and Orthogonality (**Arfken & Weber**).

**[16 hours]**

**Total work load**

**48 hours**

## PHA 140: Mathematical Methods of Physics 2

### Course Outcome:

Upon completion of the course students should be able to

- C01. Explain the concepts of Linear vector space.
- C02. Express conditions for transformations.
- C03. Explain matrix representation of a linear transformation, Matrix representations
- C04. Explain concepts of eigenvalues and eigenvectors of a matrix.
- C05. Use matrices and determinants to solve sets of simultaneous linear equations
- C06. Understand the concepts of inner product, orthogonality and orthonormality
- C07. Recognize real-world problems and formulation of mathematical models of such problems.
- C08. Understand linear representations of groups and Rotation groups and applications in Physics
- C09. Apply Fourier transforms and Integral equations in Physics

**Linear vector space:** Linear vector space - Definition. Linear dependence and independence of vectors. Dimension. Basis. Change of basis. Subspace. Isomorphism of vector spaces. Linear operators. Matrix representative of a linear operator in a given basis. Effect of change of basis. Invariant subspace. Eigenvalues and eigenvectors. Characteristic equation. The Schur canonical form. Diagonalization of a normal matrix. Schur's theorem (**Arfken & Weber**). [16 hours]

**Linear representations of groups:** Groups of regular matrices; the general linear groups  $GL(n, C)$  and  $GL(n, R)$ . The special linear groups  $SL(n, C)$  and  $SL(n, R)$ . The unitary groups  $U(n)$  and  $SU(n)$ . The orthogonal groups  $O(n, C)$ ,  $O(n, R)$ ,  $SO(n, C)$  and  $SO(n, R)$ . Homogeneous Lorentz group (**Arfken & Weber**).

**Rotation group:** The matrix exponential function-Definition and properties. Rotation matrix in terms of axis and angle. Eigenvalues of a rotation matrix. Euler resolution of a rotation. Definition of a representation. Equivalence. Reducible and irreducible representations. Schur's lemma. Construction of the  $D^{1/2}$  and  $D^1$  representation of  $SO(3)$  by exponentiation. Mention of the  $D^1$  irreps  $SO(3)$  (**Srinivasa Rao K.N.**). [16 hours]

**Fourier transforms and Integral equations:** General properties, completeness, use of Fourier series. Applications of Fourier series (**Arfken & Weber**).

**Integral transforms;** Development of Fourier Integral, Fourier transform - inversion theorem, Fourier transform of derivatives, convolution theorem. Momentum representation (**Arfken & Weber**).

**Integral equations:** Definitions, transformation of a differential equation into an integral equation, Integral transforms, generating functions, Abel's equation, Neumann series, separable kernels, Numerical solution, non-homogeneous integral equations (**Arfken & Weber**). [16 hours]

**Total work load**

**48 hours**

## PHA 150: Classical Electrodynamics, Plasma Physics and Optics

### Course Outcome:

Students who have completed this course should

- CO1. Have theoretical foundations of electromagnetic phenomena.
- CO2. Be able to solve the Maxwell equations for simple configurations.
- CO3. Formulate and solve electromagnetic problems with the help of electrodynamic potentials and super potentials
- CO4. make a detailed account for gauge transformations and their use
- CO5. Learn the techniques of deriving and evaluating formulae for the electromagnetic fields from general charge and current distributions
- CO6. calculate the electromagnetic radiation from radiating systems, formulate and solve electrodynamic problems, covariant form in 4 dimensional space-time
- CO7. Formulate self-consistent models for the interaction between matter and em fields,
- CO8. Covariant formulation of electrodynamics, Lagrange formalism
- CO8. Apply the concept of Special theory of relativity for relativistic electrodynamics

**Electric multipole moments:** The electric dipole and multipole moments of a system of charges. Multipole expansion of the scalar potential of an arbitrary charge distribution **(Griffiths D.J.)**.

**Potential formulation:** Maxwell equations in terms of electromagnetic potentials. Gauge transformations. The Lorentz, Coulomb and radiation gauges **(Griffiths D.J.)**.

**Fields of moving charges and radiation:** The retarded potentials. The Lienard-Wiechert potentials. Fields due to an arbitrarily moving point charge; the special case of a charge moving with constant velocity **(Griffiths D.J.)**.

**Radiating systems:** Radiation from an oscillating dipole. Power radiated by a point charges - Larmor formula. Lienard's generalisation of Larmor formula. Energy loss in bremsstrahlung and linear accelerators. Radiation reaction - Abraham-Lorentz formula **(Griffiths D.J)** **[16 hours]**

**Relativistic electrodynamics:** Charge and fields as observed in different frames. Covariant formulation of electrodynamics; Electromagnetic field tensor, Transformation of fields, Field due to a point charge in uniform motion. Lagrangian formulation of the motion of charged particle in an electromagnetic field **(Griffiths D.J)**.

**Plasma Physics:** Quasineutrality of a plasma, plasma behaviour in magnetic fields, Plasma as a conducting fluid. Magnetohydrodynamics; magnetic confinement, Pinch effect, instabilities, Plasma waves. **(Laud B. B.)** **[16 hours]**

**Electromagnetic waves:** Monochromatic plane waves - velocity, phase and polarization. Propagation of plane electromagnetic waves in (1) conducting media and (2) ionised gases. Reflection and refraction of electromagnetic waves; Fresnel formulae for parallel and perpendicular components. Brewster's law. Normal and anomalous dispersion; Clausius-Mossotti relation **(Born M. and Wolf E)**.

**Interference:** General theory of interference of two monochromatic waves. Two beam and Multiple beam interference with a plane-parallel plate. Fabry-Perot interferometer; etalon construction, resolving power and its application. Interference filters **(Born M. and Wolf E)**.

**Diffraction:** Integral theorem of Helmholtz and Kirchhoff. Fresnel-Kirchhoff diffraction formula; conditions for Fraunhofer and Fresnel diffraction. Fraunhofer diffraction due to a circular aperture. **(Born M. and Wolf E)** **[16 hours]**  
**48 hours**

### **PHA 160: Computer Lab CL-A**

#### **Course Outcome:**

Students who have completed this course should

- C01. Learn scientific typesetting with LaTeX program.
- C02. Plot the functions and data with Gnuplot program,
- C03. Solve problems with Octave program
  - Linux operating system basics (4 sessions) :  
Login procedure; creating, deleting directories; copy, delete, renaming files; absolute and relative paths; Permissions—setting, changing; Using text editor.
  - Scientific text processing with LATEX.  
Typeset text using text effects, special symbols, lists, table, mathematics and including figures in documents.
  - Using the plotting program GNUPLOT (2 sessions) :  
Plotting commands; To plot data from an experiment and applying least-squares fit to the data points. Including a plot in a LATEX file.
  - Using the mathematics package OCTAVE (2 sessions), To compute functions, matrices, eigenvalues, inverse, roots.

**Total work load:** 1 day(s) per week × 4 hours × 16 weeks = **64 hours**

### **PHA 220: Electronics Lab**

#### **Course Outcome:**

Students who have completed this course should

- C01. Maintain digital and analog devices and circuits.
- C02. Analyze components associated with digital and analog electronic systems.
- C03. Demonstrate proficiency in the use of electronic equipment and devices.
- C04. Assist in the design, operation, and troubleshooting of electronic systems.
- C05. Analyse electronics devices and circuits using computer simulations.
- C06. Realise electronic circuits using electronic devices and mathematical concepts.
- C07. Accept professional and ethical responsibilities of the engineering technology

Any ten of the following experiments:

1. Regulated power supply.
2. Active filters : low pass (single pole).
3. Active filters : high pass (double pole).
4. Voltage follower.
5. Colpitts' oscillator.
6. Opamp as an integrator and differentiator.
7. Opamp as a summing and log amplifier.
8. Opamp as an inverting and non-inverting amplifier.
9. Coder and encoder.
10. Half adder and full adder.
11. Boolean algebra-Logic gates.
12. Opamp astable multivibrator.

**Total work load:** 2 day(s) per week × 4 hours × 16 weeks = **128 hours**

## PHB 070: Continuum Mechanics and Relativity

### Course Outcome:

- After the completion of the course, student will be familiar with
- CO1. Internal response of materials to external loading
  - CO2. Development of physical intuition for the behaviour of solids and fluids
  - CO3. Unique connections between solid and fluid mechanics.
  - CO4. The non-existence ether through Michelson-Morley experiments
  - CO5. Minkowski space-time
  - CO6. The true nature of Newtonian mechanics and Lorentz Transformations
  - CO7. The concept of constant relative motion of different bodies in different frames
  - CO8. The calculation of proper time, dilated time, proper length and contracted length
  - CO9. Principles of the special theory of relativity, Covariant form of Newton laws
  - CO10. Einstein field equations, their underlying mathematical structure and solutions
  - CO11. Lagrangean formulation of General Relativity.
  - CO12. Derivation of testable physical consequences of General Relativity

**Continuum mechanics of solid media:** Small deformations of an elastic solid; the strain tensor. The stress tensor. Equations of equilibrium. The symmetry of the stress tensor. The generalised Hooke's law for a homogeneous elastic medium; the elastic modulus tensor. Navier equations of motion for a homogeneous isotropic medium. **(Landau L.D. and Lifshitz)**

**Fluid mechanics:** Equation of continuity. Flow of a viscous fluid; Navier-Stokes equation and its solution for the case of flow through a cylindrical pipe. The Poiseuille formula **(Landau L.D. and Lifshitz)**. **[16 hours]**

**Minkowski space-time:** Real coordinates in Minkowski space-time. Definition of 4-tensors. The Minkowski scalar product and the Minkowski metric  $\eta_{ij} = \text{diag}(1, -1, -1, -1)$ . Orthogonality of 4-vectors. Raising and lowering of 4-tensor indices. Time like, null and space like vectors and world-lines. The light-cone at an event **(Griffiths)**.

**Relativistic mechanics of a material particle:** The proper-time interval  $d\tau$  along the world - line of a material particle. The instantaneous (inertial) rest-frame of a material particle; Components of 4-velocity, 4-acceleration and 4-momentum vector, statement of second law of Newton. Determination of the fourth component  $F_4$  of the 4-force along the world-line of the particle. Motion of a particle under the conservative 3-force field and the energy integral. The rest energy and the relativistic kinetic energy of a particle. **[16 hours]**

**Einstein's equations:** The Principle of Equivalence and general covariance. Inertial mass, gravitational mass, Eötvös experiment. Gravitation as space-time curvature. Einstein Gravitational field equations and its Newtonian limits.

**The Schwarzschild metric:** Heuristic derivation of the Schwarzschild line element. Motion of particles and light rays in the Schwarzschild field. Explanation of the (1) perihelion advance of planet Mercury, (2) gravitational red shift and (3) gravitational bending of light. A brief discussion of the Schwarzschild singularity and the Schwarzschild black hole. **[16 hours]**

**Total work load**

**48 hours**

## PHB 080: Thermal Physics

### Course Outcome:

After the completion of the course, Student will be familiar with

- C01. Basic concepts of Thermodynamics
- C02. Formulation of the first law of thermodynamics for a closed systems
- C03. Mode of heat transfer, the amount of heat energy transferred and conservation of mass and energy equations.
- C04. Second law of thermodynamics; thermal efficiency & coefficient of performance.
- C05. concept of ensemble, phase space & conservation of phase-space density(Liouville's theorem)
- C06. Solution to statistical mechanics problems for simple non-interacting systems,
- C07. Phase transitions, Statistical equilibrium,. Entropy and probability
- C010. Microcanonical ensemble, Partition function, Gibbs paradox, canonical ensemble
- C011. Quantum statistical mechanics. Symmetry of wave functions.
- C012. Quantum distribution functions (BE and FD), Applications of Quantum Statistics

**Thermodynamics Preliminaries:** Zeroth law of thermodynamics, vander Walls equation of state second law of thermodynamics (**Huang K., Laud B.B, Satya Prakash**).

**Entropy:** Change in entropy for reversible an irreversible process, entropy and second law of thermodynamics, thermodynamic functions and Maxwell's relations  $TdS$  equations, heat capacities equations, third law of thermodynamics. Irreversible thermodynamics Onsager's reciprocal relation (**Huang K., Laud B.B, Satya Prakash**).

**Phase equilibria;** Equilibrium conditions. Classification of phase transitions; phase diagrams; Clausius-Clapeyron equation, applications. Thermoelectric phenomenon, Peltier effect, Seebeck effect, Thompson effect. Systems far from equilibrium (**Huang K., Laud B.B, Satya Prakash**). **[16 hours]**

**Classical Statistical Mechanics:** Probability, phase space, division of phase space, ensembles, density distribution in phase space, ergodic hypotheses, Liouville theorem. Statistical equilibrium, postulate of equal *a priori* probability, general expression for probability, Stirlings formula, the most probable distribution, Maxwell Boltzmann distribution law, law of equipartition of energy. Entropy and probability. Microcanonical ensemble, connection between statistical and thermodynamic quantities, Partition function of system of particles, Gibbs paradox, canonical ensemble, perfect monoatomic gas in canonical ensemble, grand canonical ensemble. Vibrational partition function of diatomic molecules (Einstein relations), Rotational partition function of diatomic molecule (**Huang K., Laud B.B, Satya Prakash**). **[16 hours]**

**Quantum Statistical Mechanics:** The postulates of quantum statistical mechanics. Symmetry of wave functions. The Liouville theorem in quantum statistical mechanics; condition for statistical equilibrium; Ensembles in quantum mechanics; the quantum distribution functions (BE and FD), the Boltzmann limit of Boson and Fermion gases, the derivation of the corresponding distribution functions.

**Applications of Quantum Statistics:** Equation of state of an ideal Fermi gas (derivation not expected), Application of Fermi-Dirac statistics to the theory of free electrons in metals, degeneracy. Application of Bose statistics to the photon gas, derivation of Planck's law, comments on the rest mass of photons. Thermodynamics of Black body radiation. Bose-Einstein condensation (**Huang, Laud, Satya Prakash**). **[16 hours]**

**Total work load**

**48 hours**

## PHB 090: Quantum Mechanics 1

### Course Outcome:

After the completion of the course Student will be familiar with

- CO1. The Basic concepts and mathematical foundations of quantum mechanics
- CO2. Solutions to the Schrödinger equation for simple potentials.
- CO3. The effect of symmetries in quantum mechanics
- CO4. The significance of wave function, normalization, uncertainty Principle
- CO5. The Physical significance of eigen functions and eigen vectors
- CO6. Formalism; Hilbert space, Dirac notation, concepts of Dynamical variables and operators
- CO7. General Uncertainty relation. Matrix representation of wave functions & operators.
- CO8. The Schrödinger equation and time evolution of a system.
- CO9. The Schrödinger picture and Heisenberg picture
- CO10. Schrodinger equation in three dimensions, Hydrogen atom.

**The wave function and uncertainty Principle:** Wave particle duality, interpretation of the wave function, wave functions for particles having definite momentum, wave packet, Gaussian wave packet. Heisenberg uncertainty principle.

Time independent Schrodinger equation, conservation of probability, expectation values and operators, the Ehrenfest theorem, Time dependent Schrodinger equation, stationary states. Energy quantisation. Properties of energy eigenfunction, general solutions of time dependent Schrodinger equation for a time independent potential. Schrodinger equation in momentum space **(Bransden & Joachain)**. **[16 hours]**

**Formalism:** Hilbert space. The state of a system, Dirac notation. Dynamical variables and operators – Hermitian operators, adjoint operator, projection operators. Inverse and unitary operators. Expansion in eigenfunctions - eigenvalue and eigenfunction of an operator. Commutator algebra. General Uncertainty relation. Unitary transformation, Representation in discrete basis; Matrix representation of wave functions and operators. Change of representation and Unitary transformations. Matrix representation of eigenvalue problem. Representation in continuous bases. The Schrödinger equation and time evolution of a system. The Schrödinger picture and Heisenberg picture.

**Schrodinger equation in one dimension:** The free particle, the potential step, potential barrier, infinite square well, finite square well, the linear harmonic oscillator (Algebraic and Analytic method), the periodic potential **[Bransden and Joachain, Nouredine Zettili]**. **[16 hours]**

**Angular Momentum:** Orbital angular momentum; Orbital angular momentum and spatial rotations, eigenvalues and eigenfunctions of  $L^2$  and  $L_z$ . Particle on a sphere and the rigid rotator. General angular momentum. The spectrum of  $J^2$  and  $J_z$ . Matrix representation of angular momentum operators, spin angular momentum, spin one-half, total angular momentum. Addition of angular momenta - CG Coefficients.

**Schrodinger equation in three dimensions:** Separation of the Schrodinger equation in Cartesian coordinates - the free particle. Central potential. Separation of the Schrodinger equation in spherical polar coordinates; the Hydrogenic atom and its solutions **(Bransden & Joachain)**. **[16 hours]**

**Total work load**

**48 hours**

## PHB 100: Spectroscopy and Fourier Optics

### Course Outcome:

- After completing this course, the student will be able to
- CO1. Explain the applications of spectroscopic methods for qualitative & quantitative analysis.
  - CO2. Compare and contrast atomic and molecular spectra.
  - CO3. Understand the molecular absorption & scatter from particulate matter in atomic absorption spectroscopy
  - CO4. Recognise the effect of changing the slit width on qualitative & quantitative analysis.
  - CO5. Explain the selection rule for infrared-active transitions
  - CO6. design a non-dispersive infrared spectrophotometer
  - CO7. Understand the Fourier Transform infrared spectroscopy
  - CO8. understand Raman spectroscopy
  - CO9. Elements of Nonlinear Optics

**Atomic spectroscopy:** vector model of atom- orbital magnetic moment, Larmor precession, electron spin, coupling of orbital and spin angular momenta. Spectroscopic terms and their notations, spin-orbit interaction, quantum mechanical relativistic correction. Fine structure of hydrogen, Lamb shift. L-S and J-J coupling. Lande interval rule, selection rules.

Zeeman effect, Examples 1)  $3/2^2D - 1/2^2P$  2)  $5/2^2D - 3/2^2P$  3)  $3P - 2S$ .

Anomalous Zeeman effect, Lande-g factor, Paschen-Back effect – spin-orbit correction. Stark effect – weak field effects and strong field effects. Hyperfine structure of spectral lines. Nuclear spin and hyperfine splitting, intensity ratio and determination of nuclear spin. Breadth of spectral lines, natural breadth. Doppler Effect and external effect (**Rajkumar**). [16 hours]

**Nuclear magnetic resonance:** Quantum mechanical expression for the resonance condition. Relaxation Mechanisms; Expression for spin lattice relaxation. Chemical shift; spin-spin interaction, example of ethyl alcohol. Fourier transform technique in NMR. FTNMR spectrometer and experimental procedure. NMR in medicine.

**Microwave spectroscopy:** The classification of molecules. The rotational spectra of rigid diatomic rotator, the spectra of non-rigid diatomic rotator, example of HF. Microwave oven.

**Infrared spectroscopy:** The Born-Oppenheimer approximation. Vibrational energy of diatomic molecule. Anharmonic oscillator. Diatomic vibrating rotator, example of the CO molecule. The vibrations of polyatomic molecules; skeletal and group frequencies. Experimental technique in FTIR.

**Raman spectroscopy:** The quantum theory of Raman effect. Pure rotational Raman spectra of linear molecules and symmetric top molecules. Vibrational Raman spectra. Rotational fine structure. Instrumentation technique in Raman spectroscopy (**Banwell C.N. & McCash E.M and Aruldas**). [16 hours]

**Fourier optics:** Spatial frequency filter; effect of a thin lens on an incident field distribution. Lens as a Fourier transforming element. Application to phase contrast microscopy. (**Hecht**)

**Propagation of light in an anisotropic medium:** Structure of a plane electromagnetic wave in an anisotropic medium. Dielectric tensor. Fresnel's formulae for the light propagation in crystals. Ellipsoid of wave normals and ray normals. Normal surface and ray surface. Optical classification of crystals. Light propagation in uniaxial and biaxial crystals. Refraction in crystals. (**Born M. and Wolf E.**)

**Elements of Nonlinear Optics:** Second harmonic generation, optical rectification and phase matching; third harmonic generation (**Lipson, Srivatsava**). [16 hours]

### Total work load

48 hours

## PHB 110: Computer Lab CL-B

### Course Outcome:

After completing this course the student will

- CO1. Learn Computer Programming,
- CO2. Have Hands on experience with C programming language and its syntax,
- CO3. Apply C techniques for physics problem solving and data analysis.
- CO4. Learn PERL scripting language

### Programming in C

- Check whether given number is odd or even.
- Find the largest and smallest number in the input set.
- Compute the Fibonacci sequence.
- Check whether the input number is prime or not.
- Compute the roots of a quadratic equation.
- Generate Pascal's triangle.
- To add two  $m \times n$  matrices.
- To find the sum and average of a data stored in a file.
- Linear least-squares fitting to data in a file.
- To find the trajectory of a projectile shot with an initial velocity at an angle. Also, find the maximum height travelled and distance travelled. Write the trajectory data to a file specified and plot using Gnuplot.

### Programming in Perl

- Searching for a pattern in a string.
- Counting the number of characters, words and lines in a given file.
- Sorting strings.
- Check whether the input number is prime or not.
- Compute the roots of a quadratic equation.
- Linear least squares fitting to data in a file.

Total work load : 1 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **64 hours**

## PHB 220: Optics Lab

### Course Outcome:

After completing this course the student will

- CO1. Have hands on experience of experiments using spectrometer
- CO2. Use the principles of superposition to explain interference, diffraction and polarisation
- CO3. Describe the operation of optical devices, including, polarisers and interferometers.
- CO4. Solve problems in optics by selecting the appropriate equations & performing numerical or analytical calculations.
- CO5. Follow instructions to perform experiments & document their results, using correct procedures and protocols.
- CO6. Analyse, interpret and communicate results from laboratory experiments, orally or in a written laboratory report.

Any ten of the following experiments:

1. Verification of the Brewster law of polarisation.
2. Verification of Fresnel laws of reflection from a plane dielectric surface.
3. Determination of the inversion temperature of the copper-iron thermocouple.
4. Birefringence of mica by using the Babinet compensator.
5. Birefringence of mica by using the quarter-wave plate.
6. Experiments with the Michelson interferometer.
7. Determination of the refractive index of air by Jamin interferometer.
8. Determination of the size of lycopodium spores by the method of diffraction haloes.
9. Determination of wavelength by using the Fabry-Perot etalon.
10. Dispersion of the birefringence of quartz.
11. The Franck-Hertz experiment.
12. Experiments with the laser.
13. Determination of the Stokes vector of a partially polarised light beam
14. Determination of the modes of vibration of a fixed-free bar.

Total work load : 2 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **128 hours**

## PHC 050: Quantum Mechanics 2

### Course Outcome:

- After completing this course the student will be able to
- CO1. Understand the effect of symmetries in quantum mechanics
  - CO2. Understand the significance of wave function, normalization, uncertainty principle, Physical significance of eigenfunctions and eigenvectors
  - CO3. Time-independent perturbation theory: Non degenerate Perturbation Theory
  - CO4. Degenerate Perturbation Theory; Fine Structure of Hydrogen, Zeeman Effect.
  - CO5. The Variational Principle: Theory, the Ground State of Helium.
  - CO6. WKB Approximation: The Classical Region, Tunneling; connection formulae,  $\alpha$ -decay
  - CO7. The time-dependent perturbation theory
  - CO8. Adiabatic approximation and scattering phenomena
  - CO9. Have a basic understanding of relativistic effects in quantum mechanics.
  - CO10. Mathematical foundations of quantum mechanics & Schrödinger equation for simple cases.
  - CO11. Relativistic quantum mechanics using Klein-Gordon equation & Dirac equation

**The time-independent perturbation theory:** Non degenerate Perturbation Theory; first and second order perturbation, Perturbed Harmonic Oscillator. Degenerate Perturbation Theory; Fine Structure of Hydrogen, The Zeeman Effect.

**The Variational Principle:** Theory, the Ground State of Helium.

**WKB Approximation:** Classical Region, Tunneling; connection formulae,  $\alpha$ -particle decay **(Griffiths).[16 hours]**

**Time-dependent perturbation theory:** Time dependent perturbation theory; general features, constant and periodic perturbations. Two-Level Systems; Emission and Absorption of Radiations, Spontaneous Emission, Fermi golden rule, Rabi Oscillations.

**Adiabatic approximation** - The Adiabatic Theorem, Berry's Phase. Sudden approximation.

**Scattering:** Introduction, scattering cross section, scattering by a spherically symmetric potential. Partial Wave Analysis, phase shifts. Optical theorem, Lippmann- Schwinger equation. Born Approximation, Rutherford scattering **(Griffiths D J).** **[16 hours]**

**Relativistic quantum mechanics:** Klein-Gordon equation: free particle, stationary state solutions, continuity equation. The Dirac equation; free-particle, stationary state solutions, continuity equation. Covariant formulation; Covariant form of Dirac equation, Lorentz invariance of the Dirac equation, Plane wave solutions of the Dirac equation -non-relativistic limit. Spin and helicity operators. Normalization of the solutions. Brief discussion of the hydrogen atom according to Dirac theory, Non-relativistic limit of Dirac equation. Negative energy states - Hole theory **(Sakurai J J).** **[16 hours]**

**Total work load**

**48 hours**

## PHC 060: Condensed Matter Physics

### Course Outcome:

- After completing this course, the student will be able to
- C01. Understand the principles of Condensed Matter Physics, Mathematical descriptions of physical phenomena.
  - C02. Understand the principles of crystal structure of elements Instrumentation for crystal studies
  - C03. Evaluation of crystals data and their suitability for single crystal structure analysis.
  - C04. Crystal growth techniques
  - C05. Liquid crystals; Classification and structures
  - C06. Understand the Structural, Magnetic, Electrical and Semiconductor Properties
  - C07. Theoretical and practical experience in the Condensed Matter Physics

**X-ray crystallography:** Crystalline state. Reference axes, equation of a plane, Miller indices. External symmetry of crystals; symmetry operations. Two and three dimensional point groups. Lattices; two dimensional lattices, choice of unit cell. **(Buerger, p12-20, 23-45).**

Three-dimensional lattices; crystal systems and Bravais lattices. Screw and glide operations. Space groups; Examples of space groups. Diffraction of X rays by crystals; Laue equations. Reciprocal lattice. **[Sherwood, p272-288].** Bragg equation. Equivalence of Laue and Bragg equations. Significance of structure of solid for applications **(Ladd and Palmer, p55-66, p114-121).**

**Atomic scattering factor** (qualitative).

**Electron and neutron diffraction:** Basic principles. Differences between electron, neutron and X-ray diffractions, applications (qualitative). **(Vainshtein, p 336 - 357).**

**Crystal growth techniques:** General methods of crystal growth. Czochralski, Kyropoulos, Stockbarger-Bridgman. Zone refining techniques **(Rose et al p 146 - 154). [16 hours]**

**Disordered materials:** Amorphous solids. Aperiodic materials.

**Liquid crystals:** Introduction, Classification and their applications. Morphology. The smectic (A-H), nematic and cholesteric phases. Birefringence, texture and X-ray studies. Orientational order and its determination for nematic liquid crystals **(DeGennes P.G. and Prost J, Gray and Goodby)**

**Crystal lattice dynamics:** Vibration of an infinite one-dimensional monoatomic lattice, First Brillouin Zone. Group velocity. Finite lattice and boundary conditions. Vibrations of a linear diatomic lattice; optical and acoustical branches, dispersion relations. **(Wahab, p288-305).**

**Magnetic properties of solids:** Diamagnetism and its origin. Expression for diamagnetic susceptibility. Paramagnetism; Quantum theory of paramagnetism, Brillouin function. Ferromagnetism; Curie-Weiss law, Spontaneous magnetisation and its variation with temperature. Ferromagnetic domains. Antiferromagnetism. Two sub-lattice model. Susceptibility below and above Neel's temperature. **(Dekker, p446-490). [16 hours]**

**Superconductivity:** Experimental facts. Type I and type II superconductors. Phenomenological theory. London equations. Meissner effect. High frequency behaviour. Thermodynamics of superconductors; Entropy and Specific heat. Qualitative ideas of the theory of superconductivity. **(Kittel, p333-364).**

**Semiconductors:** Elemental and compound Semiconductors [Streetman, p61-95]. Crystal structure and bonding. Expressions for carrier concentrations. Fermi energy, electrical conductivity and energy gap in intrinsic semiconductors. Extrinsic Semiconductors; impurity states and ionization energy of donors. Carrier concentrations and their temperature variation **(Mckelvey, p256-277). [16 hours]**

**Total work load**

**48 hours**

### PHC 070: Nuclear and Particle Physics

#### Course Outcome:

After completing this course the student will be able to

- C01. Understand the relation between the standard model and QCD.
- C02. Understanding strong interactions with many-body physics.
- C03. Quantitatively estimates for nuclear phenomena
- C04. Understand the Standard Model
- C05. Familiarise with theoretical and experiments used in particle physics.
- C06. Stabilise the nucleus, nuclear forces, interactions and models,.
- C07. Critically assess a range of applications of nuclear technology.
- C08. Develop Theoretical & practical experience in the scattering experiments & gamma-ray spectroscopy.

**Properties of the Nucleus:** Nuclear radius; determination by mirror nuclei, Mesic X-rays and electron scattering methods. Nuclear moments; spin, magnetic dipole moment. Relation between  $J$  and  $\mu$  on the basis of single particle model. Determination of nuclear magnetic moment by Molecular beam experiment. Electric quadrupole moment – reduced Electric quadrupole moment .

**Nuclear Models:** Liquid drop model; Weissacker's formula and its application to (1) stability of isobars and (2) fission process. Shell model; Infinite square well potential, Magic numbers. Fermi gas model; well depth, level density and nuclear evaporation.

**Nuclear reactions:** Q-values, threshold energy. Reactions induced by proton, deuteron and particles. Photodisintegration **(Krane & Taya)**. **[16 hours]**

**Nuclear decay modes:** Beta decay; Beta ray spectrum, Pauli neutrino hypothesis, mass of the neutrino from beta ray spectral shape, Fermi theory of beta decay, Kurie plot, ft- values and forbidden transitions. Methods of excitation of nuclei; Nuclear isomerism, Mossbauer effect (qualitative only), Auger effect.

**Interaction of nuclear radiation with matter:** Energy loss due to ionization for proton -like charged particles, Bethe-Bloch formula, Range energy relations. Ionisation and Radiation loss of fast electrons (Bremsstrahlung - qualitative only). Interaction of gamma and X-rays with matter. Detectors; Brief description of NaI (TI) gamma ray spectrometer. Boron trifluoride counter.

**Nuclear reactors:** Condition for controlled chain reactions, slowing down of neutrons, logarithmic decrement in energy. Homogeneous spherical reactor; critical size, effect of reflectors. Breeder reactor(Qualitative discussion) **(Krane & Taya)**. **[16 hours]**

**Nuclear forces and elementary particles:** General features of nuclear force; spin dependence, charge independence, exchange character, saturation other features. Meson theory of nuclear forces; Yukawa's theory. Properties of pi mesons; charge, mass, spin, isospin and parity, decay modes, meson resonances.

**Particle interactions and families:** Conservation laws; classification of fundamental forces and elementary particles. Associated particle production, Gellmann-Nishijima scheme, strange particles. CP violations in Kaon decay. Symmetries; Eight-fold way symmetry, quarks and gluons. Elementary ideas of the Standard model **(Griffiths D J)**. **[16 hours]**

**Total work load**

**48 hours**

**PHC 240: Solid State Physics 1****Course Outcome:**

- After completing this course the student will
- C01. Understand the Dielectrics properties of Solids;
  - C02. Understand Physics of Ferroelectric Properties of Solids
  - C03. Quantitatively estimate the Magnetic properties of solids
  - C04. Compute the magnetic relaxation time
  - C05. Understand BCS theory of Superconductors
  - C06. Understand the fundamentals of nanomaterials
  - C07. Understand the elastic properties of solids

**Dielectric properties of solids:** Macroscopic description of static dielectric constant, the static electronic and ionic polarisabilities of molecules, orientation polarization. Local electric field at an atom; Lorentz field, field of dipoles inside cavity. The static dielectric constant of solids; Clausius- Mossotti relation. Complex dielectric constant. Polarization catastrophe. Dielectric losses and Debye relaxation time. Classical theory of electronic polarization and optical absorption.

**Ferroelectricity:** Basic properties and classification of ferroelectric materials. The dipole theory of ferroelectricity, objections against the dipole theory. Ionic displacements and behavior of Barium titanate above the Curie temperature. Theory of spontaneous polarization of Barium titanate. Thermodynamics of ferroelectric transitions. Landau theory of phase transitions, Dielectric constant near the Curie point. Ferroelectric domain **(Dekker and Kittel)**. **[16 hours]**

**Magnetic properties:** Definition of magnetization and susceptibility. Hund's rule; calculation of L, S and J for 3d and 4f shells. Setting up of Hamiltonian for an atom in an external magnetic field; explanation of diamagnetism, Van Vleck Paramagnetism and quantum theory of paramagnetism **(Ashcroft & Mermin)**. Interpretation of the Weiss field in terms of exchange integral **(Dekker p473-474)**. Calculation of the singlet triplet splitting, spin Hamiltonian and Heisenberg model **(Ashcroft and Mermin)**.

**Zero-temperature properties:** Ground state of the Heisenberg ferromagnet. First excitation of one dimensional ferromagnetism at zero-temperature; spin waves, anti-ferromagnetism. Low-temperature behaviour of ferromagnets; Bloch's  $T^{3/2}$  law **(Ashcroft and Mermin, Kittel)**.

**Magnetic resonance:** Phenomenological description, Relaxation mechanisms, Derivation of Casimir Durpe relation. Nuclear Magnetic moments, condition for resonance absorption, setting up of Bloch's equations, solutions for steady state and weak RF field. Expression for power absorption, change of inductance near resonance. Dipolar line width in a rigid lattice **(Dekker p498-512)**. **[16 hours]**

**Band theory of solids:** Statement and proof of Bloch theorem; periodic potentials in solids. Reciprocal lattice, periodic boundary conditions, density of states. Construction of Brillouin zones for a square lattice. Nearly free electron model and solution at the boundary. Energy gap using nearly free electron model. Tightly bound electron approximation, application to SC, BCC and FCC lattices **(Dekker)**.

**Superconductivity:** BCS theory; Cooper pairs, Energy gap, Meissner effect. Flux quantization. Theory for DC and AC bias; Josephson tunnelling, Josephson junction. High  $T_c$  superconductors **(Ibach and Luth)**.

**Elastic constants of crystals:** Elastic strains and stresses. Elastic compliance and stiffness constants, applications to cubic crystals and isotropic solids. Elastic waves and experimental determination of elastic constants **(Kittel, R S Krishnan, R J Asero)** **[16 hours]**

**Total work load**

**48 hours**

## PHC 260: Nuclear Physics 1

### Course Outcome:

- After completing this course the student will
- C01. Conceptualise the Nuclear Detectors, Nuclear Pulse techniques and Nuclear models
  - C02. Develop Theoretical and practical experience in the scattering experiments and gamma-ray spectroscopy.
  - C03. Learn High-energy nuclear physics, the behaviour of nuclear matter under extreme conditions.
  - C04. Learn Low-energy nuclear physics, structure & dynamics of nuclei, nuclear reactions and their probabilities;
  - C05. Understand development of sensors, detectors, and larger complex Nuclear instruments

**Nuclear detectors:** Scintillation processes in inorganic crystals (NaI(Tl)). Semiconductor detector -Diffused junction, Surface barrier and Lithium drifted detectors. Relation between applied voltage and depletion layer thickness in junction detectors, Hyper pure germanium detectors, Cerenkov detectors.

**Nuclear pulse techniques:** Preamplifier circuits; charge sensitive and voltage sensitive preamplifiers. Linear pulse amplifiers; Linearity, stability, pulse shaping, pulse stretching. Operational amplifiers; analog to digital converters. Scalars, Schmidt trigger as a pulse discriminator, Single channel analyser; Integral and differential discriminators. Multichannel Analysers, memory devices and online data processing. [16 hours]

**Shell model:** Motion in a mean potential, Square well and simple harmonic oscillator potential well, spin orbit interaction and Magic numbers. Extreme single particle model, Ground state properties of nuclei based on shell model. Nordheim's Rules.

**Collective model:** Evidences for collective motion. Nuclear rotational motion; Rotational energy spectrum and nuclear wave functions for even-even nuclei. Odd- A nuclei energy spectrum and wave function.

**Nilsson model:** Nilsson diagrams.

**Many body self-consistent models:** Hartree-Fock model. **(Hans H.S)** [16 hours]

**Timing spectroscopy:** Coincidence and anti-coincidence circuits. Delay circuits. Time to amplitude conversion; start-stop and overlap converters.

**Gamma ray spectroscopy:** Life time measurements. Gamma-gamma, beta-gamma angular correlation studies. Angular distribution of gamma rays from oriented nuclei. Polarization of gamma rays. [16 hours]

**Total work load** 48 hours

## PHY-306: Theoretical Physics 1

### Course Outcome:

- After completing this course the student will
- C01. Tackle a wide range of topics using powerful analytical tools including formal methods in classical and quantum physics
  - C02. Clearly communicate information & conclusions in written and verbal form of the ideas in Theoretical Physics
  - C03. Evaluate complex problems & formulate solutions, indentifying the role of theory, hypothesis and experiment in the scientific method
  - C04. Apply computation to solve the problems in theoretical physics
  - C05. Plan, carry out and report theoretical physics based investigation
  - C06. Apply classical and quantum theoretical techniques in research

**General theory of relativity:** Tensor Calculus and Riemannian geometry: Covariant Differentiation, Parallel Transport, Geodesies, The Curvature Tensor.

**Riemannian geometry:** Riemannian space, The determinant of  $g_{\mu\nu}$ . Metrical Densities, The Connection of a Riemannian Space: Christoffel Symbols, Geodesies in a Riemannian Space, The Curvature of a Riemannian Space: The Riemann Tensor. **[16 hours]**

**Gravitational field:** The Principle of Equivalence, The Field Equations of General Relativity, Metrics with Spherical Symmetry, The Schwarzschild Solution. Geodesies in the Schwarzschild Space, Advance of the Perihelion of a Planet, The Deflection of Light Rays, Red Shift of Spectral Lines, The Schwarzschild Sphere. Gravitational Collapse. Black Holes. **[16 hours]**

**Quantum field theory-1:** Classical and quantum fields: Particles and fields, Discrete and continuous mechanical systems, Classical scalar fields, Maxwell fields Quantum Theory of Radiation: Creation, annihilation, and number operators, Quantized radiation field, Fock states, Emission and absorption of photons by atoms, Rayleigh scattering, Thomson scattering, and the Raman effect. **[16 hours]**

**Total work load**

**48 hours**

## Open Elective Papers

Paper to be offered to Non-Physics Postgraduate students

### PHY-321: Modern Physics

#### Course Outcome:

After completing this course the student will

- CO1. Apply basic principles and laws of electricity and magnetism
- CO2. Solve Problems involving the fundamental principles of physics
- CO3. Apply Mathematical techniques for quantitative solutions to problems
- CO4. Understand the fundamentals of Condensed Matter, Nuclear and Quantum Physics

**Nuclear physics:** A brief overview of nuclear physics. Nuclear reactions, a brief description of nuclear models. Interactions of X-rays and  $\gamma$ -rays with matter, slowing down and absorption of neutrons. Fundamental particles, classification of fundamental particles, fundamental forces, conservation laws in particle physics, a brief outline of the quark model.

**Nuclear power:** Nuclear fission, fission chain reaction, self sustaining reaction, uncontrolled reaction, nuclear bomb. Nuclear reactors, different types of reactors and reactors in India. Nuclear waste management. Nuclear fusion, fusion reactions in the atmosphere. Radiation effects; dosage calculation. Nuclear energy; applications and disadvantages. **[16 hours]**

**Condensed matter physics:** Amorphous and crystalline state of matter. Crystal systems. Liquid crystals. X-ray diffraction; Bragg equation. Structure of NaCl. FTIR; Experiment analysis. NMR; Experiment and analysis. Electrical conductivity of metals and semiconductor. Magnetic materials; para,ferro, ferri and anti-magnetism. Dielectrics—para, ferro, pyro and piezo properties. Symmetry in physics. **[16 hours]**

**Quantum physics:** Qualitative discussion. Molecules, atoms, nucleus, nucleons, quarks and gluons. Particle physics (qualitative). Stern-Gerlach experiment and consequences. Uncertainty relation. Hydrogen atom. Positron annihilation. Laser trapping and cooling. Ion traps. Electromagnetic, strong, weak and Gravitational forces. Big Bang theory, String theory. LHC experiment, consequences. Higgs Boson. **[16 hours]**

**Tutorial**

**[32 hours]**

## PHY-322: Energy Science

### Course Outcome:

After completing this course the student will

- CO1. Learn the need for renewable energy in the growing world
- CO2. Understand the conservation of renewable energy resources
- CO3. Understand the proper utilisation of renewable energy resources
- CO4. Understand the physics of renewable energy resources
- CO5. Learn the technology behind the biogas and biomass production

**Renewable energy resources:** Forms of Energy, Basics of Thermodynamics: Heat capacity, Heat transfer mechanism, entropy, First and second law of thermodynamics Carnot Cycle, Rankin cycle. Fossil fuels, time scale of fossil fuels. Solar energy: Sun as the source of energy and its energy transport to the earth, Extraterrestrial and terrestrial solar radiations, Measurement techniques of solar radiations using Pyranometer and Pyrheliometer. **[16 hours]**

**Materials and solar cell technology :** Single, poly and amorphous silicon, GaAs, CdS, fabrication of single and polycrystalline silicon solar cells, amorphous silicon solar cells, photovoltaic systems and technical problems. Wind Energy Origin and classification of winds, Aerodynamics of windmill: Maximum power and Forces on the Blades and thrust on turbines; Wind data collection and field estimation of wind energy, Site selection, Basic components of wind mill, Types of wind mill, Wind energy farm, Hybrid wind energy systems: The present Indian Scenario. **[16 hours]**

**Biomass energy and biogas technology:** Nature of Biomass as a fuel, Biomass energy conversion processes, Direct combustion: heat of combustion, combustion with improved Chulha and cyclone furnace; Dry chemical conversion processes: pyrolysis, gasification, types of gasification. Importance of biogas technology, anaerobic decomposition of biodegradable materials, Factors affecting Bio-digestion, Types of biogas plants, Applications of biogas. **[16 hours]**

## PHC 080: Condensed Matter Physics Lab

### Course Outcome:

After completing this course the student will

- CO1. Independently collect single crystal XRD data and evaluate the crystal structure,
- CO2. Analyse Diffraction data and their suitability for single crystal structure.
- CO3. Independently work on raw diffraction data and Solve and refine crystal data
- CO4. Understand the properties of Condensed Materials such as Structural, Magnetic, Electrical and Semiconducting Properties
- CO5. Acquire theoretical and practical experience in the Condensed Matter Physics

Any eight of the following experiments:

1. Determination of the paramagnetic susceptibility of the given salt by Quincke's method
2. Study of mercury spectrum by superimposing it on brass spectrum
3. Sodium spectrum analysis by using Edser-Butler fringes
4. Temperature coefficient of resistance of a thermistor
5. Analysis of the powder X-ray photograph of a simple cubic crystal
6. Thermionic work function of a metal (Richardson-Dushman formula)
7. Energy gap of a semiconductor
8. Frank Hertz experiment
9. Measurement of magneto resistance of semiconductors
10. Stefan's Constant of Radiation

11. Thermal Conductivity of Poor Conductor
12. Di-electric constant of a Non polar liquid
13. Dipole moment of an organic Molecule
14. High Resistance by Leakage

Total work load : 2 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **128 hours**

### **PHC 090: Nuclear and Particle Physics Lab**

#### **Course Outcome:**

After completing this course the student will

- CO1. Be familiar with theoretical concepts & experimental techniques of Nuclear & particle physics,
- CO2. Be able to make quantitative estimates of phenomena in elementary particles
- CO3. Understand stability of the nucleus, nuclear forces, interactions & models, Critically assess a range of applications of nuclear technology.
- CO4. Acquire Theoretical & practical experience in the scattering experiments and gamma-ray spectroscopy.
- CO5. Be able to realise the Nuclear Electronic circuits

Any eight of the following experiments:

1. Half-life of Indium-116 measurement.
2. Energy Resolution of a NaI(Tl) scintillation spectrometer.
3. Compton scattering—determination of the rest energy of an electron.
4. Beta absorption coefficient measurement.
5. Dekatron as a counter of signals.
6. Gamma-ray absorption coefficient measurement.
7. End-point energy of Beta particles by half thickness measurement.
8. Common Source amplifier.
9. Astable multivibrator using timer IC 555.
10. Dead time of the G.M. counter.

Total work load : 2 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **128 hours**

**Reference:** 1. Varier K. M., Antony Joseph and Pradyumman P. P., Advanced experimental techniques in Modern Physics, Pragati Prakashan, 2011

### **PHC 250: Solid State Physics Lab 1**

*For those who have opted for Solid State Physics Specialisation*

#### **Course Outcome:**

After completing this course the student will

- CO1. Be able to make quantitative estimates for phenomena in solid state physics.
- CO2. Describe thermal & vibrational properties of solids,
- CO3. Compute band structures using the tight-binding approximation
- CO4. Compute trajectories in real and reciprocal space, Characterize magnetism
- CO5. Characterize intrinsic and doped semiconductors
- CO6. Describe superconductivity
- CO7. Understand the mechanism and working of semiconductor devices.

Any five of the following experiments:

1. Optical rotatory dispersion of a uniaxial crystal.
2. Birefringence of quartz using spectrometer.
3. Paramagnetic susceptibility by Gouy balance method.
4. Fermi energy of copper.
5. Cell parameter(s) from an X-ray powder diffractogram.
6. Verification of Langmuir-Child's law.
7. Curie temperature of a ferroelectric material.
8. Dielectric constant and its temperature variation.
9. Determination of the polarisabilities of the molecules of an uniaxial crystal using spectrometer.
10. Determination of Stefan's constant using Photo Cell
11. Calibration of Si Diode

12. Measurement of Electrical and Thermal Conductivity of Copper
13. Verification of Curie-Weiss law
14. BH Curve in a ferromagnetic Material

Total work load : 1 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **64 hours**

### **PHC 270: Nuclear Physics Lab 1**

For those who have opted for *Nuclear Physics Specialisation*

#### **Course Outcome:**

After completing this course the student will

- CO1. Be familiar with Nuclear Detectors, Pulse techniques, nuclear models, timing spectroscopy and nuclear technology.
- CO2. Be familiar with Theoretical & practical experience in the scattering experiments and gamma-ray spectroscopy.
- CO3. Learn Instrumentation, development of sensors, detectors, & larger complex instruments.
- CO4. Familiarise in Fundamentals of reactor theory and nuclear decay mechanisms
- CO5. Learn Accelerator physics, research and development for the next generation of particle accelerators.

Any five of the following experiments:

1. Cockroft-Walton voltage multiplier.
2. Coincidence circuit.
3. Linear amplifier.
4. Transistorised binary circuit.
5. Pulse shaping circuits.
6. Linear Gate.
7. Randomicity of radioactive decay.
8. Nomogram method : Measurement of endpoint energy of beta rays.
9. Study of linearity of the NaI(Tl) gamma ray spectrometer.
10. Determination of the energy of an unknown gamma ray source.

Total work load : 1 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **64 hours**

### **PHY-315: Theoretical Physics Lab 1**

For those who have opted for *Theoretical Physics Specialisation*

#### **Course Outcome:**

After completing this course the student will

- CO1. Tackle a wide range of topics using powerful analytical tools including formal methods in classical and quantum physics
- CO2. Clearly communicate information and conclusions in written and verbal formats on ideas in Theoretical Physics
- CO3. Evaluate complex problems and formulate solutions, indentifying the role of theory, hypothesis and experiment in the scientific method
- CO4. Apply computation to solve the problems in theoretical physics
- CO5. Plan, carry out and report theoretical physics based investigation
- CO6. Apply classical and quantum theoretical techniques in research

Any five of the following experiments:

1. Calculation of Christoffel symbols.
2. Geodesics and curvature calculations.
3. Exterior Schwarzschild metric calculations.
4. Robertson-Walker metric calculations.
5. Lagrangian and Hamiltonian, Euler Lagrange equations for Schroedinger field.
6. Lagrangian for Maxwell's field and The field equations.
7. Symmetries of the Lagrangian and Constants of motion.
8. Operator algebra-BCH formula.
9. Relativistic kinematics-1: Relations between center of momentum and laboratory frames.
10. Relativistic kinematics-2: Non-relativistic limit of relativistic kinematics.

Total work load : 1 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **64 hours**

## PHD 250: Solid State Physics 2

### Course Outcome:

After completing this course the student will

- CO1. Gain an overall idea about X-ray diffraction method Solid State Physics
- CO2. Get the understanding about X-ray diffraction (XRD) by Crystals.
- CO3. Understand the Physical phenomena and significance of XRD
- CO4. Be able to make quantitative estimates for structural phenomena of solids.
- CO5. Describe thermal and vibrational properties of solids
- CO6. Understand the concepts of Dislocations, Imperfections and Defects in Solids
- CO7. Appreciate the Luminescent effects and colour centres in ionic crystals

**X-ray diffraction by crystals:** The reciprocal lattice. Ewald sphere and construction. Scattering by an electron and atom; Atomic scattering factor. Anomalous scattering. Fourier analysis and inversion of Fourier series; Physical significance. Geometrical structure factor of the unit cell. Absent reflections and space groups. **(Sherwood, P290 – 358).**

**Experimental techniques:** Brief introduction to Laue, Powder and single crystal methods. Use of Synchrotron radiation for structure studies. Weissenberg and precession methods. Cell parameter and space group determination. Molecular weight determination. **(Stout and Jensen, p 90–211). [16hours]**

**Structure analysis:** Low angle scattering. Reduction of intensities to structure amplitudes. Various corrections. Absolute scale factor and temperature factor from statistical methods. Statistical method for finding the presence of center of symmetry Fourier analysis of electron density. Patterson synthesis. Harker sections and lines. Heavy atom methods. Direct methods for phase determination. The inequality relations. Difference Patterson synthesis and error Fourier synthesis. Figure of merit. Cyclic Fourier refinement, Difference Fourier synthesis. Refinement of structures: The least squares method. Accuracy of the parameters. Bond lengths and angles. **(Sherwood, Ladd and Palmer)**

**SAXS;** Particle Size study of Fibre structure **[16 hours]**

**Imperfections in solids:** Different types of imperfections. Schottky and Frenkel defects; expression for energy for the formation of Frenkel and Schottky defects. Diffusion in metals; Kirkendall effect. Ionic conductivity in pure and doped halides. Photoconductivity **(Kittel).**

**Dislocations:** Burger's Vector. Expression for strain in edge and screw dislocations **(Wahab and Kittel).**

**Synthesis and Device fabrication of Nanomaterials:** Nanomaterials. Bottom-Up approach; Sol-gel synthesis, hydrothermal growth, thin-film growth, physical vapor deposition, chemical vapor deposition. Top- Down Approach; Ball milling, Microfabrication, Lithography, Ion-beam lithography **(Ramachandra rao and Shubra singh, p129-142).**

**Luminescence:** Excitation and Emission. Franck-Condon principle. Decay mechanisms; Temperature dependent and independent decays. Thermoluminescence and glow curve. Gudden-Pohl effect **(Dekker). [16 hours]**

**Total work load**

**48 hours**

## PHD 260: Solid State Physics 3

### Course Outcome:

After completing this course the student will

- CO1. Have overall idea about properties of Solids.
- CO2. Be provided with the understanding about free electron theory of metals
- CO3. Understand the properties of impurity semiconductors.
- CO4. Learn Semiconductor phenomena; Hall effect, Magneto-resistance phenomenon
- CO5. Be able to make quantitative estimates of semiconducting phenomena of solids.
- CO6. Describe the effect of excess carriers in semiconducting solids
- CO7. Understand the mechanism and working of semiconductor devices.

**Free electron theory of metals:** Boltzmann transport equation, Sommerfeld's theory of electrical conductivity, mean free path in metals, dependence of resistivity on temperature and impurities. Matthiessens rule. Electron-phonon collisions. Electrical conductivity of metals at high frequencies. Plasma frequency. Transparency of alkali metals to UV radiation. Anomalous skin effect. Plasmons. Field enhanced emission, Schottky effect. Hall effect and magnetoresistance in metals. Cyclotron frequency (**Kittel & Pillai**). Thermal conductivity of insulators; Umklapp processes (**Dekker, p275-292**). **[16 hours]**

**Impurity semiconductors:** A brief discussion on Elemental and Compound Semiconductors and their properties. Carrier concentrations; effect of temperature and impurity density. Electrical neutrality condition. Fermi energy; Variation with temperature and impurity density, when the Boltzmann approximation is valid, Effect of impurity density at very low temperatures. Mobility of current carriers; effect of temperature and impurity. Electrical conductivity; effect of temperature, impurity density and the energy band gap.

**Hall effect in semiconductors;** Expression for Hall co-efficient,

**Magneto-resistance phenomenon** (qualitative) (**M A Wahab**).

**Cyclotron resonance;**Cyclotron resonance in Si and Ge semiconductors. Effective mass tensor. Variation of cyclotron resonance frequency with orientation of the crystal in the magnetic field (**Mckelvey, p270-300**).

**[16 hours]**

**Excess carriers in semiconductors:** Generation and recombination rates. Continuity equations; Einstein equations, Expression for the diffusion length of electrons and holes (**Mckelvey, p320-335**).

High field transport in semiconductors; electron temperature. Gunn effect, Expression for drift velocity. Superlattice Phenomenon (**Roy, p29-39**).

**Semiconductor devices:** The pn junction; space charge region, effect of the applied field on barrier potential, barrier thickness and contact field. Transition capacitance. Current density for excess carriers. Characteristics and applications of phototransistors, JFET, SCR and UJT (**Mckelvey, p390-441**). **[16 hours]**

**Total work load**

**48 hours**

## PHD 300: Nuclear Physics 2

### Course Outcome:

After completing this course the student will

- C01.** Understand the phenomenon of nuclear fission and its application in energy production.
- C02.** Gain an overview on the neutron physics and nuclear reactor theory.
- C03.** Develop the understanding of quantum theory beta decay.
- C04.** Learn about the multipole transition involving gamma decay and internal conversion.

**Nuclear fission:** Nuclear fission, Mass-energy distribution of fission fragments. Statistical model of fission.

**Reactor theory-1:** Neutron and its interaction with matter-collision kinematics, differential elastic scattering cross sections, isotropic scattering, the criticality condition for a reactor. Neutron transport equation using elementary diffusion theory. One group critical equation, critical size on the basis of Fermi age theory.

[16 hours]

**Reactor theory-2:** Reactors; One group theory, spherical and cylindrical homogeneous reactor. Effective multiplication factor. Reflector reactors: effects of reflector. One group method of a homogeneous reactor with reflector. reflector savings. Infinite multiplication factor, critical size and critical mass. Heterogeneous reactor system; calculation of thermal utilization factor. Fast Breeder reactor, Evaluation of Buckling using one group model.

[16 hours]

**Beta decay:** Classification of beta interactions. Matrix elements. Fermi and Gamow-Teller selection rules for allowed beta decay. The non conservation of parity in beta decay. Wu et al experiment. The universal Fermi interaction.

**Gamma decay:** Electromagnetic interactions with nuclei. Multipole transitions. Transition probabilities in nuclear matter. Weisskopf's estimates. Structure effects. Selection rules. Internal conversion Photo disintegration of deuteron and radiative capture of neutron by proton.

[16 hours]

**Total work load**

**48 hours**

## PHD 310: Nuclear Physics 3

### Course Outcome:

After completing this course the student will

- CO1. Know about the two particle nuclear bound system like deuteron.
- CO2. Learn the theory of nucleon-nucleon scattering processes.
- CO3. Get an understanding of plane wave theory of nuclear reactions.
- CO4. Acquire knowledge on optical model and heavy ion physics.

**Two particle systems:** Deuteron; Schrodinger equation for a two nucleon system, Theory of the ground state of the deuteron under central and non central forces, Excited states of the deuteron. Rarita-Schwinger relations. Deuteron magnetic and Quadrupole moments.

**Nucleon-nucleon scattering processes:** Theory of s-wave scattering of neutrons by free protons and experimental results. Wigner's formula for n-p scattering. Theory of scattering of slow neutrons by bound protons (Ortho and Para hydrogen) and experimental results. Effective range theory for n-p scattering. S wave theory of proton-proton scattering. Mott's modification of Rutherford's formula. Pion-nucleon scattering experimental results,  $(3/2, 3/2)$  resonance. **[16 hours]**

**Nuclear reactions-1:** Plane wave theory of direct reactions. Born approximation (Plane wave); Butler's theory. Cross section for nuclear scattering and reactions. Shadow scattering, Breit-Wigner resonance formulae.

**Nuclear reactions-2:** Bohr's independence hypothesis. The compound nucleus (CN) reactions, decay rates of CN, Statistical theory of nuclear reactions. Evaporation probability and cross sections for specific reactions. **[16 hours]**

**Optical model:** Giant resonances, Kapur-Pearls' dispersion formula for potential scattering. Direct reactions: Kinematics of stripping and pickup reactions. Theory of stripping and pickup reactions. Inverse reactions.

**Heavy ion physics:** Special features of heavy ion Physics. Remote heavy ion electromagnetic interactions. Coulomb excitations. Close encounters.

Heavy ion scattering. Grazing interactions. Particle transfer. Direct and head on collisions, compound nucleus and quasi molecule formation. **[16 hours]**

**Total work load**

**48 hours**

## PHY-405: Theoretical Physics 2

### Course Outcome:

- After completing this course the student will
- CO1. Tackle a wide range of topics using powerful analytical tools including formal methods in classical and quantum physics
  - CO2. Clearly communicate information and conclusions in written and verbal formats on ideas in Theoretical Physics
  - CO3. Evaluate complex problems and formulate solutions, identifying the role of theory, hypothesis and experiment in the scientific method
  - CO4. Apply computation to solve the problems in theoretical physics
  - CO5. Plan, carry out and report theoretical physics based investigation
  - CO6. Apply classical and quantum theoretical techniques in research

**Relativistic quantum mechanics:** Probability conservation in relativistic quantum mechanics, The Dirac equation, Conserved current, Representation independence, large and small components, approximate Hamiltonian for an electrostatic problem, free particle solutions, Relativistic covariance, Space inversion, Bilinear covariants and their properties, Klein's paradox, Hole theory and charge conjugation. **[16 hours]**

**Quantization of the Dirac field:** Second quantization, positron operators and positron spinors, Electromagnetic and Yukawa couplings. Weak interactions and parity nonconservation: Classification of interactions, parity and hyperon decay, Fermi theory of beta decay, the two-component neutrino. Pion decay and the CPT theorem. **[16 hours]**

**Covariant perturbation theory:** Natural units and dimensions, S-matrix expansion in the Interaction representation. Unitarity, First order processes: Matrix element for electron scattering. Cross section for Mott scattering. Helicity change and spin projection operator. Pair annihilation, pair creation, hyperon decay. S - matrix for two photon annihilation, electron propagator, Matrix element for Compton scattering, Feynman rules. Cross section for two photon annihilation. **[16 hours]**

**Total work load**

**48hours**

**PHY-406: Theoretical Physics 3****Course Outcome:**

- After completing this course the student will
- CO1. Tackle a wide range of topics using powerful analytical tools including formal methods in classical and quantum physics
  - CO2. Clearly communicate information and conclusions in written and verbal formats on ideas in Theoretical Physics
  - CO3. Evaluate complex problems and formulate solutions, identifying the role of theory, hypothesis and experiment in the scientific method
  - CO4. Apply computation to solve the problems in theoretical physics
  - CO5. Plan, carry out and report theoretical physics based investigation
  - CO6. Apply classical and quantum theoretical techniques in research

**Angular momentum theory and applications:** Angular momentum: Transformations under rotations. Coupling of three and four angular momenta. Racah coefficients, Wigner 9j symbols, applications. Wigner-Eckart theorem. Projection theorem. j-j and L-S coupling. Angular momentum in nuclear reactions, Spherical tensors. Evaluation of matrix elements between coupled angular momentum states. Vector spherical harmonics. Gradient theorem (without proof). Multipole radiation. **[16 hours]**

**Spin density matrix:** Spin and helicity in a relativistic process. Effect of Lorentz and discrete transformations on helicity states. Wick and Wigner rotations, pure rotation, pure boost, parity, time reversal and charge conjugation. The spin density matrix ( $\rho$ ), general properties, multipole parameters, combined systems, Diagonalization of  $\rho$ . Oriented and non-oriented systems, Polarized and aligned systems, Spherical tensor basis and SU(N) basis. **[16 hours]**

**Relativistic density matrix:** Helicity multipole parameters and their transformation laws. Helicity amplitudes for elastic reactions and their symmetry properties. Polarization in scattering of spin  $\frac{1}{2}$  particles, Final state density matrix. Observables of a reaction, reactions involving polarized beam and polarized targets. **[16 hours]**

**Total work load**

**48 hours**

## Elective Papers 1

### PHD 270: Accelerator Physics

#### Course Outcome:

After completing this course the student will

- CO1. Know about different types of ion sources and their working.
- CO2. Learn ion optics and focussing.
- CO3. Know about different particle accelerators.
- CO4. Get theory behind electron accelerator.

**Ion sources:** Brief introduction to ion sources for positive and negative ions. Ion production. Semi classical treatment of ionization, Townsend theory-comparison of theory and experiment for ion production. Examples of ion sources-properties of ion sources. Insulation at high voltages-Spark voltage. Paschen's law for gas breakdown.

**Ion optics and focussing:** Focussing properties of linear fields. Electrostatic and magnetic lenses. [16 hours]

**Particle accelerators:** Introduction, development of accelerators. Direct-voltage accelerators: Cockroft-Walton generator, Van de Graff generator, Tandem accelerators, Pelletron. Resonance accelerators: Cyclotron - fixed and variable energy, principles and longitudinal dynamics of the uniform field cyclotron. Linear accelerators.

[16 hours]

**Electron accelerators:** Betatron; Beam focusing and Betatron Oscillation. Microtron. Synchronous accelerators; Principle of phase stability, Mathematical theory for Principle of phase stability. Electron synchrotron. Proton synchrotron.

Alternating gradient machines; Alternating gradient principle, AG proton synchrotron.

[16 hours]

**Total work load**

**48 hours**

### PHY-408: Liquid Crystals

#### Course Outcome:

After completing this course the student will

- CO1. Be familiar with the fundamentals of anisotropic fluids.
- CO2. Understand the principles of Long and short range order in nematics.
- CO3. Learn static distortion in nematics, defects and textures in nematics
- CO4. Know about Dynamical properties of liquid crystals and nematics.
- CO5. Study Optical properties of Cholesterics.

**Anisotropic fluids:** Main Types and properties: Introduction. The building blocks. Small organic molecules. Long helical rods. Associated structures. Nematics and Cholesterics. Nematics proper. Static pretransitional effects above  $T_{N-1}^i$ . The cholesterics. A distorted form of the nematic phase. Smectic. Smectic A. Smectic B. Smectic C. Other mesomorphic phases. Exotic smectics; long range order in a system of long rods. Lyotropic systems. Remarkable features of liquid crystals. Applications of liquid crystals. [De Gennes and Prost] [16 hours]

**Long and short range order in nematics:** Definition of an order parameter. Microscopic approach. Order parameter from optical method, from diamagnetic anisotropy. Mean field theory with S2 interaction (Maier-Saupe).

**Static distortion in nematics:** Long range distortions, distortion free energy. Magnetic field effects—Molecular diamagnetism, Magnetic coherence length.

**Defects and textures in nematics:** Observations. Black filaments. Schlieren structures. Types of defects (qualitative discussion only).

**Smectics:** Continuum description of smectics A and C, Mean field description of  $S_A$ -N transition.

[De Gennes and Prost]

[16 hours]

**Dynamical properties of nematics:** Experiments measuring the Leslie coefficients-Laminar flow under a strong orienting field, Attenuation of ultrasonic shear waves, Laminar flow in the absence of external fields. Convective instabilities under electric fields. Basic electrical parameters, Experimental observations at low frequencies, The Helfrich interpretation. Extension to higher frequencies (qualitative).

**Cholesterics:** Optical properties of an ideal helix—The planar texture, Bragg reflection, Transmission properties at arbitrary wavelengths (normal incidence), The Mauguin limit, Rotatory Power. Agents influencing the pitch—Physicochemical factors, External fields (qualitative). Textures in cholesterics. [De Gennes and Prost]

[16 hours]

**Total work load**

**48 hours**

**References:**

### PHY-409: Atmospheric Physics

**Course Outcome:**

After completing this course the student will

- CO1. Understand the composition of atmosphere and its different layers.
- CO2. Get on the thermodynamics of the atmosphere.
- CO3. Learn on terrestrial radiations and its effects on atmosphere.
- CO4. Understand on aerosols, clouds and atmospheric radioactivity.
- CO5. Understand working of atmospheric electricity.

**Atmospheric composition:** Energy in the atmosphere, heating of the atmosphere, motions in the atmosphere. Variations in atmospheric composition, Structure on the basis of composition. Thermal structure of the atmosphere.

**Thermodynamics:** Entropy of dry air, vertical motion of saturated air, tephigram, potential energy of an air column.

**Dynamics:** Escape of hydrogen, photodissociation of oxygen, photo chemical processes. Equations of motion, the geostrophic approximation, cyclostrophic motion. [16 hours]

**Terrestrial and extra terrestrial radiation:** General features of direct, diffuse and global radiation-attenuation of direct solar radiation-Rayleigh and Mie scattering. Angstrom turbidity formula for all aerosols. Direct transmittance due to continuum attenuation, diffuse spectral irradiance due to Rayleigh and aerosol scattering.

**Aerosols:** Production and properties of aerosols. Aerosol optical depth, Beer's law - Sun Photometer. Optical filters.

**Clouds:** Microphysics of clouds, Macro characterization of clouds. Radiative transfer in clouds and aerosols.

[16 hours]

**Atmospheric radioactivity:** Background Radiation, Radioactivity in Atmosphere, Radon, Properties of radon, Origin of radon, Radon entry into the atmosphere: Diffusion, Advection and Convection. Health Effects: Dose.

**Atmospheric electricity:** The generation of an ion, The mobility of ions, Ion size, recombination of ions. Ions in an electric field, Ionizing agencies, radioactivity. The conductivity of the atmosphere and its origin, Measurement of conductivity of the atmosphere near the ground. Relationship between ions and conductivity. The current voltage characteristics in a gas under conditions of volume ionization. [16 hours]

**Total work load**

**48 hours**

**PHY-410: Numerical Methods**

**Course Outcome:**

After completing this course the student will

- CO1. Understand Computer arithmetic in solving the problems.
- CO2. Learn Iterative methods like Bisection method, Newton-Raphson method, Secant method.
- CO3. Solve Linear algebraic equations by numerical techniques like the Gauss elimination method.
- CO4. Learn numerical Interpolations, Least-squares approximation of functions.
- CO5. Learn different techniques of Numerical integration
- CO6. Solve Numerical solution of differential equations

**Computer arithmetic:** Integers; Floating point representation of numbers; Arithmetic operations with normalisation; Errors in representation; Commonly used number types and their limits like max. and min. integer, float, double precision, long, etc.

**Iterative methods:** Bisection method, Newton-Raphson method, Secant method, the method of successive approximations. Solution of a polynomial equation. **[16 hours]**

**Linear algebraic equations:** The Gauss elimination method, LU decomposition method, Gauss-Jordon method, An introduction to the solution of simultaneous non-linear equations.

**Interpolations:** Introduction, Newton interpolation formulae, extrapolation, Lagrange interpolation. spline interpolation.

**Least-squares approximation of functions:** Introduction, linear regression, algorithm for linear regression. Polynomial regression, fitting exponential and trigonometric functions. **[16 hours]**

**Numerical integration.** Trapezoidal method, Simpson rule. Errors in integration formulae (Romberg method). Algorithms for integration of a tabulated function. Algorithms for integrating a known function. Gaussian quadrature formulae.

**Numerical solution of differential equations:** Euler method, Runge - Kutta methods, Runge - Kutta 4th order formulae, predictor - corrector method. comparison of predictor-corrector and Runge- Kutta methods. **[16 hours]**

**Total work load**

**48 hours**

## Elective Papers 2

### PHY-411: Nuclear Spectroscopy Methods

#### Course Outcome:

After completing this course the student will

- CO1. Understand Ion implantation and backscattering spectroscopy
- CO2. Study Compton scattering
- CO3. Know about Positron annihilation spectroscopy
- CO4. Understand Experimental methods of positron annihilation spectroscopy

**Ion implantation and backscattering spectroscopy:** Ion implantation, Implantation technique, Ion beam diffusion, Thermal annealing and sputtering, Analysis techniques. Backscattering, Energy loss and straggling. Kinematics factor, differential scattering cross sections, depth scale, backscattering yield, instrumentation. Application to elemental and compound targets. Axial and planar half angles. Estimates of minimum yield. Lattice location of impurities, alignment procedures. Ion induced X-rays. Application of ion implantation. **[16 hours]**

**Compton scattering:** Compton scattering from free electrons. Effects of external potential. Klein-Nishina cross sections for polarized and unpolarized radiation. Compton profiles, momentum distributions and impulse Compton profiles. Calculation of Compton profiles for electron models. Relativistic profile corrections: experimentation. Discussion of methodology including sources, detectors and geometry. Data accumulation, analysis and multiple scattering corrections. Discussion of experimental results for some simple metals, ionic and covalent crystals. **[16 hours]**

**Positron annihilation spectroscopy:** The positron and its discovery, Positronium, its characteristics, formation. Spur model and Ore gap model of positronium formation. Quenching and enhancement. Theory of 2-gamma and 3-gamma annihilations. Positron and positronium states in solids: trapping of positrons. Two state trapping model.

**Experimental methods of positron annihilation spectroscopy:** Positron lifetime techniques (PLT), Angular Correlation of Annihilation Radiation (ACAR), Doppler broadening (DB) and Coincidence DB. Methods of data analysis: PLT and ACAR. Experimental results of some metals and defected materials. Interpretation of the experimental results. PAS in the study of polymers. Multiparameter techniques. A brief mention of slow positron beams. **[16 hours]**

**Tutorial**

**[32 hours]**

## PHY-412: Modern Optics

### Course Outcome:

After completing this course the student will

- CO1. Understand the phenomenon of polarization of light using quantum mechanics
- CO2. Familiar with Non linear Optics
- CO3. Understand Pancharatnam phase in Quantum features of radiation field.
- CO4. Learn the concept of Radiation Field Quantization.
- CO5. Understand Squeezed states of light.

**Polarization of light:** Pure states and mixed states. Density operator, properties and equation of motion. Polarization of light, states of polarized light, Jones matrices, Jones formalism, Stokes parameters, Poincaré sphere, Mueller matrices and Mueller formalism, Mueller matrices and their characterization, Few illustrative examples; comparison of Jones and Mueller formalisms. Pancharatnam phase, dynamical phase, cyclic evolution of polarization state on Poincaré sphere; Applications of the concept of Pancharatnam phase. **[16 hours]**

**Quantum features of radiation field:** Planck's law of radiation and Einstein coefficients, Thermal equilibrium, Semi-classical theory of two level atoms, quantum theory of B coefficient, Optical resonance, damping, Theory of chaotic light, coherence, temporal, spatial, mutual coherence, line broadening, natural and Doppler width, collision broadening. **[16 hours]**

**Quantized radiation field:** Quantization of radiation field, States of radiation field; Fock states and phase eigenstates; Interaction of radiation with matter, theory of spontaneous emission; Coherent states and their properties, BCH formula, P, Q and Wigner distribution functions, Squeezed states of light and their properties; applications. Correlation functions, Brown-Twiss correlations. **[16 hours]**

**Tutorial** **[32 hours]**

## PHD 280: Electronics

### Course Outcome:

After completing this course the student will

- CO1. Learn analyzing digital and analog devices and circuits.
- CO2. Analyze components associated with digital and analog electronic systems.
- CO3. Demonstrate proficiency in the use of electronic equipment and devices.
- CO4. Assist in the design, operation, and troubleshooting of electronic systems.
- CO5. Analyze electronics devices and circuits using computer simulations.
- CO6. Solve electronic devices and systems using mathematical concepts.

**BJT AC Analysis:** Amplification in AC domain. BJT transistor modeling, common emitter voltage divider bias configuration. Emitter follower configuration. Darlington connection. Hybrid equivalent model, Approximate Hybrid equivalent circuit; Voltage divider configuration, Complete hybrid equivalent model.

**Feedback and Oscillator Circuit:** Feedback concept, Feedback connections types, Practical feedback circuits. Feedback amplifier; Phase and frequency considerations. Oscillator operation, Phase - shift Oscillator, Wien-bridge Oscillator, Crystal Oscillator—BJT version.

**FET amplifiers:** JFET small signal model, Biasing of FET, Common drain, common gate configurations, FET amplifier and its frequency response. MOSFET – types and E – MOSFET Voltage divider configurations **[16 hours]**

**Operational amplifiers:** Concepts of differential amplifier, Ideal op-amp, op-amp parameters, ideal voltage transfer curve, open loop and closed op-amp configurations, inverting amplifier, non inverting amplifier, limitations of open loop op-amp configurations.

**Operational amplifier applications:** Summing, scaling and averaging amplifiers, voltage to current converter with grounded load, current to voltage converter, integrator, differentiator, V to I and I to V converters, Log and antilog amplifiers, Wave form generators, phase shift oscillator, Wein bridge oscillator. Non-linear circuit applications: Crossing detectors, 555 timer as a mono-stable and astable multivibrators, Active Filters—First and second order Low pass and High pass filters, Butterworth filters (**Gaekwad R.A**) **[16 hours]**

**Digital electronics:** Boolean Laws and Theorems, addition and subtraction based on 1's and 2's complements, Families of gates, RS and JK flip-flops, The Master-Slave JK Flip-Flop, D and T flipflops. Karnaugh maps for 3 and 4 variables, Decoders-BCD decoders, Encoders.

**Combinational logic circuits:** Shift registers-series, series in-series out and parallel in parallel out. Half and full adders, Registers, Counters - Binary Ripple Counters, Synchronous Binary counters, Counters based on Shift Registers, Synchronous counters, Synchronous Mod-6 Counter using clocked JK Flip-Flops. Synchronous Mod-6 Counter using clocked D, T, or SR Flip-Flops. Memory cells, memory registers **[16 hours]**

**Tutorial**

**[32 hours]**

**PHY-414: Minor Project**

**Course Outcome:**

- After completing this course the student will have
- CO1. Hands on experience to various experimental Techniques
  - CO2. Research exposure to Physics experiments.
  - CO3. Knowledge on construction of electronic circuits for various application.
  - CO4. Data analysis techniques and plotting of experimental results.

**PHD 090: Nuclear and Particle Physics Lab**

*For those who have completed Condensed Matter Physics Lab PHY311*

**Course Outcome:**

- After completing this course the student will
- CO1. Be familiar with theoretical concepts & experimental techniques of Nuclear & particle Physics.
  - CO2. Be able to make quantitative estimates of phenomena in elementary particles
  - CO3. Understand stability of the nucleus, nuclear forces, interactions and nuclear models; critically assess applications of nuclear technology.
  - CO4. Acquire Theoretical and practical experience in the scattering experiments and gamma-ray spectroscopy.
  - CO5. Be able to realise the Nuclear Electronic circuits

*For those who have completed Condensed Matter Physics Lab PHY311*

Any eight of the following experiments:

1. Half-life of Indium-116 measurement.
2. Energy Resolution of a NaI(Tl) scintillation spectrometer.
3. Compton scattering determination of the rest energy of an electron.
4. Beta absorption coefficient measurement.
5. Dekatron as a counter of signals.
6. Gamma-ray absorption coefficient measurement.
7. End-point energy of beta particles by half thickness measurement.
8. Common source amplifier.
9. Astable multivibrator using timer IC 555.
10. Dead time of the G.M. counter.

Total work load : 2 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **128 hours**

### **PHD 080: Condensed Matter Physics Lab**

For those who have completed *Nuclear Physics Lab PHY 312*

#### **Course Outcome:**

After completing this course the student will

- CO1. Independently collect single crystal XRD data and evaluate the crystal structure,
- CO2. Analyse Diffraction data and their suitability for single crystal structure.
- CO3. Independently work on raw diffraction data and Solve and refine crystal data
- CO4. Understand the properties of Condensed Materials such as Structural, Magnetic, Electrical and Semiconducting Properties.
- CO5. Acquire theoretical and practical experience in the Condensed Matter Physics

Any eight of the following experiments :

1. Determination of the paramagnetic susceptibility of the given salt by Quincke's method.
2. Study of mercury spectrum by superimposing it on brass spectrum.
3. Sodium spectrum analysis by using Edser-Butler fringes.
4. Temperature coefficient of resistance of a thermistor.
5. Analysis of the powder X-ray photograph of a simple cubic crystal.
6. Thermionic work function of a metal (Richardson-Dushman formula).
7. Energy gap of semiconductor.
8. Determination of Stefan's constant.
9. Frank Hertz experiment
10. Magnetic hysteresis.
11. Measurement of magneto resistance of semiconductors.

Total work load : 2 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **128 hours**

### **PHD 240: Solid State Physics Lab 2**

For those who opted for *Solid State Physics Specialisation*

#### **Course Outcome:**

After completing this course the student will

- CO1. Be able to make quantitative estimates for phenomena in solid state physics.
- CO2. Describe characteristics of thermal and vibrational properties of solids, Compute Band structures
- CO3. Compute trajectories in real and reciprocal space, Characterize magnetism
- CO4. Characterize intrinsic and doped semiconductors
- CO5. Describe superconductivity
- CO6. Understand the mechanism and working of semiconductor devices.

Any five of the following experiments:

1. Photovoltaic cell.
2. Photoconductive cell.
3. Hall effect in semiconductors.
4. Determination of the energy gap of semiconductors by four-probe method.
5. Temperature variation of the junction voltage of a p-n diode.
6. Temperature variation of the reverse saturation current in a p-n diode.
7. Depletion capacitance of a junction diode.
8. Determination of material constant of an intrinsic semiconductor.
9. Schottky effect.
10. Ionic conductivity of an alkali halide crystal.
11. Dielectric constant and its temperature variation.
12. Ultrasonic velocity and elastic constants of a solid.
13. Determination of Curie temperature of a magnetic material
14. Magnetic field variation along with axis of the solenoid
15. Magnetic Hysteresis
16. Thermal Diffusivity of Brass
17. Temperature co-efficient of resistance of copper

*Total work load:* 1 day(s) per week × 4 hours × 16 weeks = **64 hours**

### PHD 250: Nuclear Physics Lab 2

*For those who opted for Nuclear Physics Lab Specialisation*

#### **Course Outcome:**

After completing this course the student will

- CO1. Be familiar with Concepts of Nuclear Detectors, Pulse techniques, nuclear models, timing spectroscopy and nuclear technology.
- CO2. Be familiar with Theoretical and practical experience in the scattering experiments and gamma-ray spectroscopy.
- CO3. Learn Instrumentation, development of sensors, detectors, and larger complex instruments.
- CO4. Familiarise in Fundamentals of reactor theory and nuclear decay mechanisms
- CO5. Learn Accelerator physics, research and development for the next generation of particle accelerators.

Any five of the following experiments:

1. Schmitt trigger.
2. Variable delay line.
3. Pulse recorder.
4. Display devices.
5. Feather analysis: End-point energy of beta rays measurement.
6. Z dependence of external Bremsstrahlung radiation.
7. Fermi-Kurie plot : Determination of the end-point energy of beta rays using a plastic scintillation detector.
8. Determination of the resolving time of a coincidence circuit.
9. Determination of source strength by gamma-gamma coincidence.
10. Determination of source strength by beta-gamma coincidence.
11. Multichannel analyser : Study of the variation of energy resolution as a function of gamma ray energies.
12. Verification of Mosley's law
13. Beta ray absorption studies – relation between —and end point energy.
14. Absorption coefficient of Al using Sr-90 and Y-90 beta sources.

*Total work load :* 1 day(s) per week × 4 hours × 16 weeks = **64 hours**

## **PHY-425: Theoretical Physics Lab 2**

*For those who opted Theoretical Physics Lab Specialisation*

### **Course Outcome:**

After completing this course the student will

- CO1. Tackle a wide range of topics using powerful analytical tools including formal methods in classical and quantum physics
- CO2. Clearly communicate information and conclusions in written and verbal formats on ideas in Theoretical Physics
- CO3. Evaluate complex problems and formulate solutions, indentifying the role of theory, hypothesis and experiment in the scientific method
- CO4. Apply computation to solve the problems in theoretical physics
- CO5. Plan, carry out and report theoretical physics based investigation
- CO6. Apply classical and quantum theoretical techniques in research

Any five of the following experiments:

1. Density matrix description of polarization of light.
2. Double scattering of spin-1/2 particles on spin-zero targets.
3. Second order QED processes (Compton scattering).
4. Evolution of matrix elements between coupled angular momentum states.
5. Dirac matrix representations.
6. Algebra of Dirac matrices.
7. Electron-proton scattering, Rosenbluth formula.
8. Relativistic kinematics-3: Study of decay and production processes.
9. Feynman diagrams and calculations.
10. Energy matrix calculation.

*Total work load* : 1 day(s) per week  $\times$  4 hours  $\times$  16 weeks = **64 hours**

**JSS MAHAVIDHYAPEETHA**  
**JSS COLLEGE OF ARTS COMMERCE & SCIENCE**

(Autonomous) Ooty road, Mysore – 25  
II and IV Semester Examination May / June 2018

**M.Sc PHYSICS Question Paper Pattern**

**Time:3 Hours**

**Answer all the questions**

**Max. Marks: 70**

**SECTION A**

1. (a)  
(b)  
(c)

**18 Marks**

**OR**

2. (a)  
(b)  
(c)

**18 Marks**

**SECTION B**

3. (a)  
(b)  
(c)

**18 Marks**

**OR**

4. (a)  
(b)  
(c)

**18 Marks**

**SECTION C**

5. (a)  
(b)

Ooty Road, Mysuru-570 025**

**DEPARTMENT OF ZOOLOGY (PG)**

**Programme outcome, Programme specific outcome, Course outcome and  
curriculum for Postgraduate Zoology  
(2018-2019 & onwards)**

## **Program Outcome**

1. Imbibe the knowledge with facts and figures related Zoology.
2. Understand the basic concepts, fundamental principles, and the scientific theories related to various scientific phenomena and their relevancies in the day-to-day life.
3. Identify, formulate, research literature, and analyze complex problems reaching substantiated conclusions using first principles of mathematical, biological, physical and chemical sciences.
4. Will be able to think creatively to propose novel ideas in explaining facts and figures or providing new solution to the problems.
5. Develop scientific outlook not only with respect to Zoology but also in all aspects related to life.
6. Realize that interdisciplinary knowledge in other faculties can have greatly and effectively influence which inspires in evolving new scientific theories and inventions.
7. Imbibe ethical, moral and social values in personal and social life leading to highly cultured and civilized personality.
8. Develop various communication skills such as reading, listening, speaking, etc.
9. Realize that acquiring knowledge is a continuous process and in combination with untiring efforts and positive attitude and other necessary qualities leads towards a successful life.

**Programme Specific outcome:**

At the completion of M.Sc. in Zoology the students are able to:

1. Understand the classification and taxonomic aspects of the animal world (chordates and non-chordates). The students will be able to identify the taxonomic group of a given animal based on the external characteristics.
2. Understand the basic concepts of Animal physiology. The students will be able to identify and understand the important life processes which are essential for continuation of life on earth.
3. Understand the nature and structure of biomolecules and basic concepts of Biological chemistry.
4. Understand the concepts of Genetics, Cell Biology and Molecular Biology.
5. Understand the basic principles and concepts of environmental science, ecology and nature conservation.
6. Understand the importance of knowledge of wild life and animal behaviour for conservation and balancing the nature.
7. Understand the tools and techniques employed in Biological research and experiments.
8. Understand the process of evolution.
9. Understand the concept and applications of sericulture, apiculture, animal husbandry, Lac culture etc.

**JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE**  
**OOTY ROAD, MYSURU**  
**PG DEPARTMENT OF ZOOLOGY**  
**Syllabus Adopted from the academic year 2018-19**

Semester	HC / SC	Paper title	CREDITS			Total Credits
			L	T	P	
<b>I</b>	HC - 1.1	Biosystematics & Non Chordata	2	0	2	<b>4</b>
	HC - 1.2	Biological Chemistry	2	0	2	<b>4</b>
	HC - 1.3	Cytogenetics	2	0	2	<b>4</b>
	SC - 1.4	Tools and techniques in Biology	3	1	0	<b>4</b>
	SC - 1.5	Chronobiology	3	1	0	<b>4</b>

**Total credits**

**Hard Core - 52 Credits**

**Soft Core - 20 Credits**

**Open Elective - 04 Credits**

**Total credits required to complete M.Sc Course - 76 Credits**

**M.Sc, I SEMESTER  
HC 1.1 Non Chordata**

**32hrs**

Course Outcome:

After completing the course student will be able to

1. Understand the classification of major and minor invertebrate phyla
2. Give some examples and basic characteristics of some examples of each phylum
3. Understand the evolutionary pathway and its significance
4. Adaptive characters of animals coming under different invertebrate phyla

**UNIT I Basic concepts of animal taxonomy:**

**8 hrs**

- A. Introduction and history of taxonomy
- B. Species concept
- C. Zoological classification - theories of classification - taxonomic ranks – hierarchy
- D. Zoological nomenclature: Binomial nomenclature, trinomial nomenclature-ICZN
- E. taxonomical keys: key to the species
- F. Linnaean taxonomy and classical taxonomy - level of taxonomy.

**Unit II : Classification, Locomotion and Nutrition:**

**8 hrs**

- A. General Characteristics of Non chordata.
- B. **Locomotion:** Muscle filaments and myonemes, Flagella and cilia. Amoeboid movement.
- C. **Nutrition in Protozoa:** Filter feeding in polychaetes, Filter feeding and digestion in Deuterostomia and molluscs.
- D. **Respiration:**  
Structure and function of respiratory organs- Skin, gills, book lungs and Trachea. Respiratory pigments

**Unit III:**

**8 hrs**

- A. **Excretion and osmoregulation:**  
Osmoregulation in fresh water and marine Invertebrates  
Structure and function of excretory organs- Coelom, Coelomoducts, Nephridia, Malpighian tubules and Coxal glands
- B. **Nervous system:**  
Primitive nervous system: Coelenterata and Echinodermata  
Advanced nervous system: Annelida, Arthropoda( Crustacea and insecta) and Mollusca (Cephalopod)
- C. Sense organs and their importance

**Unit IV:**

**8 hrs**

- A. **Invertebrate paleontology and larval forms:**  
Free living and parasitic Larval forms
- B. **Fossil:** types and importance of fossil study, overview of Geological Time Scale

**NON CHORDATA –PRACTICALS**

**4x16=64 Hrs**

**1. PROTOZOA;**

**4x12=48 hrs**

Slides : 1) *Trypanosoma cruzi* 2) Plasmodium – signet ring stage 3) Ceratium  
4) *Leishmania donovani* 5) Vorticella 6) Noctiluca 7) Radiolaria 8) *Entamoeba histolytica*  
9) Foraminifera 10) Opalina

**2. PORIFERA;**

a) Slides: 1)Sponge spicules 2)Sponge gemmules

b) Specimen: 1) Grantia 2) Euspongia 3) Clypeaster

### 3. CNIDARIA:

a) Slides: 1) Obelia polyp and Medusa 2) Pennaria 3) Aurelia-tentaculocyst

b) Specimens: 1) Physalia 2) Gorgonia 3) Spongodus 4) Zoanthus 5) Favia 6) Pennatula  
7) Sea anemone 8) *Corallium rubrum*

### 4. HELMINTHES:

a) Slides: 1) *Fasciola hepatica* 2) *Ancylostoma*

b) Specimens: 1) Planaria 2) Male and female *Ascaris lumbricoides* 3) *Taenia solium* 4)

### 5. ANNELIDA:

a) Slides: 1) Leech 2) Earthworm setae

b) Specimens: 1) Neries 2) *Chloea flava* 3) *Pheretima postuma* 4) Terebella 5) Eurythoe

### 6. ARTHROPODA:

a) Slides: 1) Daphnia 2) Sacculina 3) T.S of Peripatus

b) Specimens: 1) Balanus 2) Lepas 3) Palinurus 4) Scolopendra 5) Rhinoceros beetle  
6) Spider 7) Gongylus 8) Belostoma 9) Limulus 10) Squilla 11) Eupagarus 12) Julus

### 7. MOLLUSCA :

Specimens: 1) Aplysia 2) Glochidium 3) Loligo 4) Chiton 5) Cypreae 6) Octopus  
7) Sanguinolaria 8) Chicoreus 9) Ficus 10) Lambis 11) Mytillus 12) Doris 13) Onchidium  
14) Oliva 15) Murex 16) Turritella 17) Cardium

### 8. ECHINODERMATA:

Specimens: 1) Sea Urchin 2) Linckia 3) Echinodiscus 4) Holothuria 5) Antedon

### 9. MINOR PHYLA: —1) Lingula

### 10. LARVAL FORMS:

Slides: 1) Cercaria 2) Trochophore 3) Megalopa larva 4) Nauplius 5) Zoea 6) Mysis

7) Phyllosoma 8) Protozoa 9) Bipinnaria 10) Veliger 11) Tornaria

12) Glochidium 13) Pluteus

### 11. Field Study: Visit to different areas around the college campus, to observe and study

Non chordates in their natural habitat.

4x2=8 hrs

### II. Study of Nervous system, Respiratory system, Reproductive system and Excretory system

in invertebrates by employing computer animation/charts:

4x2=8 hrs

**M.Sc, I SEMESTER  
HC -1.2 BIOLOGICAL CHEMISTRY**

**32 hrs**

**Course Outcome:**

After completing the course student will be able to

1. Identify the five classes of polymeric biomolecules and their monomeric building blocks.
2. Explain the specificity of enzymes (biochemical catalysts), and the chemistry involved in enzyme action.
3. Understand types, Structure, biochemical properties and functions of vitamins.
4. Explain how the metabolism of organic compounds leads ultimately to the generation of large quantities of ATP.

**UNIT I Chemical Bonds and Carbohydrates: 8 Hrs**

- A. Structure of an atom, orbitals, chemical bonds - covalent, co-ordinate, ionic and hydrogen; Vander-Waal's force; hydrophobic interactions; Normality and Molarity of solutions.
- B. Carbohydrates – Chemistry and biological properties

**UNIT II Proteins and Lipids: 8 Hrs**

- A. Proteins- Chemistry and biological properties, Christian Anfinsen's experiment, Biological values of proteins
- B. Lipids: Chemistry, triglycerides; prostaglandins and steroids –biosynthesis, Chemical importance of lipids.

**UNIT III Enzymes: 8 Hrs**

- A. Enzymes: Nomenclature – current status; factors influencing velocity of enzyme reaction, enzyme dynamics and enzyme inhibition.  
Ribozymes and abzymes; co-enzymes, isozymes, clinical importance.

**UNIT IV Nucleic acids & Vitamins: 8 Hrs**

- A. Nucleic acids: Chemistry, alternative models of DNA,
- B. Vitamins and trace elements – chemical nature, vitamins as co-enzymes, Deficiency diseases, role of trace elements

**Biological Chemistry practicals 4x16=64 Hrs**

1. Qualitative analysis for identification of carbohydrates (Starch, Glycogen, Sucrose, Lactose, Maltose, Glucose, Fructose).
2. Qualitative analysis for identification of Proteins (Egg albumin, Casein, Gelatin, Peptone)
3. Precipitation reaction of proteins (Egg albumin, Peptone)
4. The absorbance curves for two dyes and demonstration of Beer-Lambert's law.
5. Estimation of amino acids by Sorenson's formal titration (Arginine, Alanine, Leucine, lysine)
6. Determination of concentration of Glucose and Maltose by calibration curve.
7. Determination of amylase activity.
8. Determination of effect of temperature, pH and incubation period on amylase activity.
9. Test for non-esterified fatty acid.
10. Demonstration of gel electrophoresis.

**M.Sc., I SEMESTER  
HC – 1.3 CYTOGENETICS**

**32 Hrs**

Course Outcome:

After completing the course student will be able to

1. Described the fundamental molecular principles of genetics
2. Understood the structure and function of DNA & RNA
3. Understand about the transmission, distribution, arrangement, and alteration of genetic information and how it functions and is maintained in populations
4. Described the basics of genetic mapping
5. Explain basic structure of animal cell and its organelles
6. Describe the functions and organization of cell organelles

**Unit I: Introduction to the Cell & Cell Organelles**

**8 hrs**

- A. The origin and evolution of the cell, From molecules to first cell, from Prokaryotes to eukaryotes, from single cell to multicellular organisms.
- B. Membrane Structure and Function,
- C. Structural organization and functions of intracellular organelles- The nucleus, Mitochondria, Lysosomes, Peroxisomes, Golgi apparatus, and endoplasmic reticulum.

**Unit II: Cell Cycle and Cell signalling**

**8 Hrs**

- A. Phases of cell cycle.
- B. Biochemical studies with oocytes, eggs and early embryos.
- C. Regulation of cell cycle: Molecular mechanisms regulating mitotic events.  
Regulation of cell cycle progression.  
Check points in cell cycle regulation.  
Cell cycle control in polytene cells.
- D. Molecular basis of signal transduction
- E. Cellular aging and death: (a) Causes of aging  
(b) Cellular changes due to aging  
(c) Theories of aging  
(d) Apoptosis  
(e) Longevity genes

**UNIT III Gene mutations**

**8 Hrs**

- A. Types of mutations (Spontaneous, Induced, Base substitutions and frameshifts - Transitions, Transversions, gain in function, loss in function, Neutral mutations),
- B. Molecular mechanism of mutations (Base analogs, alkylating agents); Detection of mutations: Dominant lethal test, Sex-linked recessive lethal test, II-III translocations, Ames test, P-mediated mutagenesis

**UNIT IV Chromosomal mutations**

**8 Hrs**

- A. Structure and organization of eukaryotic chromosomes
- B. Structural and numerical variations of chromosomes, Chromosomal rearrangements and their cytogenetic consequences with examples from plants, Drosophila and Man,

Practical applications of chromosome rearrangements - Balancers and attached X-chromosome in *Drosophila*. Cytogenetic effects of ionizing and nonionizing radiations

**CYTOGENETICS PRACTICALS**

**4X16 =64 Hrs**

- 1) Life cycle of *Drosophila melanogaster* 1x4=04hrs
- 2) Preparation of culture media. Culture of *Drosophila* - Methods of maintenance. 1x4=04hrs
- 3) Study of morphology of *Drosophila melanogaster* 1x4=04hrs
- 4) Mounting of Sex comb of *Drosophila melanogaster* 1x4=04hrs
- 5) Mounting of Wing of *Drosophila melanogaster* 1x4=04hrs
- 6) Study of mutants of *D. melanogaster* 1x4=04hrs
- 7) Preparation of genital plate of *D. melanogaster* 2x4=08hrs
- 8) Chi square Analysis of F1, F2 and Test cross progeny in *Drosophila melanogaster* to understand pattern of inheritance of different characters and to demonstrate. 3x4=12hrs
  - a) Law of segregation
  - b) Law of Independent assortment
  - c) Sex-linked inheritance
- 9) Temporary squash preparation of Mitotic chromosomes from root tip meristem of *Allium cepa* 2x4=08hrs
- 10) Temporary squash preparation of Meiotic chromosomes from testis of *Poicelocerus pictus* 2x4=08hrs
- 11) Study of Barr body using buccal smear of volunteers 1x4=04hrs

**M.Sc., I SEMESTER**  
**SC – 1.4 TOOLS AND TECHNIQUES OF BIOLOGY**

**48 hrs**

Course Outcome:

After completing the course student will be able to

1. Describe the methodology involved in biotechniques.
2. Describe the applications of bioinstruments
3. Demonstrate knowledge and practical skills of using instruments in biology and medical field.
4. Perform techniques involved in molecular biology and diagnosis of diseases
5. Update current knowledge regarding biomedical engineering involving new methods and the instrumentation.

**UNIT I: MICROSCOPY:**

**12hrs**

Basic principles of microscopy, Types of microscopes and their biological applications  
Bright-field microscope, numerical aperture, limit of resolution, types of objectives, ocular & stage micrometers, Electron Microscope, SEM, Confocal microscope.

Dark-field microscope

Phase-contrast microscope

Differential interference contrast microscope

Fluorescence microscope

Photomicrography and image processing

**UNIT II: SEPARATION TECHNIQUES:**

**12hrs**

**Centrifugation** - Basic principles, Types of rotors, Clinical, high speed & ultracentrifuge

**Electrophoresis** – Agarose and polyacrylamide gel, Two-dimensional, Isoelectrofocussing

**Chromatography** - Paper and Thin layer chromatography, Column chromatography, Gel filtration, Ion-exchange, Affinity, Introduction to FPLC and HPLC

**UNIT III:**

**12hrs**

**A. Radio-tracer techniques**

Unit of radioactivity and half life, Measurement of radioactivity ( $\beta$  and  $\gamma$  emission), Applications of radioisotopes, Safety measures

**B. Techniques in immunodetection:** Immunoblotting and immunofluorescence

**C. Immunological techniques:** Immunodiffusion and Immunoelectrophoresis

**UNIT IV:**

**12hrs**

**A. Cell culture techniques:** Design and functioning of tissue culture laboratory; Culture media, essential components and preparation; Cell viability testing

**B. Cytological techniques:** Mitotic & Meiotic chromosome preparations from insects and vertebrates Chromosome banding techniques (G-, C-, Q-, R- banding etc.)

**C. Molecular cytological techniques:** In situ hybridization (radiolabelled & non-radiolabelled methods), FISH, and Restriction banding

**D. Molecular biology techniques:** Southern hybridization and Northern hybridization DNA sequencing Polymerase chain reaction (PCR)

**TUTORIALS**

**2x16 = 32 Hrs**

**M.Sc., I SEMESTER  
SC – 1.5 CHRONOBIOLOGY**

**48 hrs**

Course Outcome:

After completing the course student will be able to

1. Understand the concept of Chronobiology
2. Identify the way by which circadian rhythms affect life from the genome to the complex behaviour of the individual
3. Acknowledge the role of Chronobiology and chronodisruption on several physiopathological events
4. Acknowledge the input of the synchronizers on homeostasis
5. Characterize the biological relevance of several chronotypes
6. Acknowledge the relevance of circadian rhythms on therapeutic interventions
7. Acknowledge the importance of scientific research on Chronobiology
8. To interpret study designs and scientific parameters related to Chronobiology.

**UNIT I: Introduction:**

**4 hrs**

History, Biological rhythms, Biological clocks, Significance of biological timekeeping

**UNIT II: Biological rhythms:**

**10 hrs**

- A. Types of rhythms- Circadian, Circatidal, Circalunar, Circannual
- B. Methods of measurement
- C. Properties: Entrainment, Re-entrainment, Phase angle difference, Freerun, Phase shift, Phase response curve, Arrhythmia.

**UNIT III: Factors influencing biological rhythms:**

**10 hrs**

- A. Environmental: Photoperiod -Photoreception and photo-transduction;  
The physiological clock and measurement of day length;  
Role of photic and non-photic cues in seasonality, Other zeitgebers  
Reversal of roles of principal and supplementary cues.
- B. Evolution of photoperiodism: comparative studies; Circannual rhythms and seasonality.

**UNIT III: Circadian pacemaker system:**

**8 hrs**

- A. Suprachiasmatic nuclei, B. Pineal gland, C. Optic lobes.

**UNIT IV: Molecular basis of circadian rhythms**

**8 hrs**

- A. Clock genes, B. Drosophila, C. Mouse

**UNIT V: Applied Chronobiology:**

**8 hrs**

- A. Human circadian rhythms: Melatonin: Input or output signal of the clock system, Clock function (dysfunction); Human health and diseases
- B. Applications of circadian rhythm principles: Jet-lag/shift work, Depression and

sleep disorders, Chronopharmacology and Chronotherapy

**TUTORIALS**

**2X16=32 Hrs**

\*\*\*\*\*

**M.Sc., I SEMESTER  
SC – 1.6 HISTOLOGY AND HISTOPATHOLOGY**

**48 Hrs**

Course Outcome:

After completing the course student will be able to

1. Understand the applications of dyes and its classification.
2. Know the functional morphology of various mammalian organs.
3. Imbibe the knowledge on histochemical techniques.
4. Describe the etiology and pathology of liver cirrhosis and atherosclerosis.
5. Explain histopathology of breast and prostate tumours.

**UNIT – I Basics of Histology**

**8Hrs**

- A. Objectives and applications
- B. Tissue fixation : Objectives, methods, chemical fixatives-types and chemistry of fixation; Physical methods:-freezing and microwave fixation; choice of fixatives, fixation artifacts.
- C. Dyes. –Natural and Synthetic, Classification

**UNIT-II Functional Morphology (mammalian)**

**8 Hrs**

- A. Histological organization of GI tract- stomach and intestine,
- B. Histological organization of lungs & kidney
- C. Histological organization of spleen & thymus,
- D. Bone and bone marrow.

**Unit-III Histochemistry**

**8 Hrs**

- A. Principles and methods of application
- B. Classical histochemical Techniques: for localization of glycoproteins (PAS), nucleic acids (Feulgen) and steroid dehydrogenase activity.

**Unit-IV Immunohistochemistry**

**8 Hrs**

- A. Principles, method of application
- B. Immunohistochemistry techniques for localization of proteins in endocrine cells (Pituitary cell types or islet of Langerhans)

C. Immunofluorescence: In situ hybridization of nucleic acids

**UNIT-V Histopathology**

**8 Hrs**

- A. Morphological alterations in cells due to disease,
- B. Types of degeneration: clouding, hyaline, hydrophic and fatty degeneration.
- C. Etiology, pathogenesis and histopathology of Liver cirrhosis and atherosclerosis
- D. Neuropathology of alcoholism and methanol poisoning.

**Unit-VI Histopathology of tumors**

**8 Hrs**

- A. Malignant and non-malignant
- B. Types of carcinoma
- C. histopathology of breast and prostate tumors

**PRACTICALS**

**2x8= 16 Hrs**

**I. Histology:**

- 1. Microtomy and staining: Hematoxylin-eosin - Demonstration 2x2=4 hrs
- 2. Histology: 2x2=4 hrs

Observations of permanent slides of mammalian organs – stomach, intestine, spleen, liver, kidney, lungs, testis, epididymis, vas deferens, ventral prostate, seminal vesicle, ovary, uterus and Fallopian tube.

**II. Histometry:**

**2x3=6hrs**

Histometrical measurements and statistical analysis of some tissues.

**III. Histopathology:**

**2x1=2hrs**

Study of histopathological changes (permanent slides) – gastric ulcers, cirrhosis of liver, breast tumors, cystic follicles of ovary, pancreas in diabetics, cryptorchid testis and leukemia.

\*\*\*\*\*

**M.Sc., II SEMESTER  
HC – 2.1 CHORDATA**

**32 Hrs**

**Course Outcome:**

After completing the course student will be able to

- 1. Understand the classification of chordates
- 2. Give some examples and basic characteristics of some examples of protochordates
- 3. Give some examples and basic characteristics of some examples of vertebrates
- 4. Understand the evolutionary pathway and its significance
- 5. Analyse adaptive characters of animals coming under different vertebrate classes

**UNIT I General characters and outline classification of Chordata**

**8hrs**

- A. General and Comparative study: Comparison of three Protochordates, Subphyla in terms of General comparison, Habits and habitats,

- B. Alimentary canals and associated glands, Pharynx, Food and feeding and excretory system in Protochordates.
- C. Adaptive radiation in vertebrates – fishes, amphibians, reptiles, aves and mammals

## UNIT II

8hrs

- A. **Integument and its Derivatives:** Epidermal Integument or Skin Functions, Structure & its Derivatives (Glands, Scales and scutes, digital cornifications, horns, feathers, hairs), Integument in different classes of Chordates.
- B. **Nervous system-** Development of Brain, spinal cord, Peripheral nerves and sense organs

## UNIT III

8hrs

- A. **Respiratory System:** Introduction Respiratory organs: Gills (Internal or true gills, External or Larval gills). Lungs and Ducts, Accessory Respiratory organs and Swim Bladders.
- B. **Circulatory system:** Evolution of heart and aortic arches

## UNIT IV

8hrs

- A. **Digestive System:** Introduction Embryonic Digestive Tract Alimentary Canal: Divisions, Digestive Glands
- B. **Urinogenital System:** Vertebrate kidneys and ducts, Gonads and their ducts

## CHORDATA PRACTICALS

4x16=64 Hrs

1. **Protochordates:** Specimens: 1) *Amphioxus*, *Herdmania*

Slides- *Salpa* (sexual), *Doliolum*

2. **Fishes :** 1) *Rhinobatus* 2) *Hippocampus* 3) Goldfish (aquarium fish) 4) *Clarius*

5) *Anabas* 6) *Coffe* fish 7) *Acipenser* 8) *Periophthalmus* 9) *Triacanthus*

10) *Notopterus* 11) *Exocoetus* 12) *Diodon hystrix* 13) *Echeneis neucrates*

3. **Amphibians :** 1) *Ichthyophis* 2) Axolotl Larva 3) *Rana tigrina* 4) *Amblystoma*

4. **Reptiles :** 1) *Calotes* 2) *Mabuya* 3) Chameleon 4) *Phrynosoma* 5) *Chelone mydas*

5) *Varanus* 6) *Naja naja* 7) Krait 8) *Hydrophis* 9) Viper

5. **Birds :** 1) Blue jay 2) Indian koel -male and female 3) Kite

6. **Mammals :** 1) Guinea pig 2) Domestic cat 3) Loris 4) *Megaloderma lyra* (bat)

5) Pangolin

7. **Integuments of vertebrates:** Scales of fish, Hoofs, nails, horns, claws,

plastron and carapace of tortoise, snout of saw fish

8. **Osteology :**

1) **Skull and lower jaw:-** a) Crocodile b) Bird c) Carnivore mammal (dog)  
d) Herbivore mammal (horse)

2) **Types of vertebrae:-** a) Procoelous b) Ophisthocoelous c) Amphicoelous  
d) Amphiplatian e) Heterocoelous f) Axis and atlas vertebrae.

## II. Study of following systems in rat by employing computer animation/charts:

- a) Circulatory system b) Nervous system c) Reproductive system
- d) Digestive system e) Sense organs f) Urinary system

## REFERENCES :

## M.SC., II SEMESTER HC – 2.2 ANIMAL PHYSIOLOGY

32 Hrs

### Course Outcome:

After completing the course student will be able to

1. Understand the mechanism of transport of molecules, stepwise release of energy , aerobic and anaerobic respiration
2. Describe the physiology of digestive and respiratory system of human beings.
3. Understand the blood composition, types, groups and circulatory system.
4. Describe the physiology of excretory system and nervous system of human beings.
5. Know the physiology of sense organs, muscles and reproductive system.

### UNIT I: Membrane Transport, Bioenergetics & Circulation

8 Hrs

#### A. Membrane Transport:

Molecular mechanisms of passive and active transport.

#### B. Bioenergetics:

- a) Energy – Concept, laws of thermodynamics
- b) Redox potential
- c) Stepwise release of energy through cytochromes, production of ATP, uncoupling of oxidative phosphorylation, inhibitors.
- d) Anaerobic and aerobic breakdown of glucose, alternate pathway – HMP shunt and glucuronic acid pathway.
- e) Citric acid cycle as common metabolic pathway.

#### C. Circulation:

- a) Major types of body fluids and their composition.
- b) Neurogenic and myogenic hearts.
- c) Mammalian heart – cardiac cycle, ECG.

### UNIT II: Physiology of excitation & Excretion

8 Hrs

#### A. Muscle Physiology:

- a) Molecular organization of sarcomere.
- b) Mechanism of contraction with emphasis on sliding filament and Davies models, regeneration of storage phosphate.
- c) Physiological adaptations of muscles for jumping, swimming and flight.

#### B. Neurophysiology:

- a) Axonal and synaptic transmission of nerve impulses.
- b) Synaptic integrity, synaptic plasticity.
- c) Molecular mechanism of sensory transduction and neural output in receptor cells.

#### C. Excretion:

- a) Comparative physiology of excretion in animals- Nitrogenous wastes and waste elimination.
- b) Mammalian kidney- Structure and physiology of urine formation.

### Unit III: Basic Concepts of Endocrinology

8 hrs

#### A. Chemical messengers:

Autocrine, Paracrine and endocrine secretions,  
Types of hormones, an overview of human endocrine system

#### B. Hormone synthesis: Peptide and steroid hormones.

Role of Hormones in homeostasis- Glucose and Water balance

#### C. Hypothalamus and pituitary gland:

Structure, function and control of hypothalamic hormones.  
Pituitary hormones and their physiological actions  
chemical structure and. Feedback regulation. Pathophysiology.  
Hypothalamo - hypophysial portal system

#### D. Pineal gland–Structure and function.

### Unit IV:

8 hrs

**A. Thyroid gland:** Structure, function and biosynthesis of thyroid hormone

**B. Parathyroid :** Structure and PTH – Calcitonin – Role of hormones in calcium and phosphate metabolism.

#### C. Adrenal gland hormones

**Adrenal cortex hormones:** Corticoids: role played in Stress management – Aldosterone and the rennin- angiotensin system

**Adrenal medullary hormones:** Catecholamines as emergency hormones

**D. Gastrointestinal hormones:** Secretion, control and function

**E. Pancreatic Hormones:** Insulin and glucagons, their role in the regulation of Carbohydrate, protein and lipid metabolisms.

### ANIMAL PHYSIOLOGY PRACTICALS

4x16=64 Hrs

1. Estimation of Proteins by Lowry *et al* method. (in tissue sample from slaughter house)
2. Determination of serum cholesterol. (Clinical sample)
3. Determination of glucose content by Anthrone method. ((in tissue sample from slaughter house)
4. Estimation of liver and skeletal muscle glycogen. (in tissue sample from slaughter house)
5. Determination of serum/ blood urea by DAMO method. (Clinical sample)
6. Estimation of creatinine in the urine sample.
7. Total count of RBC and WBC.
8. Differential count of WBC
9. Response of RBC's to Hypertonic, hypotonic and isotonic solutions
10. Observation of permanent slides of T.S of endocrine glands
  - a. Pituitary gland
  - b. Thyroid gland
  - c. Adrenal gland
  - d. Pancreas
11. Identification of chemical structures of steroid hormones

**M.Sc., II SEMESTER  
HC – 2.3 ENTOMOLOGY**

**32hrs**

Course Outcome:

After completing the course student will be able to

1. Understand insects encountered in agricultural fields.
2. Envisage an insight on economically important pests of various foods, fiber and household
3. Understand various insect pest management methods and its significance
4. Learn to apply various agricultural equipment and understand the effect of chemicals and its dosages in agricultural pest management
5. Learn to apply the pest control methods wisely to minimise ecological backlash
6. Discuss the evolutionary significance of insect plant interaction and insect animal interaction.

**Unit I: General Entomology** **10 hrs**

A. Classification of class Insecta up to orders with suitable examples; Integument appendages.

**B. Insect Endocrinology**

- I. Insect Hormones and their regulation: Chemistry and functions of hormones, Hormones in metamorphosis, Ecdysis and Diapause
- II. Semiochemicals: Allelochemicals and Pheromones (Primer & releaser)

**Unit II: Agricultural Entomology** **10hrs**

A. Role of insects in plant pollination

B. Insects pests: Classification and categories of pests, origin and emergence of pests, pest out breaks and pest resurgence  
Structure, life history, significance, nature of damage and control methods of major pests of sugarcane, Paddy and Coconut.

C. Structure, life history, significance, nature of damage and control measures of stored grain pests: (a) *Sitophilus* (b) *Trogoderma* (c) *Rhizopertha* (d) *Tribolium* (e) *Bruchus* (f) *Sitotrua* (g) *Ephestia*

**Unit III: General and household insect pests** **06hrs**

A. Structure, life history, significance, nature of damage and control measures of following general pests: (a) grasshoppers & locusts (c) termites (d) aphids (e) hairy caterpillars

B. Household pests: Cockroaches, Ants, Wasps, Silverfish, furniture beetle, and their control

**Unit IV: Medical Entomology** **06hrs**

A. Insect vectors: Role of insect as vectors of human diseases (Malaria, filariasis, Kala azar and their control)

Mosquitoes as pests and their control.

Housefly: A human health hazard and its control

B. Arboviral diseases: Dengue, chicken gunya, swine flu.

**PRACTICALS:** **4x16=64 Hrs**

1. Collection and preservation of dead insects for systematic studies & field report 4x4=16 hrs

2. Identification of different insects upto orders- House fly, Cockroach :

Mosquitoes, stored grain beetles, destructive insects, important crop and household pests

4x4=16 hrs

4. Fixing and preservation of dead insects by Plastination technique. 4x4=16 hrs  
 5. Field studies of insects to understand their habit: Ants, Butterflies, termite, wasps, Moths. 4x2=08 hrs  
 6. Study of insect mouth parts: Mosquito, Cockroach, House fly, Butterfly 4x2=08 hrs

**REFERENCES:**

5. L . K Jha. Applied Agricultural Entomology. New central book agency. Culcutta

**M.Sc., II- SEMESTER  
 SC – 2.4 DEVELOPMENTAL BIOLOGY**

**48 Hrs**

**Course Outcome:**

After completing the course student will be able to

1. Understand the molecular concepts of developmental biology during fertilization.
2. Know about Noble prize concepts during frog development viz., Nucleocytoplasmic interactions.
3. Explain on axis development in drosophila.
4. Describe endocrine and molecular control in metamorphosis of insects and amphibians.
5. Explain the various stages of chick embryonic development.

**Unit I:**

- A) Introduction : Descriptive V/s. Experimental Embryology **8hrs**  
 B) Fertilization : a) An overview of structure and differentiation of egg and sperm  
 b) General sequence and molecular events during fertilization

**Unit II: Early development - I**

**8 hrs**

- a) Nucleocytoplasmic interactions in early development: An overview of Nuclear transplanted experiments in Amphibians and mammals
- b) Creations of multicellularity: Cleavage-Regulatory mechanism
- c) Gastrulation: Morphogenetic movements and regulatory mechanisms in amphibian and mammalian embryo.

**Unit III: Early development - II**

**8hrs**

- a) Morphogenetic determinants and their role in development:  
 Yellow cytoplasm in Ascidians, Polar body in Mollusca, Pole plasm in *Drosophila*
- b) Laying down the embryonic body plan :  
 Determination of embryonic axes in *Drosophila* – Anterior-posterior (maternal effect genes) & Dorsoventral; Amphibians (cell-cell interaction) & Mammals (Hox Genes)
- c) Cell lineage studies and cell death genes in *Caenorhabditis elegans*.

**Unit IV: Morphogenesis –I**

**8 hrs**

- a) Early embryogenesis in *Drosophila* : Regional specification by. Segmentation genes: Gap genes, Pair rule genes, Segment polarity genes, and Homeotic genes.
- b) Cellular differentiation and morphogenesis:
  - i. Neuronal v/s epidermal fate specification in *Drosophila*.

ii. Vulval induction in *Caenorhabditis elegans*.

**Unit V: Morphogenesis-II**

**8 hrs**

- a) Role of Cell Adhesion molecules in morphogenesis : Cadherins and Fibronectins
- b) Genetics of imaginal discs and transdetermination
- c) Limb development-an over view :
  - i. Proximo-distal axis specification in developing limb.
  - ii. Cell death and formation of digits.

**Unit VI: Post embryonic development**

**8 hrs**

- a) Metamorphosis : Endocrine and molecular control of metamorphosis in insects and amphibians
- b) Types of growth
- c) Regeneration : Types, Blastema formation, Sources of cells for regeneration
- d) Abnormal development as seen in Teratogenesis.

**PRACTICALS**

**16X2=32Hrs**

- 1. Study of internal changes during early development of frog & chick (permanent slides) 3X2=06hrs
- 2. Development of chick-Embryo mounting-permanent preparation 2X2=04hrs
- 3. Study of early developmental stages of *Drosophila* (Live Observation of embryo) and dechoriation and observation of embryos 2X2=04hrs
- 4. Study of Imaginal discs – the precursors of adult structures in *Drosophila* 3X2=06hrs
- 5. Demonstration of window technique to observe chick embryo development 2X2=04hrs
- 6. Effect of thyroid hormone on development in frog 2X2=04hrs
- 7. Study of various developmental stages in frog up to tadpole stage 2X2=04hrs

\*\*\*\*\*

**M.Sc., II SEMESTER  
SC – 2.5 IMMUNOLOGY**

**48hrs**

**Course Outcome:**

After completing the course student will be able to

- 1. Outline the key components of the innate and adaptive immune responses.
- 2. Describe about cell types and organs which are involved in an immune response—
- 3. Describe the Infectious diseases, hypersensitivity, autoimmune disorders,— immunodeficiency diseases

- Unit I: Introduction to immunity** **8hrs**
- A. History; types of immunity – Innate and acquired immunity.
  - B. Cells and Organs of immune system: Cells: Lymphocytes (T & B cells), monocytes, macrophage; eosinophills, basophills, neutrophils and mast cells.
  - C. Primary and secondary lymphoid organs: Bone marrow, Thymus, Spleen, Lymph nodes
- Unit II: Antigens and Immunoglobulins** **8hrs**
- A. Antigens: factors influencing immunogenicity, adjuvant, epitope, hapten
  - B. Immunoglobulins: Basic structure of the immunoglobulin;  
Types and functions of immunoglobulins.
  - C. Monoclonal antibodies:Antigen-antibody reactions
- Unit III: Immune response** **8hrs**
- A. Humoral and cell mediated immune responses
  - B. Primary and secondary immune modulation; Cytokines; role of complement system in immune response (Classical pathway, Alternate pathway);
  - C. Immune response against bacterial (tuberculosis), parasitic (malaria) and viral (HIV) infections;
- Unit IV Immunotechniques** **8hrs**
- A. Agglutination; Precipitation;
  - B. Immunofluorescence; RIA, ELISA, Immuno-electrophoresis and Western blotting.
- Unit V Major histocompatibility complex and Hypersensitivity** **8hrs**
- A. Transplantation and graft rejection,
  - B. Genetic organization of H2 and HLA complexes, HLA typing;
  - C. Immediate and delayed hypersensitivity.
- Unit VI Vaccines and Vaccination** **8hrs**
- A. Types of Vaccines and their significance
  - B. Vaccine delivery systems.
  - C. Congenital and acquired immunodeficiencies

**TUTORIALS** **2X16=32 Hrs**

**M.Sc., II SEMESTER**  
**SC – 2.6 EVOLUTIONARY BIOLOGY**

**48 Hrs**

Course Outcome:

After completing the course student will be able to

1. Understand that many of the organisms that inhabit the Earth today are different from those that inhabited it in the past
2. Understand that the propositions underlying Darwin's theory of evolution.
3. Explain adaptation, providing examples from several different fields of biology
4. Explain how the molecular record provides evidence for evolution
5. Understand the Human origin and evolution.

**UNIT I Emergence of concept of evolution: 8 Hrs**

- A. Pre Darwinian concepts, Darwinism and its impact in the development of synthetic theory.
- B. Neodarwinism: Birth of population genetics, Components of population genetics, Mendelian population, gene pool, allele frequencies and genotype frequencies,

**UNIT II Speciation: 8 Hrs**

- A. Concept of species,
- B. Types of species
- C. Models of speciation,
- D. Patterns and mechanisms of reproductive isolation,
- E. Hybridization, polyploidy and speciation.

**UNIT III Molecular evolution 8 Hrs**

- A. Phyletic gradualism and punctuated equilibrium.
- B. Micro and macroevolution.
- C. Molecular evolution: Selectionists theory of evolution, Neutral theory of evolution and Molecular clock and emergence of non-darwinism,

**UNIT IV Phylogeny 8 Hrs**

- A. Phylogenetic trees : Construction with nucleic acid and amino acid sequences,
- B. Types of trees and Techniques employed in construction of phylogenetic trees,
- C. Molecular phylogenetics of Homo sapiens.

**UNIT V Population genetics and Evolution 8 Hrs**

- A. Gene pool, gene frequency, Hardy-Weinberg Law.
- B. Destabilizing forces of evolutionary equilibrium (Mutation, Migration, Selection, Meiotic drive and genetic drift).
- C. Founder effect, Isolating mechanisms and speciation.
- D. Micro Macro and Mega evolution, Co-evolution.

**UNIT VI Genome and Evolution 8 Hrs**

- A. Genes and gene clusters
- B. Origin of new genes by gene duplication (Ohno's concept)
- C. Selfish DNA
- D. Karyotypic evolution (Drosophila).

**TUTORIALS 2X16=32Hrs**

**M.Sc., III SEMESTER**  
**HC – 3.1 MOLECULAR BIOLOGY AND BIOTECHNOLOGY**

**32 hrs**

Course Outcome:

After completing the course student will be able to

1. Know nucleic acids, DNA replication and its mechanism.
2. Understand transcription and its modifications.
3. Explain genetic code, enzymes, factor and the process of translation.
4. Analyse gene regulation, lytic and lysogenic cycles in prokaryotes.
5. Understand gene regulation in eukaryotes.
6. Explain molecular mechanism of DNA damage repair.

**Part A: Molecular Biology**

**Unit I** Introduction to nucleic acids

**8hrs**

- A. DNA Replication: i) Enzyme components of replication unit ii) Mechanism with emphasis on Dna A in initiation, Co-ordinated synthesis, End replication in eukaryotes iii) Fidelity.
- B. Transcription: i) Transcription apparatus and process (RNA polymerase, cisregulatory elements, terminators, transcription factors). ii) Post transcriptional modifications of mRNA in eukaryotes (G-cap, Poly tail, Splicing).
- C. Translation: i) Genetic code (major features, usage of different codons). ii) Enzymes, factors and the process (Aminoacyl t-RNA synthetase, Peptidyl transferase, IFs, EFs, RFs and Ribosome)

**Unit II Gene regulation**

**8hrs**

- A. Gene regulation in Prokaryotes: (i) Regulation at transcription initiation: Eg. lac operon (+ve and -ve control) (ii) Regulation beyond transcription initiation: trp attenuator (iii) Regulation in Lambda Phage - Lytic and lysogenic cycle induction.
- B. Gene regulation in Eukaryotes: (a) Transcriptional activators (b) Transcriptional repression: (i) direct repression, indirect repression (ii) Gene silencing by modification of histones and DNA (c) RNA interference
- C. Molecular basis of homologous recombination: Models and protein machinery
- D. Molecular mechanisms of DNA damage repair.

**Part B: Biotechnology**

**Unit III:**

**8 hrs**

**A. Genetic engineering:**

Definition, objectives and outline of recombinant DNA technology procedure.

Enzymes: Restriction Enzymes; DNA ligase, Klenow enzyme,

T4 DNA polymerase, Polynucleotide kinase, Alkaline phosphatase.

**Cloning vectors:** Plasmids, Phages, Cosmids, Phagemids, Artificial chromosomes (YAC, BAC, HAC),

**B. Cloning:**

Construction of Genomic and cDNA libraries.

Identification of Recombinants: Genetic selection, Use of chromogenic substrates, Insertional inactivation.

Analysis of recombinant DNA clones: Characterization of clones, Restriction mapping, Southern hybridization.

Polymerase chain reaction and DNA sequencing-Maxam and Gilbert's method, Sanger's method, Automated DNA sequencing

**Unit IV:****8 hrs****C. Applications of Biotechnology:**

Production of medicinally important products – vaccines, Gene therapy, AIDS therapy, Biofertilizers, biopesticides, medicine and human health

**D. Animal Biotechnology**

Animal cell and Tissue culture: Principles of cell culture, cell and tissue types, cell lines, transformation.

Cell and tissue culture media: Natural and defined, role and components of serum in culture.

Applications of tissue culture: Tissue culture in biomedical research karyological studies, amniocentesis, mutagenesis, Cytotoxicity assays.

**PRACTICALS****4x16=64 Hrs**

1. Extraction of DNA by rapid method.
2. Extraction of DNA by standard method.
3. Estimation of DNA concentration by Diphenylamine method.
4. Localization of DNA in prefixed paramecium slides by Feulgen staining
5. Localization of nucleic acids in prefixed paramecium slides by Toluidine blue staining
6. Estimation of RNA concentration by Orcinol method
7. PCR amplification of DNA and gel electrophoresis.
8. Restriction digestion and gel electrophoresis.
9. Isolation of plasmid DNA from bacteria.
10. Molecular biology problems

**M.Sc., III SEMESTER  
HC – 3.2 REPRODUCTIVE BIOLOGY**

**32 hrs****Course Outcome:**

After completing the course student will be able to

1. Understand structure and function of reproductive organs
2. Explain the structure of reproductive cells
3. Describe the role of internal cues in reproduction
4. Describe the role of external factors in reproduction
5. Analyse the role of endocrine glands and their secretions in reproduction
6. Identify the factors affecting fertility
7. Know different types of assisted reproductive technologies.

**UNIT I: Male reproduction:** **8 hrs**

- A. Functional morphology of male reproductive system
- B. Kinetics of spermatogenesis – wave and cycle
- C. Hormonal control of mammalian testis and spermatogenesis
- D. Ultrastructure of spermatozoa
- E. Abnormalities of sperm
- F. Brief description of histomorphology and hormonal control of male accessory organs viz., epididymis, vas deferens, seminal vesicles, ventral prostate, bulbourethral gland and preputial gland
- G. Sperm maturation – morphological and biochemical events, influence of accessory organ secretions
- H. Biochemistry of semen and capacitation

**UNIT – II Female reproduction :** **8 hrs**

- A. Origin and migration of primordial germ cells; genetic and hormonal control of differentiation of gonads and gonadal ducts in mammals.
- B. Female Reproductive System-Functional morphology of mammalian ovary, Fallopian tube and uterus.
- C. Ovarian steroid hormones and their actions

**UNIT III: Reproductive cycles in Mammals:** **8 hrs**

- A. Comparison of estrous and menstrual cycles
- B. Menstrual cycle : Different phases, changes in the ovary and uterus and hormonal control
- C. Implantation – Process, Types and hormonal control
- D. Pregnancy – length of gestation, hormonal control
- E. Parturition – Process of birth and influence of hormones
- F. Lactation – Hormonal control of mammary gland, development and lactogenesis

**UNIT – IV: Fertility and reproductive management** **8 hrs**

- A. Fertility control – Need, principles of different male and female temporary and permanent contraceptive methods.
- B. Assisted Reproduction: Causes of infertility, Artificial insemination, different methods of assisted reproduction (*In-vitro* Fertilization, Gamete Intra Fallopian tube Transfer, Zygote Intra Fallopian tube Transfer).

**PRACTICALS** **16X4=64 hrs**

- 1. Demonstration of surgical technique by video clipping
- 2. Counting of spermatozoa in semen sample collected from volunteers
- 3. Staining of spermatozoa for abnormalities in semen samples collected from volunteers /clinical samples
- 4. Study of different contraceptive devices
- 5. Observation of permanent Histology slides
  - a. Comparative morphology of ovary
  - b. Comparative morphology of testis
  - c. Comparative study of male accessory organs
  - d. Comparative study of female accessory organs
- 6. Observation of permanent slides of T.S of endocrine glands
  - a. Pituitary gland b. Thyroid gland c. Adrenal gland d. Pancreas

**M.Sc., III SEMESTER  
HC – 3.3 ECOLOGY AND WILDLIFE**

**32 hrs**

**Course Outcome:**

After completing the course student will be able to

1. Demonstrate and Understand ecological relationships between organisms and their environment.
2. Present an overview of diversity of life forms in an ecosystem.
3. Explain and identify the role of the organism in energy transfers
4. Describe the Habitat ecology and Resource ecology
5. Understand the types of environmental Pollution and their management
6. Scope, Values and Conservation strategies of wildlife.

**Part-A Ecology**

**UNIT - I**

**8 hrs**

**A. Ecosystem:** Historical account, Scope, Basic concepts and Approaches to the study of Environmental Biology. Components of Environment - An overview of abiotic factors and Biotic factors. Concepts of habitat and Ecological niche. Ecotone and Edge effect. Food chains, Food-webs and their structure in Ecological Pyramids in aquatic, terrestrial and parasitic Environments.

**B. Population Ecology:** Introduction. An overview of important population attributes – Density, Natality, Growth rates, Growth forms and concept of carrying capacity, Patterns in human population growth and its explosion -Remedial measures. Mortality - life tables and survivorship curve, sex ratio, age distribution, dispersal and dispersion, aggregation and Allee's principle, population fluctuation and cyclic oscillations and Population interactions.

**UNIT - II**

**8 hrs**

**A. Community Ecology** Concept of community - community structure and attributes, concept of climax Species diversity in community and it's measurement- Alpha diversity- Simpson's diversity index, Shannon index, Fisher's alpha, rarefaction. Beta diversity- Sorensen's similarity index, Whittaker's index, Evenness, Gamma diversity. Drivers of species diversity loss and conservation.

**B. Bioecology of Freshwater Zooplankton:** Definition, Types and adaptations of Zooplankton. Brief study of organizations, life cycles and Ecological importance of Rotifers, Cladocerans, Copepods-Calanoids, Harpacticoids and Cyclopoids, and Ostracods. Mass culturing of Zooplankton.

**C. Microbial Ecology:** Ecological role, beneficial and pathogenic Microorganisms. Indicator Microorganisms. Role of microorganisms in biodegrading and bioremediation of organic and metal pollution.

### **Part B Wildlife Biology**

#### **UNIT – III**

**8hrs**

- A.** Scope and values of wildlife (Ecological, Aesthetic, Scientific, Recreational, Medicinal)
- B.** Causes of wildlife depletion: Degradation and destruction of natural habitats, Exploitation for commercial purposes, Deforestation, Agricultural expansion, Urbanization and Industrialization, forest fires and hunting.
- C.** Wildlife corridors, Human-wildlife conflicts
- D.** Wildlife awareness and education, Wildlife and tribal welfare

#### **UNIT – IV**

- A.** Conservation strategies: Red data book, protected area network, Role of NGOs in conservation.
- B.** Wildlife act and legislation: Wildlife Protection Act 1972; Biological Diversity Act 2002.
- C.** Wildlife conservation projects in India (with special reference to Project Tiger, Project Hungul and Gir Project)
- D.** In-situ conservation: Bioreserves, National parks, Wildlife sanctuaries and Safari's in India
- E.** Management of Bioreserves, National parks, Wildlife sanctuaries and Safari.
- F.** Ex-situ conservation: Zoo garden, Management of Zoos, Captive breeding, Artificial insemination, Cryopreservation (techniques and applications) Germplasm banks,

#### **PRACTICALS:**

**4X16=64 Hrs**

1. Qualitative and Quantitative study of freshwater planktons.
2. Determination of species diversity by Shannon-Weiner Index
3. Determination of species diversity by Simpson's index
4. Field visit to Sewage pond, Natural lake (and if possible river): Collection of water samples and study of physico-chemical parameters such as colour, pH, temperature, conductivity, total solids and turbidity
5. Estimation of Dissolved Oxygen in three natural (sewage, pond and Tap) water samples.
6. Estimation of free Carbon di-Oxide in three natural (sewage, pond and Tap) water samples.
7. To study the relationship between Dissolved Oxygen and free Carbon di-Oxide, if any, in three natural (sewage, pond and Tap) water samples.
8. Determination of BOD in three natural (sewage, pond and Tap) water samples
9. Determination of COD in three natural (sewage, pond and Tap) water samples
10. To study the relationship between BOD and COD, if any, in three natural (sewage, pond and Tap) water samples
11. Collection, observation of planktons (Phytoplankton and Zooplankton) from polluted and non-polluted water bodies.
12. Estimations of bacterial abundance in different water samples – using DDMT.
13. Visit to RMNH, Mysore, to study models of freshwater, marine, estuarine and terrestrial habitats.
14. Survey of Animal Population - to visit different habitats/areas in and around Mysore and collect data on some population attributes, application of Bio-statistical tests to the collected data and its interpretation.
15. Visit to nearby Zoological garden, wildlife sanctuaries, Animal rehabilitation centres.

### M.Sc., III SEMESTER SC 3.4 ETHOLOGY

48 Hrs

#### Course Outcome:

After completing the course student will be able to

1. Evaluate the learning and instinct behavior.
2. Explain the mechanisms in instinct and behaviour
3. Explain how animals learn
4. Compare learning and instinct behaviour.
5. Analyse any problem about animal behaviour
6. Explain the importance of evolution for animal behaviour.
7. Explain evolution and behaviour.
8. Explain natural selection and behaviour.
9. Explain the relationship between predators and prey
10. Explain social behaviour.

#### UNIT - I

8 Hrs

- A. Descriptive versus experimental approaches
- B. Reflexes and complex behaviour- Latency, after discharge, summation, warm up, fatigue inhibition and feedback control
- C. Instinctive Behaviour - Fixed action pattern, Types of sign stimuli and releasers as triggers, Genetic basis of instinctive behaviour.

#### UNIT- II

8 Hrs

- A. Development and behaviour- Causes of behavioral changes during development, development of bird song.
- B. Learning- Classical conditioning experiment, latent and insight learning. Social learning, learning sets and play.
- C. Importance of early experience – Critical period- Filial imprinting, Sexual imprinting in birds, Imprinting like process in mammals.

#### UNIT- III Foraging and anti-predator behaviour

8 Hrs

- i. Anti predator behaviour – avoiding detection through colour and Markings (Mullarian mimicry)

- ii. Warning coloration
- iii. Batesian mimicry

**UNIT-IV Biological communication**

**8 Hrs**

- i. Forms of signals,
- ii. Visual communication with suitable examples,
- iii. Auditory Communication
- iv. Tactile and Chemical communication

**UNIT -V Sexual Behaviour**

**8 Hrs**

- i. Hormones and sexual behaviour – Selected examples of courtship and mating behaviour.
- ii. Pheromones in Insects and Mammals
- iii. Lee Boot, Whitten, Bruce, Collidge and Castro-Vandenberg effect/s
- iv. Selected examples of courtship and mating behaviour

**UNIT-VI Social Behaviour**

**8 Hrs**

- i. Introduction
- ii. Advantages of grouping
- iii. Social organization in insects with special reference to ants and honeybees
- iv. Social organization in sub human primates
- v. Altruism, Kin selection and Genetic control of behaviour

**TUTORIALS – On the basis of the proposed chapters.**

**2x16 = 32 Hrs.**

**REFERENCES**

- 4) Agrawal, K.C. 2000. Biodiversity. Agrobios. India.

**M.Sc., III SEMESTER  
SC – 3.5 POLLUTION AND TOXICOLOGY**

**48hrs**

**Course Outcome:**

After completing the course student will be able to

1. broader understanding of how science and the scientific method work to address environmental problems.
2. Earth's major systems (ecosystems and biogeochemical cycles), how they function and how they are affected by human activity (population growth, air, water and soil pollution, ozone depletion, global warming, and solid waste disposal).
3. the interaction of human society (urban sprawl, energy use/generation, resource consumption and economics) with the Earth's systems.

**Part A - Pollution**

**24 hrs**

**Unit I:**

**8 hrs**

**A. Concept of Biosphere:** Its components, hydrosphere, atmosphere, and lithosphere, Origin of life in the biosphere.

**B. Water pollution:** Definition, sources Types and classification of pollutants. Effects of Water Pollution, River Pollution, Oxygen sag curves and Eutrophication Drinking water: Collection, purification and distribution. Wastewater treatment: Primary, secondary and tertiary treatment.

**Unit II:****8 hrs**

**A. Atmospheric pollution:** Primary and secondary air pollutants. Biological effects of Nox, SO<sub>x</sub>, SPM, Hydrocarbons, Acid rain, Global warming, Photochemical smog and Ozone hole.

**B. Solid waste and Biomedical waste:** Sources, collection, transport, treatment and Disposal methods.. Noise Pollution: Sources, Biological effects, Control measures and OSHA standards.

**Unit III:****8hrs**

**A. Radiation & Thermal pollution:** Sources, types, effects, Atmospheric fallout and abatement.

**B. Environmental Impact Assessment:** Basic elements, Methods Guideline for industrial EIA, Aquaculture related EIA, Transport related EIA and Water related EIA. Case studies: Konkan Railway, Silent valley, Bhopal Tragedy and Love canal tragedy, Mangalore Bojpe tragedy

**Part B – Toxicology****24 hrs****Unit IV:****8hrs**

**A. General Principles of Toxicology:** Introduction, Definition of toxicology Importance of Dose and Dose-response, factors influencing toxicity, Bioassay-toxicity evaluation studies using fish as model.

**B. Toxic compounds:** Heavy metals-Lead and mercury, Hydrocarbons- Aromatic and Aliphatic, and cyanides, and toxic gases - Bhopal tragedy.

**Unit V:****8hrs**

**A. Biotransformation:** Bioactivation, Biotransformation of organo phosphates and organo chlorines in the bodies of animals.

**B. Natural toxins, Venoms and poisons:** Properties and their effects, Major Sites and mechanism of action, Toxins in lower and higher organisms, Toxin and Venom therapy.

**Unit VI:****8hrs**

**A. Smoking aids:** Active and Passive smoking, Consumption of tobacco, Marijuana(Ganja), their effects and Prevention measures.

**B. Cosmetics:** Types of cosmetics, Chemical Characteristics, Applications, Exposure and risk assessment, Cosmetic safety regulations.

**C. Risk assessment:** Exposure assessment, Dose-Dosage, Risk characterization, Risk analysis and communications, Occupational health and illness.

**TUTORIALS – On the basis of the proposed chapters****2x16 = 32 Hrs****REFERENCES:**

**M.Sc., III Semester:  
OPEN ELECTIVE-(For Science discipline students).  
CONCEPTS OF ZOOLOGY.**

**48 Hrs**

Course Outcome:

After completing the course student will be able to

1. Broader understanding of Zoology and its concepts
2. Understand the concepts and basics of animals taxonomy
3. Understand the basics of histology
4. Describe the structure and basic functions of organ systems
5. Explain ecological concepts and effects of environmental pollution
6. Explain the mechanism of inheritance.

**1. Introduction:**

**8 Hrs**

a) Branches of animal science: Taxonomy, Animal Physiology, Genetics, Developmental Biology, Evolution, Ethology, Ecology, Applied Zoology, Entomology, Histology, c) Indian Wildlife- Status, Causes of wildlife depletion, Wildlife corridors, Conservation strategies- *In situ* and *Ex situ* d) e) Animals and human welfare.

**2. Animal Taxonomy:**

**4 Hrs**

a) Carl Linnaeus – Taxonomic hierarchy: Kingdom, Division, Phylum, Class, Order, Family and Binomial nomenclature

**3. Animal cells and Tissues :**

**8 Hrs**

a) Brief description of animal cell (light and ultra structure) b) Functions of cell organelles c) Structure and functional diversity in animal cell d) Cell division: Types and significance e) Structure and functions of basic tissues.

**5. Structure and functions of organ systems:**

**16 Hrs**

a) Human alimentary canal and outlines of digestion and absorption  
 b) Respiration: Human respiration – exchange of gases.  
 c) Circulation : Structure of human heart, Blood vessels and capillaries, composition of blood, blood coagulation.  
 d) Excretion : Mammalian kidney and urine formation.  
 e) Locomotion in vertebrates – Swimming, walking running, flying  
 f) Nervous system and their functions, A brief account of human endocrine system  
 g) Reproduction : Asexual and sexual reproduction, significance of sexual reproduction, outlines of human reproduction and fertility control

**6. Ecology and Environmental Biology:**

**8 Hrs**

a) Abiotic and Biotic factors b) Environmental Pollution – brief account of Air, Water and Noise pollution.

**7. Heredity:**

**4 Hrs**

a) Continuity of life – Mendel's laws b) Structure of chromosomes c) DNA and RNA

**TUTORIALS**

**2x16=32 Hrs**

### **M.Sc., IV SEMESTER**

#### **HC – 4.1 ADVANCED GENETICS AND COMPUTATIONAL BIOLOGY**

**32 hrs**

##### **Course Outcome:**

After completing the course student will be able to

1. Understand the genomic organization of prokaryotes and eukaryotes.
2. Know the applications of various model organisms in genomic research.
3. Able to analyse the pedigree, psychosomatic disorders, prenatal diagnosis and genetic counselling.
4. Recognise few heritable diseases in man.
5. Understand the basic concepts of genomics
6. Understand the basic concepts of proteomics
7. Understand the nucleic acid and proteinr databases and tools.

#### **Part A-Advanced Genetics**

##### **Unit I: Genome organization:**

**3 hrs**

Prokaryotes, Eukaryotic nuclear genomes - C-value paradox, Eukaryotic organelle genomes Split Genes Mobile genetic elements in Prokaryotes (bacteria) and Eukaryotes (*Drosophila*, maize and humans), Genome Projects of model organisms (*C. elegans*, *Drosophila* and Mouse).

##### **Unit II: Cancer Genetics:**

**5 hrs**

Cancer incidence and mortality, types of cancer, causes of cancer, properties of cancer cells, Genetic basis of Carcinogenesis- Oncogenes: proto-oncogenes, oncogenes, retroviral oncogenes in human cancer. Tumor suppressor genes: Functions of tumor suppressor gene products. Cancer as a multistep process. Animal models of cancer research: Transgenic mouse and *Drosophila* models.

##### **Unit III: Human genetics:**

**5 hrs**

History of human genetics, pattern of inheritance, pedigree analysis. Human genome: Organization, distribution of genes, gene families. Genetic basis of syndromes and disorders: Cystic fibrosis, Neurofibromatosis, Schizophrenia, Anxiety disorder, Congenital heart diseases, Dyslexia.

##### **Unit IV: Quantitative genetics:**

**3hrs**

Introduction, types of quantitative trait, Nature of quantitative traits and their inheritance- Polygenic inheritance (Multifactorial hypothesis) – analysis of continuous variation; Variations associated with polygenic traits.

## Part B-Computational Biology

### **Unit VII: Introduction and Scope of the Computational Biology** **4 hrs**

Genomics: Definition and types of genomics Structural genomics: whole genome shotgun sequencing, gene annotation, gene families and clusters. Orthologs and paralogs. Functional genomics: Transcriptome, Microarray technology.

### **Unit VIII: Proteomics:** **4 hrs**

Definition, Protein structure determination, protein domains, protein folding, Computer aided protein structure analysis, Protein-protein interactions, Protein microarrays.

### **Unit IX: Nucleic acid sequence and Protein analysis:** **4 hrs**

Alignment, similarity searches including remote similarity searches, secondary structure element, motifs, Single nucleotide polymorphism (SNP), Two dimensional polyacrylamide gel electrophoresis, Mass Spectrometry.

### **Unit X: Genomics and proteomics databases and tools:** **4 hrs**

Nucleic acid sequence databases and tools: Genbank, UCSC, ENSEMBL, EMBL, DDBJ, BLAST vs FASTA, file formats-FASTA, GCG, Genscan and ClustalW. Protein sequence databases and tools: Uni-prot, PDB, PIR, BLAST, PSI- BLAST (steps involved in use and interpretation of results).

### **PRACTICALS:**

1. Study of mitotic chromosomes of *Drosophila* species- *Drosophila melanogaster*, *Drosophila nasuta*.
2. Preparation of metaphase chromosomes from bone marrow cells of mouse.
3. Karyotypic studies of normal human chromosomes and syndromes.
4. Creation of pedigrees and study of patterns of inheritance.
5. Studies on phenotypes of different diseases and syndromes.
6. Study of Quantitative characters: Sternopleurals, Acrosticals – mean, standard deviation.
7. Data mining for sequence analysis.
8. Web– based tools for sequence searches and homology screening-BLAST, FASTA
9. Nucleic acid sequence databases: GenBank retrieval, GeneScan.
10. Proteomics data bases: Uni-Prot, PROSITE, PDB, PIR, ProtParam.
11. Annotations: ORF finder, Use of ARTEMIS or any other suitable software

**M.Sc., IV SEMESTER  
HC – 4.2 APPLIED ZOOLOGY**

**32 hrs**

**Course Outcome:**

After completing the course student will be able to

1. Explain plant insect interaction, origin of pest and its control.
2. Understand vectors and its communicable diseases.
3. Explain races of silkworm their disease and its control.
4. Know about the importance of insects in forensic science and medicine.
5. Know about aquaculture and its practices in India.

**UNIT I: Aquaculture**

**8hrs**

Aquaculture in India: an overview – nutritional value and food security - Site selection and preparation of culture ponds - Fish culture: carps, marine fishes and ornamental fishes. Prawn culture: Freshwater prawns and marine shrimps. Fattening of crabs. Crayfish and Lobster - Molluscs: mussels, clams, chanks and oysters including pearl oyster. Live feeds: micro algae, micro-invertebrates (*Artemia* nauplii, Rotifers, Cladocerans, Copepods, Ostracodes) and worms as live baits – Water quality management and maintenance of sanitation - Plant and animal nutrients - Balanced diet (iso-nitrous and iso-caloric) - Artificial feed formulation – Low cost feed formulation - Aquatic weeds.

**UNIT II: Sericulture**

**8hrs**

Salient features of Saturnidae and Bombycidae. Mulberry and non mulberry silkworms, classification based on voltinism, moulting and geographic origin. Morphology and life cycle of *Bombyx mori*. Structure and functions of Silk glands. Silkworm rearing technology: Building, equipments, disinfection, environmental factors, Seed cocoons, preservation, grainage activity, LSPs, egg production, incubation, artificial hatching. **Pests and diseases:** Protozoan, Fungal, Viral and Bacterial diseases and their control measures. Silkworm pests and Predators

**UNIT III: Apiculture**

**8hrs**

Scope and its importance, Classification and morphology of honey bees, species and races of honey bees, tribal life and bee hunting. sex seperation, comb building, orientation of comb, communication, collection of propolis and water. Honey and its chemical composition, medicinal importance. Economic importance of honey, wax, bee pollination, pollen and Venom.

**UNIT IV: Vermiculture**

**8hrs**

A. Introduction to vermiculture. Definition, meaning, history, economic importance, their value in maintenance of soil structure. Useful species : Local species and Exotic species of earthworms. Role of four R's.  
 B. Taxonomy Anatomy, Physiology and Reproduction of Lumbricidae and Eudrilidae.  
 C. Earthworm Farming (Vermiculture) for home gardens, larger scale, Extraction (harvest), vermicomposting harvest and processing.  
 D. Nutritional Composition of Vermicompost for plants, comparison with other fertilizers  
 E. Enemies of Earthworms, Sickness

**PRACTICALS:****16X4=64 hrs**

1. Study of morphometric characters of Indian major carps.
2. Diversity of fishes.
3. Collection of phytoplankton and zooplankton from natural resources and their identification.
4. Study of morphology of honey bee and cast system.
5. Mounting of mouth parts, stinging apparatus of honey bee.
6. Study of digestive system of honeybee.
7. Study of structure and types of honey comb.
8. Study of bee plants.
9. Study of morphology of lifecycle of *Bombyx mori*
10. Study of digestive and silk gland of *Bombyx mori*
11. Study of Non mulberry silkworms and their food plants.
12. Field trip- Collection of native earthworms & their identification
13. Study of systematic position& External characters of locally available earthworm species.
14. Mounting of setae and identification of earthworm species.
15. Study of equipments used in Vermiculture.

**M.Sc., IV SEMESTER  
HC – 4.3 Project****Course Outcome:**

After completing the course student will be able to

1. understand the concepts of Project Management for planning to execution of projects
2. find importance of reference work Using tools of information such as periodical , journals, online resources
3. break work down the tasks of project and determine handover procedures
4. Interpret, analyse and presentation of the results obtained and compare with similar works and draw conclusion.

**M.Sc., Examination**  
**(Scheme CBCS)**  
**M.Sc., ZOOLOGY**  
**HARD CORE- Model question paper**

**Time: 3 hrs**

**Max Marks: 70**

**Instructions:** *1. Answer all questions*

*2. Illustrate your answer wherever necessary*

**I. Write short notes on the following:**

**[8×2=16]**

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.

**II. Write elaborate notes on any FIVE of the following:**

**[5×6=30]**

- 9.
- 10.
- 11.
- 12.
- 13.
- 14.
- 15.
- 16.

**Q3. Answer the following:**

**[2×12=24]**

17. (i)  
Or  
(ii)
18. (i)  
Or  
(ii)

**M.Sc Examination  
(Scheme CBCS)  
M.Sc., ZOOLOGY  
Softcore - Model question paper**

**Time: 3 hrs**

**Max Marks: 70**

**Instructions:** *1. Answer all questions*

*2. Illustrate your answer wherever necessary*

**I. Write short notes on the following:**

**[8×2=16]**

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.

**II. Write elaborate notes on any FIVE of the following:**

**[5×6=30]**

- 9.
- 10.
- 11.
- 12.
- 13.
- 14.
- 15.
- 16.

**Q3. Answer the following:**

**[2×12=24]**

17. (i)  
Or  
(ii)
18. (i)  
Or  
(ii)

**M.Sc Examination  
(Scheme CBCS)

<b>M.Voc (Food Processing and Engineering) Syllabus</b>		
<b>1<sup>st</sup> -M.Voc</b>		
<b>NSQF Level: 8 – Semester I &amp; II</b>		
<b>Sub Sector: Fruits &amp; Vegetables</b>		
<b>Job Role: Head of Production</b>		
<b>UNIT I</b>		
<b>Post Harvest Management of Fruits</b>		
<b>S.No</b>	<b>THEORY</b>	<b>Hrs</b>
1.	General Introduction of fruits-citrus, tropical and subtropical, pome, stone, soft, and berry fruits, melons and watermelons	1
2.	Importance and scope of post harvest management of fruits, Morphology, structure and composition of fruits	2
3.	Maturity Indices and standards for standards for selected fruits, methods of maturity determination	2
4.	Post-harvest physiological and biochemical changes in fruits; ripening of climacteric and non-climacteric fruits	2
5.	Harvesting and handling of important fruits. Harvesting tools; field heat removal/precooling of fruits. Sorting and grading at farm and cluster level; factors affecting post harvest losses	2
6.	Nature of post harvest deterioration; physiological change- physical damage; chemical injury-pathological decay; identification of diseases and disorders in fruit-nutritional disorders, respiratory disorders, temperature disorders and miscellaneous disorders. Classification of diseases and diseases organisms, types of diseases and agents of diseases in fruits.	4
7.	Pre-cooling of fruits and cold storage, zero energy cool chamber	3
8.	Shelf life enhancement- permitted chemicals for ripening, wax coating	3
9.	Storage practices: Refrigerated storage, modified atmospheric storage-novel MAP gases and their role, novel MAP applications, Applying high oxygen MAP; MAP of minimally processed fruits; controlled atmosphere storage/ultra low oxygen storage of fruits, recent advances in CAP and MAP	9
<b>TOTAL</b>		<b>28</b>
<b>S.No</b>	<b>PRACTICALS</b>	<b>Hrs</b>
1.	Familiarization of various fruits available in India and categorization of fruits used for pulping	3
2.	Studies on morphological features of some of the fruits	3
3.	Studies on maturity indices; Studies on harvesting of fruits	3
4.	Studies on permitted chemicals for ripening and enhancing the shelf life of fruits	3
5.	Studies on regulations of ripening of banana and mango	3
6.	Studies on physiological disorders like chilling injury of certain fruits	3
7.	Studies on pre cooling and storage of fruits and vegetables	3
8.	Demonstration on wax coating on apples, citrus and Mango	3
9.	Studies on various storage systems and structures;	3
10.	Studies on pre packaging of whole and cut vegetables	3
11.	MAP of minimally processed fruits & vegetables	3

12.	Visit to commercial packaging houses for mango, banana, pomegranate, grapes	3
13.	Visit to Controlled Atmospheric packaging centres	4
14.	Visit to commercial storage structures for onion and potato	4
15.	Visit to multi chamber cold storages for fruits and vegetables	4
16.	Visit to Fruit Orchards -Observations on Pruning, orchard Hygiene, Irrigation, Manuring, Insect Pests, Pathological Spoilages, Pre-harvest spray schedules to control pathological spoilages and insect infestation	4
17.	Visit to Fruit Orchards - Studies on Causes for pre and post harvest losses. Spoilage factors, post harvest field operations including methods to reduce the post harvest losses	4
<b>TOTAL</b>		<b>56</b>
<b>UNIT II</b>		
<b>Technology for processing of Fruit Pulp</b>		
<b>S.No</b>	<b>THEORY</b>	<b>Hrs</b>
1.	Process of receiving, ripening, checking raw material quality, sorting, washing, cutting/slicing, deseeding/destining, pulping, precooking/pasteurization, sterilizing, aseptic packaging or canning, retort pouching, sampling for quality analysis and storing	2
2.	Machineries and tools used for the fruit pulping process such as fruit washer, peeler, slicer, fruit pulper, steam jacketed kettles, packaging machines etc	2
3.	Quality assessment of packaging materials	2
4.	Enzymes in quality and processing of tropical and sub tropical fruits	3
5.	Non thermal processing methods-ultra violet light, high pressure processing, ultrasound, ozone application, irradiation, pulsed electric field	7
6.	Introduction, canning machineries, various steps involved in canning of fruit pulp, syrup preparation, pretreatment for canning operation	7
7.	Canning of various fruits, process flow diagram for canning, filling, exhausting, sealing and processing operations	5
<b>TOTAL</b>		<b>28</b>
<b>S.No</b>	<b>PRACTICALS</b>	<b>Hrs</b>
1.	Canning of mango pulp	5
2.	Canning of tomato pulp	5
3.	Preservation of tomato pulp by chemical preservation method	5
4.	Preservation of banana pulp by freezing method	5
5.	Canning of mango slices in syrup	5
6.	Canning of pineapple slices in syrup	5
7.	Canning of banana slices in syrup	5
8.	Visit to fruit processing units and collection of data on wastes and by products	5
9.	Visit to Aseptic packing units for fruit pulps & concentrates	8
10.	Visit to the pilot plants of CFTRI & DFRL Mysore	8
<b>TOTAL</b>		<b>56</b>
<b>UNIT III</b>		
<b>Food Quality and Food Microbiology</b>		
<b>S.No</b>	<b>THEORY</b>	<b>Hrs</b>
1.	Introduction – definition, historical development and significance of food microbiology; Microscope; Classification & morphology of microbes; Techniques of	3

	pure culture; Bacteriology of air & water; Anti-microbial agents – physical & chemical – mechanism & action	
2.	Sources of Contamination: Air, Water, Soil, Sewage, Post processing Contamination. Intrinsic & extrinsic factors influencing the growth of Microorganisms in foods	3
3.	Disinfection & disinfectants; Energy metabolism of aerobic & anaerobic microbes; Thermal inactivation of microbes; Concept, determination & importance of TDT, F, Z & D values; Factors affecting heat resistance; Pasteurization and sterilization	4
4.	Microbiology of Fruits and vegetables and their products like jam, jelly, sauce, juice/pulp	3
5.	Food Quality aspects of Fruits & vegetables; Introduction, Quality principles, Quality enhancement model. Application of quality enhancement model	3
6.	Food Waste Treatment : Liquid waste, Solid waste vessel containers & wrapping waste, Hazardous waste .Quality and Safety of Frozen Foods: Fruits, Vegetable	3
7.	Measuring and Controlling Devices: Role of transducers measurements in food processing; Humidity, Turbidity and Color, Food & Process temperature controller and indicators. Statistical Quality Control for food Industry : Food Quality System, Fundamentals, Process control implementing quality control program, six sigma, RSM	4
8.	Food additives – preservatives, antioxidants, sequestrates, surface active agents, stabilizers and thickeners, bleaching and maturing agents, starch modifies, buffers, acids, alkalis, food colors, artificial sweeteners, nutritional additives, flavoring agents.	5
	<b>TOTAL</b>	<b>28</b>
	<b>PRACTICALS</b>	<b>3</b>
1.	Determination of firmness of fruits	3
2.	Determination of moisture content	3
3.	Titrate acidity estimation	3
4.	Estimation of SO <sub>2</sub> in food sample	3
5.	Estimation of sodium benzoate in food sample	3
6.	Estimation of polyphenol and polyphenol oxidase	3
7.	Estimation of Reducing sugar, Non-reducing and total sugars	3
8.	Determination of organic acid content	3
9.	Ascorbic acid estimation	3
10.	Determination of pH in food products	3
11.	Determination of total Ash	3
12.	Determination of total soluble solids	3
13.	Estimation of ash content	3
14.	Estimation of crude fibre	3
15.	Estimation of pectin	3
16.	Flow process chart of food plant Waste utilization processes, various treatment for waste disposal analysis of cleaners & sanitizers, CIP Cleaning	11
	<b>TOTAL</b>	<b>56</b>
<b>UNIT IV</b>		
<b>Food Safety, Hygiene and Sanitation for Processing of Fruit Pulp</b>		
<b>S.No</b>	<b>THEORY</b>	<b>Hrs</b>
1.	Food safety, hygiene and sanitation for processing of fruit pulp: food safety standards and regulations for fruit pulp, definition of hygiene, hygiene practices	14

	and its importance at every stage of fruit pulp processing at industrial level; personal hygiene requirements; physical, chemical and biological hazards and methods for prevention of various hazards; CIP and COP methods and procedures, GHP, GMP and HACCP; waste management-pre and post production.	
2.	Microbiological aspect of Food; types of food microbes, causes of food spoilage, types of food spoilage/deterioration, criteria to check the food spoilage, need for food preservation, different types of food preservation methods, method of assessing the quality of products based on physical parameters	14
	<b>TOTAL</b>	<b>28</b>
<b>S.No</b>	<b>PRACTICALS</b>	<b>Hrs</b>
1.	Clean and maintenance of work area using appropriate sanitizers, ensure the work area safe and hygienic for fruit processing, disposal of waste material as per SOPs and industrial requirement	8
2.	Check the working and performance of machineries and tools for fruit pulp process, clean the machineries and tools used with recommended sanitizer, to place the necessary tools required for the process, to attend minor repair, faults of all machineries if required.	8
3.	Disassembling and assembling of machineries used in fruit pulp industry (Fruit mill, crusher etc)	8
4.	Demonstration of CIP and COP methods of cleaning the machines with approved sanitizers	8
5.	Visit to industry to learn about GHP, GMP, HACCP	12
6.	Visit to industry to learn about waste management pre and post production	12
	<b>TOTAL</b>	<b>56</b>
<b>S.No</b>	<b>UNIT V</b>	<b>Hrs</b>
<b>Plant Design, Plant Economics and Plant Management</b>		
1.	Food Industry management- location of plant land and building requirements, plant capacity, plant and machinery requirement, building and plant layout, utilities, byproducts, waste, energy and safety audit, manpower requirements	5
2.	Introduction to economics: Meaning, scope, and contribution to business decisions. Analysis of Demand: Law of demand, Utility function, Rate of commodity substitution, Maximization of utility, Demand functions, Indifference curve analysis, Substitution and income effects. Market demand and demand elasticities: concept of market demand, price and income elasticities of demand, importance of elasticity. Demand forecasting: causes and techniques of demand forecasting	6
3.	Analysis of supply and market equilibrium: Law of supply, price elasticity of supply, equilibrium of demand and supply. Theory of the Firm: Production function, returns to scale, Optimizing behavior, Input demands, Cost functions, Profit maximization, economics & diseconomies of scale, break even analysis. Market structures perfect competition: Profit maximization and equilibrium of firm and industry, Short run and long run supply curves; Price and output determination, practical applications	6
4.	Plant maintenance program; Role of maintenance staff and plant operators, Preventive maintenance; Guidelines for good maintenance & safety precautions; Lubrication & lubricants; Work place improvement through '5S'. Hygiene and sanitation requirement in food processing and fermentation industries; CIP	6

	methods, sanitizing & disinfestation, pest control in food processing; storage and service areas	
5.	Supply chain management for fruits	5
	<b>TOTAL</b>	<b>28</b>
<b>PRACTICALS</b>		
1.	Visit to industry to learn the management system	16
2.	Visit to Fruit & Vegetable Processing Industries. Preparation of a Business Plan for setting up fruit & vegetable processing unit	40
	<b>TOTAL</b>	<b>56</b>
VI	<b>Hands on Training in Fruit Pulp Processing Industry and submission of report</b>	120
	<b>TOTAL</b>	<b>540</b>

# Plant Manager

## CURRICULUM / SYLLABUS

This program is aimed at training candidates for the job of a “Plant Manager”, in the “Food Processing” Sector/Industry and aims at building the following key competencies amongst the learner

<b>Program Name</b>	<b>Plant Manager</b>		
<b>Qualification Pack Name &amp; Reference ID. ID</b>	FIC/Q9004, v1.0		
<b>Version No.</b>	1.0	<b>Version Update Date</b>	30/03/2016
<b>Pre-requisites to Training</b>	Preferably Class 12 and 6-7 years' experience in a food processing unit		
<b>Training Outcomes</b>	<b>After completing this programme, participants will be able to:</b> Daily management of food processing unit Coordination of food processing unit operations including production planning, managing human resources, supply chain, production operation, maintenance, quality assurance, storage and distribution of finished products.		

This course encompasses 3 out of 3 National Occupational Standards (NOS) of “Plant Manager” Qualification Pack issued by “Food Industry Capacity and Skill Initiative”.

Sr. No.	Module	Key Learning Outcomes	Equipment Required
1	<b>Introduction to the training program</b>  <b>Theory Duration</b> (hh:mm) 00:30  <b>Practical Duration</b> (hh:mm) 00:00  <b>Corresponding NOS Code</b> Bridge Module	Introduce each other and build rapport with fellow participants and the trainer.	White board/Chart papers, marker
2	<b>Overview of the “Plant Manager” Role</b>  <b>Theory Duration</b> (hh:mm) 01:00  <b>Practical Duration</b> (hh:mm) 00:00  <b>Corresponding NOS Code</b>	Understanding the roles and responsibilities of plant manager Awareness of the nature and availability of job opportunities	Laptop/computer white board, marker, projector, chart papers
3	<b>Introduction to the Food Processing Industry</b>  <b>Theory Duration</b> (hh:mm) 01:30  <b>Practical Duration</b> (hh:mm) 00:00  <b>Corresponding NOS Code</b>	Define food processing List the various sub sectors of food processing industry	Laptop, white/black board, marker, chart papers, projector, Trainer’s guide, Student manual
4	<b>Introduction to food processing process</b>  <b>Theory Duration</b> (hh:mm) 02:00  <b>Practical Duration</b> (hh:mm)	List the common machineries used in food processing Explain the process of testing food for accepted quality standards Demonstrate the test for checking the quality of food Describe the procedure for processing various food	Laptop, white board, marker, chart papers, projector, trainer’s guide and student handbook

Sr. No.	Module	Key Learning Outcomes	Equipment Required
	04:00 <b>Corresponding NOS Code</b>	Identify different equipment used in food industry	
5	<b>Organizational standards and norms</b>  <b>Theory Duration</b> (hh:mm) 04:00  <b>Practical Duration</b> (hh:mm) 02:00  <b>Corresponding NOS Code</b>	State the roles and responsibilities of a plant manager State how to conduct yourself at the workplace State the personal hygiene and sanitation guidelines State the food safety hygiene standards to follow in a work environment	Laptop, white board, marker, chart papers, projector, trainer's guide and student handbook, protective gloves, head caps, aprons, safety goggles, safety boots, mouth masks, sanitizer, safety manual
6	<b>Lead operations of a food processing unit</b>  <b>Theory Duration</b> (hh:mm) 15:00  <b>Practical Duration</b> (hh:mm) 11:40  <b>Corresponding NOS Code</b> FIC/N9017	<ul style="list-style-type: none"> <li>• Develop operational plans for the operation of food processing unit that is consistent with the objectives and goals of organisation, and to produce quantity and quality products</li> <li>• Develop operational plan that is flexible and complements supply chain, inventory, human resource, production, maintenance, quality and logistics management of production unit</li> <li>• Develop operational plan to improve output in all areas of functions with the objective to reduce overall cost, and to produce quantity and quality products</li> <li>• Develop operational plan considering national and international regulatory requirements, health and safety, food safety and hygiene requirements on process and product(s), and to maintain safe and environmental compliant workplace</li> <li>• Develop objectives and set demanding but achievable targets for operation function managers, and assign clear responsibilities with expected targets/performance</li> <li>• Provide direction and professional expertise to all function managers to achieve organisation goals</li> <li>• Monitor and control the operational plan to achieve its overall objectives</li> </ul>	Laptop, white board, marker, chart papers, projector, trainer's guide and student handbook

Sr. No.	Module	Key Learning Outcomes	Equipment Required
		<ul style="list-style-type: none"> <li>• Evaluate the implemented operational plan periodically, analyze performance data, identify areas for improvement and recommend changes</li> <li>• Monitor performance of managers and employees to ensure that departmental and individual objectives are achieved within scheduled timelines and budget</li> <li>• Design new work processes, procedures, systems, structures and roles for any changes implemented in the organisation to achieve organizational goal and regulatory requirements</li> <li>• Review and ensure implemented changes are effective and meet the requirements of the organization</li> <li>• Maintain professionalism, tact, diplomacy, sensitivity, diversity and equality, and lead food processing unit to achieve organisation objectives and goals</li> <li>• Ensure that work arrangements, resources and business processes respond to different needs, abilities and values</li> <li>• Develop and implement new business strategies for improving processes and procedures to improve performance</li> <li>• Develop a leadership style and apply them appropriately for managers to follow the lead willingly to achieve organisation targets and goals</li> <li>• Communicate clearly the organisation vision, values and goals to employees, make managers understand and commit their expertise to achieve organisation goals</li> <li>• Lead managers of all operation functions, link operational plans and drive managers towards achieving organisation vision, objectives and goals</li> <li>• Lead managers through difficulties, challenges and conflicts</li> <li>• Conduct meetings with managers regularly and effectively, encourage them to share their views, provide guidance and support to overcome process issues and lead to achieve organisation goal</li> </ul>	

Sr. No.	Module	Key Learning Outcomes	Equipment Required

		<p>products to comply with regulatory standards</p> <p>Update self with understanding of health and safety requirements, and food safety, hygiene and sanitation requirements for the organisation and products produced</p> <p>Ensure that the organisation has written policy and procedures on health and safety, food safety, hygiene and sanitation, and those are clearly communicated to all employees of the organisation, and are put into practice and followed</p> <p>Implement a system for identifying hazards and assessing risk in food processing and products and set procedures to control and prevent them</p> <p>Implement system for GMP, HACCP, FIFO/FEFO, product recall, etc., organize training to the employees on health and safety, food safety, hygiene and sanitation for effective implementation of the systems, allocate required resources for implementation, and ensure those are followed by all employees</p> <p>Ensure systems are in place for effective monitoring, measuring and reporting on the performance of health and safety system</p> <p>Evaluate the existing systems and procedures, consult with managers and experts and identify methods to reduce risks/improve control measure</p> <p>Ensure health and safety policies are practiced across the organisation, effectively monitored, reviewed and revised at regular intervals to meet the changes in national and international regulations</p>	
9	<p><b>Professional and Core Skills</b></p> <p><b>Theory Duration</b> (hh:mm) 03:00</p> <p><b>Practical Duration</b> (hh:mm) 05:00</p>	<p>Undertake a self-assessment test</p> <p>Identify personal strengths and weaknesses</p> <p>Plan and schedule the work order and manage time effectively to complete the tasks assigned</p> <p>Prevent potential problems from occurring</p>	<p>Laptop, white/black board, marker, chart papers, projector ,Trainer's guide, Student manual</p>

Sr. No.	Module	Key Learning Outcomes	Equipment Required
	<b>Corresponding NOS Code</b>	Resolve issues and problems using acquired knowledge and realize the importance of decision making Identify potential problems and make sound and timely decision Improve your reading skills State the importance of listening	
10	<b>IT Skills</b>  <b>Theory Duration</b> (hh:mm) 05:00  <b>Practical Duration</b> (hh:mm) 07:00  <b>Corresponding NOS Code</b>	Identify parts of the computer Use the computer keyboard effectively to type Use computer applications effectively to record day-to-day activities Use the word processor effectively Use the spreadsheet application effectively Use the computer to document day-to-day activities	Laptop, white/black board, marker, chart papers, projector, Trainer's guide, Student manual
11	<b>Field Visits</b>  <b>Theory Duration</b> (hh:mm) 04:00  <b>Practical Duration</b> (hh:mm) 30:00  <b>Corresponding NOS Code</b>	Observe the factory location, layout and safety aspects of food processing Observe the storage facilities for raw materials and finished products Observe the various machineries used in process Observe the various machineries used in process Observe the cleaning methods and processes followed to maintain the process machineries and tools Observe the raw materials used and their storage procedures Observe the packaging and storage processes of raw material and finished product Observe the post-production cleaning and maintenance process followed in the industry	All the tools and equipment listed above must be available at the site of field visit
12	<b>Revision</b>  <b>Theory Duration</b> (hh:mm) 02:00  <b>Practical Duration</b> (hh:mm) 02:00  <b>Corresponding NOS Code</b>	Revised the knowledge gained so far	All the tools and equipment listed above must be available at the time of revision
13	<b>Evaluation</b>	Assess the knowledge and skills acquired by the participants	All the tools and equipment listed above

Sr. No.	Module	Key Learning Outcomes	Equipment Required
	<b>Theory Duration</b> (hh:mm) 08:00  <b>Practical Duration</b> (hh:mm) 20:00  <b>Corresponding NOS Code</b>		must be available for evaluation
14	<b>On-the-job Training</b>  <b>Theory Duration</b> (hh:mm) 30:00  <b>Practical Duration</b> (hh:mm) 65:00  <b>Corresponding NOS Code</b>	Apply the skills and knowledge acquired in the training program in the field	All the tools and equipment listed above must be available on the site at the time of OJT
	<b>Total Duration</b> <b>240:00</b>  <b>Theory Duration</b> <b>88:00</b>  <b>Practical Duration</b> <b>152:00</b>	<b>Unique Equipment Required:</b> Laptop, white board, marker, chart papers, projector, trainer's guide and student handbook, protective gloves, head caps, aprons, safety goggles, safety boots, mouth masks, sanitizer, safety manual	

Grand Total Course Duration: **240Hours, 0 Minutes**

*(This syllabus/ curriculum has been approved by SSC: Food Industry Capacity and Skill Initiative)*

## Trainer Prerequisites for Job role: “Plant Manager” mapped to Qualification Pack: “FIC/Q9004, v1.0”

Sr. No.	Area	Details
1	<b>Description</b>	To deliver accredited training service, mapping to the curriculum detailed above, in accordance with the Qualification Pack “FIC/Q9004”, Version 1.0
2	<b>Personal Attributes</b>	An aptitude for conducting training, and pre/ post work to ensure competent, employable candidates at the end of the training, and pre/post work to ensure competent, employable candidates at the end of the training. Strong communication skills, ability to work as part of a team; a passion for quality and for developing others; well-organized and focused, eager to learn and keep oneself updated with the latest in the mentioned fields.
3	<b>Minimum Educational Qualifications</b>	M.Sc/M.Tech/ME in Food Technology or Food Engineering with 7-8 years of hands on experience in a food industry B.Sc (home Sc) /B.Tech/BE in Food Technology or Food Engineering with 9-10 years of hands on experience in a food industry
4a	<b>Domain Certification</b>	Certified for Job Role: “Plant Manager” mapped to QP: “FIC/Q9004, v1.0”. Minimum accepted score is 80%
4b	<b>Platform Certification</b>	Recommended that the Trainer is certified for the Job Role: “Trainer”, mapped to the Qualification Pack: “SSC/Q1402”. Minimum accepted SCORE IS 80 % as per FICSI guidelines.
5	<b>Experience</b>	M.Sc/M.Tech/ME in Food Technology or Food Engineering with 7-8 years of hands on experience in a food industry B.Sc (home Sc) /B.Tech/BE in Food Technology or Food Engineering with 9-10 years of hands on experience in a food industry

**Annexure: Assessment Criteria**

<b>Assessment Criteria</b>	
<b>Job Role</b>	<b>Plant Manager</b>
<b>Qualification Pack</b>	<b>FIC/Q9004, v1.0</b>
<b>Sector Skill Council</b>	<b>Food Processing</b>

Sr. No.	Guidelines for Assessment
1	Criteria for assessment for each Qualification Pack will be created by the Sector Skill Council. Each Performance Criteria (PC) will be assigned marks proportional to its importance in NOS. SSC will also lay down proportion of marks for Theory and Skills Practical for each PC.
2	The assessment for the theory part will be based on knowledge bank of questions created by the SSC.
3	Individual assessment agencies will create unique question papers for theory part for each candidate at each examination/training centre(as per assessment criteria below)
4	Individual assessment agencies will create unique evaluations for skill practical for every student at each examination/training center based on this criteria
5	To pass the Qualification Pack, every trainee should score a minimum of 70% (overall) in every QP
6	The marks are allocated PC wise; however, every NOS will carry a weight age in the total marks allocated to the specific QP

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
<b>1. FIC/N9017: Lead Operations of a food processing unit</b>	PC1. Develop operational plans for the operation of food processing unit that is consistent with the objectives and goals of organisation, and to produce quantity and quality products	<b>100</b>	3	1	2
	PC2. Develop operational plan that is flexible and complements supply chain, inventory, human resource, production, maintenance, quality and logistics management of production unit		2.5	1	1.5
	PC3. Develop operational plan to improve output in all areas of functions with the objective to reduce overall cost, and to produce quantity and quality products		2.5	0.5	2
	PC4. Develop operational plan considering national and international regulatory requirements, health and safety, food safety and hygiene requirements on process and product(s), and to maintain safe and environmental compliant workplace		2.5	1	1.5

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	PC5. Develop objectives and set demanding but achievable targets for operation function managers, and assign clear responsibilities with expected targets/performance		3	1	2
	PC6. Provide direction and professional expertise to all function managers to achieve organisation goal		2.5	1	1.5
	PC7. Monitor and control the operational plan to achieve its overall objectives		2.5	0.5	2
	PC8. Evaluate the implemented operational plan periodically, analyze performance data, identify areas for improvement and recommend changes		2.5	1	1.5
	PC9. Monitor performance of managers and employees to ensure that departmental and individual objectives are achieved within scheduled timelines and budget		3	1	2
	PC10. Design new work processes, procedures, systems, structures and roles for any changes implemented in the organisation to achieve organizational goal and regulatory requirements		2.5	1	1.5
	PC11. Review and ensure implemented changes are effective and meets the requirements of the organisation		2.5	1	1.5
	PC12. Maintain professionalism, tact, diplomacy, sensitivity, diversity and equality, and lead food processing unit to achieve organisation objectives and goals		2.5	1	1.5
	PC13. Ensure that work arrangements, resources and business processes respond to different needs, abilities and values		2.5	0.5	2
	PC14. Develop and implement new business strategies for improving processes and procedures to improve performance		2.5	1	1.5
	PC15. Develop a leadership style and apply them appropriately for managers to follow the lead willingly to achieve organisation targets and goals		2.5	1	1.5
	PC16. Communicate clearly the organisation vision, values and goals to employees, make managers understand and commit their expertise to achieve organisation goals		2.5	0.5	2

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	PC17. Lead managers of all operation functions, link operational plans and drive managers towards achieving organisation vision, objectives and goals		3	1	2
	PC18. Lead managers through difficulties, challenges and conflicts		2.5	1	1.5
	PC19. Conduct meetings with managers regularly and effectively, encourage them to share their views, provide guidance and support to overcome process issues and lead to achieve organisation goal		2.5	0.5	2
	PC20. Encourage managers to take lead in their own areas of expertise, take own decisions in their area of function, and provide recognitions when they are successful		2.5	1	1.5
	PC21. Lead the managers and organisation successfully through difficulties and challenges		3	1	2
	PC22. Design processes with achievable targets and realistic timeline, proper resource allocation, with defined process responsibilities to manage food processing operation based on organizational goals		2.5	1	1.5
	PC23. Develop processes that are effective and sustainable, implement and ensure it is followed, review its effectiveness and make necessary changes if required		2.5	1	1.5
	PC24. Develop process measures that are affordable, and provide enough information and required training for managers and employees to manage the process		2.5	0.5	2
	PC25. Review and understand resource requirements for process and allocate necessary resources to all functional areas		2.5	1	1.5
	PC26. Develop systems to link all function processes, and encourage function heads and employees to interact across the organisation to form a complete system		2.5	0.5	2
	PC27. Establish effective methods to review the quality of work and product, and improve the process		2.5	0.5	2

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	PC28. Focus attention on issues that are critical to achieve results, provide solutions and guidance to overcome the issues that affect the process		2.5	1	1.5
	PC29. Identify issues and trends and recognize their impact upon current and future work, work out solutions and implementation plan to overcome and utilize latest trends to achieve long term goals of the organisation		3	1	2
	PC30. Develop policies and procedures for any change in organisation goal, organisation structure		2.5	1	1.5
	PC31. Set responsibilities for managers, set and prioritize objectives for change, clearly communicate change and make the managers understand their responsibilities and commitment		2.5	1	1.5
	PC32. Implement change, identify and deal with obstacles to change, and support managers and employees through the change process		2.5	1	1.5
	PC33. Brief managers on their responsibilities and make them understand their role, objectives for their area and the overall organisation, and expected performance		2	1	1
	PC34. Monitor progress and performance quality of the managers on regular basis against the level of expected performance and provide prompt and constructive feedback		3	1	2
	PC35. Support managers in identifying and dealing with problems and unforeseen events		2.5	1	1.5
	PC36. Identify gaps and performance issues, discuss the causes and recommend solutions to improve performance of managers and their team		3	1	2
	PC37. Monitor performance, analyze employee strength and weakness, and make changes in their tasks/responsibilities		2.5	1	1.5
	PC38. Review performance and update work plans in their area, monitor and conduct review meetings on regular basis, recognize successful completion of work or work activities by function manager(s) and their teams		2.5	1	1.5

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	PC39. Motivate managers to complete expected target and any additional work allocated and provide additional support and resources to complete work		2	1	1
			<b>100</b>	<b>35</b>	<b>65</b>
<b>2. FIC/N9018: Ensure proper production and proper management</b>	PC1. Update self with an understanding of the goals of the organisation and forecast/requirements of the sales & marketing manager, with the knowledge on production method and process, plant capacity, resource availability, plan products and quantity to be produced	<b>100</b>	2	1	1
	PC2. Monitor and regulate supply chain management which include sourcing and procurement, conversion of raw materials to finished products, all logistics activities, coordination and collaboration with suppliers, intermediaries, third-party service providers, and customers, to integrates supply and demand management within and across companies		3	0.5	2.5
	PC3. Monitor and regulate inventory process to meet the production requirement of the organisation, review current procurement procedures, analyze benefits and risks that may impact the procurement of supplies, implement plans and methods to improve, provide solutions to resolve any immediate problems		3	1	2
	PC4. Evaluate current storage methods, identifying ways of improving the storage of supplies to provide better fit with supply chain strategy		3	1	2
	PC5. During production process, coordinate production activities with procurement, maintenance, and quality control function to obtain optimum production and efficient utilization of human resources, machines and equipment		1.5	0.5	1
	PC6. Make adjustments/revise/reschedule production schedules and priorities in case of breakdown down of equipment/issues with physical or human resource/ urgent		1.5	0.5	1

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	orders/unforeseen issues or any operational problems				
	PC7. Direct production activities and establish production priorities to produce quantity and quality products within the operation budget		3	1	2
	PC8. Review and analyze human resource, production, quality control, maintenance, and operational reports to identify reason for non-conformance/ noncompliance to organisation and regulatory standards for product and process, develop and implement operating methods and procedures to eliminate problems and improve product and process quality		3	1	2
	PC9. Monitor storage and distribution of products to and from the plant/processing unit warehouse, ensure storage and distribution norms and procedures like palletizing, stacking height, labeling, FEFO etc are followed		3	0.5	2.5
	PC10. Establish systems to collect and assess information on performance of all functions, analyze data and evaluate performance of departments and organisation, through knowledge and understanding identify reasons for problems and low performance		1.5	1	0.5
	PC11. Establish and implement methods and procedures for improvement, ensure implemented methods deliver expected result, and identify opportunities to improve organization performance		1.5	1	0.5
	PC12. Read financial responsibilities, compile available financial information, evaluate the cost, benefits and risks of the current budget, and estimate financial requirements for operation of food processing unit		3	1.5	1.5
	PC13. Consult with department managers the objectives and associated plans, discuss and identify priorities and develop a realistic master budget for food processing operation, communicate the final proposed budget with all managers		3	1	2

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	PC14. Submit the proposed master budget with clear proposals to the management for approval, assist them to evaluate the budget, negotiate with clarity and strong reasoning and get the budget approved		2.5	1	1.5
	PC15. Evaluate, analyze and allocate budget to departments of food processing operation, allocate budget to each department managers with expectations and targets, provide required ongoing support and resources		3	1	2
	PC16. Establish systems to monitor and evaluate performance against delegated budgets and the master budget and put contingency plans in place		2.5	1	1.5
	PC17. Identify reason for significant variances between budget and actual expenditure, discuss with managers, provide solutions and ensure immediate corrective action is taken		2.5	1	1.5
	PC18. In case of unforeseen situation/emergency/shortage, identify any additional financial needs, prepare provisional budget, negotiate and get it approved by the management, delegate provisional budget to respective managers, monitor and control expenditure		3	1	2
	PC19. Encourage managers to identify ways of reducing expenditure, analyze and pursue potential ideas, implement those in all areas of function		2.5	1	1.5
	PC20. Review the financial performance of managers regularly, and identify improvement opportunities and ensure it is implemented, provide information to the management on the financial performance of the operation management		2.5	1	1.5
	PC21. Determine human resource requirement including contingencies to achieve organisation goal, organize interview, hiring and training of new employees through human resources manager		3	1	2
	PC22. Ensure that all employees receives appropriate training on job duties,		2.5	1	1.5

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	corporate policies and applicable regulations				
	PC23 Oversee and direct the activities of subordinate managers, provide coaching and mentoring, and conduct evaluations of all		2.5	1	1.5
	PC24 Discuss with managers of operation function and identify resource requirement for their area, analyze, estimate and approve resources, monitor effective use of those resources		3	1	2
	PC25 Ensure compliance of all employees with organization policy, procedures and applicable regulations		2.5	1	1.5
	PC26 Conduct meetings to address grievances, to resolve or effect settlements within the scope of authority, and refer unresolved grievances for management-union negotiations		2.5	0.5	2
	PC27 Take personnel actions, such as promotions, transfers, discharges or disciplinary measures, within the scope of authority		3	1	2
	PC28 Update self with knowledge of quality management system, legal and regulatory requirements, environmental issues related to the organisation, process and products produced		2.5	0.5	2
	PC29 Ensure system, plan and resources are in place to assure food products produced in the organisation meet the organisation standards, national and international regulations		3	1	2
	PC30 Implement procedure, standards and specifications to meet quality goals of the organisation, coordinate departments and provide support to implement food safety system like HACCP in the organisation		3	1	2
	PC31 Evaluate records on quality of product and process to assess the effectiveness of quality system followed in the organisation, review and revise the quality system through quality assurance manager and implement changes		2.5	1	1.5
	PC32 Organize training for employees to update on latest		2.5	0.5	2

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	developments/systems/ tools and techniques in quality management system and evaluate their competency to fulfill organisation goals				
	PC33 Encourage employees of all functions to take personal responsibility for achieving quality standards of product and process and to address or report/address any non-conformance		2.5	1	1.5
	PC34 Monitor process and product quality against target and plan, identify and assess risks of shortfalls in the quality of processes and products/services and take immediate corrective action to address risks		3	1	2
	PC35 Direct and coordinate implementation of quality system like ISO, HACCP etc in the organisation through quality manager		3	1	2
	PC36 Ensure managers responsible for organizational processes understand the requirements of quality system, establish their roles in implementation of quality system in their functional areas, enhance their confidence and commitment to quality by providing continuous support		3	1	2
	PC37 Encourage and support department heads and employees for quality audit process to obtaining accreditation, certifications to a standard or a mark of quality, monitor quality audit process, review results and take immediate corrective action through concerned managers		2.5	1	1.5
	PC38 Identify the environmental impact related to the resources, process and products produced in the organisation like air/water/noise pollution, effluent treatment, waste disposal etc, identify risks to the environment, consult with experts and identify opportunities to improve environmental performance		1.5	0.5	1
	PC39 Set and implement policies and procedures through managers, monitor to ensure its efficiency and effectiveness and make changes as required to meet the regulatory requirements		1.5	0.5	1
			<b>100</b>	<b>35</b>	<b>65</b>

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation

<b>3. FIC/N9019: Manage new projects and implement health and safety system in food processing unit</b>	PC1. Implement new project/business plans of the organisation for introducing new products or for improving processes, procedures and performance	<b>100</b>	3	1	2
	PC2. Map or perform comparative study of the project with the current project/product to understand the ways proposed project fits with the overall vision, objectives and plans of the organisation		4	1	3
	PC3. Read the key objectives and scope of the proposed project, prepare resource requirement for implementation of new project, negotiate with clarity and strong reasoning and get approved from superiors/management		5	2	3
	PC4. Consult with experts and managers and prepare realistic and thorough plan to implement the project successfully, prepare project report considering all possibilities		4	1.5	2.5
	PC5. Submit the project report to the superiors/management, discuss plan, consider suggestions and recommendations and make necessary changes where necessary, take approval of final plan		4	1.5	2.5
	PC6. Brief project team managers on the project plan and their roles and responsibilities, start implementation of project and provide ongoing support, encouragement and information for successful completion		5	2	3
	PC7. Monitor, control and review project plan during each stage of implementation		4	1.5	2.5
	PC8. Provide sufficient resources to deal with contingencies and to manage any potential risks		4	1.5	2.5
	PC9. Inform the management/superiors of the developments in the project on regular basis, discuss progress and problems, take approval for any changes in project plan		4	1.5	2.5
	PC10. Complete project within agreed level of resources meeting all legal and regulatory requirements, share the success with the project team		4	1.5	2.5

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation	
				Theory	Skills Practical
	members, recognize and reward their contribution				
	PC11. Read national and international food safety regulations and standards related to the food processing units, process and products produced in the organisation		3	1.5	2.5
	PC12. Ensure effective policies and procedures are in place in the organization to meet to legal and regulatory requirements		5	2	3
	PC13. Ensure regulatory standards set by the organisation for products are stringent than the national and international legal requirements		4	1.5	2.5
	PC14. Ensure managers of all functional area have a clear understanding of the policies and procedures on food regulatory standards		4	1.5	2.5
	PC15. Organize training for all employees on policies and procedures on food regulatory standards and the importance of following regulations		4	1	3
	PC16. Monitor and ensure relevant legal and regulatory requirements pertaining to food processing units and products produced in the organisation are followed and met		5	2	3
	PC17. Identify reasons for noncompliance, review and revise the policies and procedures in consultation with quality and regulatory affairs manager to correct and overcome failures, provide support to all managers to implement corrective actions for the organisation and products to comply with regulatory standards		5	2	3
	PC18. Read the health and safety requirements, and food safety, hygiene and sanitation requirements for the organization and products produced		3	1	2
	PC19. Ensure that the organisation has written policy and procedures on health and safety, food safety, hygiene and sanitation, and those are clearly communicated to all employees of the organisation, and are put into practice and being followed		4	1	3

Assessable Outcome	Assessment Criteria	Total Mark (600)	Out Of	Marks Allocation

# General Education Component

## Semester-I:

<b>Subject Name: Business English</b>	
Course Code:	
No. of Teaching Hours – 45	Credits: 2:0:1 L-T-P

<b>Theory</b>		
<b>Unit .No</b>	<b>Title</b>	<b>Hrs</b>
1	Understanding company structures, Developing Relationships in the workplace, Correspondence-Emailing, Written reports and telephoning	15
2	Public speaking and presentations, Meetings: Chairing, setting the agenda, controlling the conversation, Participating, turn taking, listening and taking notes, Being diplomatic, agreeing and disagreeing. Negotiations: Key negotiating language, framing your argument, Negotiating with suppliers, Negotiating with customers	10
3	Reports: Skim reading reports and news feeds, How to report information and ideas, Writing reports – style, register, conventions	5
	<b>Total</b>	<b>30</b>

<b>Practical</b>		
<b>Sl.No</b>	<b>Title</b>	<b>Hrs</b>
1	Understanding company structures	2
2	Developing Relationships in the workplace	3
3	Correspondence-Emailing, Written reports and telephoning	3
4	Public speaking and presentations	3
5	Meetings and negotiations	2
		2
	<b>Total</b>	<b>15</b>

<b>SubjectName:DATAANALYSIS</b>	
CourseCode:	
No.ofTeachingHours–45	Credits:3:0:0L-T-P

<b>Unit.No</b>	<b>Title</b>	<b>Hrs</b>
1	DATAANALYSIS:Regressionmodeling,Multivariateanalysis, Bayesian modeling, inference and Bayesian networks, Support vectorandkernelmethods,Analysisoftimeseries:linearsystems analysis,nonlineardynamics–Ruleinduction–Neuralnetworks: learning and generalization, competitive learning, principal component analysis and neural networks; Fuzzy logic: extracting fuzzy models from data, fuzzy decision trees, Stochastic search methods.	15
2	MINING DATA STREAMS : Introduction to Streams Concepts – Stream data model and architecture – Stream Computing, Sampling datainastream–Filteringstreams–Countingdistinctelementsina stream – Estimating moments – Counting oneness in a window – Decaying window – Realtime Analytics Platform(RTAP) applications – case studies – real time sentiment analysis, stock marketpredictions.	10
3	FREQUENTITEMSETSANDCLUSTERING:MiningFrequent item sets – Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Countingfrequentitemsetsinastream–ClusteringTechniques– Hierarchical – K- Means – Clustering high dimensional data – CLIQUE and PROCLUS – Frequent pattern-based clustering methods–Clusteringinnon-euclidean space–Clusteringfor streams and Parallelism.	10
4	FRAMEWORKSANDVISUALIZATION:MapReduce–Hadoop, Hive, MapR – Sharding – NoSQL Databases – S3 – Hadoop Distributedfilesystems–Visualizations–Visualdataanalysis techniques, interaction techniques; Systems and applications:	10
	<b>Total</b>	<b>45</b>

**Semester-II:**

<b>SubjectName:Presentationandtimemanagement Skill</b>	
CourseCode:	
No.ofTeachingHours–45	Credits:2:0:1L-T-P

<b>Theory</b>		
<b>Unit .No</b>	<b>Title</b>	<b>Hrs</b>
1	Understandbasicpatternsofaneffectivepresentation,Createand deliver an effective presentation, Asking questions, Answering questions, Evaluate presentation, Case study; Entrepreneurship development	10
2	Valuesandbeliefsoftimemanagement,Goalsandbenchmarks- The ladders of success, Managing projects and commitments, Prioritizing your to do's	10
3	Designing the projects that matter, Inspired action; Getting the resultsyouneed,Trackingprojects,Managingforaccomplishment, Tools for time management	10
<b>Total</b>		<b>30</b>

<b>Practical</b>		
<b>Sl.No</b>	<b>Title</b>	<b>Hrs</b>
1	Understandbasicpatternsofaneffectivepresentation	1
2	Createanddeliveraneffectivepresentation	1
3	Askingquestions	1
4	Answeringquestions	2
5	Evaluatepresentation	2
6	Casestudy;Entrepreneurshipdevelopment	2
<b>Total</b>		<b>15</b>

SubjectName: <b>Concepts of Data Mining</b>	
CourseCode:	
No. of Teaching Hours – 45	Credits: 2:0:1L-T-P

<b>Theory</b>		
<b>Unit .No</b>	<b>Title</b>	<b>Hrs</b>
1	Data Mining Introduction : Introduction to Data Mining, Need of Mine Data, Evolution of Data Mining, Data Mining Tasks, Classification, Clustering, Association Mining, Challenges of Data Mining	
2	Preprocessing: Data, Attribute Values, Measurement of Length, Types and Properties of Attributes & data , Data Preprocessing Data Exploration: Data Exploration Techniques, Summary Statistics, Frequency and Mode, Percentiles, Mean and Median, Visualization, Histograms, Box Plots	10
3	Classification: OLAP, OLAP Operations, Data Mining Classification, Decision Trees, Naive Bayes Data Mining Association: Data Mining Association Analysis, Association Rule Mining, Frequent Itemset Generation, FP-growth Tree Algorithm, Cluster Analysis.	15
		30

<b>Practical</b>		
<b>Sl.No</b>	<b>Title</b>	<b>Hrs</b>
1	Data Mining Tools: WEKA (Waikato Environment for Knowledge Analysis): is a well-known suite of machine learning software that supports several typical data mining tasks, particularly data pre-processing, clustering, classification, regression, visualization, and feature selection.	7
2	Rapid Miner: Formerly called YALE (Yet another Learning Environment), is an environment for machine learning and data mining experiments that is utilized for both research and real-world data mining tasks.	8
	<b>Total</b>	<b>15</b>

## **Programme Outcomes**

### **On graduating from this programme student is able to**

- PO1: Learn to write logically relating the real-life scenario with the issues depicted in literary texts.
- PO2: Demonstrate critical reading, writing, and thinking skills in writing analytical essays.
- PO3: Recognise and understand figurative language in literary works of various literatures.
- PO4: Equip the students to understand theoretical developments in literary studies.
- PO5: Acquire skills of criticism in reading literary works of different periods of various genres.
- PO6: Write focused, organised, well-developed text-based essays.

## **Programme Specific Outcomes**

### **On completion, the graduate of this programme is able to**

- PSO1: Acquire the competence to work as English Language teacher at Primary, Secondary, Higher secondary and Pre-University level.
- PSO2: Gain basic knowledge needed to enroll for M Phil or PhD programmes.
- PSO3: Demonstrate good communication skills.
- PSO4: Draft literary essays demonstrating the skills of critical thinking and creative writing.
- PSO5: Participate in discussions and debates demonstrating good communication skills.
- PSO6: Learn the skills to work as English language trainer.

## Course I – (HC-I) ENGLISH LITERATURE FROM CHAUCER TO MILTON

Course Code: ENA 010

Credits: 4

Teaching Hours: 60 (4 Hours/Week)

### Course Outcomes

#### At the end of the Course, student able to

- CO1: Recognize and understand figurative language, such as allegory and metaphor, and literary techniques, such as irony, rhyme, and allusion.
- CO2: Identify the unique qualities of the authors studied, and compare and contrast them.
- CO3: Develop a well-written argument about one or more literary texts or authors, and accurately cite literary and other sources.
- CO4: Develop ability to read, summarize and critically analyse poems and sonnets of various themes.

### UNIT – I

- 1. Background – 14<sup>th</sup> Century – 1658
- 2. Renaissance, Reformation, Puritan Upsurge
- 3. Jacobean, Metaphysical School

### UNIT – II

- 1. Chaucer -- Prologue to the Canterbury Tales
- 2. John Milton – Paradise Lost: Book-I
- 3. Book of Job

### UNIT – III

- 1. Sidney: Sonnets I, V &VI (Astrophel and Stella)
- 2. Spenser: Prothalamion, Epithalamion
- 3. Surrey: 1. Love that liveth and reigneth in my thought  
2. Set me whereas the sun doth parch the green
- 4. Wyatt: 1. Who so list to hunt 2. They flee from me

### UNIT – IV

- 1. John Donne – The Goodmorrow, Song: Go and Catch a Falling Star, Death be Not Proud, At the Round Earth's Imagined Corner, Sunne Rising, Resurrection
- 2. George Herbert – The Pulley, The Collar, Virtue, Discipline
- 3. Andrew Marvell – To His Coy Mistress, Thoughts in a Garden
- 4. Robert Herrick- To the Virgins, To Find God.

### Books for Reference and Further Reading:

- 1. David Daiches – *A Critical History of English Literature*- Four volumes.
- 2. Boris Ford (Ed) - *Pelican Guide to English Literature*- Eight volumes.
- 3. Herbert Grierson - *Metaphysical Poets*.
- 4. Abrams M H et al. *The Norton Anthology of English Literature*. New York: Norton, 2006.
- 5. Al Poplaski: *English Literature in Context*.

## Course II – (HARD CORE-II) ELIZABETHAN AGE

Course Code: ENA-020

Credits: 4

Teaching Hours: 60 (4 Hours/Week)

### Course Outcomes

#### At the end of the Course, student able to

- CO1: Understand the origin and growth of English Theatres and Renaissance plays.  
CO2: Demonstrate knowledge of Elizabethan culture, society and politics.  
CO3: Analyse Shakespearean Tragedies and Comedies in terms of language, character and Themes.  
CO4: Develop ability to read, summarize and critically analyse Shakespearean sonnets on various themes.

### UNIT – I

Background – Elizabethan Age

10. Direct and Indirect Speech
11. Punctuation

### **UNIT II**

**Oral communication** is the ability to explain and present one's ideas in clear English, to diverse audiences; speaking effectively, Effective **Listening** and **Reading skills** to be taught.

Short and long conversation involving two or more people: Greeting, introducing, making an enquiry, casual/formal telephone conversation, Conversation at the bank, at the department store, at the post office, at the doctor's, at the travel agent, at the railway station/bus stop etc.

Informal conversation between friends.

**Reading Skills** with a focus on Idioms, Phrases, Antonyms, Homophones, Homonyms and Figures of Speech

### **Unit-III**

**Written communication:** The ability to write effectively in a range of contexts and for different audiences and purposes, with a good command of the English language is taught.

#### 1. Letter Writing:

Personal letters

Leave note

Application for a job

Letter to the editor

- Letters of complaints  
Placing orders  
2. Precise Writing  
3. Short Essay writing

#### **Unit - IV**

#### **Writing skills to be taught through:**

- A. Guided Composition  
B. Expansion of an Idea/ Proverb  
C. Comprehension

Comprehension of Poetry/ Prose/ Short Story/ Essay of selected texts

- Comprehension of Poetry:** 1. Robert Frost: **Stopping by Woods on a Snowy Evening**  
2. Wole Soyinka: **Telephone Conversation**

**Comprehension of Prose:** Radhakrishnan: **Humanities V/S Science**

**Comprehension of Short Story:** Maxim Gorky: **One Autumn Night**

#### **Books for Reference and Further Reading:**

1. Sidney Green Baum, The Oxford English Grammar, Oxford University Press,
2. Cowie, A.P. & R. Macklin, Oxford Dictionary of Phrasal verbs, Oxford University Press,
3. Cowie, A.P. & R. Macklin & I.R. Mc Caig, Oxford Dictionary of Phrasal English Idioms, Oxford University Press,
4. Stuart Redman, English Vocabulary in Use pre-intermediate and intermediate; low price editions, Oxford University Press,
5. Rosemary T., Fruehling & Joan M. Lacombe, Communication for Results, A.I.T.B.S. Publishers and Distributors,
6. How to write and speak better, Reader's Digest
7. Modern Grammar with Practical Exercises, Vikas Publishing House Pvt. Ltd.

## IV SEMESTER

### Course I – (HARD CORE-I) LITERARY CRITICISM-II

Course Code: END 010

Credits: 4

Teaching Hours: 60 (4 Hours/Week)

#### Course Outcomes

At the end of the Course, student able to

CO1: Learn the meaning, elements and characteristics of contemporary literary criticism.

CO2: Writes the essays using the skills of literary critical analysis.

CO3: Learn to write analytical essays on the literary texts of the prescribed critics.

CO4: Articulate and discuss the latest developments in the specific field of practice of literary theories.

#### Unit I

Russian Formalism, Psychoanalysis, Structuralism, Deconstruction, Post colonialism, Phenomenology and certain other forms of Hermeneutics. The Archetypes of Literature“ Marx, Nietzsche, Freud, Gramsci

#### Unit II:

1. T.S. Eliot: Tradition and Individual Talent
2. F.R. Leavis: Literature and Society, Tragedy and the Medium (From The Common Pursuit)
3. Carl Jung: “Psychology and Literature”

#### Unit III:

1. Northrop Frye: Architypes of Literature
2. G. Genette: “Structuralism and Literary Criticism
3. J. Derrida: “Structure, Sign and Play in the Discourse of Human Sciences”

#### Unit IV:

1. Elaine Showalter: Towards a Feminist Poetics
2. Helene Cixous: The Laugh of the Medusa
3. Sara Suleri: Woman Skin Deep: Feminism and Postcolonial Condition

#### Books for Reference and Further Reading:

Eagleton, Terry: *Theory – An Introduction*

Selden, Raman: *A Reader’s Guide to Contemporary Literary Theory* Belsey, Catherine.

*Critical Practice:* Culler, Jonathan.

*Structuralist Poetics: Structuralism, Linguistics and the Study of Literature* Newton,

K.M. *Twentieth Century Literary Theory: A Reader*

**Course II – (HARD CORE-II) AMERICAN LITERATURE**

**Course Code: END 020**

**Credits: 4**

**Teaching Hours: 60 (4 Hours/Week)**

**Course Outcomes**

**At the end of the Course, student able to**

CO1: Understand the significance of Renaissance, Transcendentalism and journey metaphor in American literature.

CO2: Appreciate and analyse the poems of Emily Dickinson, Wallace Stevens, Walt Whitman and Robert Frost.

CO3: Understand and write critically about the themes, narrative techniques, character analysis in the novels of Mark Twain, Douglas, Toni Morrison and Ray Bradbury.

CO4: Acquire the ability to understand and explore the human condition in the plays of Arthur Miller, Eugene O'Neill and Edward Albee.

**UNIT –I**

American Renaissance, Journey as Metaphor, Westward Movement, Transcendentalism

**UNIT – II**

Emerson: American Scholar

Thoreau: Walden (Chapters on Economy & Where I Lived and What I Lived For)

Emily Dickinson: Because I Could Not Stop for Death, The Soul Selects her Own Society  
I Heard a Fly Buzz

Wallace Stevens: Emperor of Ice-Cream, Anecdote of The Jar

Walt Whitman: When Lilacs Last in the Dooryard Bloomed, A Noiseless Patient Spider,

Robert Frost: Mending Wall, The Road Not Taken, Birches

**UNIT III**

Mark Twain: Huckleberry Finn

Fredrick Douglas: Narrative of the Life of an American Slave

Toni Morrison: The Bluest Eye

Ray Bradbury: Fahrenheit 451

**UNIT – IV**

Arthur Miller: Death of a Salesman

Eugene O'Neill: The Hairy Ape

Edward Albee: The Zoo Story

**Books for Reference and Further Reading:**

Norton Anthology of American Literature

Richard J Gray. *A History of American Literature*

The Cambridge History of American Literature. Vol. 1 to 4

**Any one of the soft cores to be chosen for earning 4 credits**

**COURSE - III: SOFTCORE Elective I: INDIAN DIASPORA FICTION**

**Course Code: END 240**

**Credits: 4**

**Course Outcomes:**

**At the end of the Course, student able to**  
**Course Outcomes**

CO1: Learn the background of Diaspora Literature & major themes of Diaspora Literature

CO2: Compare and Contrast authors' treatment of themes, characters, subject matter etc.

CO3: Identify and analyse literary elements like plot, setting, tone, point of view, style, image, symbols, etc.

CO4: Trace the role of partition, corruption, fantasy, migration, etc. and psychological aspects behind human behaviour in the novels prescribed.

**Unit I:**

1. Salman Rushdie: *Midnight Children*
2. Tanuja Desai Hidier: *Born Confused*

**Unit II:**

1. Jhumpa Lahiri: *The Namesake*
2. Chitra Banerjee Divakaruni: *The Mistress of Spices*

**Unit III:**

1. Kiran Desai: *Inheritance of Loss*
2. Rohinton Mistry: *A Fine Balance*

**Unit IV:**

1. Aravind Adiga: *White Tiger*
2. Hari Kunzru: *Gods without Men*

**\*Note: Two lectures to introduce India Diaspora**

**Books for Reference and Further Reading:**

1. Avtar Brah. *Cartographies of Diaspora: Contesting Identities*. London: Routledge, 1996.
2. Homi K. Bhabha. *The Location of Culture*, 1994.
3. Edward W. Said. *Orientalism*. New Delhi: Penguin, 2001.

**COURSE - III (SOFTCORE Elective-II) AFRICAN FICTION**

**Course Code: END-230**

**Credits: 4**

**Teaching Hours: 60 (4 Hours/Week)**

**Course Outcomes**

**At the end of the Course, student able to**

CO1: Learn the social, political and cultural milieu of the African society represented in fiction.

CO2: Understand and write critical essays on contemporary African novels such as *Anthills of the Savannah*, *Purple Hibiscus*, *The Bride Price* and *Changes: A Love Story*.

CO3: Articulate and discuss the latest developments in the specific fields of postcolonial African writings to bring gender justice in the society.

CO4: Write critically on the role of the characters in the novels of Achebe, Adichie, Emecheta and Aidoo.

**Unit I:** Chinua Achebe: *Anthills of the Savannah*

**Unit II:** Chimamanda Adichie Ngozi: *Purple Hibiscus*

**Unit III:** Buchi Emecheta: *The Bride Price*

**Unit IV:** Ama Ata Aidoo: *Changes: A Love Story*

**Suggested Reading:**

1. Butler, Judith. *Gender Trouble: Feminism and the Subversion of Identity*. New York: Routledge, 1990.
2. Ogundipe-Leslie, Omolara. *Re-Creating Ourselves African Women and Critical Transformations*. Trenton, NJ: Africa World P, 1994.
3. Palmer, Eustace (ed.). *An Introduction to the African Novel. A Critical Study of Twelve Books*. London: Heinemann, 1979.
4. Ashcroft, Bill. *Post-Colonial Transformation*. London and New York: Routledge, 2001.
5. Ashcroft, Bill, Gareth Griffiths, and Helen Tiffin. Eds. *The Post-Colonial Studies Reader*. London and New York: Routledge, 2002.

**Course – IV – (HARDCORE - III) Major Project Work Leading to a Dissertation**

**Course Code: END 030**

**Credits: 4**

**Teaching Hours: 60 (4 Hours/Week)**

**Course Outcomes**

**At the end of the Course, student able to**

CO1: Learn to investigate the area of topic chosen for project work in detail.

CO2: Learn research skills and demonstrate scholarly expertise in exploring the subject to prepare the dissertation for the project work.

CO3: Learn the skills of research analysis in writing thesis.

CO4: Able to think logically and relate the issues and findings to real life scenario.

Students will be encouraged to undertake a major project work in disciplines related to literature of contemporary interest.

Suggested Areas:

Folklore

Performing Arts

Popular Culture

Gender and Sexuality

Dalit and Subaltern Discourses

Media Studies

World Literatures in English

General Survey of Poetic Works of Classical Writers

General Survey of Poetic Works of Modern Writers

The distribution of marks for The Project Work will be as per the stipulations laid down by the university.

## SOFTCORES OFFERED

1. Cross Cultural Women Writers
2. Caribbean Literature
3. Novels of Childhood
4. Indian Classics in Translation
5. Folklore and Literature-I
6. Folklore and Drama
7. Myth and Drama-I
8. Myth and Drama-II
9. Cultural Theory
10. Canada and the World
11. Feminist Theory-I
12. Australian Poetry
13. Folk Epics of Karnataka
14. Postcolonial Theory
15. Writers from African Diaspora
16. Canadian Science Fiction by Women
17. Theories on Culture: An Introduction
18. Postcolonial Criticism
19. Travel Literature
20. Popular Culture and Censorship
21. Adventure Novels
22. Novels and Metropolis
23. Short Fictions of Russia and USA
24. Contemporary Indian Novels in English
25. Translations
26. Dalit Literature-I
27. Recent Indian Poetry in English
28. Dalit Literature-II
29. Women Writings from the Margins
30. English Essayists
31. Post 1990 Indian Women Narratives
32. Indian Novels in English: 2000 and after
33. Twentieth Century Indian Poets in English
34. Contemporary Indian Regional Poetry in English Translation
35. Realism and Fiction
36. Indian Women Novelists
37. African Fiction in English
38. Jewish American Fiction
39. Introduction to Canadian Literature
40. South Asian Immigrant Literature in Canada
41. Introduction to Australian Literature.
42. Feminist Theory-II
43. Indian Classics in Translation
44. Shakespeare Criticism
45. Literature and Popular Culture
46. Postcolonial African Fiction
47. Arab Women Short Stories
48. Indian Diaspora Fiction

**POSTGRADUATE DEPARTMENT OF ENGLISH**  
**Question Paper Pattern**

**END SEMESTER EXAM (C 3)**

**Course Code      Title of the Course (HC/ SC)**

Max Marks: 70

Time: 3 Hours

**Instruction:** Answer all sections.

SECTION – I

I. Answer the following questions in **one or two** sentences

10X1= 10

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

SECTION-II (from Unit-I)

II. Answer any one of the following.

1x15=15

- 1.
- 2.
- 3.

SECTION-III (from Unit-II)

III. Answer any one of the following.

1x15=15

- 1.
- 2.
- 3.

SECTION-IV (from Unit-III)

IV. Answer any one of the following.

1x15=15

- 1.
- 2.
- 3.

SECTION-V (from Unit-IV)

V. Answer any one of the following.

1x15=15

- 1.
- 2.
- 3.

## Credit Matrix, Course of Study and Scheme of Examination for M.Sc. Degree Programme in Biochemistry

(With effect from 2021-22)

**Programme Code: BIC**

Course Type	Credits to be earned				Total Credits
	I Semester	II Semester	III Semester	IV Semester	
Hard Core Course	12	12	12	16	<b>52</b>
Soft Core Course	08	08	04	–	<b>20</b>
Open Elective Course*	–	–	04	–	<b>04</b>
<b>Semester Total</b>	<b>20</b>	<b>20</b>	<b>20</b>	<b>16</b>	<b>76</b>

\*An Open Elective course offered by PG Dept. of Biochemistry to the students of other Depts.

Course Code	Course Type	Course Title	Credit Pattern (L:T:P)	Credits
<b>Semester – I</b>				
BCA040	HC	Analytical Biochemistry–I	3:1:0	4

Course Code	Course Type	Course Title	Exam Hrs	Max. Marks			
				IA		Exam C3	Total
				C1*	C2*		
<b>Semester - IV</b>							
BCD010	HC	Molecular Biology and Gene Regulation	3	15	15	70	100
BCD070	HC	Genetics and Genetic Engineering	3	15	15	70	100
BCD060	HC	Project Work OR Dissertation***	–	15	15	70	100
<b>Semester Total Marks</b>							<b>300</b>

- C1 & C2 Internal test will be conducted for 20 marks (if MCQs are used as assessment pattern, then there will be 30 MCQs carrying one mark each conducted through LMS of one hour duration and in both the cases the scored marks is reduced to 10 marks and 5 marks for continuous assessment is added, making a total of 15 marks each for C1 and C2.
- Continuous assessment comprise of assignments, group discussions, seminars and tutorials
- \*\* The Project evaluation is as below
  - Component 1 (C1): Periodic Progress Report (15%)
  - Component 2 (C2): Periodic Progress Report (15%)
  - Component 3 (C3): Final Viva-Voce and Evaluation (70%)
  - (The report evaluation is for 40% and the Viva-Voce examination is for 30%)

**Program Outcome(s):**

**PO1:** Provides with the necessary knowledge and skills to undertake a career in research, either in industry or in an academic setting

**PO2:** Provides the breadth and depth of scientific knowledge in Biochemistry and allied areas

**PO3:** Equips to apply for a PhD or to gain employment in biochemistry and allied areas

**PO4:** Provides a substantial element of hands-on research experience, with enhanced experimental skills

**PO5:** Demonstrates detailed knowledge and understanding of the principles and theories of biochemistry

**PO6:** Helps to understand the principle techniques of biomolecular structural characterization, including spectroscopy

**Program Specific Outcome(s):** The Specific Outcome of this programme is to train and provide the candidate with knowledge related to

**PSO1:** Global level research opportunities to pursue PhD programme targeted approach of CSIR-NET examination

**PSO2:** Enormous job opportunities at all level of chemical, pharmaceutical, food products, life oriented material industries

**PSO3:** Specific placements in R&D and quality control or analysis division of nutraceutical, pharmaceutical industries and allied division

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
<b>BCA040</b>	<b>ANALYTICAL BIOCHEMISTRY–I</b>	<b>4</b>

**COURSE OUTCOME(S):**

- CO1 Specify in depth cell fractionation techniques
- CO2 Write down in details with application, if applicable, chromatography and spectroscopy
- CO3 Write down in details with application, if applicable, principle and applications of electrophoresis
- CO4 Understand the classification and characteristics of centrifugation and microscopy

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>08</b>
<b>1.1</b>	<b>Cell Fractionation</b>	
1.1.1	<u>Cell fractionation techniques</u> : Preparation of extracts for biochemical investigations. Physico-chemical properties of solvents, solubility and miscibility, salting-in and salting-out.	
1.1.2	Choice of solvent for solvent extraction, mixed solvents, solid phase extraction. Cell lysis, dialysis, precipitation and ultra filtration.	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Chromatography and Spectroscopy</b>	
2.1.1	Adsorption <u>vs.</u> Partition chromatography. Paper, TLC, Ion exchange, Reverse phase, Gel filtration, Affinity, HPLC, and Gas chromatographic techniques.	
2.1.2	Beer-Lamberts Law, Its verifications and Deviations, Concept of Absorptions, Transmission, Scattering, Phosphorescence, Fluorescence, Luminescence, Diffraction Spectra.	
2.1.3	Principle, instrumentation, working and applications of-UV and Visible Spectroscopy,	
2.1.4	Turbidometry and Nephelometry.	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Electrophoresis</b>	
3.1.1	Theory of electrophoresis, continuous and discontinuous PAGE, SDS-PAGE.	
3.1.2	Other electrophoretic methods-Isoelectric focusing, 2-dimensional gel electrophoresis, Capillary electrophoresis and PFGE.	
3.1.3	Agarose gel electrophoresis of nucleic acids. Isotachopheresis.	
3.1.4	Separation of proteins, lipoproteins, visualizing separated	

	components–staining, fluorescence, PAS staining, zymogram and reverse zymogram,	
--	---	--

<b>Unit IV:</b>		
<b>4.1</b>	<b>Centrifugation and Microscopy</b>	
4.1.1	Analytical and Preparative Ultracentrifuge–Principle, instrumentation and applications.	<b>14</b>
4.1.2	Analysis of subcellular fractions, marker enzymes and determination of relative molecular mass–Svedberg's constant, sedimentation velocity and sedimentation equilibrium.	
4.1.3	Theories of Tissue Fixation and Staining Techniques. Principles of Transmission and Scanning Electron Microscopy.	
4.1.4	Principles of Phase Contrast and Fluorescence Microscopy, Confocal Microscopy

Course Code	Title of the Course	Credits
BCA050	CHEMISTRY AND METABOLISM OF PROTEINS AND NUCLEIC ACIDS	4

### COURSE OUTCOME(S):

- CO1 Identify the details of amino acids and proteins
- CO2 Understand in details with application, if applicable, nitrogen metabolism and degradation
- CO3 Write down the classification and characteristics of synthesis of amino acids and proteins
- CO4 Write down in details with application, if applicable, metabolism of nucleic acids

		No. of Lectures
<b>Unit I:</b>		
<b>1.1</b>	<b>Chemistry of Amino acids and Proteins</b>	
1.1.1	Classification and structure of 20 amino acids, newly discovered amino acids, essential, non-essential, unusual and non-protein	
1.1.2	General properties of aa, acid-base titrations, pKa Peptide bond-stability and formation, chemical synthesis of peptide. Primary structure and determination, GN Ramachandran plots	
1.1.3	Secondary structure and motifs, $\alpha$ helix, $\beta$ sheet, Leucine zipper, Zinc finger	
1.1.4	Tertiary & Quaternary structure (myoglobin, hemoglobin) Protein-protein interactions (actin, tubulin) Small peptides (glutathione, peptide hormones), Cyclic peptides (Gramicidin)	
1.1.5	Classification of proteins-globular, fibrous, membrane, metallo-proteins, Denaturation (pH, temperature, chaotropic agents), refolding, Role of chaperones in folding	<b>10</b>
<b>Unit II:</b>		
<b>2.1</b>	<b>Nitrogen Metabolism and Degradation of Amino Acids</b>	
2.1.1	Nitrogen cycle, Nitrogen fixation – symbiotic and non-symbiotic, Nitrogenase complex. Assimilation of ammonia	
2.1.2	Metabolic fate of dietary proteins and amino acids Degradations to glucose and ketone bodies	
2.1.3	Amino acids degraded to Pyruvate, Oxaloacetate	
2.1.4	Amino acids degraded to Acetyl-CoA, Succinyl-CoA Metabolism of branched chain amino acids, urea cycle, regulation of urea cycle	
2.1.5	Genetic defects in metabolism of amino acids (albinism, Phenylketonuria, maple syrup urine disease, homocystinuria, alkaptonuria, methyl malonic Acidemia)	<b>14</b>

<b>Unit III:</b>		
<b>3.1</b>	<b>Biosynthesis of Amino Acids and Protein Degradation</b>	
3.1.1	Biosynthesis of amino acids and regulation of amino acid metabolism	<b>08</b>
3.1.2	Biosynthesis and degradation of heme	
3.1.3	Biosynthesis of polyamines, creatine, gramicidine and glutathione	
3.1.4	Biosynthesis and degradation of glycoproteins and proteoglycans	
3.1.5	Protein degradation pathway–Ubiquitin–Proteosome pathway, lysosomal pathway	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Chemistry and Metabolism of Nucleic Acids</b>	
4.1.1	Purines, pyrimidines, nucleosides, nucleotides, unusual bases. Structure of DNA – Watson Crick Model, A- and Z- forms.	<b>16</b>
4.1.2	Supercoiling of DNA – negative and positive, linking number	
4.1.3	Structure of RNA, tRNA, rRNA, siRNA / miRNA Denaturation and renaturation, T <sub>m</sub> (factors affecting T <sub>m</sub> ) and Cot curves, Isolation and purification of nucleic acids from biological sources.	
4.1.4	Biosynthesis of purines and pyrimidines, Degradation of purines and pyrimidines, Regulation: de novo, salvation, nucleotide analogs, conversion of nucleotides to deoxynucleotides, mechanism of action of methotrexate, 5-fluorouridine, azathymidine.	
4.1.5	Gout and Lesch–Nyhan syndrome	
4.1.6	Biosynthesis of NAD, FAD and Co–enzyme A

BCA060	EXPERIMENTS IN BIOCHEMICAL TECHNIQUES AND ENZYMOLOGY AND SEMINAR	4

### COURSE OUTCOME(S):

- CO1 Identify the details of spectrophotometer  
CO2 Identify the details of specific activity of enzymes  
CO3 Deliberate the characteristics of gel electrophoresis  
CO4 Deliberate the characteristics of use of pipettes

<b>Group I:</b>	<ol style="list-style-type: none"> <li>1. Determination of Normality, Molarity and Molality of solutions</li> <li>2. Preparation of buffers: Acetate, Phosphate and Tris buffer</li> <li>3. Colorimetry–Beer's law and its applications</li> <li>4. Determination of Molar Extinction Coefficient</li> <li>5. Chromatography–Separation of amino acids by ascending, descending, circular paper chromatography</li> <li>6. TLC of amino acids</li> <li>7. Gel filtration, Ion exchange chromatography</li> </ol>	
<b>Group II:</b>	<ol style="list-style-type: none"> <li>8. Estimation of protein by Lowry's method.</li> <li>9. Estimation of protein by Biuret reagent method.</li> <li>10. Estimation of amino acids by Ninhydrin method</li> <li>11. Isolation of casein from milk and its quantification</li> <li>12. Electrophoresis–Separation of proteins by Native and SDS-PAGE</li> <li>13. Determination of <math>pK_a</math> and <math>pI</math> of amino acid, formal titration.</li> <li>14. Separation of nucleic acids by agarose gel electrophoresis</li> </ol>	
<b>Group III:</b>	<ol style="list-style-type: none"> <li>15. Isolation of microbes from air, soil and water</li> <li>16. Gram's staining</li> <li>17. Determination of growth curve of bacteria</li> <li>18. Antibiotic sensitivity tests</li> <li>19. Determination of specific activity of <ol style="list-style-type: none"> <li>(i) Acid Phosphatase</li> <li>(ii) Alkaline Phosphatase</li> <li>(iii) Salivary Amylase</li> <li>(iv) Protease</li> <li>(v) Invertase</li> <li>(vi) Aminotransferase</li> </ol> </li> </ol>	
<b>Group Study</b>	Extraction, Isolation, Purification and enzyme characterization. Determination of specific activity, optimum pH, temperature, time and energy of activation. Determination of $K_m$ and $V_{max}$ Enzyme inhibition studies

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
BCA230	ENZYMOLGY	4

**COURSE OUTCOME(S):**

- CO1 Write down in details with examples enzyme kinetics
- CO2 Identify in details with examples enzyme catalysed reactions
- CO3 Identify the characteristics of cooperativity reactions
- CO4 Learn the classification and characteristics of multienzyme complex reactions

		No. of Lectures
<b>Unit I:</b>		
<b>1.1</b>	<b>Enzyme Kinetics and Inhibition</b>	
1.1.1	Nature of enzymes, Nomenclature and IUB classification of enzymes, Units of enzyme activity, IU and activity and specific activity. Localization, isolation, purification and characterization of enzymes. Criteria of purity of enzymes. Assay methods–coupled enzyme assays, continuous, end point and kinetic assay.	<b>16</b>
1.1.2	<u>Enzyme Kinetics</u> : Rate of a reaction, order and molecularity. Michaelis Menten equation, initial velocity approach, steady state approach. Vmax, Km and their significance. Linear transformation of Michaelis Menten equation–Lineweaver Burk plot, Eadie Hofstee, Haynes–Wolf and Cornish–Bowden.	
1.1.3	<u>Inhibition</u> : Reversible inhibition–Competitive, Non competitive and Uncompetitive, product inhibition, irreversible inhibition–suicide inhibition. Determination of <i>K<sub>i</sub></i> . Fast reactions–Stopped flow, temperature jump method with examples of enzymes.	
<b>Unit II:</b>		
<b>2.1</b>	<b>Enzyme Catalyzed Reactions</b>	
2.1.1	Bisubstrate enzyme catalysed reactions–Cleland’s notation with examples for ordered, ping pong, and random.	<b>08</b>
2.1.2	General rate equation. Primary and secondary plots. Mechanisms of enzyme catalysis–Active site structure and its investigation.	
2.1.3	Methods of determining active site structure–isolation of ES/EI complex, affinity labeling, chemical modification studies.	

<b>Unit III:</b>		
<b>3.1</b>	<b>Enzyme Catalysis and Cooperativity</b>	
3.1.1	<u>Nature of enzyme catalysis:</u> Transition state theory, proximity and orientation, orbital steering, acid base catalysis, covalent catalysis, metal ion catalysis, nucleophilic and electrophilic catalysis, intramolecular catalyses, entropy effects.	<b>12</b>
3.1.2	Effect of temperature and pH on enzyme catalyzed reactions.	
3.1.3	<u>Oligomeric proteins and Cooperativity:</u> Binding of ligands to macromolecules–Scatchard plot, Positive and Negative cooperativity. Oxygen binding to hemoglobin.	
3.1.4	Hill equation, homotropic and heterotropic effectors. Allosteric enzyme–Aspartyl transcarbamylase.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Multienzyme Complex and Coenzymes</b>	
4.1.1	<u>Mechanisms of action of specific enzyme:</u> Chymotrypsin zymogen activation, acid–base catalysis, charge relay net work. Lysozyme, alcohol dehydrogenase, ribonuclease, Carboxypeptidase–A, RNA as enzyme, coenzymic action of NAD+ FAD, TPP, PLP, biotin, CoA, folic acid and lipoic acid.	<b>12</b>
4.1.2	<u>Multienzyme complexes:</u> Isoenzymes, eg. LDH. Multifunctional enzyme (DNA polymerase) multi enzyme complex (PDC)	
4.1.3	Metabolic regulation of enzyme activity–Feedback regulation.

Course Code	Title of the Course	Credits
BCA250	CHEMICAL PRINCIPLES AND BIOCHEMICAL REACTIONS	4

### COURSE OUTCOME(S):

- CO1 Specify in details with examples chemical principles and bonding  
 CO2 Write down in depth thermodynamics  
 CO3 Learn in details with application, if applicable, stereochemistry  
 CO4 Deliberate in depth secondary metabolites

		No. of Lectures
<b>Unit I:</b>		<b>16</b>
<b>1.1</b>	<b>Chemical Principles and Bonding</b>	
1.1.1	<u>Chemical principles</u> : Acids and bases, Buffers. Buffering capacity. Ionic strength- Molarity, Normality, Mole concept, Avogadro number, structure and special properties of water.	
1.1.2	<u>Bonding</u> : Covalent bond, ionic bond, Coordinate bond. Coordinate bond formation by transition metals in biological complex structures.	
1.1.3	Crystal field theory, ligand field theory, valence bond theory.	
1.1.4	Bonding of iron in hemoglobin and cytochromes, cobalt in Vit B12, and Mg <sup>2+</sup> in chlorophyll. Chelates and complexes.	

<b>Unit II:</b>		<b>08</b>
<b>2.1</b>	<b>Thermodynamics</b>	
2.1.1	<u>Physiological importance of electrolytes</u> : Osmotic pressure, vapour pressure, vapour pressure osmometer, Donnan membrane equilibrium.	
2.1.2	<u>Introduction to thermodynamics</u> : I, II and III law. Enthalpy, entropy and free energy. Free energy and chemical equilibrium	
2.1.3	<u>Electrodes</u> : Hydrogen electrode, oxygen electrode, oxidation and reduction reactions, redox potential.	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Stereochemistry and Heterocyclic Compounds</b>	
3.1.1	Importance of Stereochemistry, position and order of groups around carbon. Geometric and optical isomerism, absolute and relative configuration. Symmetry view of chirality, relation between chirality and optical activity, representation of chiral structures by Fischer.	
3.1.2	Structure and stereochemistry of glucose—anomers, epimers and stereoisomers, D and L, + and – R and S notations.	
3.1.3	Heterocyclic Compounds: Chemistry, biological	

	occurrence of furan, indole, thiazole, pterine, pteridine, isoalloxazine, pyrrole.	
--	--	--

<b>Unit IV:</b>		
<b>4.1</b>	<b>Organic Reactions and Secondary Metabolites</b>	
4.1.1	Mechanism of Organic Reactions: Classification of organic reactions. Reaction intermediates, reaction energetics, rate, order and molecularity of reactions.	<b>12</b>
4.1.2	Mechanisms and stereochemistry of substitution, addition, and elimination. Rearrangements reactions. Mechanisms of ester hydrolysis. Aromaticity and resonance structure. Hydrogenation- homogenous and heterogenous hydrogenation	
4.1.3	Secondary metabolites: Phytochemicals, terpenes, polyphenols, procyanidins, flavonoids, xanthones, alkaloids and pigments.

Course Code	Title of the Course	Credits
BCA250	PLANT BIOCHEMISTRY	4

**COURSE OUTCOME(S):**

- CO1 Specify in details with examples Photosynthetic pathways and its regulations  
CO2 Write down in depth plant growth hormones in the agriculture  
CO3 Learn in details with application, if applicable, Medicinal plants  
CO4 Deliberate in depth secondary metabolites of plants and its significance

		No. of Lectures
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Plant Cell and Photosynthesis</b>	
1.1.1	Plant cell–Structure and functions of subcellular organelles, plant cell wall, Mechanism of water absorption, Ascent of sap. Transpiration - types, stomatal opening, Mechanism and factors affecting transpiration.	
1.1.2	Photosynthesis–Photosynthetic pigments, Photo synthetic apparatus, Light reactions, cyclic and non cyclic Phosphorylation. Calvin cycle, Hatch–Slack cycle, CAM plants.	
1.1.3	Regulation of photosynthesis, Photorespiration. □	

<b>Unit II:</b>		<b>12</b>
<b>2.1</b>	<b>Cycles of elements</b>	
2.1.1	Nitrogen cycle, Biochemistry of symbiotic and non symbiotic nitrogen fixation, Sulphur cycle, Phosphorus cycle.	
2.1.2	Plant nutrition–Biological functions of micro and macro nutrients in plants and their deficiency symptoms.	

<b>Unit III:</b>		<b>16</b>
<b>3.1</b>	<b>Growth Regulators</b>	
3.1.1	Plant growth regulators–chemistry, biosynthesis, mode of action, distribution and physiological effects of Auxins, Gibberellins, Cytokinins, ABA and Ethylene.	
3.1.2	Biochemistry of seed dormancy, Seed germination,	
3.1.3	Fruit ripening and Senescence.	

<b>Unit IV:</b>		<b>08</b>
<b>4.1</b>	<b>Medicinal Importance</b>	
4.1.1	Medicinal value of different parts of plants.	
4.1.2	Basic methods to identify the secondary metabolites. Role of secondary metabolites in Ayurvedha and Siddha treatment.	
4.1.3	Medicinal value of Amla, Stevia, Aswagandha, Turmeric and other Indian medicinal plants. □

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
<b>BCA250</b>	<b>MICROBIAL BIOCHEMISTRY</b>	<b>4</b>

**COURSE OUTCOME(S):**

- CO1 Specify in details with examples staining techniques used for the identification of microbes
- CO2 Write down in depth Molecular biology of prokaryotes
- CO3 Learn in details with application, if applicable, Operon systems in gene regulation of bacteria
- CO4 Deliberate in depth antimicrobial drugs are used for the microbial infections

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Pure Culture, Staining Technique and Growth</b>	
1.1.1	Principles of microbial nutrition: Nutritional requirements, different kinds of media, factors affecting growth.	
1.1.2	Enrichment culture techniques for isolation of chemoautotroph's, chemoheterotroph's and photosynthetic microorganisms. Modes of reproduction,	
1.1.3	Biosynthesis of cell wall components, enumeration, growth curve, generation time, synchronous growth, Chemostat. Adaptation to stationary phase, heat and cold shock, osmolarity and salinity, oxidative stress.	
1.1.4	Gram, Acid fast & flagellar staining. Mechanism of bacterial motility.	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Regulation of Genes in Bacteria</b>	
2.1.1	Nucleic Acids as Carriers of Genetics Information, Arrangement and Organization of Gene in Prokaryotes:	
2.1.2	Operon Concept, Catabolite Repression, Instability of Bacterial RNA, Inducers and Co repressors E. coli Lac Operon: Negative Regulation and Positive Regulation, E. Coli Arabinose Operon: Regulation by Attenuation, His and Trp Operons: Anti-termination,	
2.1.3	Genetic Transfer: Conjugation, Transformation and Transduction.	

<b>Unit III:</b>		
<b>3.1</b>	<b>Virology and Biological Nitrogen Fixation</b>	
3.1.1	Introduction to Virus, Classification, Assay Methods, Properties and Characteristic of Bacterial, Plant and Animal Viruses	<b>16</b>
3.1.2	Virus Host Interaction, Acute Virus Infections, Persistent of Virus Infection, Influenza, Herpes, Hepatitis A and B.	
3.1.3	<u>Nitrogen Metabolism</u> : Mechanism and Regulation of Utilization of Ammonia, Nitrate and other Nitrogen Source	
3.1.4	<u>Nitrogen Fixation</u> : Mechanism and Regulation of Nitrogen Fixation, Symbiotic and Asymbiotic Nitrogen Fixation and Biochemistry of Nitrogenase.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Antimicrobial Agents</b>	
4.1.1	The Development of Antimicrobial Agents, Past, Present and Future, Selection of Antimicrobial Agents	<b>08</b>
4.1.2	Synthetic Organic Antimicrobials, $\beta$ -Lactam Antibiotics, Amino glycoside Antibiotics, Antifungal Drugs, Antiviral Drugs	
4.1.3	Resistance to Antimicrobial Drugs

Course Code	Title of the Course	Credits
BCB040	ANALYTICAL BIOCHEMISTRY-II	4

### COURSE OUTCOME(S):

- CO1 Identify in details with application, if applicable, flow cytometry  
CO2 Specify the characteristics of biosensor technology  
CO3 Understand in details with examples spectroscopy  
CO4 Write down the details of x-ray crystallography

		No. of Lectures
<b>Unit I:</b>		<b>08</b>
<b>1.1</b>	<b>Flow Cytometry and Model Systems</b>	
1.1.1	<u>Flow Cytometry</u> : Principle and design of flow cytometer, cell sorting.	
1.1.2	<u>Animal models</u> : Choice of animals, types of studies, mutant organisms, cultured cells, plant as models and tissue culture models.	

<b>Unit II:</b>		<b>16</b>
<b>2.1</b>	<b>Biosensor Technology and Radioactivity</b>	
2.1.1	Concept and design of biosensors, types and uses of biosensors.	
2.1.2	Principle and applications of biosensors for glucose, triglyceride, uric acid, cholesterol and oxalate.	
2.1.3	Units of radioactivity. Detection and measurement of radioactivity—solid and liquid scintillation counting, scintillation cocktails and sample preparation. Cerenkov counting. Applications of radioisotopes in biology. Radiation hazards.	
2.1.4	Principle and Applications of Autoradiography	

<b>Unit III:</b>		<b>10</b>
<b>3.1</b>	<b>Spectroscopy</b>	
3.1.1	Principle, instrumentation, working and application of—Spectrofluorimetry, Flame Spectrophotometry, Atomic Absorption Spectrometry.	
3.1.2	<u>IR spectroscopy</u> : Physical basis of IR spectroscopy. Instrumentation, use of IR in structure determination, Fourier Transfer—IR spectroscopy.	
3.1.3	<u>NMR</u> : Principle, effect of atomic, identity on NMR, chemical shift, spin coupling NMR, measurement of NMR spectra, biochemical application of NMR.	
3.1.4	<u>ESR</u> : Principle, measurement of ESR spectra, biochemical application of ESR.	
3.1.5	Principle, instrumentation and applications of ORD and CD	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Mass spectroscopy, X-ray Crystallography and Nanoparticles</b>	
4.1.1	Theory and construction of mass spectrometer. Ionization, fragmentation, $m/z$ , time of flight, MALDI and ESI.	<b>14</b>
4.1.2	<u>Other methods</u> : MS/MS, LC/MS, GC/MS, Peptide mapping, post translation modification analysis, determination of disulfide bridges	
4.1.3	X-ray crystallography–Bragg's law, Unit cell, Isomorphous replacement, Fibre pattern of DNA.	
4.1.4	<u>Introduction to Nanoscience</u> : Importance and fundamental science behind nanotechnology.	
4.1.5	<u>Applications of Nanoparticles</u> : Tools to make nanostructures, Nanoscale lithography, E–beam lithography, molecular synthesis, self assembly. Drug and Gene delivery for human health, Biosensors and sensors, cleaning environment (for heavy metal & Bioremediation).

Course Code	Title of the Course	Credits
BCB050	CHEMISTRY AND METABOLISM OF CARBOHYDRATES AND LIPIDS	4

### COURSE OUTCOME(S):

- CO1 Understand the classification and characteristics of chemistry of carbohydrates  
CO2 Deliberate the classification and characteristics of bioenergetics  
CO3 Write down the characteristics of chemistry of lipids  
CO4 Learn in depth metabolism of lipids

		No. of Lectures
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Chemistry of Carbohydrates</b>	
1.1.1	Classification, monosaccharides (aldoses & ketoses) Configuration and conformation of monosaccharides (pyranose & furanose, chair & boat).	
1.1.2	Reducing and optical properties of sugars. Stability of glycosidic bond disaccharides, oligosaccharides.	
1.1.3	Structural polysaccharides—cellulose, hemicellulose, pectin, lignin, chitin, chitosan	
1.1.4	Storage polysaccharides: starch, glycogen, inulin Steric factors in polysaccharides folding, blood group polysaccharides and lectins. Glycosaminoglycans, mucopolysaccharides, hyaluronic acid Chondroitin sulfate, keratan sulfate, dermatan sulfate. Bacterial cell wall polysaccharides, proteoglycans (syndecan and agrecan)	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Metabolism of Carbohydrates and Bioenergetics</b>	
2.1.1	Reactions and energy balance in Glycolysis, Gluconeogenesis, TCA cycle, HMP Shunt pathway, Pasteur and Crabtree effect, Anapleurotic reactions	
2.1.2	Glyoxylate cycle, Glucuronic acid cycle, Glycogen metabolism.	
2.1.3	Photosynthesis reactions for biosynthesis of glucose C3 and C4 cycle in plants	
2.1.4	Mitochondrial ETC—Organization of respiratory chain complexes, P/O ratio, ATP synthesis, Mitchell's hypothesis, uncouplers and inhibitors.	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Chemistry of Lipids</b>	
3.1.1	Classification & biological significance of lipids, fatty acids and Steroids	
3.1.2	Bile acids and salts, Phospholipids, Oils, waxes, isoprene units, Lipoproteins, Glycolipids, Sphingolipids	

3.1.3	Cerebrosides, Gangliosides, Prostaglandins, Prostacyclins, Thromboxanes, Leukotrienes, cysteinyl leukotrienes	
-------	---	--

<b>Unit IV:</b>		
<b>4.1</b>	<b>Metabolism of Lipids</b>	
4.1.1	Fate of dietary lipids and Apo-lipoproteins Fatty acid biosynthesis, Desaturation of fatty acids Beta oxidation, breakdown of odd chain fatty acids, energy yields	<b>12</b>
4.1.2	Regulation of $\beta$ -oxidation, $\omega$ -oxidation & $\alpha$ -oxidation Metabolism of phospholipids & Sphingolipids Regulation and Biosynthesis of cholesterol, action of statins	
4.1.3	Fate of acetyl CoA, formation of ketone bodies and ketosis	
4.1.4	Biosynthesis of prostaglandins, Prostacyclins, Thromboxanes, Leukotrienes, Action of aspirin	
4.1.5	Genetic defects in lipid metabolism, Medium chain acyl coenzyme A dehydrogenase deficiency MCAD, Long-chain 3-hydroxyacyl-CoA dehydrogenase (LCHAD) deficiency, Familial hypercholesterolemia

**COURSE OUTCOME(S):**

- CO1 Identify in details with examples antigens and antibodies
- CO2 Understand the details of cellular basis of immunity
- CO4 Identify the classification and characteristics of MHC Complex
- CO4 Learn in depth basic concepts of microbiology

		No. of Lectures
<b>Unit I:</b>		
<b>1.1</b>	<b>Antigens and Antibodies</b>	
1.1.1	<u>Introduction</u> : Historical development and milestones in immunology. Barriers to infection–skin, mucous membrane, Definitions–Antigenicity, Immunogenicity, primary and secondary lymphoid organs, self and non self discrimination. Innate and acquired immunity.	<b>12</b>
1.1.2	<u>Antigens and Antibodies</u> : Haptens and determinants–Epitopes and paratopes. Antigenicity, carbohydrates, proteins, nucleic acids, and cells as antigens. Valency of antigen.	
1.1.3	Classes and subclasses of immunoglobulins, structure of immunoglobulins, hyper variable region, isotypic, allotypic and idiotypic variations.	
<b>Unit II:</b>		
<b>2.1</b>	<b>Complement and Cellular Basis of Immunity</b>	
2.1.1	<u>Complement</u> : Structure, components, properties and functions of complement pathways, biological consequences of complement activation.	<b>12</b>
2.1.2	Hyper sensitivity reactions (Type I, II, III and IV).	
2.1.3	<u>Cellular basis of immunity</u> : Primary and secondary immune response. Reticuloendothelial system. T, B and accessory cells. Subsets of T (T–helper cells, T–killer cells, T–suppressor cells) and B cells. Development of T and B cells. T and B cell receptors, antigen processing and presentation.	
2.1.4	Cytokines and co–stimulatory molecules–Lymphokines, interleukins structure and function of IL-2, TNF $\alpha$ . T and B interaction. Suppression of immune response, immunoglobulin, diversity of gene rearrangement, factors affecting diversity, class switching and clonal selection theory of Burnet.	

<b>Unit III:</b>		<b>16</b>
<b>3.1</b>	<b>MHC, Transplantation, Tumor Immunology and Vaccines</b>	
3.1.1	<u>MHC</u> : MHC gene and its polymorphism, role of MHC in immune response.	
3.1.2	<u>Transplantation</u> : Autograft, isograft, allograft and xenograft, Graft rejection, graft Vs host reaction, MHC in transplantation.	
3.1.3	<u>Immunochemical techniques</u> : Precipitation, agglutination, complement fixation, immunodiffusion, immunoelectrophoresis, immunofluorescence, RIA, ELISA.	
3.1.4	<u>Tumor immunology</u> : Tumor associated antigens, factors favoring tumor growth, immune surveillance. Tumor necrosis factors $\alpha$ and $\beta$ Disorders of immunity: Immunological tolerance, auto immune disorders, AIDS, SCID, lupus erythematosus <u>Vaccines</u> : Adjuvants; vaccines and their preparations. Polyclonal and monoclonal antibodies–hybridoma technique.	
<b>Unit IV:</b>		<b>08</b>
<b>4.1</b>	<b>Microbiology</b>	
4.1.1	Historical aspects - Discovery of microorganisms. Theory of spontaneous generation. Era of Louis Pasteur. Microbes and fermentation. Microbes and diseases-Koch's Postulates.	
4.1.2	General characteristics: Morphology, nomenclature and classification of bacteria, virus, yeasts and fungi.	
4.1.3	Microbial nutrition-Factors influencing growth, growth curve of bacteria. Measurement of growth, continuous culture, synchronous culture and chemostat. Auxotrophs, autotrophs, heterotrophs. Methods of cultivations and preservation of microorganisms.	
4.1.4	Methods of control of microorganisms-Sterilization Techniques: Definitions of physical methods, heat (dry & moist) filtration, radiation; chemical agents-phenols, alcohols, halogens, heavy metals, aldehydes, quaternary ammonium compounds & gases.

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
<b>BCB260</b>	<b>HUMAN PHYSIOLOGY AND NUTRITION</b>	<b>4</b>

**COURSE OUTCOME(S):**

- CO1 Specify the classification and characteristics of blood and respiratory systems  
CO2 Identify in depth digestive and excretory systems  
CO3 Learn in details with application, if applicable, concepts of nutrition  
CO4 Specify the details of vitamins and minerals

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Blood and Respiratory System</b>	
1.1.1	<u>Blood</u> –Composition, cells. Erythrocytes–structure and function, WBC–types and functions.	
1.1.2	Platelets and their function. Buffer systems; hemostasis–blood volume, blood pressure and its regulation. Blood clotting, Dissolution of clot; anticoagulants. CSF–composition and function.	
1.1.3	<u>Respiratory System</u> –Mechanism of gas exchange, oxygen binding by hemoglobin and factors affecting oxygenation. Acid–base balance and its regulation.	

<b>Unit II:</b>		<b>12</b>
<b>2.1</b>	<b>Hepatobiliary, Digestive and Excretory System</b>	
2.1.1	<u>Hepatobiliary system</u> –Anatomy of the liver, blood supply; cells–hepatocytes, endothelial cells, Kupffer cells and paranchymal cells.	
2.1.2	Secretory and excretory function; detoxification and formation of bile	
2.1.3	<u>Digestive system</u> –GI tract, digestion and absorption of carbohydrates, proteins and lipids. Mechanism of HCl production in the stomach. Gastrointestinal hormones.	
2.1.4	<u>Excretory System</u> –Ultra structure of the nephron, glomerular filtration, tubular reabsorption and tubular secretion, formation of urine.	

<b>Unit III:</b>		<b>16</b>
<b>3.1</b>	<b>Nutrition, Carbohydrates, Proteins and Fats</b>	
3.1.1	<u>Nutrition</u> –Concepts of macro and micro nutrients, essential nutrients and their classification. Food groups, proximate analysis of foods, chemical and biological analysis for nutrients.	
3.1.2	Food as source of energy, methods of determining energy value of foods, calorimetry, physiological fuel values and daily requirement of energy, high and low	

	calorie diets. Basal metabolic rate (BMR), factors affecting BMR, specific dynamic action of foods.	
3.1.3	<u>Carbohydrates</u> –dietary sources, dietary fiber essentiality of carbohydrates.	
3.1.4	<u>Proteins</u> –Evaluation of nutritive value of dietary protein PER, BV, essential amino acids, nutritional classification of proteins, supplementary value of proteins, protein calorie malnutrition–Kwashiorkor and Marasmus.	
3.1.4	<u>Fats</u> –Sources, invisible fat, essential fatty acids, PUFA.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Vitamins and Minerals</b>	
4.1.1	<u>Vitamins</u> –Fat soluble and water soluble vitamins, provitamins, antivitamins, dietary sources, structure, daily requirements and functions.	<b>08</b>
4.1.2	Deficiency symptoms of B complex members and fat soluble vitamins, hypervitaminosis, vitamin like compounds.	
4.1.3	<u>Minerals</u> –Macro and micronutrients, sources, requirements, functions and deficiency symptoms.	
4.1.4	Water metabolism–distribution in body, function and factors affecting water balance.	
4.1.5	Recommended daily allowances, special nutrition for infants, children, during pregnancy, lactation and old age.

Course Code	Title of the Course	Credits
BCB260	RESEARCH METHODOLOGY AND BIostatISTICS	4

**COURSE OUTCOME(S):**

- CO1 Specify the classification and characteristics of research methodologies and the experimental designs
- CO2 Identify in depth statistical analysis
- CO3 Learn in details with application, if applicable, scientific write-up
- CO4 Specify the details of Interpretation of data

		No. of Lectures
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Research Methodology and Design</b>	
1.1.1	<u>Research Methodology</u> : Meaning of research, Objectives of research, Motivation in Research, Types of Research, and Research approaches.	
1.1.2	Research methods vs. Research Methodology, Research process–scientific method, Criteria for good research, Defining the research problem.	
1.1.3	<u>Research Design</u> : Meaning and need for research design, features of good design. Preparation of Scientific report, presentation of a review.	

<b>Unit II:</b>		<b>12</b>
<b>2.1</b>	<b>Scientific Writing</b>	
2.1.1	Mechanical and stylistic aspects of scientific writing–Precision and clarity of language, writing style, writing process, presentation of numerical data and scientific figures.	
2.1.2	Constraints on scientific writing–audience, format and mechanics (grammar, word choice, punctuation, tenses).	
2.1.3	Objectives and design of experiment–experimental unit, identifying variables, replications & controls, power analysis in planning experiments, treatment structure and design structure.	
2.1.4	Graphical analysis of data and presentation of results.	

<b>Unit III:</b>		<b>16</b>
<b>3.1</b>	<b>Statistical Significance Analysis</b>	
3.1.1	Significance and limitations of statistical calculations, Sampling techniques.	
3.1.2	Probability theory, random variables and distribution functions, Point and interval estimation, linear regression. Statistical evaluation of results–Hypothesis testing, interpretation of statistic for analysis of error.	
3.1.3	Measures of central tendency and dispersion	

<b>Unit IV:</b>		<b>08</b>
<b>4.1</b>	<b>Testing Methods</b>	
4.1.1	ANOVA, F-test, t-test, z-test, chi-square, correlation coefficient.

Course Code	Title of the Course	Credits
BCB260	CLINICAL RESEARCH METHODS AND INDUSTRIAL BIOCHEMISTRY	4

### COURSE OUTCOME(S):

- CO1 Specify the classification and characteristics of clinical practice and clinical research
- CO2 Identify in depth fermentation technology and downstream processing
- CO3 Learn in details with application, if applicable, clinical research methods
- CO4 Specify the details of steps involved in drug discovery

		No. of Lectures
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Introduction to Clinical Research</b>	
1.1.1	Introduction to Clinical Research, Terminologies and definition in Clinical Research, Origin and History of Clinical Research	
1.1.2	Difference between Clinical Research and Clinical Practice, Types of Clinical Research, Phases of clinical research	
1.1.3	Clinical Trials in India–The National Perspective, Post marketing surveillance	
1.1.4	Pharmaceutical Industry–Global and Indian Perspective Clinical Trial market, Career in Clinical Research	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Clinical Research Methods</b>	
2.1.1	Design of experiments, factorial experiments, randomization, interaction among factors.	
2.1.2	Types of studies: Cohort studies, double blind, placebo control, cross over and double dummy.	
2.1.3	Introduction to Good Clinical Practices, Clinical Trial Development: Protocol Design and Development, Case Report Form Design and Development, Principals of Data Management, Clinical Trial Management: Maintaining and Managing Essential Documents, Recording and Reporting Non–Serious and Serious Adverse Events.	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Drug Discovery Concepts and Biostatistics</b>	
3.1.1	Proof of concept, target identification and validation. Identifying the lead compound, optimization of lead compound, mechanism of action, drug target and validation of target.	
3.1.2	Safety pharmacology, pharmaco–kinetics and	

	pharmaco–dynamics, acute and chronic toxicity Development of new drug/molecules and elucidation of their mechanisms of actions, formulations, factors affecting drug efficacy, drug resistance, traditional medicines; biotransformation.	
3.1.3	Statistical concept: Data structure, sampling methods, collection, classification and tabulation of data, graphical and diagrammatic representation, histogram, frequency polygon, frequency curve, bar graph, pie chart.	
3.1.4	Measure of central tendency: Mean, median, mode, mean deviation, standard deviation, standard error Types of distribution of data: Normal, binomial, Poisson,	
3.1.4	Z-test, t-test and ANOVA. Correlation and regression.	
<b>Unit IV:</b>		
<b>4.1</b>	<b>Bioprocess Methods</b>	
4.1.1	Basics of chemical engineering, mass transfer, heat generation and removal, fluid dynamics:	<b>12</b>
4.1.2	Bernoulli's principle, viscosity, hydraulic conductivity, capillary flow, control and applications of industrial processes, process evaluation and development, over production of metabolites and methods;	
4.1.3	Fermentation–Submerged and solid state fermentation Fermentor design, Industrial use of microbes. Strain improvement, Inocula preparation, Downstream processing–Recovery and purification of intracellular and extra cellular products. Methods to maximize the yield.

Course Code	Title of the Course	Credits
BCC070	CELL BIOLOGY, ENDOCRINOLOGY AND CELL SIGNALING	4

### COURSE OUTCOME(S):

- CO1 Specify in details with examples cellular organization  
CO2 Learn the characteristics of endocrinology  
CO3 Learn in depth cell signaling  
CO4 Write down the characteristics of membrane biology

		No. of Lectures
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Cellular Organization, Division and Cytoskeletons</b>	
1.1.1	Cell types–organization of prokaryotic and eukaryotic cells.	
1.1.2	Cell division–mitosis and meiosis, cell cycle–phases of cell cycle, cyclins and cdks. Regulation of cell growth and cell cycle.	
1.1.3	Cell motility–molecular motors, microtubules, structure and composition. Microtubular associated proteins–role in intracellular motility.	
1.1.4	Cellular organelles–Nucleus–internal organization, traffic between the nucleus the nucleolus, and cytoplasm. Endoplasmic reticulum–protein sorting and transport, golgi apparatus and lysosomes, morphology and function of mitochondria, chloroplasts and peroxisomes, glyoxysomes.	

<b>Unit II:</b>		<b>12</b>
<b>2.1</b>	<b>Membrane Biology</b>	
2.1.1	Organization of lipid monolayer, bilayer, Physicochemical properties of biological membranes - compositions, supra molecular organization - Singer and Nicolson's model.	
2.1.2	Membrane asymmetry-lipids proteins and carbohydrates, lateral diffusion, biogenesis of lipids and proteins. Polarized cells, membrane domains- caveolae, rafts, Membrane lipid and protein turnover, intracellular targeting of proteins. Factors influencing fluidity of membrane	
2.1.3	Membrane transport - Laws of diffusion across membranes, simple diffusion, facilitated diffusion and active transport - glucose transporter Na <sup>+</sup> K <sup>+</sup> ATPase (Structure and mechanism of action), bacterial phosphotransferase system. Endocytosis, receptor mediated endocytosis, exocytosis, ion channels, aquaporin channel, ionophores. Patch clamp technique.	

<b>Unit III:</b>		
<b>3.1</b>	<b>ENDOCRINOLOGY</b>	
3.1.1	<u>Endocrine System</u> –Endocrine organs in man. Hierarchy and regulation of hormone release.	<b>12</b>
3.1.2	Structure and control of hypothalamus, GRH, somatostatin, TRH, CRH, GnRH. Pituitary-anatomy and structure.	
3.1.3	Hormones of anterior, posterior and median lobes. Pro-opiomelanocortin. Thyroid, parathyroid, adrenals, gonads–Testes and ovaries. Menstrual cycle. Hypothalamus–pituitary target organ axis and regulation by feedback mechanism, Pineal gland, melatonin and circadian rhythm	
3.1.4	Classification of hormones based on solubility and structure, mechanism of action of water soluble and lipid soluble hormones.	
<b>Unit IV:</b>		
<b>4.1</b>	<b>Cell Signaling</b>	
4.1.1	Nerve transmission–Central and peripheral nervous systems. Structure of neuron, axon, dendrites, synapse neuromuscular junction. Neurotransmitters- mechanisms of nerve conduction. $\alpha$ and $\beta$ adrenergic neurons, nicotinic and muscarinic neurons.	<b>12</b>
4.1.2	Muscle contraction–Skeletal muscle and smooth muscle contraction, muscle proteins–actin, myosin, tropomyosine, troponins, mechanisms of muscle contraction, role of calcium and calmodulin Biochemistry of vision	
4.1.3	Cellular signaling: Extra cellular signaling–G Protein linked receptors ,Role of cyclic AMP, IP3, DAG, $Ca^{2+}$ as a second messenger, receptor tyrosine kinases , MAP kinase pathway, NF $\kappa$ B pathway, apoptosis, Cell survival pathway, Jak/Stat pathway, TGF $\beta$ Signaling. Multiple signaling path ways–Insulin receptor (regulation of blood glucose)	
4.1.4	Steroid hormone receptors, structural organization of receptor protein, hormone binding domain, antigenic domain and DNA binding domain.

BCC050	CLINICAL BIOCHEMISTRY	4

**COURSE OUTCOME(S):**

- CO1 Identify in details with application, if applicable, specimen collection and analysis  
CO2 Specify in details with application, if applicable, metabolic disorders  
CO3 Write down the characteristics of hormonal disorders  
CO4 Write down in details with application, if applicable, hematology

		No. of Lectures
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Specimen Collection and Analysis</b>	
1.1.1	Concepts of accuracy, precision, reproducibility, reliability, and other factors in quality control.	
1.1.2	Normal values. Specimen collection and Processing: Collection of blood–venipuncture, skin puncture, arterial puncture. Anticoagulants. Collection and analysis of normal and abnormal urine–timed urine specimens, preservatives.	
1.1.3	Clinical significance of sugars, proteins, ketone bodies, bilirubin and porphyrins. CSF–collection, composition and analysis. Amniotic fluid–Origin, collection, composition.	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Disorders</b>	
2.1.1	Disorders of carbohydrate metabolism: Diabetes mellitus, glycohemoglobins, hypoglycemias, galactosemia and ketone bodies.	
2.1.2	Various types of glucose tolerance tests. Glycogen storage diseases.	
2.1.3	Lipid profile, lipidosis and multiple sclerosis. Causes and diagnosis of the disorders of HDL–cholesterol, LDL–cholesterol and triglycerides.	
2.1.4	Cancer: Etiology, diagnosis, treatment and prognosis. Carcinogens, oncogens, mechanism.	
2.1.5	Biochemistry of ageing: Cellular senescence, Role of Telomerase in aging, Alzheimer’s disease, Parkinson’s disease.	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Enzymes and Hormonal Disorders</b>	
3.1.1	<u>Evaluation of organ function tests:</u> Clinical assessment of renal, hepatic, pancreatic, gastric, intestinal and thyroid functions. Clinical importance of bilirubin.	
3.1.2	<u>Diagnostic enzymes:</u> Principles of diagnostic enzymology. Clinical significance of aspartate aminotransferase, alanine aminotransferase, creatine	

3.1.3	kinase, aldolase and lactate dehydrogenase. Enzyme tests in determination of myocardial infarction. Enzymes of pancreatic origin and biliary tract.	
3.1.4	<u>Hormonal disorders</u> : Protein hormones (anterior pituitary hormones, posterior pituitary hormones), steroid hormones, adrenocorticosteroids, and reproductive endocrinology. Disorders of thyroid hormones.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Hematology</b>	
4.1.1	<u>Biochemical aspects of hematology</u> : Total cell count, differential count, hematocrit.	<b>12</b>
4.1.2	Disorders of erythrocyte metabolism, hemoglobinopathies, thalassemias, thrombosis, porphyrias and anemias. Laboratory tests to measure coagulation and thrombolysis.	
4.1.3	Doping	
4.1.4	<u>Detoxification in the body</u> : Enzymes of detoxification, polymorphism in drug metabolizing enzymes. Mechanism of drug action and channels of its excretion.	
4.1.5	Test for lung function: Chest X-ray, Spirometry. Test for Brain function: EEG, MRI, CT.

**COURSE OUTCOME(S):**

- CO1 Specify the details of DNA sequencing methods
- CO2 Specify the characteristics of determination of Proteins
- CO3 Identify the classification and characteristics of microarray data
- CO4 Deliberate the details of bioinformatics in biological databases and sequencing analysis

		No. of Lectures
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Structural Organization of Genome and Sequencing</b>	
1.1.1	Structural organization of genome in Prokaryotes and Eukaryotes, Organelle DNA–mitochondrial, chloroplast,	
1.1.2	DNA sequencing–principles and translation to large scale projects, Recognition of coding and non–coding sequences and gene annotation. Tools for genome analysis–RFLP, DNA fingerprinting, RAPD, PCR, Linkage and Pedigree analysis–physical and genetic mapping.	
1.1.3	Microbes, plants and animals, Accessing and retrieving genome project information from web, Comparative genomics, ESTs and SNPs.	

<b>Unit II:</b>		<b>12</b>
<b>2.1</b>	<b>Proteomics</b>	
2.1.1	Protein analysis (includes measurement of concentration, amino-acid composition, N-terminal sequencing),	
2.1.2	2–D electrophoresis of proteins, Microscale solution isoelectricfocusing, Peptide fingerprinting,	
2.1.3	LC/MS-MS for identification of proteins and modified proteins, MALDI-TOF	
2.1.4	SAGE and Differential display proteomics, Protein-protein interactions, Yeast two hybrid systems.	

<b>Unit III:</b>		<b>08</b>
<b>3.1</b>	<b>Functional Genomics, Proteomics and Metabolomics</b>	
3.1.1	Analysis of microarray data, Protein and peptide microarray–based technology; PCR–directed protein <i>in situ</i> arrays	
3.1.2	Structural proteomics	
3.1.3	Metabolomics	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Biological Databases and Sequence Analysis</b>	
4.1.1	<u>Introduction biological databases</u> : Types (relational & object-oriented). Primary, secondary & specialized databases.	<b>16</b>
4.1.2	Types of databases–Nucleotide sequence database, EMBL, Genbank, Unigene, Genome biology, Protein dBase (Swiss-prot & Trembl and Motif) and 3D structure databases (PDB, SCOP, Cath, Genecards, SRS & Entrez).	
4.1.3	Computational approaches for gene identification, ORF and Human Genome Project.	
4.1.4	<u>Basics of sequence analysis</u> : Alignments using BLAST and FASTA, Multiple Sequence Alignment (CLUSTAL-X and CLUSTAL-W), Application of multiple sequence alignment	
4.1.5	Protein Structure Prediction in Bioinformatics– <i>Ab initio</i> based methods, Homology based methods, secondary structure prediction.	
4.1.6	Protein structure comparison–intermolecular and intramolecular methods. Phylogenetic construction by distance based methods

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
	<b>BIOTECHNOLOGY AND RESEARCH METHODOLOGY</b>	<b>4</b>

**COURSE OUTCOME(S):**

Upon completion of the course, the student is able to

<b>CO1</b>	Understand the concepts of biotechnology
<b>CO2</b>	Provide examples of current applications of biotechnology
<b>CO3</b>	Explain the concept and application of enzyme technology
<b>CO4</b>	Explain the general principles of generating transgenic plants, animals and microbes
<b>CO5</b>	Understand the concepts of research methods, tools and ethics

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Tissue culture and transgenesis</b>	
1.1.1	Techniques of tissue culture—culturing explants and haploids, protoplasts fusion and embryoids.	
1.1.2	Methods of gene transfer to plants, animals and bacteria—Ca transfection, electroporation, shotgun and others.	
1.1.3	Transgenic plants, gene knockouts and transgenic animals.	

<b>Unit II:</b>		<b>16</b>
<b>2.1</b>	<b>Industrial Biotechnology</b>	
2.1.1	Fermentors: principle, types product recovery and purification of ethanol, citric acid, vitamin B12, streptomycin.	
2.1.2	Enzyme biotechnology—production and uses of industrially important enzymes such as protease, immobilization of enzymes and their applications	
2.1.3	Waste treatment, bioenergy, biogas production, biopesticides and bioleaching.	

<b>Unit III:</b>		<b>08</b>
<b>3.1</b>	<b>Biosafety and Bioethics</b>	
3.1.1	Biotechnology–potential hazards, biological weapons, biosafety of GM foods and GMOs–substantial equivalence and safety testing.	
3.1.2	Human genome research–the objectives and approaches, genomics and genome prospecting–the controversies, issues of biotechnology-social and scientific, technology protecting systems and the terminator.	
3.1.3	IPR, its concepts and conditions–patenting of genes, cells and life forms, evaluation of life patenting.	

<b>Unit IV:</b>		<b>12</b>
<b>4.1</b>	<b>Research Methodology</b>	
4.1.1	Types of Research: Academic, Industrial, Clinical, Basic and Applied research. Research objectives, review of literature and hypothesis formulation.	
4.1.2	Information, types and sources. PubMed as a resource. Research Design: Types of studies-cohort, double blind, placebo and cross-over.	
4.1.3	Statistical Methods: Error and significance, sample size and data collection, presentation of data, parametric and non-parametric tests	
4.1.4	Ethical issues: ICMR guidelines of ethical issues, IPR and Plagiarism

Course Code	Title of the Course	Credits
BCC220	PHARMACEUTICAL BIOCHEMISTRY	4

### COURSE OUTCOME(S):

- CO1 Identify the details of ADME mechanism of drugs
- CO2 Learn in details with application, if applicable, Drug receptor interactions
- CO3 Deliberate in details with application, if applicable, Mode of action of anti cancer drugs
- CO4 Write down in depth Drug tolerance and abuse

		No. of Lectures
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Drugs</b>	
1.1.1	Drugs: History of Drugs Classification of drugs, routes of drug administration, absorption and distribution of drugs.	
1.1.2	Factors influencing drug absorption and elimination of drugs. □	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Drug Receptor and Metabolism</b>	
2.1.1	Drug-Receptor interactions involvements of binding forces in drug receptor interaction, drug action not mediated by receptors.	
2.1.2	Drug metabolism: Mechanism of phase I and II enzyme reactions, biochemical importance of xenobiotic metabolism. □	

<b>Unit III:</b>		<b>12</b>
<b>3.1</b>	<b>Anticancer Drugs</b>	
3.1.1	Cancer: Cancer and principles of cancer chemotherapy, mode of action of anti cancer drugs.	
3.1.2	Antimetabolites, antibiotics, alkylating agents and other agents, □	

<b>Unit IV:</b>		<b>12</b>
<b>4.1</b>	<b>Adverse Drug Reactions</b>	
4.1.1	Adverse drug reactions and drug induced side effects.	
4.1.2	Biological effects of drug abuse and drug dependence.	
4.1.3	Drug tolerance and intolerance. □

<b>Course Code</b>	<b>Title of the Course (Open Elective)</b>	<b>Credits</b>
<b>BCC630</b>	<b>NUTRITION AND HEALTH</b>	<b>4</b>

**COURSE OUTCOME(S):**

- CO1 Identify the details of basic concepts of nutrition  
CO2 Learn in details with application, if applicable, nutrients  
CO3 Deliberate in details with application, if applicable, nutrition associated problems  
CO4 Write down in depth social health problems

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>10</b>
<b>1.1</b>	<b>Basic Concepts in Nutrition</b>	
1.1.1	Understanding relationship between food, nutrition, health and food pyramid.	
1.1.2	Functions of food: Physiological, psychological and social Basic food groups and concept of balanced diet	
1.1.3	Energy: Functions, sources and concept of energy balance.	
1.1.4	Nutritional requirements: Physiological considerations and nutritional concerns for the following life stages: Adult man / woman Preschool children Adolescent children Pregnant woman, Nursing woman and infant Geriatrics	

<b>Unit II:</b>		<b>14</b>
<b>2.1</b>	<b>Nutrients</b>	
2.1.1	Functions, Recommended Dietary Allowances, dietary sources, effects of deficiency and/ or excess consumption on health of the following nutrients: Carbohydrates and dietary fibre Lipids Proteins Fat soluble vitamins: A, D, E and K Water soluble vitamins: Thiamin, Riboflavin, Niacin, Pyridoxine, Folate, Vitamin B12 and Vitamin C Minerals: Calcium, Iron, Zinc and Iodine	
2.1.2	Gut Microbiome	

<b>Unit III:</b>		
<b>3.1</b>	<b>Nutritional problems, their implications and related nutrition programmes</b>	
3.1.1	Etiology, prevalence, clinical features and preventive strategies of <u>Undernutrition:</u> Protein energy malnutrition, nutritional anemia's, vitamin A deficiency and iodine deficiency disorders <u>Overnutrition:</u> Obesity, Coronary Heart Disease and Diabetes	<b>14</b>
3.1.2	<u>National Nutrition Policy and Programmes:</u> Integrated Child Development Services (ICDS) Scheme Mid day Meal Programme (MDMP) National programmes for prevention of Anemia Vitamin A deficiency and Iodine Deficiency Disorders	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Social health problems</b>	
4.1.1	Smoking Alcoholism AIDS including AIDS Control Programme	<b>10</b>
4.1.2	<u>Nutrition for special conditions:</u> Nutrition for physical fitness and sport, BMI Feeding problems in children with special needs Considerations during natural and man-made disasters e.g. floods, war. Basic guidelines in disaster management

Course Code	Title of the Course	Credits
BCD010	MOLECULAR BIOLOGY AND GENE REGULATION	4

**COURSE OUTCOME(S):**

- CO1 Write down the characteristics of DNA characteristics and replication
- CO2 Write down in depth Transcription and regulation
- CO3 Learn in depth translation
- CO4 Identify in depth translational regulation

		No. of Lectures
<b>Unit I:</b>		
<b>1.1</b>	<b>DNA Replication and Gene Expression</b>	
1.1.1	<u>Introduction</u> : Historical perspective, types of RNA, Central dogma of molecular biology.	<b>14</b>
1.1.2	<u>DNA Replication</u> : Nearest neighbor base frequency analysis. Replication of DNA semiconservative model- Meselson and Stahl experiment. Direction of replication of <i>E.coli</i> , discontinuous replication-Okazaki fragments.	
1.1.3	Composition and properties of DNA polymerase I, II and III. of <i>E.coli</i> DNA ligase, fidelity of replication. DNA topoisomerases and gyrases.	
1.1.4	Replication in viruses single stranded DNA virus, $\phi$ X174, rolling circle model. Replication of mitochondrial DNA.	
1.1.5	Organization of prokaryotic and eukaryotic gene-promoters, introns, exons, other regulatory sequences, enhancers, silencers, function of introns.	
1.1.6	<u>Regulation of Gene expression in prokaryotes</u> : Operon model-Lac operon-structure and regulation; Galactose operon-role of two promoters; Arabinose operon-positive control; tryptophan operon-attenuation control.	
1.1.7	<u>Regulation of gene expression at the level of DNA structure</u> : Super coiling, DNA methylation, role of nucleosome structure of eukaryotic DNA in gene expression-eg. glucocorticoid gene, chromatin remodeling	

<b>Unit II:</b>		
<b>2.1</b>	<b>Transcription and Regulation</b>	
2.1.1	<u>Transcription</u> : RNA biosynthesis in prokaryotes and eukaryotes- initiation, elongation and termination. RNA polymerase I, II and III. RNA dependent RNA synthesis - RNA replicase of QB virus.	<b>10</b>
2.1.2	Processing of eukaryotic mRNA–cap addition, poly A tail addition, intron splicing, RNA editing. Processing of t–RNA.	
2.1.3	<u>Regulation at the level of transcription</u> : Transcription factors, TF II. Formation of initiation complex. Role of enhancers	
2.1.4	<u>Regulation at the level of RNA processing</u> : RNA export and RNA stability. Factors affecting RNA stability. RNA degradation.	
<b>Unit III:</b>		
<b>3.1</b>	<b>Translation</b>	
3.1.1	<u>Translation</u> : Genetic code, triplet codon, Universality features of the genetic code, assignment of codons studies of Khorana, Nirenberg, triplet binding techniques, degeneracy of codons, wobble hypothesis, evolution of genetic code and codon usage, variation in the codon usage.	<b>12</b>
3.1.2	<u>3D structure of prokaryotic and eukaryotic ribosomes</u> . <u>Translation</u> : initiation, elongation and termination. Role of m–RNA and t–RNA; aminoacyl t–RNA synthetase and its role in translation accuracy, signal sequence, translational proof-reading, translational inhibitors.	
3.1.3	<u>Post translational modification of proteins</u> –signal peptide cleavage, disulphide bond formation, O–and N–Glycosylation, folding of nascent protein, role of chaperones, attachment of glycosyl anchor, and other modifications.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Translational Regulation</b>	
4.1.1	<u>Regulation at the level of translation</u> : Secondary structure in the 5' and 3' untranslated region–eg. Regulation of Ferritin and Transformation of m-RNA. Role of upstream AUG codons. (eg. GCN 4 gene regulation), transplicing and translational introns, protein splicing introns.	<b>12</b>
4.1.2	<u>Role of ribosomes in the regulation of translation</u> : Proof–reading mechanism. Ribosomal optimization of translation. Regulation at the level of ribosome assembly. Regulation at the level of post-translational modification, protein stability, N–end rule, PEST and other sequences

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
<b>BCD070</b>	<b>GENETICS AND GENETIC ENGINEERING</b>	<b>4</b>

**COURSE OUTCOME(S):**

Upon completion of the course, the student is able to

<b>CO1</b>	Understand the importance of plasmids and viruses to genetic engineering.
<b>CO2</b>	Understand the principle of Mendelism and gene development
<b>CO3</b>	Describe how mutations occur and scope of population genetics
<b>CO4</b>	Explain the principle of genetic engineering
<b>CO5</b>	Understand the value of and the processes involved in the amplification of DNA

		<b>No. of Lectures</b>
<b>Unit I:</b>		<b>12</b>
<b>1.1</b>	<b>Mendelism and Gene Organization</b>	
1.1.1	Basic principles of Mendelism–Laws of inheritance, dominance, codominance, epistasis, (eg. Comb shape in chickens). Pleiotropism. Cytoplasmic inheritances (eg. Shell Coiling)	
1.1.2	Organisation of genes in chromosomes–Single copy gene, gene families, tandemly repeating genes, pseudo genes	
1.1.3	Chromosome number–Ploidy, karyotyping, sex chromosome and dosage compensation. Mobile genetic elements,	
1.1.4	Chromosomal basis of human diseases–Extra or missing chromosome, abnormality in chromosome structure–deletion duplication, inversion and translocation.	
1.1.5	Gene and development–Model systems for studying development in Drosophila, genetic control of development in Drosophila, anteroposterior axis, specification role of maternal genes, segmentation of larval body, gap genes, pair rule genes, homeotic genes, complex gene interaction in development, sequential gene action.	

<b>Unit II:</b>		
<b>2.1</b>	<b>Population Genetics and Mutations</b>	
2.1.1	Population Genetics–Genetic variation, Hardy–Weinberg Law, genetic frequency, migration, genetic equilibrium	<b>16</b>
2.1.2	Mutations- nature of mutations–spontaneous and induced mutation, conditional lethal (eg. Temperature sensitive) mutation. Biochemical basis of mutation. Point mutation, base substitution mutation, missense, nonsense and silent mutations. Mutation rates. Chemical mutagens, radiation induced mutation, reverse mutations and suppressor mutations–intergenic and intragenic suppression, reversion as a means of detecting mutagens - Ames test	
2.1.3	Repair Mechanism–DNA repair mechanisms. Reciprocal recombination, site specific recombination, <i>E. coli</i> rec system. Holliday model of recombination, SOS repair.	

<b>Unit III:</b>		
<b>3.1</b>	<b>Tools of Genetic Engineering</b>	
3.1.1	Basic principles–mechanism of natural gene transfer by <i>Agrobacterium</i> , generation of foreign DNA molecules.	<b>12</b>
3.1.2	Restriction enzymes, their types and target sites, cutting and joining DNA molecules, linkers, adapters, homopolymers, enzymes used in genetic engineering.	
3.1.3	Cloning vehicles and their properties, natural plasmids, in vitro vectors, cosmids and T-DNA based hybrid vectors.	
3.1.4	Cloning strategies–cloning with single strand DNA vectors, cDNA cloning and gene libraries, recombinant selection and screening methods, expression of cloned genes–problems and solutions, shuffle vectors.	
3.1.5	DNA sequencing strategies–Sanger's and Maxam–Gilbert's methods and NGS.	

<b>Unit IV:</b>		
<b>4.1</b>	<b>Amplification &amp; Applications of Genetic Engineering</b>	
4.1.1	Amplification of DNA by PCR technique and applications.	<b>8</b>
4.1.2	<i>In situ</i> hybridization, analysis of DNA, RNA and protein by blotting techniques.	
4.1.3	Marker and Reporter genes.	
4.1.4	Applications of genetic engineering: Transgenic plants and animals, DNA vaccines and Gene therapy

<b>Course Code</b>	<b>Title of the Course</b>	<b>Credits</b>
<b>BCD060</b>	<b>PROJECT WORK OR DISSERTATION</b>	<b>8</b>

**COURSE OUTCOME(S):**

- CO1 Identify the classification and characteristics of literature survey
- CO3 Learn in depth define of objective of project work
- CO3 Write down the classification and characteristics of design of experimental methods
- CO4 Understand the details of result analysis and interpretation

# BLUE PRINT OF QUESTION PAPER FOR C1 & C2 COMPONENT

JSS Mahavidyapeetha  
**JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE**  
(Autonomous) B N Road, Mysuru - 25

**M.Sc. Biochemistry**

I/II/III/IV Semester First/Second Internal Assessment Test (Component 1/2)

**Title of the Course & Code**

**Duration: 1hr**

**Max Marks: 20**

**A) Answer any FOUR of the following**

**4X2=08**

- 1.
- 2.
- 3.
- 4.
- 5

**B) Answer any ONE of the following**

**1X4=04**

- 1.
- 2.

**C) Answer any ONE of the following**

**1X8=08**

- 1.
- 2.

# BLUE PRINT OF QUESTION PAPER FOR C3 COMPONENT

JSS Mahavidyapeetha  
**JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE**  
(Autonomous), Ooty Road, Mysuru – 570025

**M.Sc Degree**  
I/II/III/IV Semester Examination, \_\_\_\_\_

## **BIOCHEMISTRY**

**Course Title & QP Code**

Time: 3 Hours

Max. Marks: 70

**Instructions to Candidates:**

**Answer any Five questions from Part – A**

**Any Four questions from Part – B**

**Any Three questions from Part – C**

### **Part – A**

**5X2=10**

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.

### **Part – B**

**4X6=24**

- 8.
- 9.
- 10.
- 11.
- 12.
- 13.

### **Part – C**

**3X12=36**

- 14.
- 15.
- 16.
- 17.
- 18.

**CHOICE BASED CREDIT SYSTEM AND  
CONTINUOUS ASSESSMENT AND GRADING PATTERN**

**SYLLABUS FOR**

**MASTER'S DEGREE PROGRAM  
IN  
BIO-TECHNOLOGY  
(2018-19 ONWARDS)**

**JSS COLLEGE OF ARTS COMMERCE AND SCIENCE**  
(An Autonomous College of University of Mysore; Re-Accredited by NAAC with 'A' Grade)

**POSTGRADUATE DEPARTMENT OF STUDIES IN BIO-TECHNOLOGY**  
Ooty Road, Mysore – 570 025, India

**POSTGRADUATE DEPARTMENT OF STUDIES IN BIOTECHNOLOGY**

**Choice Based Credit System and Continuous Assessment and Grading Pattern Syllabus**

**M.Sc., PROGRAM IN BIOTECHNOLOGY**

**Scheme of Study – 2018-19 onwards**

**Credit matrix for Master's Degree Program in Biotechnology**

<b>Credits to be earned</b>	<b>I Sem</b>	<b>II Sem</b>	<b>III Sem</b>	<b>IV Sem</b>	<b>Total Credits</b>
Hard Core Course	12	12	12	16	52

Open Elective Course	–	–	04	–	04
<b>Semester Total</b>	<b>20</b>	<b>20</b>	<b>20</b>	<b>16</b>	<b>76</b>

<b>I SEMESTER</b>			
<b>Course title</b>	<b>Hard Core(HC)/ Soft Core(SC)</b>	<b>Credit pattern (L:T:P)</b>	<b>Credits</b>
Biomolecules and Bioenergetics	HC	3:1:0	4
Bioanalytical Techniques	HC	3:1:0	4
Lab – I	HC	0:0:4	4
<b>Choose any TWO from the following</b>	SC	3:1:0	4
1. Molecular Genetics			
2. Microbiology	SC	3:1:0	4
3. Cancer Biology			
4. Cell Biology			
<b>NON CREDIT COURSES</b>			
<b>Communication Skills</b>			
<b>Total credits</b>			<b>20</b>
<b>II SEMESTER</b>			
<b>Course title</b>	<b>Hard Core(HC)/ Soft Core(SC)</b>	<b>Credit pattern (L:T:P)</b>	<b>Credits</b>
Molecular Biology	HC	3:1:0	4
Immunology and Immunotechnology	HC	3:1:0	4
Lab – II	HC	0:0:4	4
<b>Choose any TWO from the following</b>	SC	3:1:0	4
1. Cell Signalling and communication			
2. Metabolomics	SC	3:1:0	4
3. Food and Environmental Biotechnology			
4. Pharmaceutical Biotechnology			
<b>NON CREDIT COURSE</b>			
<b>Employability Skills</b>			
<b>Total credits</b>			<b>20</b>

<b>III SEMESTER</b>			
<b>Course title</b>	<b>Hard Core(HC)/ Soft Core(SC)/ Open Elective(OE)</b>	<b>Credit pattern (L:T:P)</b>	<b>Credits</b>
Bioprocess Engineering and Technology	HC	3:1:0	4
Genetic Engineering	HC	3:1:0	4
Lab – III	HC	0:0:4	4
<b>Choose any ONE from the following</b> 1. Biostatistics, Bioinformatics and Bioentrepreneurship 2. Clinical and Advanced Techniques in Biotechnology	SC	4:0:0	4
Applied Biotechnology * (For other discipline students)	OE	4:0:0	4
<b>Total credits</b>			<b>20</b>
<b>IV SEMESTER</b>			
<b>Course title</b>	<b>Hard Core(HC)</b>	<b>Credit pattern (L:T:P)</b>	<b>Credits</b>
Plant Biotechnology	HC	3:1:0	4
Animal Biotechnology	HC	3:1:0	4
<b>Project Work/Dissertation</b>	HC	0:4:4	8
<b>Total credits</b>			<b>16</b>
<b>Total credits to be earned for M.Sc. Biotechnology</b>			<b>76</b>

**\* Open Elective Course shall be from different discipline of study**

1. A student opting I, II and III semester has to appear for at least 12 credits. (Soft core course may be studied any time).
2. Minimum number of students per Soft core course is 15.

L – Lecture – 1 credit = 1 hour

T – Tutorial – 1 credit = 2 hours

P – Practical – 1 credit = 2 hours

#### **ASSESSMENT:**

**Continous Assessment: C1 – 15% & C2 – 15% (at the end of 8th and 16th week respectively)**

<b>Assessment</b>	<b>IA Test (20 Marks)</b>	<b>Assignment (5M)</b>		<b>Total (25 Marks)</b>	<b>Total reduced to 15 Marks</b>
		a - Collection of material - 2.5 Marks	b - Preparation of report - 2.5 Marks		
<b>C1</b>					
<b>C2</b>					

**Semester End Assessment: C3 – 70% – By written exam.**

Conversion of grades in to credits should be based on relative evaluation calculations.

## **Program: M.Sc. Biotechnology**

### **Program outcomes (PO):**

**PO1:** To make the students develop interpersonal skills, written and oral communication and also to improve their body language and eye contact during presentations.

**PO2:** To train the students in group discussions to develop leadership qualities and to respect the others idea and take the decisions for the welfare of society.

**PO3:** To teach the students not to demoralize the others ideas and not to differentiate the intelligent and the ignorant, poor and the rich and to uphold the moral values in the society.

**PO4:** Upon completion of course students will have the ability to design the experiments to solve the current problems in the society related to health, environment and industries.

**PO5:** To make the students competent enough to write the research papers, project proposals and application of mathematics in understanding biological science.

### **Program Specific Outcomes (PSO):**

**PSO1:** To make the students understand the nature, bio-molecules, their analysis and application in day to day life, so that we are transforming knowledge from nature to lab and lab to beside.

**PSO2:** Higher studies like M.Phil and Ph.D can be pursued to attain research positions.

**PSO3:** Various examinations such as CSIR-NET, ARS-NET GATE, ICMR, DBT and many other opens channels for career development.

**PSO4:** Students have various opportunities in different industrial sector.

**PSO5:** Several career opportunities are available for students with biotechnology background abroad

**PSO6:** In practical we teach the students to follow the standard operating procedures of the equipment, troubleshooting the problems and analyse and interpretation of data.

**PSO7:** To train the students regarding bio-safety in handling corrosive, explosive and radioactive and bio-hazardous compounds.

**I SEMESTER**  
**BIOMOLECULES AND BIOENERGETICS (HARD CORE) - 48 Hrs**

**COURSE CODE: BTA040**

**Course Outcome**

CO1-Study of different biomolecules

CO2-Metabolism and their regulation

CO3-Enzymes and their role in metabolism

CO4- Application of thermodynamics to understand the basic concepts of life.

**Unit – I**

**12 Hrs**

Chemical basis of life; Composition of living matter; Water – properties, pH, ionization and hydrophobicity; Emergent properties of biomolecules in water; Biomolecular hierarchy; Macromolecules; Molecular assemblies; Structure-function relationships

Amino acids – structure and functional group properties; Peptides and covalent structure of proteins; Ramchandran's plot; Elucidation of primary and higher order structures; Evolution of protein structure; Structure-function relationships in model proteins like ribonuclease A, myoglobin, hemoglobin and chymotrypsin.

**Unit – II**

**12 Hrs**

Enzyme catalysis – general principles of catalysis; Quantitation of enzyme activity and efficiency; Enzyme characterization and Michaelis-Menten kinetics; activation, inhibition (reversible & irreversible) and covalent modification; Single substrate enzymes; Bisubstrate reaction (ping-pong and sequential), Applications of enzymes (food& Pharmacy).

**Unit – III**

**12 Hrs**

Sugars - mono, di, and polysaccharides; Suitability in the context of their different functions-cellular structure, energy storage, signaling; Glycosylation of other biomolecules - glycoproteins and glycolipids; Lipids - structure and properties of important members of storage and membrane lipids; lipoproteins

**Unit – IV**

**12 Hrs**

Bioenergetics-basic principles; Equilibria and concept of free energy; Coupled processes; Glycolytic pathway; Kreb's cycle; Oxidative phosphorylation; Photophosphorylation; Elucidation of metabolic pathways; Logic and integration of central metabolism; entry/ exit of various biomolecules from central pathways; Principles of metabolic regulation; Regulatory steps; Nucleosides, nucleotides, nucleic acids - structure, diversity and function

**Texts/References**

1. V.Voet and J.G.Voet, Biochemistry, 3rd edition, John Wiley, New York, 2004.
2. A.L. Lehninger, Principles of Biochemistry, 4th edition, W.H Freeman and Company, 2004.
3. L. Stryer, Biochemistry, 5th edition, W.H. Freeman and Company, 2002.

## BIOANALYTICAL TECHNIQUES (HARD CORE) - 48 HRS

### COURSE CODE: BTA050

#### Course Outcome

CO1-To understand the separation of molecules by different chromatography, centrifugation and electrophoretic techniques

CO2-Analysis and characterization of molecules by spectroscopy techniques

CO3-Use of radioactive material in understanding metabolic pathways

#### Unit- I

12 Hrs

Basic Techniques

Buffers; Methods of cell disintegration; Enzyme assays and controls; Detergents and membrane proteins; Dialysis, Ultrafiltration and other membrane techniques

Spectroscopy Techniques

UV, Visible and Raman Spectroscopy; Theory and application of Circular Dichroism; Fluorescence; MS, MALDI-TOF; NMR and Plasma Emission spectroscopy; Protein crystallization; Theory and methods; API-electrospray; Peptide Synthesis.

**Imaging techniques:** Compound microscope, fluorescent, phase contrast, TEM, SEM, cryo-electron microscope

#### Unit-II

12 Hrs

Chromatography Techniques

TLC and Paper chromatography; Chromatographic methods for macromolecule separation - Gel permeation, Ion exchange, Hydrophobic, Reverse-phase and Affinity chromatography; HPLC and FPLC; Criteria of protein purity

Electrophoretic techniques

Theory and application of Polyacrylamide and Agarose gel electrophoresis; Capillary electrophoresis; 2DElectrophoresis; Gradient electrophoresis; Pulsed field gel electrophoresis

#### Unit- III

12 Hrs

Centrifugation

Basic principles; (RCF, Sedimentation coefficient etc); Types of centrifuge -Microcentrifuge, High speed & Ultracentrifuges; Preparative centrifugation; Differential & density gradient centrifugation; Applications (Isolation of cell components); Analytical centrifugation; Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods

#### Unit- IV

12 Hrs

Radioactivity

Radioactive & stable isotopes; Pattern and rate of radioactive decay; Units of radioactivity; Measurement of radioactivity; Geiger-Muller counter; Solid & Liquid scintillation counters (Basic principle, instrumentation & technique); Brief idea of radiation dosimetry; Cerenkov radiation; Autoradiography; Measurement of stable isotopes; Falling drop method; Applications of isotopes in biochemistry; Radiotracer techniques; Distribution studies; Isotope dilution technique; Metabolic studies; Clinical application; Radioimmunoassay

#### Texts/References

1. Freifelder D., Physical Biochemistry, Application to Biochemistry and Molecular Biology, 2nd Edition, W.H. Freeman & Company, San Fransisco, 1982.
2. Keith Wilson and John Walker, Principles and Techniques of Practical Biochemistry, 5<sup>th</sup> Edition, Cambridge University Press, 2000.

3. D. Holme & H. Peck, Analytical Biochemistry, 3rd Edition, Longman, 1998.
4. R. Scopes, Protein Purification - Principles & Practices, 3rd Edition, Springer Verlag, 1994.
5. Selected readings from Methods in Enzymology, Academic Press.

## LAB – I (HARD CORE)

### COURSE CODE: BTA060

#### Course Outcome

CO1 - Course objective is to introduce the students to the fundamental experiments in the field of Biochemistry, Microbiology and Genetics.

CO2 - Students get the insight to operate simple equipments like colorimeter and spectrophotometer.

CO3 - Identification of microorganisms by morphology and staining techniques. Study of growth kinetics.

CO4 - In genetics students are exposed to know about culture and maintenance of *Drosophila melanogaster* (model organism), Study of mutants, salivary gland chromosome and karyotyping techniques.

#### Practicals/ Experiments

1. Good laboratory practices
2. Measurement of pH
3. Preparation buffers and solutions
4. Determination of pKavalues of amino acids
5. Estimation of reducing sugar by DNS method
6. Estimation of proteins by Lowry's method
7. Ascending, descending and circular paper chromatography for separation of amino acids (1D & 2D)
8. TLC of amino acids/lipids (1D & 2D)
9. HPLC
10. Estimation of ascorbic acid by DNPH method
11. Estimation of urea
12. Estimation of Phosphate
13. Gel electrophoresis- native and SDS-PAGE and determination of molecular weight of proteins
14. Salivary amylase assay, time kinetics, specific activity, determination of optimum temperature and pH; Effect chloride ions on salivary amylase activity
15. Determination of Km and Vmax. and activation energy for an acid phosphatase (from potato)
16. Effect of inhibitors on enzyme activity
17. Purification of amylase from sweet potatoes: Extraction, ammonium sulphate fractionation, gel filtration. Monitoring of enzyme activity, % activity and % recovery during purification
18. Preparation of liquid and solid media for growth of microorganisms
19. Isolation and maintenance of organisms by plating, streaking and serial dilution methods, slants and stab cultures, storage of microorganisms
20. Isolation of pure cultures from soil and water
21. Growth, growth curve; measurement of bacterial population by turbidometry and serial dilution methods. Effect of temperature, pH, carbon and nitrogen sources on growth.
22. Microscopic examination of bacteria, yeast and molds and study of organisms by gram stain, acid fast stain and staining for spores.
23. Assay of antibiotics and demonstration of antibiotic resistance.
24. Culture of *Drosophila melanogaster* and Observation of drosophila mutants
25. Isolation of salivary gland chromosomes
26. Biotech Industry and/ or R & D institution visit/s

## MOLECULAR GENETICS (SOFT CORE) – 48 Hrs

**COURSE CODE: BTA230**

### Course Outcome

**CO1-** To understand the molecular mechanism of inheritance

CO2-Mutation and DNA repair mechanism

CO3-Gene mapping and study of chromosomal abnormalities

CO4-Phylogenetics and micro-evolution

CO4-Development of an organism

### Unit- I

**12 Hrs**

Laws of inheritance in haploid organisms- *Chlamydomonas* and *Neurospora*, uniparental, maternal and cytoplasmic inheritance in yeast, *Neurospora*, paramecium and plants

Genomic organization: Prokaryotes, eukaryotes, viral genome, extrachromosomal genome-plasmids, mitochondria & chloroplast, repetitive elements- LINES and SINES, simple sequence repeats

Mobile genetic elements: discovery, insertion sequence in prokaryotes, complex transposons (Tn10, Tn5, Tn9 and Tn3 as examples), mechanisms, control, consequences and applications of transposition by simple and complex elements.

### Unit – II

**12 Hrs**

Mutation: Types, causes and detection, mutant types – lethal, conditional, biochemical, loss of function, gain of function, germinal versus somatic mutants, Molecular basis of mutations, insertional mutagenesis

Recombination: Homologous and non-homologous recombination, Holliday model, site-specific recombination

DNA Repair: Mechanism of genetic repair- direct repair, photo reactivation, excision repair, mismatch repair, post-replicative recombination repair, SOS repair

### Unit-III

**12 Hrs**

Gene mapping methods: Linkage maps, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids, development of mapping population in plants.

**Microbial genetics:** Methods of genetic transfers – transformation, conjugation, transduction and sex-duction, mapping genes by interrupted mating, fine structure analysis of genes.

Quantitative genetics: Polygenic inheritance, heritability and its measurements, QTL mapping.

### Unit-IV

**12 Hrs**

Genes and development: Model systems for studying development- *Drosophila*, *Caenorhabditis*, *Arabidopsis*. Genetic control of development in *Drosophila*: anterioposterior axis specification, role of maternal genes, segmentation of larval body, gap genes, pair rule genes, homeotic genes, complex gene interaction in development, sequential gene action. Floral meristems and floral development in *Arabidopsis*.

Human Genetics: Human chromosomes, karyotype – construction, characteristics, staining techniques and nomenclature; chromosomal abnormalities – sex chromosomal and autosomal, inherited disorders, genetic counselling, gene therapy; Human Genome Project, Human Genome Map.

Population Genetics: Genetic variation, Hardy-Weinberg Law, random mating, genetic frequency, natural selection, genetic drift, migration, genetic equilibrium.

Evolution: Molecular basis of evolution, Molecular clock, Molecular phylogenetics

## **Reference Books**

1. Genetics. Strickberger, M. W., Prentice Hall of India Pvt. Ltd.
2. Genetics – A Molecular Approach. Brown, T. A. Chapman and Hall.
3. Genes VII. Lewin, B. Pearson Education International. 2003.
4. Genetics- A Conceptual Approach. Benjamin A Pierce.

## CANCER BIOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE:

#### Course Outcome

CO1-Understanding the normal and cancerous cell

CO2-Protooncogenes, tumor suppressor genes and apoptotic genes – regulation

CO3-Diagnosis and treatment of cancer

#### Unit-I

Cancer Biology:

**12 Hrs**

Introduction, historical perspective, classification, Carcinogenesis, cancer initiation, promotion and progression, Cancer cell cycles, Genomic instability, Apoptosis, Genes and proteins as players in apoptosis, DNA viruses/ cell immortalization.

#### Unit-II

**12 Hrs**

Cancer Genes I: Oncogenes and signal transduction

Cellular proto-oncogenes, oncogene activation, Growth factors, growth factor receptors, signal transduction, Transcription, Transcription factors and cancer, Retroviral oncogenes, Tumor suppressor, Tumor suppressor gene pathways, DNA methylation, epigenetic silencing of suppressor genes.

#### Unit-III

**12 Hrs**

Understanding Cancer as a Disease: natural history of cancer development

Free radicals, antioxidants and metabolic oxidative stress and cancer, Epidemiology of selected cancers, Gene rearrangements, detecting oncogene abnormalities in clinical specimens, Cell: cell interactions, cell adhesion, angiogenesis, invasion and metastasis, Antiangiogenic therapy of cancer.

#### Unit-IV

**12 Hrs**

Current concepts in cancer therapy

Strategies of anticancer chemotherapy, Strategies of anticancer gene therapy/translating therapies from the laboratory to the clinic, Gene discovery in cancer research, cancer genome anatomy project, Cancer immunity and strategies of anticancer immunotherapy, stem cells and their applications in cancer therapy.

#### Reference Books

1. Molecular Biology of the Cell. Bruce Alberts

## MICROBIOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE: BTA240

#### Course Outcome

CO1- To understand the microbial taxonomy

CO2-Handling, preservation and sterilization of microbes

CO3-Microbial interactions with different hosts

CO4-Application of microorganisms in the field of agriculture, environment and health sciences

#### Unit-I

12 Hrs

##### Microbial Diversity & Systematics

The beginning of microbiology: The discovery of the microbial world – Hook, Anton van Leeuwenhoek and Cohn; Contribution of Pasteur and Koch. Development of pure culture methods; the enrichment culture methods. Methods in Microbiology: Pure culture techniques; the theory and practice of sterilization.

Classical and modern methods and concepts; Domain and Kingdom concepts in classification of microorganisms; Criteria for classification; Classification of Bacteria according to Bergey's manual; Molecular methods such as Denaturing Gradient Gel Electrophoresis (DGGE), Temperature Gradient Gel Electrophoresis (TGGE), Amplified rDNA Restriction Analysis and Terminal Restriction Fragment Length Polymorphism (T-RFLP) in assessing microbial diversity; 16S rDNA sequencing and Ribosomal Database Project.

#### Unit-II

12 Hrs

##### Microbial Growth & Physiology

Ultrastructure of Archaea (Methanococcus); Eubacteria (*E.coli*); Unicellular Eukaryotes (Yeast) and viruses (Bacterial, Plant, Animal and Tumor viruses); Microbial growth: Batch, fed-batch, continuous kinetics, synchronous growth, yield constants, methods of growth estimation, stringent response, death of a bacterial cell. Factors affecting growth like temperature, acidity, alkalinity, water availability and oxygen. Microbial physiology: Physiological adaptation and life style of Prokaryotes; Unicellular Eukaryotes and the Extremophiles (with classical example from each group)

#### Unit-III

12 Hrs

##### Microbial Interactions and Infection

Host-Pathogen interactions; Microbes infecting humans, veterinary animals and plants; Pathogenicity islands and their role in bacterial virulence. Chemotherapy/antibiotics: Types, mode of action, resistance to antibiotics.

#### Unit-IV

12 Hrs

##### Microbes and Environment

Role of microorganisms in natural system and artificial system; Influence of Microbes on the Earth's Environment and Inhabitants; Ecological impacts of microbes; Symbiosis (Nitrogen fixation and ruminant symbiosis); Microbes and Nutrient cycles; Microbial communication system; Quorum sensing; Microbial fuel cells; Prebiotics and Probiotics.

## CELL BIOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE:

### Course Outcome

CO1-Understanding the structure and function of bacterial, plant and animal cell

CO2-Cell signalling and communication

CO3-Study of growth factors and their function

CO4-Tumor biology of a cell

### Unit-I

12 Hrs

Membrane and membrane phenomenon: Membrane structure and principles of organization, Membrane proteins, glycoproteins and glycolipids, specialization of plasma membrane, transport across cell membrane – types of transport, ion channels, active transport and ion pumps, symport, antiport, plant and prokaryotic membrane transport proteins. Cell organelle and membrane proteins: Mechanism and regulation of vesicular transport, Golgi and post golgi storing, receptor mediated endocytosis.

### Unit-II

12 Hrs

Microfilament, cell motility and cell shape: actin, actin architecture and assembly, myosin, muscle contraction, microtubules structure and dynamics, microtubule associated protein, cilia, flagella, intermediate filaments.

Multicellularity: Extracellular matrix, hyaluronan and proteoglycan, matrix proteins and their receptors, adhesive proteins, cell junctions, structure and function of plant cell wall.

Cellular signaling: Extra cellular signaling, G-protein linked receptors, role of cAMP, receptor tyrosine kinases,  $Ca^{2+}$  as a second messenger, multiplex signaling pathways, insulin receptor and regulation of blood glucose, regulation of cell surface receptors and transcription factors in signaling pathways, Chemical messenger – peptide and steroid hormones, mechanism of hormone action.

### Unit-III

12 Hrs

Growth factor: Growth factor structure (PDGF, VEGF), mechanism of action (PDGF, VEGF), receptors, signal transduction, plant growth factors and hormones – auxins, cytokinins and other

Cell Cycle: General strategy of cell cycle, discrete cell cycle events, cell cycle control, early embryonic cell cycle, yeast cell cycle, molecular genetics of cell cycle control, cyclins, cyclin dependent kinase, inhibitors, cell division control in multicellular organism, apoptosis.

### Unit-IV

12 Hrs

Tumor biology: Retroviruses, retro viral transformation of host, development and causes of cancer, proto-oncogene, conversion from proto-oncogene to oncogene, tumor suppressor gene, role of p53 in cancer, cell culture uses in research, molecular medicine and cancer.

Nerve cells: Action potential, voltage gated ion channels, nicotinic acetylcholine receptor, other neurotransmitters and their transporters, sensory transduction – the visual and olfactory system.

### Reference Books

1. Molecular Biology of the Cell. Alberts, B., *et al.*, 4<sup>th</sup> Edition. Garland Publ. Inc.
2. Molecular Cell Biology. 5<sup>th</sup> Edn. Lodish, H., *et al.*, W H Freeman.
3. Genes VII. Lewin, B. Pearson Education International.
4. Cell and Molecular Biology. Karp, J. John Wiley and Sons Inc.

## NON CREDIT COURSE

### **COURSE CODE:**

#### **Course Outcome**

CO1-Interpersonal skills (body language, eye contact)

CO2-Presentation skills

CO3-Writing emails, research papers and proposals and business reports

### **Communication Skills Module**

**Business Etiquette – Video Conferencing (VC):** Introduction to Video Conferencing; Concept & uses of VC; VC Etiquette

**Business Communication:** Seven Cs of communication: Complete, Courteous, Considerate, Clear, Concise, Concrete, Correct; Verbal/ Nonverbal Communication

**Writing Process:** Identifying objective; Categorizing Information; Organizational Patterns; Designing document; Memo writing; Revision checklist; Releasing document

**Business Proposal & Report Writing:** Types of Proposals; Top-Down & Bottom-Up Approach; Study of Technical Bid & Cost Bid; Transmittal Letters; Formal Reports (Short and Long); Types of graphics & illustrations; Business Report Templates; Study of Sample Proposals;

**Project Report Writing:** Project Charter; Project Plan; Gant Chart; Activities List; Resources List; Risks List, Project Status Report; Project Closure Report; Types of graphics & illustrations; Study of Project Report Templates

**Email Writing:** Problems resulting out of emails; Contents of email, Importance of a good subject line; Dos and Don'ts; Using your email software to its maximum; Setting up signatures; Setting up accounts; Creating HTML stationary; Creating email templates for common emails; Using short mails for internal communication; Importance of acknowledging emails; Creating folder structure for easily accessing emails; Care to be taken while deleting emails, Archiving emails; Comparison of emails and letters; Writing typical emails, sending point-wise reply to emails

**Cross-Cultural Training:** Cross-Cultural Sensitivity; American, European, Australian, Middle-east and South-East Asian countries culture training; Cultural Foundations; Cross Cultural Communication; Communication Styles; Comparative Values (American – Indian); Regional Dialects; Cross-Cultural Customer Attitude & Expectations

**Interpersonal Skills:** Introduction & Importance of Interpersonal Skills; Cost of Poor interpersonal skills; Standing up for self assertiveness; Strategies to achieve self-assertiveness; Managing conflicts, disputes; Dealing with Diversity Interpersonal Relationship and influence

## II SEMESTER

### MOLECULAR BIOLOGY (HARD CORE) – 48 Hrs

**COURSE CODE: BTB020**

#### **Course Outcome**

**CO1-** The student will get an idea about the genomic organization of prokaryotes and eukaryotes.

**CO2-** Obtain in depth knowledge of genetic code, DNA replication and transcription.

**CO3-** Understand principles, concepts of translation, post translation mechanism

**CO4-** Regulation of gene expression in prokaryotes and eukaryotes

**CO5-** Gain the insight into molecular mechanism of antisense molecules, inhibition of splicing and application of antisense and ribozyme technologies.

#### **Unit-I**

**12 Hrs**

Genome organization: Organization of bacterial genome; Structure of eukaryotic chromosomes; Role of nuclear matrix in chromosome organization and function; Matrix binding proteins; Heterochromatin and Euchromatin; DNA reassociation kinetics (Cot curve analysis); Repetitive and unique sequences; Satellite DNA; DNA melting and buoyant density; Nucleosome phasing; DNase I hypersensitive regions

DNA topology: Closed and super coiled DNA, DNA topoisomerases,

DNA replication: Enzymes in DNA replication, DNA Pol I, II III, replication in single stranded DNA viruses, replication in prokaryotes, eukaryotic DNA replication, eukaryotic polymerases, role of other proteins and enzymes in replication, fidelity of replication, replication of mitochondrial DNA, inhibitors of replication.

#### **Unit- II**

**12 Hrs**

Genetic code: Elucidation, Contributions of Khorana and others, triple binding assay, Wobble hypothesis.

Transcription: Transcription unit, RNA polymerase in prokaryotes, mechanism of transcription- initiation, elongation and termination. Eukaryotic transcription - eukaryotic RNA polymerase, transcription factors, initiation, elongation and termination of transcription, inhibitors of transcription; post transcriptional modifications – capping, polyadenylation, splicing, introns and exons. Structural organization of mRNA, tRNA and rRNA, nuclear export of mRNA and mRNA stability

#### **Unit-III**

**12 Hrs**

Translation: Molecular anatomy and biogenesis of ribosome, partial reconstitution experiments; Amino acid activation- amino acylation of tRNA; prokaryotic and eukaryotic translation- mechanism of initiation, elongation and termination, inhibitors of translation, post translational modifications, protein glycosylation.

Protein localization: Synthesis of secretory proteins and membrane proteins; import into nucleus, mitochondria, chloroplast and peroxisomes.

Regulation of gene expression in Prokaryotes: Basic control circuits, positive and negative regulation; Operon concept – *lac*, *ara* and *trp* operons- catabolite repression, regulatory elements in prokaryotes, attenuation, antitermination, regulation of gene expression in Bacteriophage.

#### **Unit-IV**

**12 Hrs**

Regulation of gene expression in Eukaryotes: *cis* control elements – promoters, enhancers, *trans* acting factors, DNA binding motifs of transcription factors, mechanism of regulation by transcription factors, NFkB histone acetyl transferase and deacylase, hormonal regulation of gene expression, post transcriptional control.

Antisense RNA and ribozymes: Molecular mechanism of antisense molecules, inhibition of splicing, disruption of RNA structure, hammerhead, hairpin ribozymes, Application of antisense and ribozyme technologies. RNA interference, RNA induced gene silencing.

### **Reference Books**

2. Advance Molecular Biology. Twyman, R. M. Viva Book Pvt. Ltd.
3. Molecular Biology. JD Watson
4. Molecular Biology of the Cell. Bruce Alberts.
5. Genes, Benjamin XII ,2017

## **IMMUNOLOGY AND IMMUNOTECHNOLOGY (HARD CORE) – 48 Hrs**

### **COURSE CODE: BTB050**

#### **Course Outcome**

- CO1-** Study basic concepts of immunology
- CO2-** MHC and their role in transplantation
- CO3-** Cytokines and their role in immune system
- CO4-** Tumor immunology
- CO5-** Autoimmune diseases
- CO6-** Hypersensitivity
- CO7-** Vaccine production.

#### **Unit-I**

**12 Hrs**

Immune system: Structure, functions and organization of cells and organs involved in immune systems – T cells, B-cells, macrophages, Eosinophils, Neutrophils, Mast cells; bone marrow, spleen, thymus, lymph node, peyer's patch; Infections and immune responses – Innate immunity, acquired immunity; clonal nature of immune response; Immunohaematology – blood groups antigens, blood transfusion and Rh incompatibilities.

Antigens: Types, haptens, adjuvants, antigenic specificity.

Antibodies: Structure of immunoglobulins, heterogeneity, sub-types – iso-, allo- and idio- types and their properties

#### **Unit-II**

**12 Hrs**

Complements: Structure, components, properties and functions of complement pathways, biological consequences of complement activation; Immunological diversity;

Effector mechanism: T-cell cloning, mechanism of antigen recognition by T-cells and B-lymphocytes and their properties, receptors and related diseases.

Role of class II MHC molecules in T-cell cloning, antigen specific and alloreactive T-cell cloning, applications of T-cell cloning in understanding relevant antigens and T-cell subtypes; T-cell cloning in vaccine development

MHC and Tumor immunology: Structure and function of MHC and the HLA system; regulation of Ir-genes; Tumor immunology– Tumor specific antigens, Immune response to tumors, theory of surveillance, immune diagnosis of tumor; Tumor markers – Alpha fetofetal proteins, carcinoembryonic antigen

#### **Unit-III**

**12 Hrs**

Immune responses and Transplantation: HLA and tissue transplantation; Tissue typing methods for organ and tissue transplantation in humans; Graft versus host rejection, Host versus graft rejection; Xenotransplantation; Immunosuppression theory; Autoimmune diseases – Hashimoto's disease, Systemic lupus erythematosus, Multiple sclerosis, Myasthenia gravis, Rheumatoid arthritis and the remedies.

Allergy: Type I – Antibody mediated – Anaphylaxis, Type II – antibody dependent – Cytolytic and Cytotoxic, Type III – Immune complex mediated reactions– Arthus reaction, serum sickness, Type IV– Cell mediated hypersensitivity reaction– Tuberculin type.

#### **Unit-IV**

**12 Hrs**

Lymphokines and Cytokines– assay methods, related diseases; Immunological tolerance; production of interleukins and interferons– applications.

Immunizations: Conventional vaccines, sub-unit vaccines, DNA vaccines, toxoids, antisera; common immunization – small pox, DPT, hepatitis, polio, measles

### **Reference Books**

1. Immunology. Roitt, Gower Medical Publisher.
2. Fundamental Immunology. Paul W E Raven Press.
3. Immunology. Kuby
4. Immunology, JanewasTraves, Walpart, SHlomehik. Churchill Livingstone.
5. An introduction to Immunology. Rao, C. V. Nasora pub house.
6. Immunology – A short course. Coico, R., Sunshine, G. and Benjamini, E. John Wiley and sons.
7. Cellular Interactions and Immunobiology. BIOTOL series. Butterworth-Heinemann.

## LAB – II (HARD CORE)

### COURSE CODE: BTB060

#### Course Outcome

CO1-Students are trained to get the skills in the field of Molecular biology and Genetic engineering

CO2- , Isolation and purification of nucleic acids and their quantification

CO3-Study of antigen and antibody interactions.

CO4 -Preparation of wine and analysis of food samples

#### Practicals/ Experiments

1. Identification of normal and abnormal human karyotype
2. Localization of Barr bodies
3. Estimation of free fatty acids by titrametric method
4. Saponification value for commercial oil samples
5. Determination of iodine value of an oil
6. Determination of total carbohydrates by phenol-sulphuric acid method
7. Estimation of cholesterol
8. *In vitro* transcription
9. Total RNA extraction
10. Estimation of DNA by Diphenylamine (DPA) method
11. Estimation of RNA by orcinol method
12. Isolation of DNA different samples: plant leaves, coconut endosperm, yeast, animal tissues
13. Determination of purity and concentration of isolated DNA using spectrophotometer
14. Agarose gel electrophoresis of DNA
15. Analysis of microbial quality of foods – Litmus test, catalase test and dye reductase test in milk, estimation of lactic acid in milk
16. Preparation of wine
17. Estimation of percentage of alcohol in wine
18. Chemical method to differentiate between ethanol from methanol
19. Estimation of total acids in wine
20. Conjugation
21. Phage titration
22. Preparation of antigen and antibody production
23. Purification of IgG/IgY
24. Slide agglutination test/blood grouping
25. Antibody labeling
26. Immunoprecipitation test- ODD
27. ELISA for quantification of an antigen
28. Lymphocyte preparation
29. Rossette assay
30. Rocket immunoelectrophoresis

Biotech Industry and/ or R & D institution visit

## CELL SIGNALLING AND COMMUNICATION (SOFT CORE) – 48 Hrs

### COURSE CODE: BTB220

#### Course Outcome

CO1- Understanding the multi-cellularity of organisms

CO2-role of extracellular matrix in signalling

CO3-various signalling pathways from the cell surface to the nucleus

CO4-cell signalling in plants

CO5-microbe-plant and insect-plant interaction.

#### Unit-I

12 Hrs

Multicellularity: Role of Extracellular matrix - hyaluronan and proteoglycan. Matrix proteins and their receptors, adhesive proteins and cell junctions in multicellularity. Structure and function of plant cell wall

The importance of the matrix in signal transduction: Cell surface receptors as reception of extracellular signals, Amplification of signal during transmission - a quantitative study, Tyrosine kinase and tyrosine phosphatase, Cell membrane components and adapter proteins required for signal transmission, Upstream and downstream signal transduction without cell surface receptor activation, G-protein coupled signaling; the secondary messengers in signal transduction pathways cAMP, Ca<sup>2+</sup>, Reactive Oxygen Species and Hypoxia Signalling, Apoptosis Signaling Transduction Pathway, PI3K/AKT Cell Survival Pathway.

#### Unit-II

12 Hrs

Various signal transduction pathways from cell surface to nucleus: MAP kinase pathway, SAP/JNK pathway, p38 pathway, ERK pathway, NFκB pathway, Cell survival pathway, Wnt signaling pathway, Jak/Stat pathway, Smad pathway, TGF β Signaling, EGFR, VEGF And their Signalling, Cytoskeleton And Cell Signalling, Carbohydrate Recognition Signaling, MMPs And Cell Signalling, Cross talk among cell surface receptors, Cross talks among cytoplasmic components, Translocation of signal components during signal transmission, From cytoplasm to cell membrane, NF-κB Signaling from cytoplasm to nucleus, Cell cycle and its Signalling.

The end point of signal transduction--- gene transcription: Nuclear receptors and transcription factors in signalling, Signalling from single gene expression to multiple gene expression: Super array as a tool for the study of multiple gene transcription, Practical application of the signal transduction research, RNA Interference And Cell Signalling, Senescence and Its Signaling Pathways.

#### Unit-III

12 Hrs

Signal transduction in plants: Cross-talk with the environment- wound and mechanical signalling - fatty acid signalling, peptide signalling, oligosaccharide signalling; protein kinases and signal transduction. Abiotic stresses - Dehydration-stress, salt-stress, cold acclimation, heat-stress

Role of active oxygen species (AOS) in plant signal transduction: AOS in plants, AOS as signal molecules, AOS-part of a signalling network.

Action of phytohormones: Multiple signals regulating growth and development of plant organs and their adaption to environmental stresses.

#### Unit-IV

12 Hrs

Symbiotic plant-microbe interaction: Rhizospheric signals (PGPR) and early molecular events in the ectomycorrhizal symbiosis; Lipo-chito-oligosaccharides (LCO) signalling in the interaction between rhizobia and legumes; endophytes.

Recognition and defencesignalling in plant-microbe interaction: Resistance genes - gene-for-gene resistance; co-evolution and specificity of R genes; the TIR domain, the NBS domain; genetic organization of resistance genes; quorum sensing.

Plant-insect interaction: Induction of direct and indirect defence

### **Reference Books**

1. Animal Cell Biotechnology – Methods and Protocols. Nigel Tenkins.
2. Molecular biology of the Cell –Alberts et al.
3. Molecular Cell Biology. 5th Edn. Lodish, H, et al., W H Freeman
4. Cell and Molecular Biology. Karp, J.JohnWiley and Sons In.
5. The Cell-Molecular approach. 4th Ed. Geoffrey M Cooper and Robert E Hausman.
6. Cell Biology- A Laboratory Handbook. 3rd Ed, 4th Vol, Julio E Celis

## METABOLOMICS (SOFT CORE) – 48 Hrs

### COURSE CODE:

#### Course Outcome

CO1-Understanding the basic metabolism of plants

CO2-Different pathways involved in secondary metabolite production

CO3-Altering the metabolic pathways by changing the precursors

CO4-Purification of useful secondary metabolites and their kinetics and dynamics

CO5-Applications in food and pharmaceutical industries

#### Unit-I

12 Hrs

Plant Metabolomics: Developments and history of plant metabolomics, Nature and prospecting of metabolism-related secondary plant products, tools and techniques, production in culture: optimization; selection, hormonal kinetics for secondary metabolites, production, mechanism and control.

#### Unit-II

12 Hrs

Production of secondary metabolites: Induction, Alkaloids, antitumor compounds, food additives, steroids and saponins, detoxification of secondary metabolites, production of secondary metabolites by bioconversion, genetic transformation for production of secondary metabolites, large-scale production in bioreactors, Metabolomics-assisted breeding.

#### Unit-III

12 Hrs

Microbial metabolomics: Systems biology of microbial metabolism; microbe sensors, *In silico* metabolomes, Food and Applied metabolomics, Biomarker discovery. Experimental Approaches- Genome sequencing, Gene expression arrays, Nuclear Magnetic Resonance, Mass spectroscopy, Capillary electrophoresis, Two dimensional gel electrophoresis, Gene expression arrays, Pathway analysis, HPLC, Protein sequencing, Bench-scale fermentation, AFLP/RLFP analysis.

#### Unit-IV

12 Hrs

Pharmacometabolomics: personalized medicine and future of health system, Pathways discovery and disease pathophysiology, Bioinformatics analysis of targeted metabolomics; Environmental metabolomics, Bioactive compounds and Pharmacognosy, Clinical Applications of Metabolomics, Nutrigenomics and Metabolomics, Novel Technologies for Metabolomics, Data Handling for Metabolomics.

### Reference Books

1. V.Voet and J.G.Voet, Biochemistry, 3rd edition, John Wiley, New York, 2004.
2. A.L. Lehninger, Principles of Biochemistry, 4th edition, W.H Freeman and Company, 2004.

## FOOD AND ENVIRONMENTAL BIOTECHNOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE: BTB210

#### Course Outcome

CO1-Comprehensive insight into the fermented foods and enzymes in food industry

CO2-Obtain knowledge of functional foods, genetically modified foods and nutraceuticals.

CO3-Students will be able to understand current status of biotechnology in environment protection.

CO4-Understand the principles of bioremediation and significance of GMO to the environment.

#### Unit-I

12 Hrs

Fermented foods, milk-based products, fermented vegetables, fermented meats, fish, beverages, vinegar, mould fermentation - tempeh, soysauce, rice wine.

Enzymes in dairy industry, cheese making and whey processing, impact of enzyme technology (protein hydrolysates, bioactive peptides), Enzymatic processing of fruit juices; role of enzymes in baking, meat and meat processing, phytase in animal feeds, DNA-based methods for food authentication, comparative methods of toxicity testing in (novel) foods, biological approach to tailor-made foods, application of generic technologies in food and nutritional sciences; anti-cancer components in foods.

#### Unit-II

12 Hrs

Functional foods and Biotechnology: applying molecular, biochemical, cellular and bioprocessing concepts, use of specific phenolic metabolites from botanical species. Pre- and Pro-biotics, single cell protein, single cell lipids. Manipulation of fruit ripening process.

Food processing, principles and practices, food ingredients and processing aids from biotechnological processes, corn sweeteners, bacterial starter cultures, Food spoilage, preservation, mycotoxins in food commodities. Genetically modified foods, designer foods, Nutraceuticals, detection of GM foods.

#### Unit-III

12 Hrs

Renewable and non-renewable resources, current status of biotechnology in environment protection. Characterization of waste. Waste water management: Bioreactors for waste-water treatment, Aerobic biological treatments, anaerobic biological treatments, treatment of industrial effluents-dairy, distillery, paper and sugar industries. Membrane-based waste water treatment.

Oil pollution – treatment with microorganisms.

#### Unit-IV

12 Hrs

Bioremediation: Concepts and principles, bioremediation using microbes, in situ and ex situ bioremediation, biosorption and bioaccumulation of heavy metals.

Xenobiotics: Degradation capabilities of microorganisms with reference to toxicology, pesticides, herbicides, polyaromatic hydrocarbons.

Renewable energy: Relevance of GMO to the environment.

Solid waste management: Waste as a source of energy, biotechnology in paper and pulp industry, production of oil and fuels from wood waste, anaerobic and aerobic composting, vermiculture, biofuels.

#### Reference Books

1. Food Microbiology. Frazier, W. C. and Westhoff, D. C. Tata McGraw Hill.
2. Agriculture Bio-technology. Purohit. Agrobios India.
3. Food Bio-technology. Knorr, D. Marcel Dekker Inc.
4. Environmental Bio-technology. Jogand, S. N. Himalaya Publishing House, New Delhi.

## PHARMACEUTICAL BIOTECHNOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE:

#### Course Outcome

CO1-Rules and regulation regarding development of drugs

CO2- Study of Pharmacodynamics and pharmacokinetics of drugs

CO3-Different phases of clinical trials and drug toxicity studies.

CO4-GMP and GLP in production management and quality control and assessment

#### Unit- 1

12 Hrs

Introduction to pharmaceuticals and Drug development process: Introduction to pharma industry, history of the pharmaceutical industry, traditional pharmaceuticals of biological origin (animal, plant and microbial) biopharmaceuticals and pharmaceutical biotechnology, age of biopharmaceuticals, biopharmaceuticals: current status and future prospects.

Steps involved in drug development process, drug delivery systems, preclinical studies and principles practices, phases of clinical trials. Regulatory authorities in India, USA and Europe and Japan, prescription, non- prescription drugs and orphan drugs.-

#### Unit-II

12 Hrs

Drug Receptors, Pharmacodynamics and pharmacokinetics.: Different types of drug receptors, second messengers (cAMP, Ca<sup>2+</sup> and phosphoinositides) and their signalling mechanism, relation between drug concentration and response, concentration effect curves, concentration- effect curves, relation between drug dose and clinical responses. Volume of distribution of drug, clearance, drug accumulation, bioavailability, alternative routes of administration and the first pass effect, therapeutic drug monitoring

#### Unit-III

12 Hrs

Drug biotransformation and drug toxicity: The role of biotransformation in drug disposition, phase I metabolism (microsomal oxidation, hydroxylation, dealkylation), phase II metabolism (Drug conjugation pathway) CYP families, clinical relevance of drug metabolism, drug-drug interaction. Mechanisms of toxicity, production of toxic metabolites, harmful immune response, idiosyncratic toxicity, contexts of drug toxicity, drug overdose, drug- drug interactions, pathology of drug toxicity. Cellular toxicity, organ and tissue toxicity.

#### Unit-IV

12 Hrs

The drug manufacturing process and drugs of biopharmaceutical origin: Guides to good manufacturing practice, manufacturing facility. Clean rooms, cleaning, decontamination and sanitations (CDS), CDS of the general manufacturing area, CDS of the Process equipment, generation of purified water, water for injection, documentation, specifications, Concept and testing of pre- formulations & their parameters. Tablets: Compressed, granulation, coatings, pills and capsules, parenteral preparations, herbal extracts, oral liquids, Ointments. Processing and packing instructions.

Therapeutic enzymes: asparaginase, DNase, Glucocerebrosidase, galactosidase and urate oxidase, superoxide dismutase, Lactase.

## Reference Books

1. Textbook of Pharmaceutical Biotechnology. Chandrakant Kokate, Pramod H.J, SS Jalalpure. Elsevier Health Sciences, 2012
2. Pharmaceutical Biotechnology: Concepts and Applications. Gary Walsh. John Wiley & Sons, 2013
3. Pharmaceutical Biotechnology, Second Edition. Michael J. Groves. Taylor & Francis, 2005

## NON CREDIT COURSE

### EMPLOYABILITY SKILLS MODULE

#### **COURSE CODE:**

#### **Course Outcome**

CO1- Concepts of corporate communication

CO2- English grammar skills

CO3- Develop strategies for negotiation and marketing

CO4- Personality development and interview skills

CO5- This course will enable students to learn about the project management, entrepreneurship.

**Campus to Corporate:** Transition from College to Corporate world; Perceptions v/s Real Corporate life; Working in Teams; Basics of corporate communication

**Corporate & Office Etiquette:** Elements of a good handshake; Visiting cards exchange & How to manage business cards; Small Talk & Networking; Basics dining etiquette

**English Grammar:** A quick round up: Nouns, Pronouns, Adjectives, Verbs, Adverbs, Tenses, Prepositions, Clauses, Subject and Predicate, Punctuations, Subject- verb agreement, Confusing prepositions, Missing Articles, Editing paragraphs

**Negotiation Skills:** Introduction to Bargaining and Negotiation; The Negotiation Process: Four Stages; An Analytical framework of Negotiation; Bargaining Approaches; Strategy for Value Added Negotiation

**Selection & Interviewing Skills:** Current market for talent & methods for attracting & sourcing; Best practices for different hiring situations - Campus, Market, Head hunter agencies; Selection process design & assessment centers; Effective interview

**Personality Development:** Self assessment: SWOT; Understanding Personality - Identifying different personalities; Levels of Human Learning; Change v/s Transformation; Sensitivity - Sharpen your senses; Creativity and Lateral thinking; Developing Positive Mental Attitude; Emotional Quotient; Handling Criticism; Positive Health; Food habits and Meditation; Goal setting - Creative Visualization - Law of Attraction; Living a created life - Personal Leadership

## III Semester

### BIOPROCESS ENGINEERING AND TECHNOLOGY (HARD CORE) – 48 Hrs

#### COURSE CODE:

#### Course Outcome

CO1-To have the comprehensive insight into the different type of fermenter

CO2-To obtain knowledge of media design and industrial culture

CO3-Students will be able to understand different type of fermenter and bioreactor.

CO4-Understand the principles of downstream processing

CO5- To understand the enzyme technology and their applications in industry.

#### Unit-I

12 Hrs

#### Basic principle of Biochemical engineering and Microbial Growth Kinetics:

General Introduction to metabolic pathways involved in microbial products, concepts of over production, primary and secondary metabolites, estimation of biomass. Isolation, screening and maintenance of industrially important microbes; Microbial growth kinetics, Strain improvement for increased yield and other desirable characteristics.

Batch culture, continuous culture, fed batch culture, the growth cycle, effect of nutrients, growth rate and cell cycle.

#### Unit II

10 Hrs

**Media design and industrial cultures:** Introduction, typical media, Oxygen requirement, antifoams, media formulation, energy sources, carbon and nitrogen source, other components, media optimization, Media sterilization, Batch process (thermal death kinetics), continuous sterilization process. Sterilization of fermenter and other ancillaries, filter sterilization of air and media. Rheological properties of medium. Screening for industrial useful metabolites, maintenance of stock cultures

#### Unit III

10 Hrs

**Types of fermenters and bioreactors:** design, control system, operation, optimization, control and monitoring of variables such as temperature, agitation, pressure, pH, online measurements and control, Scale up of bioreactors. Bubble column, airlift reactor, packed bed, fluidized bed, trickle bed, Membrane reactor, Photobioreactor, Solid state fermenter, Animal and plant cell bioreactors. Scale up and Scale down studies of bioreactors. Biosensor

#### Unit IV

16 Hrs

**Downstream processing (Recovery and purification of products) of biologicals:** Separation of cells, foam separation, disintegration of micro organism, mechanical and non mechanical methods, flocculation, filtration, plate filters, rotary vacuum filters, centrifugation, Stoke's law, continuous centrifugation, basket centrifuge, bowl centrifuge, membrane filtration, ultra filtration and reverse osmosis, chromatographic techniques, absorption, spray drying, drum drying, freeze drying.

**Enzyme Technology:** production, recovery, stability and formulation of bacterial and fungal enzymes-amylase, protease, penicillin acylase, glucose isomerase; Immobilised Enzyme and Cell based biotransformation steroids, antibiotics, alkaloids.

7. Mansi EMTEL, Bryle CFA. Fermentation Microbiology and Biotechnology, 2nd Edition, Taylor & Francis Ltd, UK, 2007.

## GENETIC ENGINEERING (HARD CORE) - 48 Hrs

### COURSE CODE:

#### Course Outcome

CO1-To have the comprehensive insight into the different enzymes used in Genetic engineering lab

CO2-To obtain knowledge of construction of vectors

CO3-Students will be able to understand different type of cloning methods.

CO4-Understand the principles of PCR & types

CO5- To know the different sequence methods

### Unit I

10 Hrs

**Basics Concepts:** DNA Structure and properties; Restriction Enzymes; DNA ligase, Klenow enzyme, T4 DNA polymerase, Polynucleotide kinase, Alkaline phosphatase; CRISPR- cas9, Cohesive and blunt end ligation; Linkers; Adaptors; Homopolymeric tailing; Labeling of DNA: Nick translation, Random priming, Radioactive and non-radioactive probes, Hybridization techniques: Northern, Southern and Colony hybridization, Fluorescence in situ hybridization; Chromatin Immunoprecipitation; DNA-Protein Interactions-Electromobility shift assay; DNaseI footprinting; Methyl interference assay

### Unit II

10 Hrs

**Cloning Vectors:** Plasmids; Bacteriophages; M13 mp vectors; PUC19 and Bluescript vectors, Phagemids; Lambda vectors; Insertion and Replacement vectors; Cosmids; Artificial chromosome vectors (YACs; BACs); Animal Virus derived vectors-SV-40; vaccinia/baculo & retroviral vectors; Expression vectors; pMal; GST; pET-based vectors; Protein purification; His-tag; GST-tag; MBP-tag etc.; Intein-based vectors; Inclusion bodies; Methodologies to reduce formation of inclusion bodies; Baculovirus and pichia vectors system, Plant based vectors, Ti and Ri as vectors, Yeast vectors, Shuttle vectors

### Unit III

6 Hrs

**Cloning Methodologies:** Insertion of Foreign DNA into Host Cells; Transformation; Construction of libraries; Isolation of mRNA and total RNA; cDNA and genomic libraries; cDNA and genomic cloning; Expression cloning; Jumping and hopping libraries; Southwestern and Far-western cloning; Protein-protein interactive cloning and Yeast two hybrid system; Phage display; Principles in maximizing gene expression

### Unit IV

22 Hrs

**PCR and Its Applications:** Primer design; Fidelity of thermostable enzymes; DNA polymerases; Types of PCR – multiplex, nested, reverse transcriptase, real time PCR, touchdown PCR, hot start PCR, colony PCR, cloning of PCR products; T-vectors; Proof reading enzymes; PCR in gene recombination; Deletion; addition; Overlap extension; and SOEing; Site specific mutagenesis; PCR in molecular diagnostics; Viral and bacterial detection; PCR based mutagenesis, Mutation detection: SSCP, DGGE, RFLP, Oligo Ligation Assay (OLA), MCC (Mismatch Chemical Cleavage, ASA (Allele-Specific Amplification), PTT (Protein Truncation Test)

**Sequencing methods:** Enzymatic DNA sequencing; Chemical sequencing of DNA; Automated DNA sequencing; RNA sequencing; Chemical Synthesis of oligonucleotides; Introduction of DNA into mammalian cells; Transfection techniques; Gene silencing techniques; Introduction to siRNA; siRNA technology; Micro RNA; Construction of siRNA vectors; Principle and application of gene silencing; Gene knockouts and Gene Therapy; Creation of knock out mice; Disease model; Somatic and germ-line therapy- in vivo and ex-vivo; Suicide gene therapy; Gene replacement; Gene targeting; Transgenics; cDNA and intragenic arrays; Differential gene expression and protein array.

**Text/References**

1. S.B. Primrose, R.M. Twyman and R.W.Old; Principles of Gene Manipulation. 6th Edition, S.B.University Press, 2001.
2. J. Sambrook and D.W. Russel; Molecular Cloning: A Laboratory Manual, Vols 1-3, CSHL, 2001.
3. Brown TA, Genomes, 3rd ed. Garland Science 2006
4. Selected papers from scientific journals.
5. Technical Literature from Stratagene, Promega, Novagen, New England Biolab etc.
6. Genes, Benjamin XII , 2017

## LAB-III (HARD CORE)

### COURSE CODE:

### Course Outcome

CO1 -

CO2 -

CO3 -

CO4 -

CO5 -

### Practicals/ Experiments

1. Animal cell culture: preparation of media, culture and maintenance of cell lines, trypsinization
2. Culture of transformed cells
3. MTT assay for cytotoxicity
4. Western blotting and detection
5. Study of fermenter (demo)
6. Immobilization of yeast by calcium alginate, gel entrapment and assay for enzyme *invertase*
7. Assay of catalase.
8. Study of alcohol fermentation – alcohol from different substrates – estimation of alcohol content
9. Solid state fermentation
10. Determination of the activity of enzyme protease
11. Determination of the activity of enzyme amylase
12. Estimation of Vitamin E
13. Estimation of Vitamin C
14. Estimation of aminoacid by ninhydrin method
15. Preparation of MS media
16. Induction of callus
17. Micropropagation
18. Suspension culture- production of secondary metabolites
19. Preparation of synthetic seeds
20. Database search for nucleotide and aminoacid sequences using BLAST
21. Study of sequence alignment
22. Construction of trees/dendrogram using sequence analysis
23. Structure prediction using homology searches
24. RAPD
25. Transformation
26. Bacterial gene expression
27. RFLP mapping
28. Isolation of plasmid DNA from *E.coli*
29. Restriction digestion of DNA
30. DNA ligation
31. production of citric acid by *A.niger* by submerged fermentation.
32. Estimation of citric acid by titrametric method
33. PCR
34. Isolation of antibiotic producing actinomycetes from soil sample

## CLINICAL AND ADVANCED TECHNIQUE IN BIOTECHNOLOGY (SOFT CORE) – 48 Hrs

### COURSE CODE:

#### Course Outcome

CO1-Diagnosis of diseases using enzymes as markers

CO2-analysis of blood and urine sample to interpret the diseases

CO3-Study of metabolic disorders and their diagnosis

CO4- Clinical trails of designed drugs/ biomolecules

CO5-Tools of Histopathology, Immunotechnology, microarray and DNA chips in understanding the diseases

### Unit I

16 Hrs

**Diagnostic Enzymology:** Mechanisms of elevated enzyme activities. Some important enzymes – alkaline phosphates, creatine kinase, LDH, AST, ALT – isozyme changes

**Blood:** Composition, cells, functions of plasma proteins and lipo proteins in diseases. Disorders of hemoglobin – Thalassemia, sickle cell anemia. Anemias – Microcytic, normocytic and macrocytic.

**Advanced methods in clinical analysis:** Blood, urine and quantitative determination of metal ions in body fluids

**Liver:** Biochemical indices of hepatobiliary diseases. Bile pigments – formation of bilirubin, urobilinogen bile acids, jaundice – pre-hepatic, hepatic and post-hepatic; liver function tests, diseases of the liver – hepatitis, cholestasis, cirrhosis, Gallstones.

### Unit II

8 Hrs

**Kidney:** Assessment of renal function – creatine clearance, renal calculi, uremia, laboratory investigation of kidney disorders.

**Cardiovascular Disorders:** major cardio vascular system – Atherosclerosis – risk factors, pathogenesis. Diagnosis and prognosis

**Disorders of Amino Acid and nucleotide metabolism:** Gout Lesch – Nyhan syndrome, orotic acid urea phenyl ketonuria, alkaptonuria, maple-syrup urine.

Clinical trails of designed drugs/biomolecules.

Molecular detection of diseases, Amniocentesis

### Unit III

12 Hrs

**Microscopy:** Phase Contrast Microscopy, Fluorescence Microscopy, Confocal and Inverted Microscopy), Electron Microscopy (Transmission Electron Microscopy, Scanning Electron Microscopy)

**Diagnostics and immunological techniques:** applications of immunological and molecular diagnostic methods (RIA, ELISA, PCR, DNA finger printing) in forensic science and disease diagnosis. *In vitro* antigen-antibody reactions, Coombs' test, complement titration test (Direct and indirect), Immunofluorescence, Immuno-enzymatic and ferritin technique, Immuno-electromicroscopy. Immuno-electrophoresis, Western blot analysis. Hybridoma technology – Monoclonal and polyclonal antibodies and their application

### Unit IV

12 Hrs

**Nanobio-technology:** Introduction, types and synthesis of nanomaterial, protein – based nano structures, DNA-based nano structures. Applications of nanomaterials, nano biosensors, drug and gene diversity, disease diagnostics, cancer therapy, risk potential of nanomaterials.

**DNA chip technology and micro arrays:** Types of DNA chips and their production, hybridization, application of micro arrays on DNA chips.

**Genomic research:** Methods for whole genome sequencing, genome sequence data, e-PCR, genome sequence to annotation- methods for annotation of genome sequence.

## Reference Books

1. Biochemistry – With Clinical Correlations. Devlin.
2. Clinical Biochemistry. Latner.
3. Principles of Instrumental Analysis. 5<sup>th</sup> Ed. Douglas A Skoog, James Holler and Timothy A Nieman.
4. Analytical and Preparative Separation Methods of Biomacromolecules. Hassan Y Aboul – Enein.
5. Microbiology – Principles and Explorations. 5<sup>th</sup> Ed. Jacquelyn G Black.
6. Genetic Engineering: Primose, S. B.
7. An introduction to molecular Bio-technology (Ed.) Wink.
8. Principles of gene manipulation and genomics. Primose, S. B. and Twyman, R. M.
9. Gene cloning and DNA analysis an Introduction. Brown, T. A. Blackwell Science Company.
10. Molecular Biology and Biotechnology. Walker, J. M. and Rapley, R. Panima Publishing Corporation.
11. Molecular Biotechnology – Principles and application of Recombinant DNA. Glicks, R. Bernard and Pasternak, J. Jack. Panima Publishing Corporation.
12. Molecular Biomethods Hand Book. Rapley, R and Walker, M. Jhon. Humana Press.
13. Genes (VIII edition) Benjamin Lewin, Pearson Education International

**BIOSTATISTICS, BIOINFORMATICS AND BIOENTREPRENEURSHIP (SOFT CORE)  
– 48 HRS**

**COURSE CODE:**

**Course Outcome**

CO1-Application of statistics to understand and analyse the experimental results of biological sciences

CO2-retrieval of biological data

CO3-phylogenetic analysis

CO4-primer designing

CO5-drug discovery and molecular docking

**Unit I**

**12 Hrs**

**Statistical concept:** Data structure, sampling methods, collection, classification and tabulation of data, graphical and diagrammatic representation, histogram, frequency polygon, frequency curve, bar graph, pie chart.

Measure of central frequency: **Mean, median, mode, mean deviation, standard deviation, standard error**

**Types of distribution of data:** Normal, binomial, Poisson, Z-test, t-test and ANOVA.

**Correlation and regression**

**Unit II**

**18 Hrs**

**Bioinformatics:** Introduction, history, internet and bioinformatics, knowledge, discovery and data mining, problems faced in bioinformatics area, opportunities in bioinformatics, human genome project.

**Biological databases and their management:** database concept, introduction, history of databases, databases management systems, types of database, Codd rules, data normalization biological databases – introduction, application and its importance, biological database and their functioning, types of biological database, microbiological database, primary sequence database, carbohydrate database, RNA database, genome database, organism database, biodiversity.

**Sequence database:** Introduction, nucleotide sequence database, protein sequence database, the EMBL nucleotide sequence database, structure databases.

**Bioinformatics software:** Clustal V Multiple sequence alignment, Clustal W Version 1.7, Ras Mol, Oligo, Mol script, TREEVIEW, ALSCRIPT, genetic analysis software, Phylip.

**Computational biology:** Introduction, data mining and sequence analysis, database similarities searches, practical aspects of multiple sequence alignment, phylogenetic analysis, predictive methods using nucleic acid and protein sequences, submitting DNA sequences to the databases.

**Unit III**

**10 Hrs**

**Innovation:** Idea to enter into business, Designing and development of new products as per market demands and their future prospective. Needs of customer, branding, distribution, promotion and advertising.

**Types of bio-industries and IPR:** biopharma, bioagri and bioservices. IP protection & commercialization strategies- freedom to operate.

**Accounting and Finance :** Business plan preparation, contracts, partnerships, business feasibility analysis by SWOT, socio-economic costs benefit analysis; funds/support from Government agencies like MSME/banks and private agencies like venture capitalists:/angel investors for bio entrepreneurship; business plan proposal for virtual start up company. statutory and legal requirements for starting a company/venture; basics in accounting practices: concepts of balance

sheet, profit and loss statement, Valuation, Cash flow, double entry. Information technology for business administration and expansion. Technology transfer.

**Incubation centres:** Govt. (C-CAMP, KBITS, CFTRI) and Private incubation centres for start-ups.

#### **Unit IV**

**8 Hrs**

**Marketing :** Market conditions, segments, prediction of market changes; identifying needs of customers; Market linkages, branding issues; developing distribution channels - franchising; policies, promotion, advertising; branding and market linkages for virtual start-up company.

**Business Strategy & HR:** Entry and exit strategy; pricing strategy; negotiations with financiers, bankers, government and law enforcement authorities; dispute resolution skills; external environment/ changes; avoiding/managing crisis; broader vision–global thinking; mergers & acquisitions.

**Regulatory understanding:-** GLP, GMP, GCP, PCB, IBSC, ISO

**Bioentrepreneurship and case study:** Importance of entrepreneurship; advantages of being entrepreneur - freedom to operate; introduction to bioentrepreneurship – biotechnology in a global scale; Scope in bioentrepreneurship; innovation – types, out of box thinking; skills for successful entrepreneur – creativity, leadership, managerial, team building, decision making, Risk assessment, opportunities for bioentrepreneurship- development programs of public and private agencies (MSME, DBT, BIRAC, Start-up & Make in India).

## APPLIED BIOTECHNOLOGY (OPEN ELECTIVE) – 48 Hrs

<b>Unit I</b> <b>Scope of Biotechnology in India and Karnataka.</b> Structure of plant, animal and bacterial cells. Biomolecules and their importance. <b>Enzyme Biotechnology</b> Introduction to application of enzymes in industry: Food & beverage, detergent, textile pharmaceutical and leather.	<b>12 Hrs</b>
<b>Unit II</b> <b>Applications of Plant Cell and tissue culture technology</b> Improvement of hybrids, encapsulated seeds, production of disease resistant, stress resistant plants, secondary metabolites from cell cultures Transgenic plants for crop improvement, molecular farming from transgenic plants, edible vaccines. Bioethics in plant genetic engineering.	<b>14 Hrs</b>
<b>Unit III</b> <b>Animal Cell Culture Techniques</b> <b>Manipulation of reproduction in animals:</b> Artificial insemination, embryo transfer, embryo splitting, embryo sexing <b>In vitro fertilization technology (IVF):</b> Embryo cloning, embryonic stem cells In vitro fertilization and embryo transfer in humans. Transgenic animals Valuable products from animal cell culture (Tissue plasminogen activator, Blood factor VIII, erythropoietin.) <b>Hybridoma technology:</b> Production of monoclonal and polyclonal antibodies and their applications. Bioethics in animal genetic engineering cryopreservation, quantitation of cells, cytotoxicity assays.	<b>10 Hrs</b>
<b>Unit IV</b> <b>Industrial and microbial biotechnology</b> Growth media, sources of nutrition, sterilization, design of fermenter, batch, fed batch and continuous culture. Production of primary metabolites (vitamins, organic acids, alcohols and amino acids). Production of secondary metabolites (antibiotics) Biopesticides (Biological control of plant pathogens, pests and weeds). Biofertilizers (microbial inoculants) <b>Food Biotechnology</b> – Genetically modified foods, Nutraceuticals, detection of genetically modified foods. Production of single cell proteins and mycoproteins.	<b>12 Hrs</b>

### Reference Books

1. Biotechnology. B. D. Singh
2. Biotechnology. R. C. Dubey

## OPEN ELECTIVE –FUNDAMENTALS OF BIOINFORMATICS

---

Contact Hours/ Week	: 4	Credits	: 4
Total Lecture Hours	: 48		

### Course Outcomes:

- Ability to use popular bioinformatics tools to generate biologically meaningful results
- Ability to interpret biological results generated by a bioinformatics tool
- Application of some basic models and algorithms
- The students will gain an understanding of the computational challenges (and their solutions) in the analysis of large biological data sets; they will understand how some of the commonly used bioinformatics tools work, how to use these tools effectively

### Unit I

12 Hrs

Introduction to Bioinformatics and Biological Database:

Introduction to bioinformatics, Review of Central Dogma, Genome organization -Prokaryotic and Eukaryotic. Overview of Genome Projects – Human genome project. Introduction to DNA and protein databases and their classification, file formats, information retrieval tools – Entrez, SRS, ARSA. Nucleotide and Protein sequence and structure databases (NCBI, EMBL, DDBJ and PDB). Focus on GenBank, UniProt, and Gene Ontology.

### Unit II

12 Hrs

Sequence Alignment and Database Similarity Searching:

Pairwise alignment: Alignment algorithm: Pairwise: Dot matrix method, Dynamic programming Method (Needleman-Wunsch & Smith Waterman), Scoring Matrices – PAM and BLOSUM, Database Similarity Searching: FASTA and BLAST. BLAST variants, Statistical parameters for BLAST output – e value, p value and Bit Score.

### Unit III

12 Hrs

Multiple sequence alignment:

Iterative, Progressive alignment. Application of MSA – 1. Phylogenetics – Phylogenetics Basics, Terminologies, Gene versus species phylogeny, Forms of tree representation: Maximum Parsimony and Distance methods 2. Gene prediction: Gene prediction in prokaryotes and eukaryotic 3. Protein Motif and Domain Prediction: Identification of Motif and Domains in MSA – PSSM and Profile HMMs.

Protein sequence analysis:

Analysis of Scalar parameters: ProtParam and pepstats: Hydropathy analysis (Membrane protein prediction): Kyte-Doolittle plot, Helical Wheel representation. Secondary structure prediction, Protein structure building-Homology modelling (Comparative modelling only) – SWISS MODEL server and MODELLER, Protein Structure Visualization: Rasmol, Pymol, CN3D, Swiss PDB viewer, Chimera and Discovery studio visualizer

**Applications of Bioinformatics:** Bioinformatics in pharmacy: overview of drug discovery process, structure based and ligand-based drug design (CADD). Pharmacokinetics: absorption, distribution, metabolism, excretion and toxicity of drugs.

## IV SEMESTER

### PLANT BIOTECHNOLOGY (HARD CORE) – 48 Hrs

#### Unit I

10 Hrs

Plant tissue culture-General: Historical background: Requirements for in-vitro culture- Tissue culture laboratory, Preparation of media, sterilization. Conventional plant breeding and plant tissue culture.

Cell and Tissue Culture Technology: **Role of hormones in growth and development of plants, tissue-specific hormones. Callus Induction, Organogenesis, Somatic embryogenesis, cell suspension culture and synthetic seeds**

**Somaclonal variations:** Isolation of somoclonal variants, Factors affecting somoclonal variants – applications

**Micropropagation:** Propagation from pre-existing meristem, shoot apical meristem, shoot and node culture, micropropagation stages and applications

#### Unit II

15 Hrs

**Germplasm preservation:** cryopreservation, cryoprotectant, warming rate and recovery, gene banks, applications.

#### Seed Health Technology

Introduction: Importance of Seed health, important seed-borne diseases; Seed Health diagnostics; Management of seed-borne diseases.

**Haploid Technology:** Methods of haploid culture, Factors affecting anther and microspore cultures, applications. Cytoplasmic male sterility in Indian Mustard.

**Protoplast Technology:** Isolation, purification and culture of protoplasts, protoplast fusion and somatic hybridization, applications of somatic hybrids/ cybrids.

**Secondary metabolite production:** Induction of secondary metabolites by plant cell culture, technology of plant cell culture for production of chemicals, biotransformation using plant cell culture. Bioreactor systems and models for mass cultivation of plant cells.

#### Unit III

7 Hrs

**Plant transformation techniques:** Methods of gene transfer in plants, *Agrobacterium* mediated transfer- mechanism of DNA transfer, general features of Ti and Ri plasmids, role of *vir* genes, design of expression vectors, use of promoters and reporter genes; viral vectors, direct gene transfer methods- electroporation, microinjection, particle bombardment, selection of transformants, screening and field trials.

#### Unit IV

16 Hrs

**Transgenic plants:** Herbicide resistance, resistance against biotic stress- bacterial, viral, fungal and insect resistance, abiotic stress, improved crop productivity, improved nutritional quality, transgenic plants for floriculture, Qualitative trait loci and marker studies.

**Growth- promoting bacteria in plants:** Biological nitrogen fixation, genetic manipulation for nitrogen fixation. Biocontrol of phytopathogens.

**Molecular farming:** Transgenic plants as production systems-production of alkaloids, steroids, colouring agents, flavoring agents, biodegradable plastics, industrial enzymes, therapeutic proteins, biopharmaceuticals, edible vaccines, plantibodies.

**Intellectual Property Rights (IPR):** IPRs and agricultural technology- implications for India, WTO, WIPO, GATT, TRIPS. Plant Breeder's Rights, legal implications, commercial exploitation of traditional knowledge, protection. Ethical issues associated with consumption of GM food, labelling of GM crops and foods.

9. Plant Molecular Biology – A Practical Approach. Shaw, C. H. Panima Publishing Corporation.
10. A Laboratory Manual of Plant Biotechnology. Purohit. Publisher Agrobios.
11. Introduction to Plant Biotechnology. Chawla, H. S.
12. Practical Application of Plant Molecular Biology. Henry, R. J. Chapman and Hall.
13. Plant Biotechnology – Laboratory manual. Chawla, H. S. Oxford and IBH publishing Co. Pvt. Ltd.
14. Biotechnology. Gupta, P. K. Rastogi Publications.
15. Biochemistry and Molecular Biology of Plants. Buchanan, Gmissem and Jones.
16. Genetic Engineering of Crop Plants. Lyrett, G. W., Grierson, D.
17. Plant Molecular Biology. Grierson and S. N. Covey.

## ANIMAL BIOTECHNOLOGY (HARD CORE) – 48 Hrs

### Unit I

10 Hrs

**Culture of animal cells:** Advantages and limitations of tissue culture, aseptic handling, facilities required, media and cell lines. Primary culture: Isolation of mouse and chick embryos, human biopsies, methods for primary culture, nomenclature of cell lines, sub culture and propagation, immortalization of cell lines, cell line designation, selection of cell line and routine maintenance.

**Cloning and Selection:** Cloning protocol, stimulation of plating efficiency, suspension cloning, isolation of clones, isolation of genetic variants, interaction with substrate, selective inhibitors.

### Unit II

16 Hrs

**Cell separation and characterization:** Density based, antibody based, magnetic and fluorescence based cell sorting. Characterization of cells based in morphology, chromosome analysis, DNA content, RNA and protein, enzyme activity, antigenic markers, cytotoxicity assays, cell quantitation, cell culture contamination: monitoring and eradication, cryopreservation.

**Culturing of specialized cells:** Epithelial, mesenchymal, neuro ectodermal, hematopoietic gonad and tumor cells, Lymphocyte preparation, culture of amniocytes, fish cells, confocal microscopy. Stem cell culture and its applications

**Organic and embryo culture:** Choice of models, organ culture, histotypic culture, filter-well inserts, neuronal aggregates whole embryo culture eggs, chick and mammalian embryos.

### Unit III

16 Hrs

**Cell and Tissue engineering:** Growth factors for *in situ* tissue regeneration, biomaterials in tissue engineering, approaches for tissue engineering of skin, bone grafts, nerve grafts. Hemoglobin based blood substitutes, bio artificial or biohybrid organs. Limitations and possibilities of tissue engineering.

***In vitro* fertilization and Embryo transfer:** *In vitro* fertilization in Humans, Embryo transfer in Humans, Super ovulation and embryo transfer in farm animals e.g: Cow.

**Cloning of Animals:** Methods and uses. Introduction, nuclear transfer for cloning, cloning from-embryonic cells, adult and fetal cells. Cloning from short term cultured cells: cloning of sheep, monkeys, mice, pets, goats and pigs. Cloning from long term cultured cells: Cloning of cows from aged animals. Cloning efficiency, Cloning for production of transgenic animals, gene targeting for cloned transgenic animals, cloning for conservation, human cloning: ethical issues and risks.

### Unit IV

6 Hrs

**Transfection methods and transgenic animals:** Gene transfer or transfection, transfection of fertilized eggs or embryos, unfertilized eggs, cultured mammalian cells, targeted gene transfer. Transgenic animals and applications: mice and other animals, sheep, pigs, goats, cows and fish.

The legal and socio-economic impact of biotechnology at national and international levels, public awareness. Biosafety regulations- guidelines for research in transgenic animals, public awareness of the processes of producing transgenic organisms

3. Animal Cell Culture – A Laboratory Manual. Frushney.
4. Animal Biotechnology. Ballinic, C. A., Philip, J. P and Moo Young, M. Pergamon Press.
5. Genetic Engineering of Animals. Puhler, A. VCH Publisher.
6. Methods of Tissue Engineering. Anthony Atala, Robert P. Lanza.
7. Animal Cell Biotechnology – Methods and Protocols. Nigel Tenkins.

## **PROJECT WORK/DISSERTATION (HARD CORE)**

### **COURSE CODE:**

#### **Course Outcome**

CO1-Review of recent research articles published in high impact journals and presentation by students.

CO2-Students do conduct review of literature followed by hands on training to do piece of research work.

CO3-They would be skill full to understand the experiment and interpret the result.

CO4-They get an idea to compile the data and present in the form of dissertation.

- Includes exhaustive review of literature on the topic selected, design of work, standardization of techniques and execution of work
- Compiling of the data generated in the form of thesis. Interpretation of the result correlating with the advanced information available in the literature.
- Research Paper presentation.

JSS COLLEGE OF ARTS COMMERCE AND SCIENCE  
(An Autonomous College of University of Mysore; Re-Accredited by  
NAAC with 'A' Grade)

OOTY ROAD, MYSURU- 25

**PG DEPARTMENT OF BOTANY**

Choice - Based Credit System (CBCS)

# **BOTANY**

M.Sc. DEGREE SYLLABUS

2018-19 ONWARDS  
(MODIFIED ON 2022)

**JSS MAHAVIDYAPEETHA**  
**JSS COLLEGE FOR ARTS, COMMERCE AND SCIENCE**  
**(AUTONOMOUS) OOTY ROAD, MYSURU- 25**  
**POST GRADUATE DEPARTMENT OF BOTANY**

**M.Sc., Botany Choice - Based Credit System (CBCS) Syllabus**  
**(CBCS-CGPA-Modified (2018-19))**  
**CORE SUBJECT: BOTANY – [POST GRADUATE]**

**DEGREE: M.Sc., BOTANY**

**1<sup>st</sup> and 3<sup>rd</sup> semester Changes made at BOS meeting held on 13.01.2022 (in %)**

**HC 1.3 Systematics of Angiosperms (5.17%)**

**HC 3.3 Plant Biotechnology (40.22%)**

**SC 3.3 Plant Propagation and Plant Breeding (1.7%)**

**OE 3.1 Plant Propagation Techniques (1.35%)**

**(CHANGES MADE ARE HIGHLIGHTED IN THE TEXT)**

<b>FIRST SEMESTER</b>				<b>Credits: 22</b>
<b>No.</b>	<b>Course/Paper Code</b>	<b>Title of the Course/ Paper</b>	<b>Hrs/Week L:T:P</b>	<b>Credits</b>
1	HARD CORE 1.1	<b>Virology, Bacteriology, Mycology and Plant Pathology</b>	<b>2:2:2</b>	2:1:1
2	HARD CORE 1.2	<b>Phycology, Bryophytes, Pteridophytes and Gymnosperms</b>	<b>2:2:2</b>	2:1:1
3	HARD CORE 1.3	<b>Systematics of Angiosperms</b>	<b>2:2:2</b>	2:1:1+ (2 credits for submission of tour report) 2:1:3
4	<b>SOFT CORE 1.1**</b>	<b>Fungal Biology and Biotechnology</b>	<b>2:2:2</b>	2:1:1
5	<b>SOFT CORE 1.2**</b>	<b>Algal Biology and Biotechnology</b>	<b>2:2:2</b>	2:1:1
6	<b>SOFT CORE 1.3**</b>	<b>Lichenology and Mycorrhizal Technology</b>	<b>2:2:2</b>	2:1:1
7	<b>SOFT CORE 1.4**</b>	<b>Phytopathology</b>	<b>2:2:2</b>	2:1:1
*Field Study/Tour: The student shall undertake a field trip for a minimum of 2-3 days and shall submit the herbaria and tour report for evaluation-2 credits.				
**Any two soft core papers shall be studied.				

<b>SECOND SEMESTER</b>			<b>Credits: 18</b>	
<b>No.</b>	<b>Course/Paper Code</b>	<b>Title of the Course / Paper</b>	<b>Hrs/Week L:T:P</b>	<b>Credits</b>
1	<b>HARD CORE 2.1</b>	<b>Reproductive Biology of Angiosperms and Plant Morphogenesis</b>	<b>2:2:2</b>	2:1:1
2	<b>HARD CORE 2.2</b>	<b>Cell Biology and Genetics</b>	<b>2:2:2</b>	2:1:1
3	<b>HARD CORE 2.3</b>	<b>Plant Breeding and Evolutionary Biology</b>	<b>2:2:2</b>	2:1:1
4	<b>SOFT CORE 2.1*</b>	<b>Plant Anatomy and Histochemistry</b>	<b>2:0:2</b>	2:0:1
5	<b>SOFT CORE 2.2*</b>	<b>Ethno-Botany and Intellectual Property Rights (IPR)</b>	<b>2:0:2</b>	2:0:1
6	<b>SOFT CORE 2.3*</b>	<b>Economic Botany</b>	<b>2:0:2</b>	2:0:1
7	<b>OPEN ELECTIVE 2.1</b>	<b>Medicinal Plants</b>	<b>2:2:0</b>	2:1:0
** Any two soft core papers shall be studied.				

<b>THIRD SEMESTER</b>			<b>Credits: 16</b>	
<b>No.</b>	<b>Course/Paper Code</b>	<b>Title of the Course /Paper</b>	<b>Hrs/Week L:T:P</b>	<b>Credits</b>
1	<b>HARD CORE 3.1</b>	<b>Biochemistry and Plant Physiology</b>	<b>2:2:2</b>	2:1:1
2	<b>HARD CORE 3.2</b>	<b>Molecular Biology</b>	<b>2:2:2</b>	2:1:1
3	<b>HARD CORE 3.3</b>	<b>Plant Biotechnology</b>	<b>2:2:2</b>	2:1:1
4	<b>SOFT CORE 3.1*</b>	<b>Molecular Genetics of Plants</b>	<b>2:2:2</b>	2:1:1
5	<b>SOFT CORE 3.2*</b>	<b>Molecular Plant Pathology</b>	<b>2:2:2</b>	2:1:1
6	<b>SOFT CORE 3.3*</b>	<b>Plant Propagation and Plant Breeding</b>	<b>2:2:2</b>	2:1:1
7	<b>SOFT CORE 3.4*</b>	<b>Phyto-chemistry and Herbal Technology</b>	<b>2:2:2</b>	2:1:1
8	<b>OPEN ELECTIVE 3.1</b>	<b>Plant Propagation Techniques</b>	<b>2:2:0</b>	2:1:0
* Any one soft core courses/papers shall be studied.				

<b>FOURTH SEMESTER</b>				<b>Credits:</b>
<b>16</b>				
<b>No.</b>	<b>Course/Paper Code</b>	<b>Title of the Course /Paper</b>	<b>Hrs/Wk L:T:P</b>	<b>Credits</b>
<b>1</b>	<b>HARD CORE 4.1</b>	<b>Ecology, Conservation Biology and Phytogeography</b>	<b>2:2:2</b>	2:1:1
<b>2</b>	<b>HARD CORE 4.2</b>	<b>Project Work *</b>	<b>4:2:2</b>	8
<b>3</b>	<b>SOFT CORE 4.1*</b>	<b>Seed Technology</b>	<b>2:2:2</b>	2:1:1
<b>4</b>	<b>SOFT CORE 4.2*</b>	<b>Seed Pathology</b>	<b>2:2:2</b>	2:1:1
<b>5</b>	<b>SOFT CORE 4.3*</b>	<b>Bio -Analytical Techniques</b>	<b>2:2:2</b>	2:1:1
<b>6</b>	<b>OPEN ELECTIVE 4.1</b>	<b>Plant Diversity and Human Welfare</b>	<b>2:2:0</b>	2:1:1
<p><b>*Project Work:</b> The student shall undertake a Project Work in the Department or in any other University or Institute under the guidance of a Research Supervisor and shall submit a Project Report duly signed by Student and Research Supervisor for Evaluation.</p>				

**Semester- Wise Credit Pattern:**

**I Semester= 22 [HC- 12+2=14 + 08 (SC)]**

**II Semester= 24 [HC- 12 + 08 (SC) + 04 (OE)]**

**III Semester= 18 (HC- 08 + 06 (SC) + 04 (OE)]**

**IV Semester= 20 (HC-12 +04 (SC) + 04 (OE)]**

In total= 46 HC + 26 (SC) + 12 (OE)= The Department is offering 84 Credits of B.Sc. Honors/ M.Sc. Botany (CBCS) Course including three Open Elective Course to the outside Department Students/

**Important Note:**

Student is required to earn the credit for qualifying B.Sc. Honors/ M.Sc. Botany from Department of Botany as follows:

Hard Core offered by the Department= 46 (Against maximum of 56)

Soft Core offered by the Department = 26 (Against minimum of 16)

Minimum Open Elective to be earned by the Student (Outside the Department) = 04

A total of 76 Credit is required for qualifying B.Sc. Honors/ M.Sc. Botany Course.

**SCHEME OF EXAMINATION/ASSESSMENT  
MODEL QUESTION PAPER (THEORY)  
JSS COLLEGE FOR ARTS, COMMERCE AND SCIENCE  
(AUTONOMOUS) OOTY ROAD, MYSURU- 25  
POST GRADUATE DEPARTMENT OF BOTANY  
M.Sc., Degree -----Semester Examination May/June-20--  
BOTANY**

Course/Paper: .....  
Course/Paper Code.....

**Time: 3 Hrs**

**Max Marks: 70**

**Instructions: 1) Answer all questions.  
2) Draw neat and labelled diagrams wherever necessary.**

**I. Answer the following; (10MCQs of 1 Marks each)**

**10 X 1 = 10**

- 2 from Unit I
- 3 from Unit II
- 2 from Unit III
- 3 from Unit IV

**II. Answer the following;**

**4 X 5 = 20**

- 2 from Unit I with internal choice
- 2 from Unit II with internal choice
- 2 from Unit III with internal choice
- 2 from Unit IV with internal choice

**III. Answer the following;**

**4 X10 = 40**

- 2 from Unit I with internal choice
- 2 from Unit II with internal choice
- 2 from Unit III with internal choice
- 2 from Unit IV with internal choice

**SCHEME OF PRACTICAL EXAMINATION/ASSESSMENT  
MODEL QUESTION PAPER (PRACTICALS)**

**JSS COLLEGE FOR ARTS, COMMERCE AND SCIENCE

POST GRADUATE DEPARTMENT OF BOTANY  
M.Sc., Degree I Semester Examination May/June-2018  
BOTANY**

Course/Paper: .....  
Course/Paper Code.....

**Time: 3 Hrs**

**Max Marks: 70**

Conducting Experiment/Micro-preparation /Plant identification	15	
Q II. Minor experiment/ Demonstrations/ Procedure Writing		10
Q III. Critically comments (3x5 Marks)	15	
Q IV. Identification 5x2 Marks)	10	
Q V. Viva-voce examination	10	
Q VI. Class Records/ Submissions	10	

Q I.

**PO M.SC. BOTANY**

<b>Sl. No.</b>	<b>PO</b>
1.	Conduct investigations of complex problems by the use of research-based knowledge on an independent term project.
2.	Transfer of appropriate knowledge and methods from one topic to another within the subject.
3.	Carry out practical work, in the field and in the laboratory, with minimal risk.
4.	Able to think logically and organize tasks into a structured form and assimilate knowledge and ideas based on wide reading of text books and through the internet.
5.	Apply the scientific knowledge of basic science, life sciences and fundamental process of plants to study and analyse any plant form.
6.	Knowledge and understanding of the range of plant biology in terms of structure, function and environmental relationships.
7.	Apply reasoning informed by the contextual knowledge to assess plant diversity, and the consequent responsibilities relevant to the biodiversity conservation practice.

**PSO M.SC. BOTANY**

<b>Sl. No.</b>	<b>COURSE</b>	<b>PSO</b>
1.	Algal Biology and Biotechnology	Phylogeny, thallus organisation, economic and ecological importance of algal community
2.	Biochemistry and Plant Physiology	Biomolecules, metabolic pathways and stress physiology in plants
3.	Cell Biology and Genetics	Cell originals and Mendelian principles
4.	Ecology, Conservation Biology and Phytogeography	Diversity of vegetation, distribution and its conservation
5.	Economic Botany	Economic values of different crop plants and their applications
6.	Major Project	Hands on experience in various fields of plant science
7.	Molecular Biology	Molecular level organisation in prokaryotes and eukaryotes with respect to various mechanisms involved
8.	Plant Anatomy and Histochemistry	Anatomical features and organisation of cells in plants
9.	Plant Breeding and Evolutionary Biology	Plant breeding methods, procedures and their application for crop improvement
10.	Plant Biotechnology	Tissue culture techniques and its application in development of resistant varieties
11.	Plant Propagation and Plant Breeding	Propagation methods and plant breeding procedures and their application in different fields
12.	Plant Propagation Techniques	Propagation methods and procedures and their application in different fields
13.	Phycology, Bryophytes, Pteridophytes and Gymnosperms	Distribution, classification and phylogeny of lower plant communities
14.	Phytopathology	Concepts of plant diseases defence mechanisms in plants and study of plant diseases
15.	Reproductive Biology of Angiosperms and Plant Morphogenesis	Embryological study of growth and development using plant models
16.	Seed Technology	Industrial scale processing of seeds up to marketing

17.	Systematics of Angiosperms	Angiospermic plant family study with their phylogeny
18.	Virology, Bacteriology, Mycology and Plant Pathology	Diversity, distribution of microorganism with respect to their economic aspects

**CO M.SC. BOTANY**

<b>Sl. No.</b>	<b>COURSE</b>	<b>CO</b>
1.	Algal Biology and Biotechnology	Specify in depth of thallus organization and phylogeny in algae
2.	Algal Biology and Biotechnology	Understand the details of toxins, blooms and distributions of algae
3.	Algal Biology and Biotechnology	Deliberate in depth about cultivation and marketing algae
4.	Algal Biology and Biotechnology	Specify the details of Algal products and uses
5.	Biochemistry and Plant Physiology	Learn in details with biomolecules and their function
6.	Biochemistry and Plant Physiology	Understand in depth about solute transport and photosynthesis in plants
7.	Biochemistry and Plant Physiology	Specify the details of metabolism of nitrogen, lipids and plant hormones
8.	Biochemistry and Plant Physiology	Understand in depth about Stress physiology
9.	Cell Biology and Genetics	Learn in detail about cell membranes transport and proteins
10.	Cell Biology and Genetics	Deliberate the Functions of cell organelles, programmed cell death
11.	Cell Biology and Genetics	Specify the extensions of Mendelian principles
12.	Cell Biology and Genetics	Learn about Sex determination and dosage compensation
13.	Ecology, Conservation Biology and Phytogeography	Understand the diversity of ecosystem and types of ecosystems
14.	Ecology, Conservation Biology and Phytogeography	Learn the in details of pollution and environmental biology
15.	Ecology, Conservation Biology and Phytogeography	Study the importance of biodiversity and conservation biology
16.	Ecology, Conservation Biology and Phytogeography	Detailed study of phytogeography and crop distribution
17.	Economic Botany	Specify the details of cereals, millets, pulses, oil yielding plants and study of horticultural plants and floriculture
18.	Economic Botany	Deliberate the characteristics of sugar yielding plants, spices and condiments
19.	Economic Botany	Understand the importance of fibre, timber and gum yielding plant
20.	Economic Botany	Deliberate on the medicinal plants and their applications
21.	Major Project	Learn the details of literature survey and methodology in research
22.	Molecular Biology	Identify the characteristics of genetic materials and its replication
23.	Molecular Biology	Learn the details of molecular basis of mutation, repair and recombination
24.	Molecular Biology	Deliberate the details of RNA formation, processing of RNA and post-RNA
25.	Molecular Biology	Understand in depth of gene regulation in prokaryotes and eukaryotes
26.	Plant Anatomy and Histochemistry	Learn in details of primary vegetative body of the plants
27.	Plant Anatomy and Histochemistry	Deliberate in details of differentiation in vascular tissues and study of apical meristems in shoot and root
28.	Plant Anatomy and Histochemistry	Deliberate the characteristics of secondary growth
29.	Plant Anatomy and	Understand the details of plant histochemistry

	Histochemistry	
30.	Plant Breeding and Evolutionary Biology	Learn in depth about plant breeding methods and techniques
31.	Plant Breeding and Evolutionary Biology	Understand the details of breeding for specific purposes
32.	Plant Breeding and Evolutionary Biology	Learn the details of Nature of evolution
33.	Plant Breeding and Evolutionary Biology	Identify the characteristics of variation and speciation
34.	Plant Biotechnology	Understand in depth about plant tissue culture and its techniques
35.	Plant Biotechnology	Specify the genetic engineering and tools used in it
36.	Plant Biotechnology	Understand the details of genetic manipulation, transgenic approaches to produce resistant plants
37.	Plant Biotechnology	Learn the details of engineering of crop plants for production of secondary metabolites
38.	Plant Propagation and Plant Breeding	Learn the details of importance of plant propagation, vegetative propagation and micro propagation
39.	Plant Propagation and Plant Breeding	Understanding of basic concepts of plant breeding and genetics
40.	Plant Propagation and Plant Breeding	Study types, purposes of plant breeding
41.	Plant Propagation and Plant Breeding	Deliberate study of advanced breeding aspects
42.	Plant Propagation Techniques	Learn the details of importance of plant propagation
43.	Plant Propagation Techniques	Understand in depth about types of vegetative propagation
44.	Plant Propagation Techniques	Learn the techniques of budding and layering
45.	Plant Propagation Techniques	Deliberate in details with examples of micro propagation in forestry and horticulture plants
46.	Phycology, Bryophytes, Pteridophytes and Gymnosperms	Understand the details of diversity, distribution, pigmentation and life cycle of algae
47.	Phycology, Bryophytes, Pteridophytes and Gymnosperms	Deliberate in depth of Bryophytes life cycle, classification, phylogeny and Economic importance
48.	Phycology, Bryophytes, Pteridophytes and Gymnosperms	Understand the details of Pteridophytes life cycle, phylogeny, classification, economic importance and anatomy
49.	Phycology, Bryophytes, Pteridophytes and Gymnosperms	Write down in details with examples Gymnosperms history, reproduction, edconomic importance and interrelationship
50.	Phytopathology	Learn the details of the concept, causative agents and disease cycle of plant pathogens
51.	Phytopathology	Deliberate the details of defense mechanisms in plants and its genetics
52.	Phytopathology	Study of Management of plant diseases
53.	Phytopathology	Identify in details with examples of diseases in crop plants
54.	Reproductive Biology of Angiosperms and Plant Morphogenesis	Understanding the microsporogenesis and historical overview
55.	Reproductive Biology of Angiosperms and Plant Morphogenesis	Specify in details with examples about megasporogenesis, fertilization, endosperm and embryo
56.	Reproductive Biology of Angiosperms and Plant Morphogenesis	Specify the details of models and concepts of plant morphogenesis
57.	Reproductive Biology of Angiosperms and Plant Morphogenesis	Understand in details with examples of plant growth and development, photomorphogenesis
58.	Seed Technology	Understand the seed science and concepts
59.	Seed Technology	Study the seed production and processing methods

60.	Seed Technology	Learn about seed quality parameters and tests
61.	Seed Technology	Deliberate the procedure of seed certification
62.	Systematics of Angiosperms	Understand the principles and applications of Taxonomy of angiosperms
63.	Systematics of Angiosperms	Specify the details of taxonomic literature
64.	Systematics of Angiosperms	Deliberate in details with examples Dicot and monocot family and features of classification systems
65.	Systematics of Angiosperms	Specify in details molecular systematics with examples of softwares and databases
66.	Virology, Bacteriology, Mycology and Plant Pathology	Learn the classification and characteristics of viruses, viroids, prions and diseases of it
67.	Virology, Bacteriology, Mycology and Plant Pathology	Deliberate in details with examples of Bacteria, archeabacteria, actinomycetes and mycoplasma and its economic importance
68.	Virology, Bacteriology, Mycology and Plant Pathology	Specify the Fungal diversity, life cycle and economic importance of fungi
69.	Virology, Bacteriology, Mycology and Plant Pathology	Understand in details of etiology, distribution and management of plant disease

**BOTANY: I SEMESTER- HARD CORE 1.1**  
**VIROLOGY, BACTERIOLOGY, MYCOLOGY AND PLANT PATHOLOGY**

**Theory-32 Hrs**

**Unit-1: Virology:** Origin and evolution of viruses; Classification of viruses-ICTV and Baltimore Systems; Genome diversity in viruses; Methods of cultivation of viruses; Purification and detection of viruses; Transmission of viruses; Mechanism of replication of DNA and RNA viruses; Viroids - Structure and multiplication; Prions - structure and multiplication; Prion diseases.

**Unit-2: Bacteriology:** Introduction and classification of Bacteria by Bergey's Manual of Determinative and Systematic Bacteriology; C. R. Woese- Three domain classification of Bacteria; Archaeobacteria and Eubacteria - diversity and evolution; Nutritional types of bacteria; Bacterial growth; Recombination in bacteria (conjugation transformation, and transduction); Brief account on actinomycetes; Structure and multiplication of Mycoplasma and Phytoplasmas; Economic importance of bacteria.

**Unit -3: Mycology:** Present status of fungi; Outline classification of fungi (Ainsworth-1973). Vegetative organization in fungi; Nutrition in fungi (saprotrophs, biotrophs, necrotrophs; symbiotrophs); Methods of reproduction in fungi - Asexual and sexual methods; Spore liberation in fungi; Evolution of sex in fungi; Heterothallism and parasexuality; Life cycle pattern and phylogeny of Myxomycotina, Mastigomycotina, Zygomycotina, Ascomycotina, Basidiomycotina and Deuteromycotina; Fungi and their economic importance.

**Unit-4: Plant Pathology:** Concepts and scope of plant pathology; Plant diseases and crop losses; Classification of plant diseases; Parasitism and disease development; Effect on physiology of host; Host range of pathogens; Defence Mechanisms in Plants; Plant Disease epidemics and plant disease forecasting; Methods of plant disease management; Study of plant diseases- Sandal Spike, Citrus Canker, Bacterial Blight of Paddy, Late Blight of Potato, Downy Mildew of Bajra, Tikka Disease of Ground nut, Grain Smut of Sorghum. Phloem Necrosis of Coffee, Root Knot Disease of Mulberry.

**Practicals-32 Hrs**

- 1) Laboratory guidelines, design, tools, equipments and other requirements for studying microorganisms.
- 2) Measuring the dimensions of microorganisms using Micrometry.
- 3) Determining total count of microbes using Haemocytometer.
- 4) Gram and special staining of bacteria.
- 5) Preparation of NA, PDA, sterilization, pouring, inoculation and culturing of bacteria/fungi.
- 6) Staining of fungi including VAM fungi.
- 7) Identification of fungi.
- 8) Measurement of bacterial growth by Spectrophotometer.
- 9) Recording environmental factors (Temperature, RH, and Rainfall and wind velocity).
- 10) Splash liberation of spores from diseased tissue.
- 11) Estimation of total phenols in diseased and healthy plant tissues.
- 12) Study of the following diseases: Sandal Spike, Citrus canker, Bacterial Blight of paddy, Late Blight of Potato. Downy Mildew of Bajra, Tikka disease of ground nut, Grain smut of Sorghum, Phloem Necrosis of Coffee, Root Knot disease of Mulberry.

**BOTANY: I SEMESTER - HARD CORE 1.2**  
**PHYCOLOGY, BRYOPHYTES, PTERIDOPHYTES AND GYMNOSPERMS**

**Theory-32 Hrs**

**Unit-1: Phycology:** Diversity and distribution of algae; Unicellular, colonial, filamentous, heterotrichous, parenchymatous, pseudoparenchymatous, siphonous forms; General characteristics, classification and phylogeny of algae; Pigmentation in algal groups; Role of photosynthetic and accessory pigments; Life cycles in algae - haplontic, diplontic, isomorphic, heteromorphic; Economic importance of algae.

**Unit -2: Bryophytes:** Introduction, general characteristics, classification and phylogeny of Bryophytes; Distribution, habitat, external and internal morphology and reproduction; Comparative account on gametophytes and sporophytes of bryophytes; Economic and ecological importance.

**Unit -3: Pteridophytes:** Introduction, classification and phylogeny; Morphology, anatomy reproductive biology and phylogeny; Psilophytes, Lycophytes, Sphenophytes, Filicophyta; Evolution of sorus; evolution of sporangium; Gemetophyte development - homosporous and heterosporous ferns; Heterospory and seed habit; Stellar evolution in Pteridophytes; Ecology of Pteridophytes; Economic importance.

**Unit- 4: Gymnosperms:** Distribution, general characteristics, classification and phylogeny of Gymnosperms; Range in morphology, anatomy, reproduction and interrelationships of - Cycadales, Ginkgoales, Coniferales, Gnetales; Pteridosperms; Economic importance of Gymnosperms.

**Practicals-32 Hrs**

**1-4) Algae:** Study of Cyanophyceae: *Anabaena*, *Oscillatoria*; Study of Chlorophyceae: *Oedogonium*, *Pediastrum*; Study of Phaeophyceae: *Turbinaria*, *Ectocarpus*; Study of Rhodophyceae: *Gracilaria*, *Batrachospermum*; Economic products of algae.

5-7) **Bryophytes:** Study of morphology, anatomy and reproductive morphology - Hepaticopsida- *Marchantia*, *Dumortiera*; Anthocerotopsida- *Anthoceros*, *Notothylas*; Bryopsida- *Bryum* and *Polytrichum*.

8-10) **Pteridophytes:** Study of vegetative habit, anatomy and reproductive morphology of *Psilotum*, *Lycopodium*, *Isoetes*, *Ophioglossum*, *Botrychium*, *Angiopteris*, *Pteris*, *Hymenophyllum*, *Marselia*, *Salvinia*, *Azolla*; **Paleobotany-** Study of Lepidodendrales, Calamitales, Sphenophyllales and Coenopteridales (Fossil Pteridophytes).

11-12) **Gymnosperms:** Study of morphology, anatomy and reproductive morphology of *Zamia*, *Pinus* and *Ephedra*, *Ginkgo*, *Auracaria*, *Podocarpus*, *Gnetum*, *Agathis*, *Cupressus*, *Thuja*; Economic importance of Gymnosperms.

**BOTANY: I SEMESTER - HARD CORE 1.3**  
**SYSTEMATICS OF ANGIOSPERMS**

**Theory-32 Hrs**

**Unit-1:** Introduction to plant systematics; Plant classification systems-artificial, natural and phylogenetic systems; Contributions of Carolus Linnaeus, Michel Adanson, de Jussieu, de Candolle to plant classification; Concepts of taxonomic hierarchy; Taxonomic Categories-Genus concept; Species concept; Intraspecific categories; subspecies; varieties and forms; History of botanical nomenclature; ICBN and ICN aims and principles; Rules and recommendations; Rule of priority; Typification; Author citation, Legitimate and illegitimate names; Name changes and synonyms; Effective and valid publication; Herbarium and its significance; Botanical gardens.

**Unit-2: Taxonomic Literature:** General taxonomic indices, world floras and manuals; Monographs and revisions; Bibliographies, catalogues and reviews; Periodicals, glossaries and dictionaries; Hortus Malabaricus; Taxonomic websites-IPNI, Plant List, Tropicos, Botanicum-Periodicum-Huntianum (BPH); Biodiversity Heritage Library (BHL); Botanicus, Index Herbariorum; Taxonomic Keys- bracketed keys, indented keys, numbered keys, edge punched and body punched keys.

**Unit-3:** Study of plant classification Systems; Broad outlines of Bentham and Hooker's system, Engler and Prantl's system, Hutchinson's system, Takhtajan's system, and Cronquist's system; Numerical Taxonomy-principles, selection of characters, merits and demerits; Angiosperm Phylogeny Group (APG) III & IV classification; Study of angiosperm families-Magnoliaceae, Nymphaeaceae, Urticaceae, Papaveraceae, Euphorbiaceae, Acanthaceae, Rubiaceae, Alismataceae, Cyperaceae, Commelinaceae, Zingiberaceae, Liliaceae, Dioscoreaceae and Orchidaceae.

**Unit-4: Molecular Systematics:** Nuclear, mitochondrial and chloroplast genes. Gene sequencing, analysis of molecular data, alignment of sequences; Phylogenetic tree construction-Maximum Likelihood and Neighbour Joining Methods; Phylogenetic analysis-rooted and unrooted trees; Data analysis- alignment, substitution, model building; Phylogenetic softwares-CLUSTAL W, MEGA, Mesquite, PAUP, PHYLIP, Treefinder, TreeBase.

**Practicals-32 Hrs**

1) Methods of preparation and maintenance of Herbaria.

2-4) A field trip of three days to a floristically rich area to study plants belonging to different families (Every student shall submit a report for evaluation for two credits).

5-10) Identification of the flowering plants in and around Mysore using keys, floras and monographs.

11-12) Construction of phylogenetic tree based on molecular data of plant species retrieved from GenBank.

**BOTANY: I SEMESTER - SOFT CORE 1.1**  
**FUNGAL BIOLOGY AND BIOTECHNOLOGY**

**Theory-32 Hrs**

**Unit-1:** Introduction and historical overview of mycology; General characteristics and importance of fungi in human life; Fungi –Taxonomy and Systematics; Fungi in genetic and applied research; Estimation of Fungal diversity; Quantitative Indices- species richness, species evenness and species abundance; Molecular methods used for fungal diversity estimation-nuclear genome, messenger RNA transcripts, Ribosomal/DNA sequence comparisons and mitochondrial genome.

**Unit-2:** Macro fungi and micro fungi living on plant substrata; Lignicolous macrofungi; Lichenized fungi; Sequestrate fungi; Endophytic fungi; Saprobic soil fungi; Fungi in stressful environment; Mutualistic, arbuscular, and endomycorrhizal fungi; Yeasts; Fungicolous fungi; Fungi in fresh and marine water habitats; Fungi associated with aquatic animals; Fungi as parasites of humans and plants; Fungi associated with animals, insect, arthropod and nematodes; Coprophilous fungi.

**Unit-3:** Fungal Fermentation and Food Products: Food and Beverages; Single cell proteins- Myco-proteins; Food processing by fungi-bread, soybean products, cheese and fermented milk; Fungal secondary metabolites-antibiotics, immunosuppressive agents, anti-tumour agents, fungal toxins as medicines; Fungal pigments; Steroid transformation; Fungal enzymes; Bio-control agents; Application of molecular biology in fungal biotechnology.

**Unit-4: Mushrooms and fungi in medicine;** Toxic macromycetes; Mushroom cultivation; Model organisms- *Saccharomyces cerevisiae/Neurospora crassa*; Bio-deterioration of food grains and mycotoxins; Fungal communities of herbivore dung; The fungal communities of composts; Fungal interactions and practical exploitation; Heavy metals in fungi-accumulation and sorption; Biotechnology of wood rotting fungi.

**Practicals-32 Hrs**

- 1) Study of Myxomycetes and Chytridiomycetes
- 2) Study of Plasmodiophoromycetes and Oomycetes
- 3) Study of Zygomycetes
- 4) Study of Ascomycetes
- 5) Study of Basidiomycetes
- 6) Study of
- Deuteromycetes 7) Study of
- Lichens
- 8) Study of VAM fungi
- 9) Detection of aflatoxin B1
- 10) Cultivation of Oyster mushroom.
- 11) Alcoholic fermentation of grape juice by *Saccharomyces*.
- 12) Cultivation of *Penicillium* and testing antibiotic principle.
- 13) Study of edible and poisonous mushrooms.
- 14) Study of fungal model organisms - *Saccharomyces cerevisiae/Neurospora crassa*

**BOTANY: I SEMESTER - SOFT CORE 1.2**  
**ALGAL BIOLOGY AND BIOTECHNOLOGY**

**Theory-32 Hrs**

**Unit-1: Algal Biology:** Historical development of Phycology and contributions of Phycologists; Thallus organization in algae-Cyanophyceae, Chlorophyceae, Charophyceae, Euglenophyceae, Xanthophyceae, Bacillariophyceae, Phaeophyceae and Rhodophyceae; General characteristics, algal classification, affinities and phylogeny- polyphasic approach; Molecular markers for phylogenetic study; Algal physiology- ultra-structure of cells; Photosynthesis and respiration.

**Unit-2: Algal blooms and Toxins:** Blooms produced by algal groups; Toxins produced by cyanobacteria, diatoms, dinoflagellates, prymnesiophytes and eugleoids; bioaccumulation and biomagnification; effects of toxins on aquatic life and humans; Scenario in coastal waters of India- monitoring and safety measures; Algal communities of extreme environments- Thermal hot springs, cold springs, snow and ice; **Fresh water algae-** Ecological classification of fresh water organisms; Lentic communities of algae (pond, lake, bog, swamp); Lotic communities (streams, rivers, rapids; **Marine algae-** Marine biota; zonation; quantitative study of phytoplanktons, marine communities of algae.

**Unit-3: Algal Biotechnology:** Algal culture techniques; general principles; physical parameters; culture media; strain improvement; **Algal cultivation methods-**conventional, advanced; **Cultivation of microalgae-*Spirulina*** and ***Dunaliella***; Media, seeding, cultivation systems, harvesting; processing, drying methods, packaging, marketing; Algal cultivation and production in India; **Cultivation of macroalgae- *Porphyra***; Nutritional value; importance of life cycle; methods of cultivation in advanced countries; Pillar, semi raft floating and open sea cultivation.

**Unit-4: Applications of algae/products:** Pollution indicators, treatment of waste water plants, heavy metal toxicity and phyco-remediation; Bio-fouling and biofuel production; Algal products as sources of nutraceuticals; Food colorants; Aquaculture feed; Therapeutics and cosmetics; Medicines; Dietary fibres from algae and uses; Biotechnological applications of algal silica and oils.

**Practicals-32 Hrs**

- 1) Study of fresh water planktonic forms in the lake samples.
- 2) Study of fresh water diatoms.
- 3) Chlorophyceae: *Ulva*, *Caulerpa*, *Halimeda*, *Acetabularia*.
- 4) Xanthophyceae: Mounting of *Botrydium* from soils.
- 5) Phaeophyceae: *Dictyota*, *Sargassum*, *Cystophyllum*.
- 6) Rhodophyceae: *Gracilaria*, *Gelidium*.
- 7) Cyanophyceae: *Microcystis*, *Nostoc*, *Spirulina*.
- 8) Estimation of carotene content in algal cells .
- 9) Culturing of microalgae: *Spirulina*/*Chlorella*/*Scenedesmus*/*Dunaliella*.
- 10) Applications of algal products: Agar, spirulina tablets/powder, beta-carotene, phycobiliproteins, triglycerides, Mycosporine like amino acids (MAA), diatom silica as nanoparticles.
- 11) Visit to National Institute of Oceanography, Goa.
- 12) Study of algal herbaria.

**BOTANY: I SEMESTER - SOFT CORE 1.3**  
**LICHENOLOGY AND MYCORRHIZAL TECHNOLOGY**

**Theory-32 Hrs**

**Unit-1:** Introduction: Photobionts- identification, reproduction, and taxonomy of photobionts; Occurrence within lichens; Mycobionts- Lichenized versus nonlichenized fungi; Bryophilous and folicolous lichens; Thallus morphology and anatomy; Growth forms - crustose lichens, foliose lichens, fruticose lichens; Vegetative structures- Homoiomerous thallus, stratified thallus, cortex, epicortex, and epinecral layer, photobiont layer and medulla, lower cortex, Attachment organs and appendages; Cyphellae and pseudocyphellae; Cephalodia (Photosymbiodemes); Reproductive structures- sexual reproduction in lichen-forming ascomycetes; Mating systems, dikaryon formation, Ascomal ontogeny, Ascosporeogenesis; Ascus structure and function; Generative reproduction: ascoma, perithecia, apothecia, Thallinocarpia, Pycnoascocarpia, Hysterothecia, Asci, Basidioma; Vegetative reproduction- aposymbiotic propagules, symbiotic propagules; Systematics of lichenized fungi- History, classification and phylogeny.

**Unit-2:** Morphogenesis- Acquisition of a compatible photobiont; Recognition and specificity; Structural and functional aspects of the mycobiont–photobiont interface; Genotypes and phenotypes, growth patterns; Biochemistry and secondary metabolites- intracellular and extracellular products; The fungal origin of the secondary metabolites; Major categories of lichen products; Application to pharmacology and medicine; Harmful properties of lichen substances, lichens in perfume, lichens in dyeing; Stress physiology and the symbiosis- stress tolerance, limits to stress tolerance; harmful effects of stress, constitutive and inducible stress tolerance, evolution of stress tolerance in lichens; Modes of water uptake, light, temperature, carbon dioxide; The carbon economy of lichens.

**Unit-3:** Nitrogen, its metabolism and potential contribution to ecosystems, Methods of determination of nitrogen fixation; Nutrients- chemical and physical properties of nutrients and metals; Nutrient requirements, sources of nutrients, accumulation mechanisms, compartmentalization of elements within lichens; Metal toxicity, metal tolerance; Environmental role of lichens- dispersal, establishment, pedogenesis and biodeterioration; Community structure, succession, ecosystem dynamics; Animal and lichen interactions; Forest management, conservation, environmental monitoring; Lichen sensitivity to air pollution- lichens in relation to sulfur dioxide, oxidants and lichens, hydrogen fluoride and organopollutants.

**Unit-IV:** Mycorrhizal fungi: Introduction and classification; Types of mycorrhizas- Arbutoid mycorrhizas, ectomycorrhizas, vesicular arbuscular mycorrhizas or arbuscular mycorrhizas, ectendomycorrhizas, ericoid mycorrhizas, monotropoid mycorrhizas and orchid mycorrhizas; Phosphate solubilisation; Ecological significance of AM fungi; Importance of mycorrhiza in evolution of land plants; Role of mycorrhiza in agriculture, horticulture and forestry.

**Practicals-32 Hrs**

- 1-3) Survey of lichen vegetation in the study area: Frequency, density and abundance.
- 4) Determination of species richness and species diversity.
- 5) Isolation and maintenance of cyanobionts and phycobionts
- 6) Isolation and maintenance of mycobionts

- 7) Analysis of secondary metabolites of lichens.
- 8) Biological activity of secondary metabolites of the lichens.
- 9) Culture methods for lichens and lichen symbionts.
- 10) Root clearing and staining technique to study arbuscular mycorrhizal fungi.
- 11) Assessment of % root colonization of arbuscular mycorrhizal fungi.
- 12) Isolation and identification of arbuscular mycorrhizal fungi.

**BOTANY: I- SEMESTER - SOFT CORE 1.4**  
**PHYTOPATHOLOGY**

**Theory-32 Hrs**

**Unit-1:** Concept of plant disease, Economic aspects of plant diseases; Types of plant diseases- Infectious diseases and non-infectious diseases; Causative agents of plant diseases; Angiospermic parasites; Development of plant pathology; Plant pathology in practice- Plant Clinic and Plant Doctor Concept; Parasitism and pathogenicity; Disease triangle; Infections and colonization; Weapons of plant pathogens; Effect of pathogen on physiology of host plant (photosynthesis, translocation and transpiration, respiration, permeability, transcription and translation).

**Unit-2: Defence mechanisms in Plants-** Pre-existing structural and chemical defences, induced structural and biochemical defences; Plant disease epidemiology- Elements of an epidemic and development of epidemics; Plant Disease forecasting; Genes and Diseases, Gene for gene concept, non-host resistance; Types of plant resistance to pathogens (Horizontal and Vertical Resistance); 'R' Genes and 'avr' genes; Genetics of virulence in pathogens and resistance in host plants; Breeding for disease resistance.

**Unit-3: Management of Plant Diseases:** Exclusion, eradication, cross protection, direct protection, integrated disease management, chemical methods of plant disease control; Biotechnological approaches to plant disease management; Gene silencing and disease control; Mechanism of gene silencing and control of viral diseases; Engineered resistance to viral, bacterial, fungal and insect diseases of crop plants.

**Unit-4: Study of diseases of crop plants:** Potato Spindle Tuber Disease, Tobacco Mosaic Disease, Sandal Spike Disease, Bacterial blight of Paddy, Citrus Canker, Late Blight of Potato, Downy Mildew of Maize, Blight of Paddy, Angular leaf spot of Cotton, Tikka disease of ground nut, Rust of coffee, Grain and Head smut of Sorghum. Leaf blight of Paddy, Blast of Paddy, Powdery mildew of cucurbits, Wilt of Tomato, Phloem Necrosis of Coffee, Root Knot of Disease of Mulberry and Vegetables; Non-parasitic diseases of plants; Seed-borne diseases.

**Practicals-32 Hrs**

- 1) Isolation of bacterial, fungal, and nematode plant pathogens of crop plants.
- 2) Study of mineral deficiency diseases of Tomato and French bean.
- 3) Estimation of foliar infection by Stover's method.
- 4) Study of spore germination.
- 5) Estimation of total phenols in diseased and healthy plant tissues.
- 6) Mycoflora analysis by Standard Blotter Method SBM/agar plating method.
- 7)-9) Study of Tobacco mosaic, Bacterial blight; Downy mildew of Maize; Powdery mildew of cucurbits; Grain smut of sorghum; Leaf rust of Coffee; Root Knot of Mulberry. Bunchy top of banana, Grassy shoot of sugar cane, Little leaf of Brinjal; Potato Spindle Tuber Disease (PSTVd)
- 10) Study of effect of pathogens on seed germination and vigour index.
- 11) Study of effect of fungicide on seed-borne pathogens.
- 12) Study of Fungal bio-control agents.

## BOTANY: II- SEMESTER- HARDCORE 2.1

### REPRODUCTIVE BIOLOGY OF ANGIOSPERMS AND PLANT MORPHOGENESIS

#### Theory-32 Hrs

**Unit-1: Reproductive Biology of Angiosperms:** Historical overview; Contributions of P. Maheshwari; BM Johri; BGL Swamy to the development of embryology in India; Microsporogenesis and Microgametogenesis- wall layers and functions; Tapetum- types, concept of male germ unit and its significance; Pollen morphological features; Unusual features-pollen development in Cyperaceae, pollen embryo sac; Concept and scope of palynology.

**Unit-2: Megasporogenesis and Megagametogenesis;** Ovular structure and types; Development of monosporic, bisporic, tetrasporic and special types of embryo sacs; Ultra structure and nutrition of female gametophyte, concept of female germ unit and its significance; Fertilization- a general account, double fertilization, single fertilization, heterofertilization and polyspermy; Pollen recognition and rejection reactions - types, structures, methods to overcome incompatibility reactions; Endosperm- types, haustorial variations, ruminant and composite endosperm; Embryo- structure, development of monocot, dicot and grass embryo; Significance of embryonal suspensor; Experimental Embryology- scope and applications.

**Unit-3: Plant Morphogenesis:** Models of morphogenesis- comparison of plant v/s animal morphogenetic pathways: Embryo, *Arabidopsis thaliana*; Concepts- cell fate/ fate maps, gradients, stem cells in plants and their significance in development, polarity, symmetry, totipotency of cell types, pluripotency, plasticity, differentiation, redifferentiation, dedifferentiation and regeneration in *Acetabularia* and *Arabidopsis thaliana*.

**Unit-4: Plant Growth and Development:** Types, shoot apical meristems, root meristems; control of cell division in meristems; Quiescent center and meristeme de attente; *Arabidopsis*- vascular patterning and leaf development, abnormal growth; Cellular basis of growth- maintenance of cell shape; Cytoskeletal elements; Photomorphogenesis- definition, history, Hartmann's technique; Photoreceptors and photo morphogenesis, localization and properties; Effect of blue light-mediated photomorphogenesis with suitable examples.

#### Practicals-32 Hrs

##### Reproductive Biology of Angiosperms:

- 1) Study of microsporangium- slides: wall layers, tapetal types, two-celled and three-celled pollen; pollen tetrads.
- 2) Study of pollen germination: *Balsam*, *Delonix*, *Hibiscus* and *Peltaphorum*
- 3) Study of megasporangium-slides: female gametophyte development in *Penstemon*, *Xyris pauciflora*, 2, 4, 8-nucleate stages, mature embryo sac.
- 4) Endosperm mounting- *Cucumis sativus*, *Grevillia robusta* and *Croton sparsiflorus*
- 5) Embryo: Slides-monocot, dicot and grass embryo.
- 6) Embryo mounting : *Crotalaria*.

##### Plant Morphogenesis:

- 7) Study of stem cells in plants: SAM, RM.
- 8) Regeneration abilities of shoot apical meristems of dicots on media with combinations of growth regulators.
- 9) Study of totipotency in cell types: stomata, epidermal cells, stem and leaf explants on a tissue culture media.
- 10) Polarity in stem cuttings: *Pothos* spp.
- 11) Study of regeneration in succulents *Kalanchoe*, *Byrophyllum*.

- 12) Study of leaf galls of plants: *Pongamia pinnata* and *Achyranthes aspera*: Morphological observations and histology.
- 13) Study of *Arabidopsis thaliana* as a model plant.

**References:**

**BOTANY: II- SEMESTER - HARD CORE 2.2**  
**CELL BIOLOGY AND GENETICS**

**Theory-32 Hrs**

**Unit-1: Bio Molecules and Membranes:** Structure, composition of bio-molecules and their stabilizing interactions (carbohydrates, lipids, proteins and nucleic acids); Unit membrane structure and functions; Membrane proteins, membrane transport and the electrical properties; Intra-cellular compartments and protein sorting; Intracellular membrane traffic; Cytoskeletons.

**Unit-2: Functions of Organelles:** Cell wall, membranes, nucleus, mitochondria, Golgi bodies, lysosomes, spherosomes, peroxisomes, ribosomes, endoplasmic reticulum, Plastids, chloroplast, vacuoles and cytoskeleton; Cell cycle and mechanism of cell cycle regulations; A brief account of cell signalling, receptors, second messengers; General mechanism of signal transduction pathway; Programmed cell death in life cycles of plants.

**Unit-3: Extensions of Mendelian Principles** co-dominance, incomplete dominance, gene interactions, multiple alleles, lethal alleles, pleiotropy, penetrance and expressivity, polygenic inheritance, linkage and crossing over, sex linked inheritance, sex limited and influenced traits, genome imprinting, extra nuclear inheritance; **Concept of the gene-**classical-alleles, multiple alleles, pseudo-alleles, complementation test, experiments on rII locus and lozenge locus, modern- jumping genes, overlapping and genes within genes, split genes, nested genes, fusion genes; **Gene mapping methods-** linkage maps, tetrad analysis; Recombination in bacteria mapping genes in bacteria by interrupted mating technique, fine structure mapping, transduction and transformation mapping, mapping genes in Bacteriophages,

**Unit-4: Sex Determination and Dosage Compensation:** Chromosomal and genetic basis of sex determination; Mechanism of sex determination in *Melandrium*, *C. elegans*, *Drosophila* and humans, dosage compensation mechanisms in humans, *Drosophila* and *C. elegans*. **Transposable elements-** discovery in maize and bacteria, transposal elements in bacteria and bacteriophage, types and functions; Transposable elements in eukaryotes- Plants, *Drosophila* and Humans, mechanisms of transpositions; Transposable elements in research.

**Practicals-32 Hrs**

- 1) Determination of reducing sugars by Nelson-Somogyim's method.
- 2) Estimation of total soluble sugars by volumetric method.
- 3) Quantitative determination of free Amino acid content in germinating seeds.
- 4) Estimation of ascorbic acid in plant tissues.
- 5) Estimation of Phospholipids by TLC.
- 6) Slides/Charts/photos NP (Cytology Genetics and Embryology).
- 7) Study of mitosis in normal and induced root tips cells of Onion.
- 8) Study of meiosis in onion flower buds , translocation in *Rhoeo*.
- 9) Study of special chromosomes- B chromosomes, and sex chromosomes.
- 10) Determination of chiasma frequency in onion.
- 11) -12) To solve genetic problems on linkage, ordered and unordered tetrads.

**BOTANY: II SEMESTER HARD CORE 2.3**  
**PLANT BREEDING AND EVOLUTIONARY BIOLOGY**

**Theory-32 Hrs**

**Unit-1: Introduction:** Objective and role of plant breeding; Evolution of plant breeding, scope of plant breeding, sciences related to plant breeding, Vavilov's concept of origin of centers of origin of crop plants; Recent trends in plant breeding; **Breeding Methods**-plant introduction and acclimatization, domestication and agriculture, pure line, clonal, mass and progeny selections, recurrent selection, pedigree, bulk and back cross methods; Heterosis breeding synthetic and composite varieties; **Breeding Techniques**-Mutation breeding, polyploidy, hybridization, tissue culture techniques in crop improvement, protoplast fusion, electrophoration, electro-fusion, biolistics, somatic hybridization, transgenic plants (GMO's); The role of Gene technology in plant breeding.

**Unit-2: Breeding for Specific Purposes:** Breeding for disease resistance, insect resistance, drought and salinity, quality trait, multiple cropping systems, ideotype breeding, breeding for Adaptation; **Crop breeding and seed production**- Breeding field crops, seed production techniques, release of new varieties, intellectual property rights, computer application in plant breeding, crop breeding Institutes/Centers; Genetic resources and germplasm conservation; Scientific Plant breeding; Green revolution; The elite crop (Golden rice); Contributions of **Dr.**

M.S. Swaminathan, Dr. Norman E. Borlaug and N.I. Vavilov.

**Unit-3: Nature of Evolution :** The origin, theories of evolution of life, earth and the universe,; Conditions of the early earth, emergence of the first living cell, origin of prokaryotic and eukaryotic cells, life in the Palaeozoic, Mesozoic and Coenozoic era. **Development of Evolutionary thoughts;** Ecological context, before Darwin, Darwinism, Darwin's evolutionary theory, Neo – Darwinism, modern synthesis: **Fossil evidence of Ancient life,** fossilization,; Interpreting geological time scale and fossil records; Evidences from comparative, morphology, patterns of development, comparative physiology and biochemistry, biogeography, palaeontology, taxonomy, anatomy and embryology, plant and animal breeding; Evidence from changing earth and sea; Extinctions; Evolutionary ecology.

**Unit-4: Natural Selection :** Types of natural selection, selective forces, selection models, sexual selection, selection and non adaptive characters, Adaptive radiation, artificial selection, **Variation-** gene flow, genetic drift, gene mutation - Mendelian concept, chromosomal mutation, architectural changes in chromosomes; The Hardy – Weinberg law, polyploidy in plant evolution; Speciation and origin of higher categories -Types of speciation, models of speciation, pattern of speciation, isolating mechanism and species formation, signification of speciation; Molecular evolution.

**Practicals-32 Hrs**

- (1) Study of floral biology of crops - typical examples of self and cross pollinated plants.
- (2) Selfing and hybridization techniques - Bagging and emasculation.
- (3) Pollen viability: germination test and TTC test.
- (4) Studying of centre's of origin of cultivated crops - N.I. Vavilov Concept.
- (5) Mode of pollination study in different crops.
- (6) Identification of crop breeding institutes/ centers and logos.
- (7) Studying and identification of contributors of plant breeding - M.S. Swaminathan, N.I. Vavilov, Norman . E. Borlaug .
- (8) Study of contributions of scientists to evolutionary biology.
- (9)-12) Study of models and photographs related to evolution.

**BOTANY: II- SEMESTER - SOFT CORE 2.1**  
**PLANT ANATOMY AND HISTO-CHEMISTRY**

**Theory-32 Hrs**

**Unit-1: Plant Anatomy:** Primary vegetative body of the plant; Anatomical features of leaf, stem and root (dicot and monocot); leaf of fern and gymnosperm; Structure of modified leaves- Kranz anatomy and C4 photosynthesis; Ultra-structure and chemistry of the cell wall; formation of the cell wall and its uses.

**Unit-2: Anatomy of Vascular Tissue:** Ultra structure and differentiation of xylem and phloem tissues; Apical meristems- shoot apex in Pteridophytes, Gymnosperms and Angiosperms, theories, root apical meristems.

**Unit -3: Secondary Growth:** Vascular cambium, secondary xylem of gymnosperms and dicots and secondary phloem of Gymnosperms and dicots; Periderm and bark; Anomalous secondary growth in monocots and climbers; Leaf ontogeny - Dicot- simple, compound, Monocot; Floral anatomy-flower parts, floral meristem, vascular system.

**Unit-4: Plant Histochemistry:** Tests for minerals, carbohydrates, lignins, polyphenols, proteins, lipids and nucleic acids; Study of instruments: (a) Camera lucida (b) Micrometry (c) Microtome. Principles of histo-chemical stains; Killing, fixing and staining of plant tissues; Double staining- TBA method.

**Practicals-32 Hrs**

- 1) Staining of xylem and phloem elements.
- 2) Study of anatomy of roots in: *Ficus, Musa, Dieffenbachia, Vanda*.
- 3) Study of anomalous secondary growth in the following examples: Stem of *Aristolochia, Nyctanthes, Pyrostegia, Peperomia, Tinospora, Achyranthes*.
- 4) Study of Ecological anatomy.
- 5) Study of Vasculature in floral organs.
- 6) Studying double staining technique.
- 7-11) Embedding: TBA method, embedding for electron microscope, Sectioning, Microtomes, whole mounts maceration.
- 12) Histochemical- PAS Test, Sudan black- lipids, Feulgen reaction – Nucleic acids.

**BOTANY: II- SEMESTER - SOFT CORE 2.2**  
**ETHNO-BOTANY AND INTELLECTUAL PROPERTY RIGHTS (IPR)**

**Theory - 32 Hrs**

**Unit-1: Ethno-botany:** Introduction, concept, scope and objectives; Ethno-botany as an interdisciplinary science; The relevance of ethno-botany in the present context; Ethnic groups; Ethno-botany- Major and minor ethnic groups of India and their life styles; Forest Vs. ethnic groups; Plants in tribal life with reference to Magico-religious rituals and social customs; Sacred groves.

**Unit-2:** Methodology used in the study of Ethnobotany and Ethno pharmacology: Field work, Herbarium, Ancient Literature, Archaeological findings, temples and sacred places, protocols. Preliminary phyto-chemical analysis of ethno-botanical important medicinal plants.

**Unit-3:** Role of ethno-botany in modern Medicine with special examples; Medico-ethno-botanical Sources in India with special reference to Karnataka; Tribals Vs. Agriculture: Shifting, Podu and Jhum cultivation; Role of ethnic groups on surrounding environment; Crop genetic sources; Endangered taxa and forest management (participatory forest management); Ethno- botany as a tool to protect interests of ethnic groups; Sharing of wealth concept with few examples from India.

**Unit-4:** Study of Intellectual Property Rights – patents, trademark, geographical indication, copyright; IPR and Traditional Knowledge; Bio-piracy of traditional knowledge; Ethno botany and legal aspects; National and international organizations and treaty related to traditional knowledge – WIPO, TKDL, TRIPS, CBD, Nagoya protocol etc., Ethno botany as a source (recent) of already known drugs: a) *Withania* as an antioxidant and relaxant b) *Sarpagandha* in brain ailments c) *Becopa* and *Centella* in epilepsy and memory development in children d) *Phyllanthus fraternus* in diabetic and viral jaundice e) *Artemisia* as a powerful cerebral anti malarial agent and its possible use in tuberculosis.

**Practicals-32 Hrs**

- 1) Survey and collection important ethno botanical plants by using questionnaire and interview.
- 2) Preliminary phyto- chemical analysis of medicinal plants.
- 3) Study of biological functional properties of crude drugs – Anti microbial activity.
- 4) Study of methods of *in-situ* or *ex-situ* conservation of important medicinal plants.
- 5) Study of techniques used in Pharmacognosy – organoleptic, anatomy and chemical methods.
- 6) A visit to a Tribal area to conduct field work and collect ethno botanical information / data.
- 7) Listing of Crude drugs in Pansali shops (local crude drugs shops) and their identification (little known drugs only).
- 8) -12) Visit to nearby Western Ghats and Sacred Groves.

**BOTANY: II- SEMESTER - SOFT CORE 2.3**  
**ECONOMIC BOTANY**

**Theory -32 Hrs**

**Unit- 1: Economic Botany:** The origin of cultivated plants and Agriculture; The future role of plants in relation to mankind; Introduction to Green revolution; Study of origin, distribution, cultivation and utility of the useful parts of the following- - rice, wheat, maize, barley, sorghum and millets; Red gram, green gram, black gram, horse gram, pea, cow pea, bengal gram; Oil Yielding plants- sunflower, safflower, groundnut, linseed, rape seed; A brief account of economically important horticultural and floricultural plants.

**Unit- 2: Economic Botany:** Study and utility of the useful parts of the following- Sugar yielding plants- sugar cane and sweet potato, sugar beet and *Stevia*; Spices and condiments - ginger, turmeric, cardamom, cinnamon, clove, saffron, all spice, black pepper, nutmeg, red pepper, coriander, cumin, fennel and *Vanilla*.

**Unit -3: Economic Botany** Study and utility of the useful parts of the following- fibre- cotton, jute, flax, hemp, Sunn hemp, China grass, coconut and Kapok; Timber yielding plants- *Tectona* and *Dalbergia*; Dyes- indigo, henna; Masticatories and fumitories-areca nut, betel leaf, tobacco; rubber- Para rubber and other substitutes; Gums- Gum Arabic, Karaya gum.

**Unit-4: Medicinal Botany:** Scope and importance of medicinal plants; Indigenous medicinal Sciences; Important medicinal plants and their uses; Major exporters and importers of traditional medicinal plants and plant products; Application of natural products to certain diseases- jaundice, cardiac, infertility, diabetics, blood pressure and skin diseases; Poisonous plants.

**Practicals-32 Hrs**

- 1) Utility, uses and economic importance of cereals and millets.
- 2) Utility, uses and economic importance of horticultural and floricultural plants
- 3) Utility, uses and economic importance of pulses and oil yielding crops.
- 4) Utility, uses and economic importance of sugar yielding crops.
- 5) Utility, uses and economic importance of spice and condiments.
- 6) Utility, uses and economic importance of fiber and timber yielding plants.
- 7) Utility, uses and economic importance of dye, rubber and gum yielding plants
- 8) Utility, uses and economic importance of masticatories and fumitories
- 9) -12) Study of medicinal and poisonous plants.

**BOTANY: II SEMESTER- OPEN ELECTIVE 2.1**  
**MEDICINAL PLANTS**

**Theory-32 Hrs**

**Unit-1: Medicinal Plants:** History, scope and importance of medicinal plants; Indigenous medicinal sciences; History, origin, panchamahabhutas, saptadhatu and tridosha concept, Rasayana, plants used in ayurvedic treatments, Siddha: Origin of Siddha medicinal systems, Basis of Siddha system, plants used in Siddha medicine. Unani: History, concept: Umoor-e-tabiya, tumors treatments/ therapy, polyherbal formulations.

**Unit-2: Medicinal Plants Conservation:** Conservation of endangered and endemic medicinal plants; Endemic and endangered medicinal plants; Red list criteria; *In-situ* conservation- biosphere reserves, sacred groves, national parks; *Ex situ* conservation- botanic gardens, ethno medicinal plant gardens; Propagation of medicinal plants - objectives of the nursery, its classification, important components of a nursery, sowing, pricking, use of green house for nursery production, propagation through cuttings, layering, grafting and budding.

**Unit - 3: Funding for Cultivation of Medicinal Plants:** Sources of financial aids for medicinal plant cultivation: Aims and objectives, Functions and activities of the board, Schemes and Projects for Financial assistance, Funding of projects; Procedure for processing project proposal for approval, Implementation and monitoring.

**Unit- 4: Ethno botany and Folk medicines:** Definition; Ethno botany in India: Methods to study ethno botany; Applications of Ethno botany: National interacts. Ethno medicine. Application of natural products to certain diseases- Jaundice, cardiac, infertility, diabetics, Blood pressure and skin diseases. Brief introduction to poisonous plants.

- 4) Yoganasimhan, S.N. Medicinal Plants of India- Vol 1- Karnataka, Interline Publishing Pvt. Ltd.

**BOTANY: III- SEMESTER - HARD CORE 3.1**  
**BIOCHEMISTRY AND PLANT PHYSIOLOGY**

**Theory -32 Hrs**

**Unit-1: Biochemistry-** Brief account of plant structural and functional molecules- carbohydrates, proteins, lipids and nucleic acids; classification, structural and functional properties of bio molecules; Biochemistry of cell membranes; **Lipids**-building and storage molecules, classification and significance; **Proteins**- classification, structure- primary, secondary, tertiary and quaternary structure; properties of proteins; **Enzymes**- Nomenclature, nature and properties of enzymes, active sites, co-enzymes, kinetics of enzyme action, catalysis, specificity and inhibition, allosteric enzymes, ribozyme and abzyme.

**Unit-2:Solute transport:** Transport of solutes across the membranes Transmembrane proteins, Transport of ions, solutes and macro-molecules, Mechanism of translocations in phloem; Role played in signal transduction pathway stomatal physiology; **Phytosynthesis in higher plants** (i) Photophosphorylation - Calvin cycle; **Photorespiration** - C4 – Pathway, CAM in plants; Oxidative Phosphorylations; Glycolysis -TCA – Cycle and terminal oxidation.

**Unit-3: Plant Hormones-** plant hormones-discovery, biosynthesis, metabolism, transport and physiological effects of plant hormones and their applications; **Nitrogen metabolism** -(i) Molecular mechanism of N<sub>2</sub> fixation (ii) Biosynthesis of amino acids (iii) Assimilation of nitrate and ammonium; **Lipid metabolism**- fats and oils biosynthesis and oxidation of lipids; Physiology of seed germination and flowering.

**Unit -4: Stress Physiology:** Water deficit and its physiological consequences; Drought tolerance mechanisms, Salinity stress and plant responses. Heat stress and heat shock proteins; Metal toxicity in plants. Biotic stress, HR and SAR mechanisms; **Mineral nutrition**- in plants and deficiency diseases; **Plant development**- physiology of flowering; **Phytochrome**- photochemical and biochemical properties of phytochrome; Concept of photoperiodism and vernalization and its influence on flowering;

**Practicals-32 Hrs**

- 1) Estimation of protein by Lowry's method
- 2) Determination of water potential of tissue by plasmolytic method
- 3) Determination of water potential by Gravimetric method
- 4) Quantitative estimation of chlorophyll a, chlorophyll b and total chlorophyll in plant tissue
- 5) Determination of diurnal fluctuation of acid content of CAM plants (TAN)
- 6) Determination of temperature quotient (Q<sub>10</sub>) of water uptake
- 7) Separation of chlorophyll pigments/Anthocyanin by TLC
- 8) Protein analysis by SDS PAGE method.
- 9) Estimation of Alpha-amylase activity in germinating seedling.
- 10) Silver staining of proteins.
- 11-12) Visit to Molecular Biology Laboratories.

**BOTANY: III- SEMESTER - HARD CORE 3.2**  
**MOLECULAR BIOLOGY**

**Theory-32 Hrs**

**Unit-1: Organization of chromosomes and genes in prokaryotes and eukaryotes** - Operon, interrupted genes, gene families, unique and repetitive DNA, heterochromatin, euchromatin, transposons, mitochondrial and chloroplast genome organization, Transposable elements in prokaryotes and eukaryotes, genetic and evolutionary significance, **DNA replication**- patterns, Messelson and Stahl's and Taylor's experiment, enzymes of replication, mechanism of DNA replication in prokaryotes and Eukaryotes, proof reading and error correction mechanisms.

**Unit-2: Molecular mechanism of mutation, repair and recombination:- Mutation**-DNA damage by spontaneous mutations, physical and chemical mutagens and their molecular mechanisms, **Repair mechanisms**- direct reversal of damage, base and excision repair, recombinational repair, SOS repair, translation repair synthesis, transcription coupled repair, **Recombination**- homologous recombination, models of recombination, mechanisms, protein machinery of homologous recombination, genetic consequence of homologous recombination, gene conversion, site specific recombination, mechanism and biological significance, non homologous recombination- transposition, molecular mechanisms of transposition- conservative, replicative and retro-transposition.

**Unit-3: RNA synthesis, processing and translation:** transcription activators and repressors, promoters, RNA polymerases and transcription factors, mechanism of transcription in prokaryotes and eukaryotes, **RNA processing**- capping, polyadenylation, splicing, alternative splicing, RNA editing, exon shuffling and RNA transport, **Translation and processing**- ribosomes, tRNA aminoacylation, aminoacyl tRNA synthetase, genetic code, wobble hypothesis, deciphering of the code, translation mechanism , translation proof reading, translation inhibitors and post translational modifications.

**Unit-4: Regulation of gene expression in Prokaryotes:** Operon concept, regulation at transcription initiation- lac and trp operon control, regulation of lytic and lysogenic cycles in lambda phage, regulation beyond transcription initiation-premature termination- trp operon, ribosomal proteins as translational repressors, riboswitches, **Regulation of gene expression in eukaryotes**-transcription activators and repressors, regulation after transcription initiation- alternative splicing, translational control in ferritin and transferrin mRNA, RNA interference, role of chromatin in regulation of gene expression and gene silencing.

**Practicals-32 Hrs**

- 1) Isolation of DNA from CTAB method.
- 2) Isolation of DNA from Onion.
- 3) Isolation of DNA from mulberry leaves.
- 4) Estimation of DNA by DPA method.
- 5) Extraction of RNA by trizol/ phenol-chloroform methods.
- 6) Estimation of proteins by Biuret method.
- 7) Estimation of protein by Bradford method.
- 8) Determination of T<sub>m</sub> value of DNA.
- 9-12) Photo graphs/ charts related to molecular biology/Molecular Biologists.

**BOTANY: III-SEMESTER - HARD CORE 3.3**  
**PLANT BIOTECHNOLOGY**

**Theory-32 Hrs**

**Unit-1: Plant Tissue Culture:** Scope and importance of plant tissue culture - Media composition and types, hormones and growth regulators, explants for organogenesis; Micro propagation, embryo and endosperm culture, somatic embryogenesis, variation and cell line selection, androgenesis and microspore culture, significance of haploids, diploidization and bulbosum technique; Cryopreservation, germplasm collection; Somatic Hybrids- Isolation and protoplast culture and somatic hybridization and its significance, Synthetic seed production and somaclonal variations.

**Unit-2: Genetic Engineering:** Milestones in plant recombinant DNA technology; Importance of gene manipulation in future perspectives; **Tools in Genetic Engineering-** Enzymes in genetic engineering - restriction endonucleases, types and their actions, other DNA modifying enzymes; Cloning vectors- plasmids isolation and purification - Ti Plasmid, pBR322, pUC-series. Phage vectors-M13 phage vectors, Cosmids -types, phasmids or phagemids, shuttle vectors-types; YAC and BAC vectors, Lambda phage vectors, Lambda phage DNA as a vectors; Cloning vectors and expression vectors; Vectors for plant cells; Vectors for animal cells, baculovirus vectors- adenoviruses, retroviruses, transposons as vectors, Synthetic construction of vectors.

**Unit 3: Applications of Genetic Engineering for pest, disease and stress tolerance:** The genetic manipulation of herbicide resistance with suitable examples; The genetic manipulation of pest and disease resistance with suitable examples; Transgenic approaches to viral and bacterial disease resistance. Engineering for stress tolerance and Metabolic Engineering of Plants; Future prospects for GM crops.

**Unit 4: Biofertilizers:** Preparation and applications of biofertilizers such as Rhizobium, Azotobacter, Blue Green Algae and VAM. Single Cell proteins (SCP): Health benefits and advantages of single cell proteins- *Spirulina*. Biofuels: Ethanol and Biofuel production from plants. Mushroom cultivation and its advantages. Bioremediation: Phytoremediation; Biodegradation, Xenobiotics. Biotechnology of medicinal and aromatic plants for human welfare.

**Practicals-32 Hrs**

- 1) Preparation of plant tissue culture media and types.
- 2) Organ culture (Shoot tip, nodal and leaf culture) for callus Initiation and regeneration.
- 3) Anther culture for the production of haploids.
- 4) Suspension culture and production, separation and estimation of secondary metabolites.
- 5) Encapsulation of somatic embryos and production of Synthetic seed.
- 6) Extraction of secondary metabolites using Soxhlet extractor and Identification of In vitro secondary metabolites-alkaloids, steroids and flavonoids.
- 7) Restriction digestion of plasmid and genomic DNA and gel electrophoresis.

- 8) Isolation of genomic DNA from bacteria/plants and purification by agarose gel electrophoresis.
- 9) Restriction analysis of plasmids, gel purification of DNA, small and large scale purification of plasmids.
- 10) Preparation of competent *E. coli* cells. Bacterial transformation and recovery of plasmid clones.
- 11) Gene cloning in plasmids, analysis of recombinant plasmids.
- 12) DNA amplification by PCR, RT-PCR, Real Time PCR.
- 13) Analysis of DNA and RNA and Protein by Southern, Northern and Western blotting.
- 14) Primer design for PCR.

**BOTANY: III- SEMESTER- SOFT CORE 3.1**  
**MOLECULAR GENETICS OF PLANTS**

**Theory-32 Hrs**

**Unit-1: Plants as genetic tools in Biology:** *Arabidopsis*, *Rice*, *Maize*, *Saccharomyces*; Genome organization in plants; *Arabidopsis thaliana*- an experimental model for understanding plant development and functions; Plant genes and regulation; nucleus and chromatin organization; Histones and histone modifications; DNA packaging, organization and types of DNA sequences; functional and non- functional sequences, organization of plant nuclear genes, plastid genes and mitochondrial genes.

**Unit-2:** Genes responding to hormones, phytochrome, responses to abiotic stresses; Genes induced by water stress and freezing stress; Genes involved in photosynthesis and nitrogen fixation and their regulation; Molecular development of leaf and flower - ABC and revised model of flower development; Genes involved in fertilization, seed development, embryo development.

**Unit-3: Genetics of *Agrobacterium*:** Biology and genetics of *Agrobacterium tumefaciens*; The Ti- plasmid, *Vir* genes and expression, Mechanism of T-DNA transfer and integration; Basic features of vectors for plant transformation; Proteomics, genomics and bioinformatics; Structural and functional genomics, comparative genomics - biochemical, evolutionary, physiological and phylogenomics; Tools to study functional genomics.

**Unit-4: Proteomics-** functional and comparative proteomics; Protein distribution, characterization and identification, differential display proteomics, detection of functional linkages; Pharmacogenomics; Bioinformatics- tools of bioinformatics, data bases and data base management, bioinformatics in taxonomy, biodiversity, agriculture; Bioinformatics in drug design and drug discovery.

**Practicals-32 Hrs**

- 1) *Arabidopsis thaliana*- study of plant system and its biology.
- 2) *Arabidopsis* RNA extraction (total and polysomal) for Northern blotting.
- 3) Expression of foreign genes in plant cells through *Agrobacterium tumefaciens* (Chart)
- 4) Production of tobacco transgenic plants and assay for the introduced transgenic (Chart)
- 5) Co-cultivation of tobacco *Agrobacterium tumefaciens*
- 6) -12) Learning gene bank formats- EMBL format, FASTA format, Swiss- PROT, Ex PASy

**BOTANY: IV- SEMESTER- SOFT CORE 3.2**  
**MOLECULAR PLANT PATHOLOGY**

**Theory-32 Hrs**

**Unit-1:** Concepts and scope of physiological and molecular plant pathology; Molecular approaches to plant disease diagnosis; Nucleic acid based probes for detection of plant pathogens including non-culturable organisms; **Pathogenicity and Disease Development-**factors; induced resistance, virulence and pathogenecity factors; Plant-pathogen interactions with emphasis on incompatible interactions and induced resistance.

**Unit -2: Pathogenesis:** Necrogenic plant pathogenic bacteria with emphasis on hrp and avr genes and virulence factors; Fungal plant pathogens with emphasis on virulence and pathogenicity factors; Plant viruses with emphasis on virus replication, virus transport in plants and control of plant viruses with transgenic plants; **Signal Transduction-** recognition of the pathogen by the host, transmission of the alarm signal to the host defense providers; Necrotic defense reaction, defense through hypersensitive response; Molecular basis of induced biochemical reaction; Local and systemic acquired resistance (SAR).

**Unit-3:Genetics of Plant Diseases and Resistance:** Genes and diseases; physiological specialization among plant pathogens; Variability in viruses, bacteria and fungi; Levels of variability in pathogens and loss of virulence in plant pathogens; Genetics of virulence in pathogens and of resistance in host plants; Molecular plant breeding for disease resistance.

**Unit-4: Genetics and molecular basis of host-pathogen interaction:** Evolution of parasitism; genetics oh host-pathogen interaction; Gene for gene relationship; Criteria for gene for gene type relationship; Molecular basis of host pathogen interaction; Host-parasite-interaction. **Biotechnological methods of plant disease management;** Genetic engineering and crop protection; Cross protection; Gene silencing and disease control- mechanism of gene silencing and control of viral diseases; Engineered resistance to viral, bacterial, fungal and insect diseases of crop plants.

**Practicals-32 Hrs**

- 1-2) Testing hypersensitivity reaction on *Nicotiana and Bajra*.
  - 3) Estimation of lipoxygenase in diseased and healthy plants.
  - 4) Estimation of polyphenols in diseased and healthy plants.
  - 5-7) Studying systemic acquired resistance in crop plants.
  - 8) Genetic testing of disease resistance in plants.
  - 9-11) Molecular detection of viruses, Mycoplasma, fungi and bacteria from infected plants.
  - 12) In-vitro testing of pathogen virulence.
- Visit to agricultural research station to study diseases on different crop plants.

**BOTANY: III SEMESTER- SOFT CORE 3.3**  
**PLANT PROPAGATION AND PLANT BREEDING**

**Theory-32 Hrs**

**Unit-1: Plant Propagation:** History, scope and importance of plant propagation; Propagation structures with reference to green house equipment and media; Seed propagation and vegetative propagation; Propagation by cuttings; Biology and techniques of grafting; Techniques of budding; Layering and its natural modifications; Propagation by specialized stems and roots; Micro propagation – techniques and applications in forestry and horticulture; Limitations and applications of vegetative propagation; Propagation methods of some selected plants – Citrus, Grape, Mango, Mulberry, Hibiscus, Rose, Croton, Eucalyptus.

**Unit-2: Plant Breeding:** History of plant breeding, objectives of plant breeding, salient achievements of plant breeding; Centres of origin of crop plants, Exploration and collection of plant genetic resources, evaluation of germplasm collection, documentation, conservation of plant genetic resources, utilization of genetic resources; The theory of pure line selection – Genetic basis, sources of genetic variation in pure lines, the land variety (races); **Mendelian experiments of plant hybridization;** Quantitative Inheritance; Applications of biometrical genetics in plant breeding.

**Unit-3: Plant Breeding:** Types of plant breeding; Fertility regulating mechanisms - manual or mechanical control, genetic control, incompatibility, male sterility, genetic engineering for male sterility, chemical control, genetic basis of heterosis; Synthetic and composite varieties -genetic basis, procedure for developing synthetic and composite varieties - genetic basis, procedure for developing synthetic varieties; Breeding for resistance to disease and insect pests.

**Unit - 4 :Mutation Breeding:** Significance of induced mutations in plant breeding; Polyploidy in plant breeding- types of polyploids, induction of polyploidy, phenotypic effects of polyploidy, significance of polyploids; Tissue culture in crop improvement; Molecular approaches to crop improvement- probes, gel electrophoration, electrofusion, biolistics, gene cloning, transgenic plants (GMO's), molecular markers, construction of genetic maps, application of DNA makers in plant breeding, the role of gene technology in plant breeding; Crop breeding Institutes/Centers, Molecular biology in relation to intellectual property rights.

**Practicals-32 Hrs**

- 1) Study of types of vegetative propagation: Cutting, Grafting, budding, layering.
- 2) Study of propagation by modified stems and modified roots.
- 3) Preparation of media, explants, culture, initiation of shoot multiplication.
- 4) Pot and green house implants (demonstration) (5) Studying of floral biology.
- 6) Hybridization techniques - bagging and emasculation.
- 7) Pollen viability test : Seed germination test, TTC test.
- 8) Mode of pollination study in different crops.
- 9) Visit to crop breeding stations/institutes / centres.
- 10) Estimation of protein quality, Amino acid Analysis and determination of oil and fatty acids.
- 11) Observation of colour and conditions of mature anthers in different crops.
- 12) Identification of and studying of important plant breeders.

**BOTANY: III SEMESTER SOFT CORE 3.4**  
**PHYTOCHEMISTRY AND HERBAL TECHNOLOGY**

**Theory-32 Hrs**

**Unit-1: Phytochemistry:** Scope of phytochemistry, plants as source of chemical compounds, primary and secondary metabolites and its applications; Definition, source of herbal raw materials, identification, authentication, standardization of medicinal plants as per WHO guidelines and different herbal pharmacopoeias; Natural pigments, natural products as markers for new drug discovery.

**Unit-2: Extraction, isolation and purification of phytochemicals:** Selection of plant samples, processing and storage of samples for extraction; Factors influencing the choice of extraction, principles of extraction methods, infusion, decoction, digestion, maceration, percolation, solvent extraction, fluid extraction, ultrasound, microwave assisted extraction, advantage and disadvantage involved in each method; Isolation of selected primary and secondary metabolites – amino acids, proteins and carbohydrate; Phenolics, flavonoids, alkaloids, lipids, oils, terpenes and saponins; Purification techniques for primary and secondary metabolites – solvent-solvent fractionation and chromatography techniques.

**Unit-3: Characterisation of Phytochemicals:** Preliminary, qualitative and quantitative techniques – paper chromatography, thin layer chromatography, column chromatography-HPLC, GC (qualitative and quantitative), colour reactions for amino acids, sugars, phenolics, flavonoids, alkaloids, terpenes, saponins, oils, lipids; Spectroscopic estimations/gravimetric determination of total sugars, amino acids, proteins, phenolics, flavonoids, alkaloids, terpenes, saponins, oils, lipids; Characterisation using spectroscopic techniques - UV/VIS, FTIR, DSC (differential scanning calorimeter), NMR, MS, MALDI. XRD – single crystal and powder.

**Unit-4: Standardisation and Validation of Photochemical:** Quality determination of herbal drugs; Role of processing methods and storage conditions on quality of drugs; Standardisation parameters- impurity limit, ash content, extractable matter, moisture content, other phytochemicals, microbial contaminants, pesticides; Validation of drug – guidelines, limit of detection and quantification of impurities, organoleptic properties, physical, chemical, biological characteristics, stability testing, storage conditions and packing system/unit.

**Practicals-32 Hrs**

- 1) Survey and collection of medicinal plants for analysis.
- 2) Selection of plant part, processing and storage of samples for further analysis.
- 3) Extraction methods - aqueous and sequential solvent extraction of compounds.
- 4) Preliminary phytochemical analysis of active principles from the extracts.
- 5) Antibacterial/antifungal activity of crude /active principles
- 6) Identification of secondary metabolites using TLC- phenolics, flavonoids, alkaloids, terpenes, saponins etc.
- 7) Column chromatographic separation of active principles.
- 8) Characterisation of active principle using spectroscopy, HPLC, GCMS, LCMS, FTIR, and MALDI TOF.
- 9) -12) Submission of report on TEN important curative principles of Indian medicinal plants.

**BOTANY: III SEMESTER- OPEN ELECTIVE 3.1**  
**PLANT PROPAGATION TECHNIQUES**

**Theory-32 Hrs**

**Unit-1:** History, scope and importance of plant propagation; Propagation structures with reference to green house equipment and media; Seed propagation – the development of seeds, techniques of seed production and handling principles and media.

**Unit-2:** Vegetative propagation: Techniques of propagation by cuttings; stem cuttings – hard wood, semi hard wood, soft wood and herbaceous, leaf cuttings, leaf bud cuttings, root cuttings; Biology and techniques of grafting: Whip and tongue, wedge and cleft, bark, side grafting, approach.

**Unit-3:** Techniques of budding: T- budding patch budding, chip budding, ring budding; Layering and its natural modifications- simple layering, tip layering, mound or stool layering, air layering, compound or serpentine layering and trench layering; Propagation by specialized stems and roots.

**Unit- 4:** Micro propagation – techniques and applications in forestry and horticulture; Advantage, limitations and applications of vegetative propagation, **Somaclonal variations;** Propagation methods of some selected plants – Citrus, gape, mango, mulberry, hibiscus, rose, Croton, Eucalyptus.

**BOTANY: IV- SEMESTER- HARD CORE 4.1**  
**ECOLOGY, CONSERVATION BIOLOGY AND PHYTOGEOGRAPHY**

**Theory-32 Hrs**

**Unit-1: Introduction and scope of Ecology:** Plants and the environment- plant adaptation, ecotypes, habitat ecology- fresh water and marine water ecology (ecosystems), wetlands and their characteristics; Ecosystem function; The distribution of biomes; Major Terrestrial Biomes; Forests-Tropical Forests-Temperate Forests, Taiga, Grasslands, Savanna, Temperate Grasslands/Prairies, Tundra, Deser and Chaparral.

**Unit-2: Environmental Biology:** Global warming: Greenhouse gases - causes and consequences; Ozone depletion- causes and consequences; Air, water and soil pollution - major pollutants, their source, permissible limits - and control methods; Radioactive pollution- Ionising radiation, disposal of radioactive waste, nuclear accidents; Environmental Education Programmes - WWF, UNEP, MAB; Role of plants in solving energy crisis and ameliorating global warming.

**Unit-3: Biodiversity and Conservation Biology:** Science in the service of Biodiversity, biodiversity and its value, biodiversity issues, concerns, management; Biodiversity hot spots; Biodiversity- threats and current status of biodiversity; IUCN categories, Red Data book and Red lists, invasive alien species as threat to biodiversity; Conservation strategies- past, present, and future; Attitudes about conservation; conservation movements; CITES (Convention on international trade in endangered species), WCU (World Conservation Union); Endangered species Act. 2002 (GOI); Protected areas, Network of India- history, size, scale and management; Heritage trees.

**Unit-4: Phytogeography:** Biogeography of the world, India and Karnataka; Climatic zones, tectonics, continental movements; Types of plant distribution – discontinuous distribution - land bridge theory, continental drift; continuous distribution-cosmopolitan, circumpolar, circumboreal, circumaustral, pantropical; Distribution of plants - islands; Phytochorea of the world, India; Plant dispersal, migrations and isolation; Eendemic plants of Western Ghats and Eastern Himalayas; Origin, distribution and acclimatization of coffee, cardamom, sugarcane, cashew, ragi, maize, wheat, rice and cotton; Remote sensing and GPS, study of vegetation by GIS (Geographical Information system).

**Practicals-32 Hrs**

- 1) Study of local vegetation by quadrat method.
- 2) Water analysis for pollution studies.(Bio-monitoring: TDS, Hardness, Chlorides, CO<sub>2</sub> COD, DO, BOD)
- 3) Rapid detection of bacteriological quality of water with special reference to faecal coliforms.
- 4) Morphology and anatomy of plants in relation to habitats - Xerophytes, Mesophytes, Hydrophytes.
- 5) *In situ* and *Ex situ* method of conservation.
- 6) Eminent phytogeographers of the world (photos).
- 7) Continental drift (charts).
- 8) Application of Remote Sensing, GIS and GPS in Forestry and Wild life management.
- 9) Biogeography of the world – Oceans, deserts, islands, mountains.

- 10) Biogeography of India –rivers, mountains, islands.
- 11) Floristic regions of world – India and Karnataka.
- 12) Study of endemic plants of India.
- 13) Origin, acclimatization and distribution of Coffee, Cardamom, Sugarcane, Cashew, Ragi, Maize, Wheat, Rice and Cotton.

**BOTANY: IV- SEMESTER- SOFT CORE 4.2  
PROJECT WORK**

**BOTANY: IV- SEMESTER- SOFT CORE 4.1**  
**SEED TECHNOLOGY**

**Theory-32 Hrs**

**Unit-1: Seed Technology:** Introduction to seed science and technology and its goals; Development of seed technology industry in India; Seed as basic input in agriculture; Seed Biology - Seed development, morphology and anatomy of dicot and monocot seeds; Seed structure and functions; Seed programmes and organizations; Seed village concept, seed production agencies, seed industry and custom seed production in India; International Seed Science and Technology Organizations.

**Unit-2:Seed Production:** General principles of seed production in self and cross pollinated and vegetatively propagated crops; Hybrid seed production; Maintenance of inbred lines and breeders seeds; Synthetic and composite seeds; Improved seed and their identification; Germplasm banks; **Seed Processing**-Harvesting, seed drying, seed cleaning and grading; Equipments; Seed Storage- types of storage structure; seed factors affecting storage life, effect of storage on relative humidity, temperature and moisture; Seed deterioration; Seed treatment.

**Unit-3: Seed Quality Testing:** Devices and tools used in seed testing; ISTA and its role in seed testing; Seed sampling- physical purity and heterogeneity test; Seed moisture content-importance and determination and methods; Viability and vigour testing; Genetic purity testing -objective and criteria for genetic purity testing, seed health testing, field and seed standards, designated diseases, objectionable weeds; Significance of seed borne diseases, seed health testing and detection methods for seed borne fungi, bacteria, viruses and nematodes; Preparation and dispatch of seed testing reports, storage of guard samples, application and use of seed standards and tolerances.

**Unit- 4: Seed Certification:** Principles and philosophy of seed certification, purpose and procedures, national seed programme; National Seed Corporation (NSC) - agencies responsible for achieving self-reliance in seed production and supply of quality of seeds (State Seeds Corporation; National Seed Development Council (NSDC); Central Seed Committee(CSC) ; Seed market surveys, seed industry in relation to global market; Concept of WTO, GATT, IPR, Plant Variety Protection and its significance seed technology; UPOV and its role.

**Practicals-32 Hrs**

- 1) Determination of physical purity of seed samples.
- 2) Determination of density or weight per thousand seeds.
- 3) Determination of seed Heterogeneity.
- 4) Visual examination of dry seeds for disease symptoms.
- 5) Determination of moisture content by hot air oven method.
- 6) Seed viability test- TTC method.
- 7) Determination of seed germination by TP/BP/Sand method.
- 8) Evaluation of seedlings vigour by BP/Sand methods.
- 9) Seed vigour evaluation by (a) conductivity test (b) Hiltner's test (c) Performance test(d) Accelerated ageing test (e) Cold test.
- 10) Examination of suspensions obtained from washings of seed.
- 11) Infection sites studied by planting seed components.
- 12) Detection of seed-borne fungi and their characters of five seed borne pathogens. Vist: Visit to seed industries/seed companies/ seed research stations.

## BOTANY: IV- SEMESTER- SOFT CORE 4.2

### SEED PATHOLOGY

#### Theory - 32 Hrs

**Unit-1: Seed Pathology:** Introduction, historical development, development of seed health testing; Reduction in crop yields loss in due to seed-borne diseases; Seed-borne pathogens (Fungi, Bacteria, Mycoplasma-like Organisms, fastidious Vascular Bacteria, Spiroplasmas, Viruses, Viroids, Nematodes); Location of seed-borne inoculums, histopathology of some seed-borne pathogens; Seed infection, mechanism of seed infection, seed infestation or contamination; Factors affecting seed infection; Longevity of seed-borne pathogens.

**Unit-2:** Seed transmission and inoculation, factors affecting seed transmission; Cultural practices, epidemiology and inoculum thresholds of seed-borne pathogens; Classification of seed-borne; Role of Seed-borne inoculum in disease development; Economic loss due to seed borne pathogens; Certification program; Seed health tests, Nonparasitic seed disorders; Deterioration of grains; Storage fungi, field and storage fungi; Invasion by storage fungi; effects of seed deterioration.

**Unit-3: Detection of Seed-borne Diseases:** Examination of dry seeds; Isolation of fungi, Bright-field microscopic examination, observation under UV light, measurement of gases, Determination of FAV, Moldy smell, collection of seed exudates; Immunoassays, ergosterol estimation; Avoiding damage to seeds during harvesting; Processing, threshing, storage conditions, reducing seed moisture to safe limits, seed treatment, resistance.

**Unit-4:** Mycotoxins - Fungi known to produce mycotoxins, Factors affecting mycotoxin production the effects and control of mycotoxins, storage conditions, sorting of grains, cultural operations, chemical treatment, biological control, detoxification, regulatory measures, use of resistant cultivars; Control of seed-borne pathogens; Selection of seed production areas; Crop management, crop rotation, isolation distances, rouging, biological control, chemical method, mechanical method, physical methods; Certification- certification standards, plant quarantine, national and international regulations.

#### Practicals-32 Hrs

- 1-5) Detection of seed-borne fungi and their identification.
- 6) Detection of Seed-borne bacteria.
- 6) Detection of seed-borne viruses.
- 7) Detection of seed-borne insects by egg-plug staining.
- 8) Detection seed-borne nematodes.
- 9 ) Effect of deterioration of grains by Storage Fungi.
- 10) Detection of seed-borne fungi by PCR.
- 11) Estimation of ergosterol by UV-visible Spectrophotometer.
- 12) Detection of mycotoxins by thin Layer chromatography.

**BOTANY: IV- SEMESTER- SOFT CORE 4.3**  
**BIO- ANALYTICAL TECHNIQUES**

**Theory-32 Hrs**

**Unit- 1: Spectroscopy:** Principles of UV-Visible spectroscopy, chromophores and their interaction with UV-visible radiation and their utilization in structural, qualitative and quantitative analysis of drug molecules; Infrared Spectroscopy, Infrared radiation and its interaction with organic molecules, vibrational mode of bonds, instrumentation and applications, interpretation of IR spectra; FTIR and ATR, X-ray diffraction methods.

**Unit-2: Nuclear Magnetic Resonance Spectroscopy:** Magnetic properties of nuclei, field and precession, instrumentation and applications of NMR; Chromatographic techniques- Principles and applications- types- column, paper, thin layer and gas chromatography, HPLC, HPTLC, size exclusion chromatography, Affinity chromatography, Mass spectrometry, MALDI-TOF.

**Unit-3: Electrophoresis:** Principle and application of PAGE, SDS PAGE, immunostaining, immuno-electrophoresis, Iso-electric focusing, 2D electrophoresis Centrifugation- Principles, techniques of preparative and analytical centrifugation. Ultracentrifuges, molecular weight determination, sedimentation analysis, RCF. Microscopy- principles and applications of electron microscope (SEM and TEM), CryoEM, Preparations of specimen for electron microscopy- freeze drying, freeze etching, fixing, staining; confocal, fluorescent, flow cytometry - principles and applications.

**Unit-4: Molecular Biology Techniques:** Primer designing; Principles and applications of PCR; Blotting techniques; Hybridization techniques; Micro-array; Next Generation Sequencing- Nucleic acid sequencing.

**Practicals-32 Hrs**

- 1) Calibration of bio-analytical instruments.
- 2) Principles and instrumentation and applications of imaging techniques:
- 3) Separation of fatty acids/lipids by TLC/HPTLC.
- 4) Separation of proteins by PAGE, SDS- PAGE.
- 5) Agarose gel electrophoresis of DNA/RNA.
- 6) Immunoelectrophoresis
- 7) Agar gel diffusion, counter immuno electrophoresis.
- 8) Verification of Beer Lambert law with the U.V. spectrophotometer.
- 9) Demonstration of blotting techniques.
- 10) Performing PCR for amplification of ITS regions of fungi/ bacteria.

**BOTANY: II SEMESTER - OPEN ELECTIVE 4.1**  
**PLANT DIVERSITY AND HUMAN WELFARE**

**Theory-32 Hrs**

**Unit -1: Plant Diversity and Significance:** Role of plant diversity in ameliorating energy crisis and global warming; Types of biodiversity-genetic diversity, species diversity, plant diversity at the ecosystem level; Agro-biodiversity and cultivated plant taxa, wild taxa; **Values and uses of Biodiversity-** Ethical and aesthetic values, precautionary principle, methodologies for valuation, uses of plants and microbes.

**Unit -2: Loss of Biodiversity:** Major causes of for biodiversity loss; Loss of genetic diversity, Loss of species diversity; Loss of ecosystem diversity; Loss of agro-biodiversity; Projected scenario for biodiversity loss; Management of Plant Biodiversity- Organizations associated with biodiversity management; Methodology for execution-IUCN, UNEP, UNESCO, WWF, NBPGR; Biodiversity legislation and conservations; Biodiversity information management and communication.

**Unit -3: Conservation of Biodiversity:** Conservation of genetic diversity, species diversity and ecosystem diversity, *In situ* and *ex situ* conservation, Social approaches to conservation, Biodiversity awareness programmes, Conservation of Heritage Trees.

**Unit-4: Role of plants in relation to Human Welfare:** Importance of forestry their utilization and commercial aspects, Avenue trees, Ornamental plants of India, Alcoholic beverages through ages, Fruits and nuts- Fruit crops of Karnataka and their commercial importance; Wood and its uses.

**JSS Mahavidyapeetha**

**JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE**  
OOTY ROAD, MYSURU – 570 025

**POSTGRADUATE DEPARTMENT OF CHEMISTRY**

## **SYLLABUS**

**PROGRAMME: M.Sc. in CHEMISTRY**

**PROGRAMME CODE: CHE**

**Under**  
**Choice Based Credit System (CBCS) and**  
**Continuous Assessment Grading Pattern (CAGP)**  
**Effective from 2021-22**

# **GUIDELINES AND REGULATIONS LEADING TO MASTER OF SCIENCE IN CHEMISTRY (TWO YEARS - SEMESTER SCHEME UNDER CBCS-CAGP)**

## **Programme details**

<b>Name of the Department</b>	: PG Department of Chemistry
<b>Subject</b>	: Chemistry
<b>Faculty</b>	: Science
<b>Name of the Programme</b>	: Master of Science (M.Sc.) in Chemistry
<b>Duration of the Programme</b>	: 2 years divided into 4 semesters

## **Programme Objectives**

- To provide the latest subject matter both theory as well as practicals in such a way to foster their core competency and discovery learning. A chemistry postgraduate as envisioned in this framework would be sufficiently competent in the field to understand further discipline specific studies as well as to begin domine related employment.
- To mould a responsible citizen who is aware of most basic domain-independent knowledge including critical thinking and communication.
- Enable the graduate to prepare for national as well as international competitive examinations, especially UGC-CSIR NET and UPSC civil service examinations.

## **Programme Outcomes**

- Students will have a strong foundation in the fundamentals and applications of current theoretical and practical chemistry in Analytical, Inorganic, Organic and Physical Chemistry.
- Students will be able to design and carry out scientific experiments and accurately record and analyze the results of the experiments.
- Students will be skilled in problem solving, critical thinking and analytical reasoning as applied to scientific problems.
- Students will be able to explore new areas of research in both chemistry and allied fields such as Biochemistry, Material Chemistry, Pharmaceutical chemistry and Chemical biology and related technology.
- Students will understand the central role of chemistry to our society which includes understanding of safe handling of chemicals, environmental issues and key issues facing our society in energy, health and medicine.

### **Programme Specific Outcomes**

- Global level research opportunities to pursue Ph.D. programme, targeted approach of CSIR – NET and competitive civil service examinations.
- Enormous job opportunities at all levels of teaching, chemical, pharmaceutical, food products, life oriented material industries.
- Specific placements in R & D and many pharmaceutical & other industries.
- Facile development for the synthesis of biologically significant organic molecules using the green route for chemical reactions for sustainable properties.
- To inculcate the scientific temperament in the students and outside the scientific community.
- Learnt to handle sophisticated equipment for the determination and characterization of chemical compounds.
- Use of the latest chemistry software to avoid the laborious work in research.

### **Pedagogies used in the programme**

- Conventional method such as black board and chalk, and modern methods like power point presentation and information and communications technology (ICT) are used in class room teaching.
- Molecular models are used to teach molecular symmetry, stereochemistry and solid state chemistry topics.
- Each student performs experiments as per the protocol in practical classes.
- For the preparation of new compounds, each student can adopt new experimental setup, and also exposed to different analytical instruments for qualitative and quantitative analyses. In addition to this, students will acquire skill to handle various instruments independently.
- Students will be presenting seminars in each semester.
- Each student will be subjected to viva-voce examinations in every semester.
- Every student will work for project on a small research problem.
- Rigorous training will be giving for every student to interpret spectral data in the respective course including their dissertation.
- Special lectures are delivered by eminent scholars from different intuitions.
- National/International conferences are organized to upgrade the subject knowledge.

## GENERAL REQUIREMENTS

### Scheme of instructions

1. A Masters Degree programme is of 4 semesters-two Years duration. A candidate can avail a maximum of 8 semesters – 4 years (in one stretch) to complete Masters Degree (including blank semesters, if any). Whenever a candidate opts for blank semesters, he/she has to study the prevailing courses offered by the department when he/she continues his/her studies.
2. A candidate has to earn a minimum of 76 credits, for successful completion of a Master Degree. The 76 credits shall be earned by the candidate by studying Hardcore, Soft Core and Open Elective. A candidate may earn another 04 credits by studying MOOCs/SWAYAM courses.
3. **Minimum for Pass:** In case a candidate secures less than 30% in C<sub>1</sub> and C<sub>2</sub> put together, the candidate is said to have DROPPED the course, and such a candidate is not allowed to appear for C<sub>3</sub>.
4. In case a candidate secures less than 30% in C<sub>3</sub>, or secures more than 30% in C<sub>3</sub> but less than 50% in C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> put together, the candidate is said to have not completed the course and he/she may either opt to DROP the course or to utilize PENDING option.
5. **Credits (Minimum) Matrix:** A candidate has to study 42 credits, but not exceeding 52 credits from hard Core, a minimum of 16 credits in Soft Core (sum total of 4 semesters) and 04 credits in Open Elective (III Semester) for the successful completion of the Masters Degree programme.
6. All other rules and regulations hold good which are governed by the University of Mysore from time to time.

### Definitions

1. In the Choice Based Credit System – Continuous Assessment Grading Pattern (CBCS-CAGP), programme means a course and a course means a paper.
2. **HC:** Hard Core; **SC:** Soft Core; **OE:** Open Elective

## GENERAL SCHEME WITH RESPECT TO ASSESSMENT OF CREDITS

Semester	Hard Core		Soft Core			Open Elective
		Theory		Theory	Practicals	
<b>I</b>	<b>I</b>	3 + 0 + 0 = 3	<b>A</b>	2 + 0 + 0 = 2	0 + 0 + 4 = 4 <sup>a</sup>	-
	<b>O</b>	3 + 0 + 0 = 3	<b>I</b>	2 + 0 + 0 = 2	0 + 0 + 4 = 4 <sup>a</sup>	
	<b>P</b>	3 + 0 + 0 = 3	<b>O</b>	2 + 0 + 0 = 2	0 + 0 + 4 = 4 <sup>a</sup>

	<b>P</b>	3 + 0 + 0 = 3	<b>O</b>	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
	<b>A</b>	3 + 0 + 0 = 3	<b>P</b>	2 + 0 + 0 = 2	0 + 0 + 2 = 2 <sup>ab</sup>	
			<b>D</b>	--	0 + 0 + 4 = 4 <sup>c</sup>	
<b>Total Credits</b>	<b>48</b>		<b>24</b>			<b>04</b>

### NOTE

A–Analytical; I–Inorganic; O–Organic; P–Physical; G-Spectroscopy; D-Dissertation/Project Work; (L+T+P)-Theory + Tutorial + Practical

<sup>a</sup> Compulsory but 50% of the students will attend Analytical/Inorganic Practicals and remaining 50% students will attend Organic/Physical Practicals in I or III Semesters and vice-versa during II or IV Semesters.

<sup>b</sup> Practicals are only for Chemistry students which are compulsory papers.

<sup>c</sup> Dissertation/Project work, which is offered by the department during IV Semester.

## SCHEME OF STUDY AND EXAMINATION

### FIRST SEMESTER

#### HARD CORE COURSES

Course Code	Title	Contact Hours/ week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHA10	Concepts & Models of Inorganic Chemistry	3	3	100	15	15	3	70
21CHA11	Stereochemistry & Reaction Mechanism	3	3	100	15	15	3	70
21CHA12	Basic Physical Chemistry	3	3	100	15	15	3	70
21CHA13	Essentials of Analytical Chemistry	3	3	100	15	15	3	70

#### SOFT CORE PRACTICALS

Course Code	Title	Contact Hours/ week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHA50	Analytical Chemistry Practicals	8	4	100	15	15	6	70
21CHA51	Inorganic Chemistry Practicals	8	4	100	15	15	6	70
21CHA52	Organic Chemistry Practicals	8	4	100	15	15	6	70
21CHA53	Physical Chemistry Practicals	8	4	100	15	15	6	70

**NOTE:** 50% of students will attend Analytical and Inorganic Practicals and the remaining 50% of students will attend Organic and Physical Practicals in I Semester and vice-versa in II Semester.

#### SOFT CORE COURSES

Course Code	Title	Contact Hours/ week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHA54	Titrimetric Analysis	2	2	100	15	15	3	70
21CHA55	Chemistry of Selected Elements	2	2	100	15	15	3	70
21CHA56	Chemistry of Natural Products-I	2	2	100	15	15	3	70
21CHA57	Biophysical Chemistry	2	2	100	15	15	3	70

## SECOND SEMESTER

### HARD CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End Marks
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks	
21CHB10	Coordination Chemistry	3	3	100	15	15	3	70	
21CHB11	Synthetic Organic Chemistry	3	3	100	15	15	3	70	
21CHB12	Principles of Physical Chemistry	3	3	100	15	15	3	70	
21CHB13	Molecular Symmetry and Spectroscopy	3	3	100	15	15	3	70	

### SOFT CORE PRACTICALS

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End Marks
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks	
21CHB50	Analytical Chemistry Practicals	8	4	100	15	15	6	70	
21CHB51	Inorganic Chemistry Practicals	8	4	100	15	15	6	70	
21CHB52	Organic Chemistry Practicals	8	4	100	15	15	6	70	
21CHB53	Physical Chemistry Practicals	8	4	100	15	15	6	70	

**NOTE: Practicals:** Same as that of I Semester. Students who have conducted Analytical and Inorganic or Organic and Physical Practicals in the I Semester will get interchanged during II Semester.

### SOFT CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End Marks
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks	
21CHB54	Titrimetric Analysis	2	2	100	15	15	3	70	
21CHB55	Chemistry of Selected Elements	2	2	100	15	15	3	70	
21CHB56	Chemistry of Natural Products-I	2	2	100	15	15	3	70	
21CHB57	Biophysical Chemistry	2	2	100	15	15	3	70	

**NOTE: Soft Core Theory:** All courses are same as that described in first semester.

### THIRD SEMESTER

#### HARD CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHC10	Advanced Inorganic Chemistry	3	3	100	15	15	3	70
21CHC11	Organometallic and Photochemistry	3	3	100	15	15	3	70
21CHC12	Advanced Physical Chemistry	3	3	100	15	15	3	70
21CHC13	Chemical Spectroscopy	3	3	100	15	15	3	70

#### SOFT CORE PRACTICALS

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHC50	Analytical Chemistry Practicals	4	2	100	15	15	6	70
21CHC51	Inorganic Chemistry Practicals	4	2	100	15	15	6	70
21CHC52	Organic Chemistry Practicals	4	2	100	15	15	6	70
21CHC53	Physical Chemistry Practicals	4	2	100	15	15	6	70

**NOTE:** 50% of students will attend Analytical and Inorganic Practicals and the remaining 50% of students will attend Organic and Physical Practicals in I Semester and vice-versa in II Semester.

#### SOFT CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHC54	Kinetic and Radiochemical Methods of Analysis	2	2	100	15	15	3	70
21CHC55	Frontiers in Inorganic Chemistry	2	2	100	15	15	3	70
21CHC56	Chemistry of Natural Products-II	2	2	100	15	15	3	70
21CHC57	Material Chemistry	2	2	100	15	15	3	70

#### OPEN ELECTIVE FOR NON-CHEMISTRY STUDENTS

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester End Exams (C <sub>3</sub> )	
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks
21CHC80	General Chemistry	4	4	100	15	15	3	70

## FOURTH SEMESTER

### HARD CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks	
21CHD10	Bioinorganic Chemistry	3	3	100	15	15	3	70	
21CHD11	Heterocyclic and Bioorganic Chemistry	3	3	100	15	15	3	70	
21CHD12	Nuclear, Radiation and Photochemistry	3	3	100	15	15	3	70	
21CHD13	Instrumental Methods of Analysis	3	3	100	15	15	3	70	

### SOFT CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Ma rks	
21CHD50	Analytical Chemistry Practicals	4	2	100	15	15	6	70	
21CHD51	Inorganic Chemistry Practicals	4	2	100	15	15	6	70	
21CHD52	Organic Chemistry Practicals	4	2	100	15	15	6	70	
21CHD53	Physical Chemistry Practicals	4	2	100	15	15	6	70	
21CHD54	Dissertation/Project Work	8	4	100	15	15	-	70	

**NOTE: Practicals:** Same as that of III Semester. Students who have conducted Analytical and Inorganic or Organic and Physical Practicals in the III Semester will get interchanged during IV Semester.

### SOFT CORE COURSES

Course Code	Title	Contact Hours/week	Credits	Max. Marks	Internal Assessment Marks		Semester Exams (C <sub>3</sub> )		End
					C <sub>1</sub>	C <sub>2</sub>	Duration (hrs)	Marks

21CHD58	Quantum Chemistry	2	2	100	15	15	3	70	

## SCHEME OF EXAMINATION FOR C1, C2 AND C3 COMPONENTS

### Preamble

In view of the CBCS syllabus, following is the model distribution of marks for C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components. At a glance, the model includes HC, SC and OE courses for the assessment of marks.

The following is the scheme which will be followed for the assessment of marks for HC, SC and OE courses irrespective of the credits associated with each course. 30% of the marks will be assessed for internals (C<sub>1</sub> and C<sub>2</sub>) and remaining 70% will be for the Semester end Examinations (C<sub>3</sub>). Each course carries 100 marks and hence 30 marks will be allotted to internals and remaining 70 marks will be for Semester end Examinations. Out of 30 marks for internals, 15 marks will be allotted to each C<sub>1</sub> and C<sub>2</sub> components.

Each course (HC/SC/OE) consists of three components namely C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub>. C<sub>1</sub> and C<sub>2</sub> are designated as Internal Assessment (IA) and C<sub>3</sub> as Semester end Examination. Each course (HC/SC/OE) carries **100 Marks** and hence the allotment of marks to C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components will be 15, 15 and 70 marks, respectively. i.e.,

C <sub>1</sub> Component	15 Marks	Assessment Marks
C <sub>2</sub> Component	15 Marks	
C <sub>3</sub> Component	70 Marks	Semester end Examination
<b>Total</b>	<b>100 Marks</b>	

**The above Scheme will be followed for all the HC, SC and OE courses in all the four semesters.**

### 1. HARD CORE (03 CREDIT COURSES)

#### Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components

Assessment Marks (C<sub>1</sub> + C<sub>2</sub>) consists of 30 marks. It will be divided into three parts viz., **Internal Test, Home Assignment and Seminar**. Internal tests will be conducted during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. Home Assignment will be considered for C<sub>1</sub> Component and Seminar for C<sub>2</sub> Component only. Hence, a teacher from each unit of a course may be given one assignment (or in their personal interest one more may be given). Since each course has three units, the marks shall be divided equally. Allotment of marks for C<sub>1</sub> and C<sub>2</sub> is as follows: Out of 15 Marks for C<sub>1</sub>, Internal test will be conducted for 30 Marks (10 Marks from each unit and reduced to 10 Marks) and Home Assignment will be given for 05 Marks (Each Home Assignment from every unit will be assessed for 05 Marks and finally reduced to 05 Marks). Assessment Marks for C<sub>2</sub> will be distributed as follows: Internal test will be conducted for 30 Marks (10 Marks from each unit and reduced to 10 Marks) and Seminar will be assessed for 20 Marks and finally its Marks will be distributed to each theory HC course. i.e.,

C <sub>1</sub>		C <sub>2</sub>	
Internal Test	30 Marks (10+10+10) <b>Reduced to 10 Marks</b>	Internal Test	30 Marks (10+10+10) <b>Reduced to 10 Marks</b>
Home Assignment	15 Marks (05+05+05) <b>Reduced to 5 Marks</b>	Seminar	20 Marks (05+05+05+05) <b>5 Marks will be distributed to each HC course</b>
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

### Distribution of Marks for C<sub>3</sub> Component (Semester end Examination)

The question paper is of 3 hrs duration with the Maximum of 70 Marks. The following question paper pattern will be followed for all the theory courses (HC/SC/OE). Question paper will have FIVE main questions. All the questions will cover all the units of the course with equal marks distribution. Q. No. 1 is of Medium/ Short Answer Type questions which will have nine questions and each question carries two marks. A student has to answer any seven questions. Q. No. 2 to 5 carries 14 marks each and a student has to answer all the four questions (*No Choice*). Each main question will have three sub-sections a, b, c. An examiner may set the questions like (4+4+6) or (4+5+5) or as his/her wish. However, sub-section 'c' will have an internal choice. i.e.,

#### Model Question Paper Pattern

**Max. Duration: 3 Hr**

**Max. Marks: 70**

**Note:** Answer all the questions. Each question carries 14 marks.

**Q. No. 1:** Nine Medium/ Short Answer Type Questions and any seven should be answered. Each question carries TWO marks. **(7 × 2 = 14)**

**Q. No. 2 to 5:** All the four questions have to be answered (*No Choice*). Each question carries **FOURTEEN** marks. An examiner may set the questions like (4+4+6) or (4+5+5) or as his/her wish. However, sub-section c will have an internal choice. (*Two marks questions shall be avoided for 2 to 5*). **(4 × 14 = 56)**

- a)
- b)
- c) **OR** c)

## 2. SOFT CORE (02 CREDIT COURSES)

### Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components

Assessment Marks (C<sub>1</sub> + C<sub>2</sub>) consists of 30 marks. It will be divided into two parts viz., **Internal Test and Home Assignment**. Internal tests will be conducted during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. As far as Home Assignment is concerned, the concerned teacher will assign one or two Home Assignments to each student. Since each course has two units, the marks will be divided equally. Allotment of marks for C<sub>1</sub> and C<sub>2</sub> is as follows: Out of 15 Marks for IA, Internal tests will be conducted for 20 marks and reduced to 10 marks, whereas Home Assignment is for 05 Marks. i.e.,

C <sub>1</sub>		C <sub>2</sub>	
Internal Test	20 Marks (10+10) <b>Reduced to 10</b>	Internal Test	20 Marks (10+10) <b>Reduced to 10</b>
Home Assignment	10 Marks (05+05) <b>Reduced to 05</b>	Home Assignment	10 Marks (05+05) <b>Reduced to 05</b>
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

### Distribution of Marks for C<sub>3</sub> Component (Semester End Examination)

The above described pattern (1.2) holds good in this case also.

### 3. PRACTICALS

The following Scheme will be applicable for all the four semesters (SC for chemistry students only)

Each practical consists of three components namely C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub>. C<sub>1</sub> and C<sub>2</sub> are designated as Internal Assessment (IA) and C<sub>3</sub> as Semester End Examination. Each practical carries **100 Marks** and hence the allotment of marks to C<sub>1</sub>, C<sub>2</sub> and C<sub>3</sub> Components will be 15, 15 and 70 marks respectively. i.e.,

C <sub>1</sub> Component	15 Marks	Internal Assessment Marks
C <sub>2</sub> Component	15 Marks	
C <sub>3</sub> Component	70 Marks	Semester End Examination
<b>Total</b>	<b>100 Marks</b>	

#### Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components

IA consists of **15 Marks**. It will be divided into three parts viz., **Internal Test, Continuous Assessment and Record**. Continuous assessment refers to the daily assessment of each student based on his/her attendance, skill, results obtained etc. Thus, 05 marks are allotted for Continuous Assessment. Internal tests will be conducted for 05 Marks during the 8<sup>th</sup> week of the semester for C<sub>1</sub> and 16<sup>th</sup> week of the semester for C<sub>2</sub>. Finally, remaining 05 Marks will be for the record. i.e.,

C <sub>1</sub>		C <sub>2</sub>	
Internal Test	05 Marks	Internal Test	05 Marks
Continuous Assessment	05 Marks	Continuous Assessment	05 Marks
Record	05 Marks	Record	05 Marks
<b>Total</b>	<b>15 Marks</b>	<b>Total</b>	<b>15 Marks</b>

#### Distribution of Marks for C<sub>3</sub> Component (Semester End Examination)

The end examination will be conducted for **70 Marks/course** with a maximum duration of 6 hours. Two experiments will be given to each student which carries 30 Marks each. Each student will be subjected to Viva-Voce Examination for which 10 Marks is allotted. i.e.,

Two Experiments	30+30 Marks
Viva-Voce	10 Marks
<b>Total</b>	<b>70 Marks</b>

**Note: Examiners have to set at least one experiment from each part in the semester end Examination (C<sub>3</sub>).**

#### 4. Evaluation of Dissertation/Project Work:

Each student can take up Project Work/ Dissertation under the guidance of the faculty of the department during the IV Semester as a Soft Core course.

##### 4.1. Distribution of Marks for C<sub>1</sub> and C<sub>2</sub> Components:

IA consists of **fifteen Marks** for each components; it will be divided into three parts viz.,

**Attendance, Continuous Assessment and Work Progress.** Continuous assessment refers to the daily assessment of each student based on his or her skill, results obtained, literature survey etc. C<sub>1</sub> will be assessed during the 8<sup>th</sup> Week of the semester and C<sub>2</sub> during the 16<sup>th</sup> Week of the semester. Hence, the concerned guide will prepare the marks list based on the above said parameters for both C<sub>1</sub> and C<sub>2</sub> Components.

**4.2. Distribution of Marks for C<sub>3</sub> Component (Semester End Examination):**

The semester end examination will be conducted for **seventy Marks**. Every student is suppose to prepare a hard copy of the findings of the work in the form of report and submitted for evaluation. This part will be assessed for fourth Marks. Each student will be subjected to Viva-Voce Examination for which thirty Marks is allotted. i.e.,

Evaluation of Report	: 40 Marks
Viva-Voce	: 30 Marks
<b>Total</b>	<b>: 70 Marks</b>

# FIRST SEMESTER

## HARD CORE

### CONCEPTS AND MODELS OF INORGANIC CHEMISTRY

COURSE CODE: 21CHA10

#### Objectives

- To study the structures of ionic crystals and simple molecules through VSEPR model.
- To learn acid-base concepts and chemical reactions in non-aqueous, ionic liquids and supercritical fluids as media.
- To study the chemistry of f-block elements.

#### Course Outcome

- The periodic properties of the elements, structures of ionic solids and their lattice energy calculations. Further, the use of VSEPR concepts in analyzing the structures of simple molecules.
- Various acid-base concepts and their applications in different fields. Also, understand the utility of various non-aqueous solvents in inorganic synthesis.
- Complete understanding of the chemistry of lanthanides, actinides and their applications.

#### Pedagogy

- Familiarize the students with the periodic properties of the elements using modern periodic table.
- Teaching through conventional method such as black board and chalk, and modern methods like power point presentation.
- For teaching structures of solids, crystal models (MX and MX<sub>2</sub> types) are used.

### Course content

#### UNIT-I

[16 HOURS]

**Chemical Periodicity:** Review of periodic properties

**Structures and energetics of ionic crystals:** Introduction, MX (NaCl, CsCl, ZnS) and MX<sub>2</sub> (fluorite, rutile,  $\beta$ -cristobalite, cadmium chloride and cadmium iodide) types. The perovskite and spinel structures. Thermodynamics of ionic crystal formation. Hydration energy and solubility of ionic compounds, Lattice energy, Born-Haber cycle, Born-Lande equation. The Kapustinskii's equation, Consequences of lattice enthalpies. Applications of lattice energetics. Ionic radii, factors affecting the ionic radii, radius ratio rules.

**Structures and energetics of inorganic molecules:** Introduction, Bent's rule, Energetics of hybridization. VSEPR model for explaining structure of molecules including fluxional molecule. M.O. treatment of homo-nuclear and heteronuclear diatomic molecules. **M.O. treatment involving delocalized  $\pi$ -bonding ( $\text{CO}_3^{2-}$ ,  $\text{NO}_3^-$ ,  $\text{NO}_2^-$ ,  $\text{CO}_2$  and  $\text{N}_3^-$ ), M.O. correlation diagrams (Walsh) for triatomic molecules.**

#### UNIT-II

[16 HOURS]

**Modern concepts of acids and bases:** Lux-Flood and Usanovich concepts, solvent system and leveling effect. Hard-Soft Acids and Bases, Classification and Theoretical backgrounds.

**Non-aqueous solvents:** Classification of solvents, Properties of solvents (dielectric constant, donor and acceptor properties) protic solvents (anhydrous H<sub>2</sub>SO<sub>4</sub>, HF and glacial acetic acid)

aprotic solvents (liquid SO<sub>2</sub>, BrF<sub>3</sub> and N<sub>2</sub>O<sub>4</sub>). Solutions of metals in liquid ammonia, hydrated electron. Super acids and super bases. Heterogeneous acid-base reactions.

**Ionic liquids:** Molten salt solvent systems, Ionic liquids at ambient temperature, Reactions in and applications of molten salt/ionic liquid media.

**Supercritical fluids:** Properties of supercritical fluids and their uses as solvents. Supercritical fluids as media for inorganic chemistry

### UNIT-III

[16 HOURS]

**Lanthanoid Chemistry:** General trends, Electronic, optical and magnetic properties. Abundance and extraction, **General principles:** conventional, solvent extraction and ion-exchange methods. Separation from monazite. Chemistry of principal oxidation states (II, III and IV). Stability of tetrahalides, dihalides and aqua ions of simple lanthanide compounds. Redox potentials. **Uses:** lanthanides as shift reagents, lanthanides as probes in biological systems. High temperature super conductors.

**Actinoid Chemistry:** General trends and electronic spectra. Occurrence and preparation of elements, **Isolation of the elements:** thorium and uranium, enrichment of uranium for nuclear fuel, uranium hydrides, oxides and chlorides. Chemical reactivity and trend. Chemistry of trans-uranium elements.

**Supramolecular Chemistry:** Introduction, selectivity and Supramolecular Interactions.

# STEREOCHEMISTRY AND REACTION MECHANISM

## COURSE CODE: 21CHA11

### Objectives

- To understand detailed molecular structures of organic compounds.
- To learn bonding and chemical reactions of organic compounds.
- To study different chemical reactions involved in organic synthesis.

### Course Outcome

- Optical and geometrical isomerism of Organic compounds. Application of stereochemistry in the study of regioselective and regiospecific reactions.
- The study of HMOT and its applications to simple organic molecules, and also understand the concept of aromaticity and methods of determining reaction mechanism.
- Nucleophilic, electrophilic and elimination reactions.

### Pedagogy

- Molecular models are used to teach stereochemistry.
- Teaching through conventional method such as black board and chalk, and modern methods like power point presentation.

## Course content

### UNIT-I

[16 HOURS]

**Stereoisomerism:** Projection formulae [flywedge, Fischer, Newman and sawhorse], enantiomers, diastereoisomers, mesomers, configurational notations of simple molecules, DL and RS configurational notations.

**Conformational analysis:** Conformational analysis of ethane, butane, cyclohexane, decalins, 1,2-, 1,3- and 1,4-disubstituted cyclohexane derivatives, Effect of conformation on the course and rate of reactions.

**Optical isomerism:** Conditions for optical isomerism; Elements of symmetry-plane of symmetry, centre of symmetry, alternating axis of symmetry (rotation-reflection symmetry). Optical isomerism due to chiral centers and molecular dissymmetry, allenes and biphenyls,

**Geometrical isomerism:** In C=C, C=N and N=N bonds, *E*, *Z* conventions, determination of configuration by physical and chemical methods. Geometrical isomerism in cyclic systems.

**Stereoselectivity:** Meaning and examples of stereospecific reactions, stereoselective reactions, diastereoselective reactions, regioselective, regiospecific reactions, enantioselective reactions and enantiospecific reactions.

### UNIT-II

[16 HOURS]

**Basics of organic reactions:** Meaning and importance of reaction mechanism, classification and examples for each class.

**Bonding in organic systems:** Theories of bonding-molecular orbital approaches. Huckel molecular orbital theory and its application to simple  $\pi$ -systems: ethylene, allyl, cyclopropyl, butadienyl, cyclopentadienyl, pentadienyl, hexatrienyl, cyclohexatrienyl, heptatrienyl, cycloheptatrienyl systems. Calculation of the total  $\pi$ -energy, and M.O. coefficients of the systems.

**Aromaticity:** Concept of aromaticity, Huckel's rule, Polygon rule, annulenes, heteroannulenes and polycyclic systems.

**Structure and reactivity:** Brief discussion on effects of hydrogen bonding, resonance, inductive and hyperconjugation on strengths of acids and bases.

**Methods of determining organic reaction mechanism:** Thermodynamic and kinetic requirements for reactions, kinetic and thermodynamic control; Identification of products; Determination of reaction intermediates, isotope labeling and effects of cross over experiments, kinetic and stereochemical evidence, solvent effect. Formation, structure, stability, detection and reactions of carbocations (classical and non-classical), carbanions, free radicals, carbenes, nitrenes, arynes and ylides (Sulphur, nitrogen and phosphorous).

### UNIT-III

[16 HOURS]

**Aliphatic Nucleophilic Substitution reactions:** Kinetics, mechanism and stereochemical factor affecting the rate of  $S_N1$ ,  $S_N2$ ,  $S_{RN}1$ ,  $S_Ni$ ,  $S_N1'$ ,  $S_N2'$ ,  $S_{N1i}$  and  $S_{RN1}$  reactions; Neighboring group participation.

**Electrophilic substitution reactions:** Kinetics, mechanism and stereochemical factor affecting the rate of  $S_E1$  &  $S_E2$

**Aromatic electrophilic substitution reactions:** Mechanism of nitration, halogenation, sulphonation, Friedel-Crafts alkylation and acylation, Mannich reaction, chloromethylation, Vilsmeier Haack reaction, Diazonium coupling, Gattermann-Koch reaction, Mercuration reaction.

**Aromatic nucleophilic substitution reactions:**  $S_N1$ ,  $S_N2$  and benzyne mechanism, Bucherer reaction, von Richter reaction.

**Mechanism of Addition reactions:** Addition to C=C multiple bonds involving electrophiles, nucleophiles. Markownikoff's rule and anti-Markownikoff's rule.

**Additions to carbonyl compounds:** Addition of water, alcohol, bisulphate, HCN and amino compounds. Hydrolysis of esters.

**Elimination reactions:** Mechanism and stereochemistry of eliminations -  $E_1$ ,  $E_2$ ,  $E_{1cB}$ . *cis* elimination, Hofmann and Saytzeff eliminations, competition between elimination and substitution reactions, decarboxylation reactions. Chugaev reaction.

4. Organic Chemistry, Vol-I by I. L. Finar.
5. Advance Organic Chemistry, IV edition, Jerry March.
6. Advance Organic Chemistry, III edition, Part-A and Part-B, Francis A. Carey and Rechar J. Sundberg.
7. Organic Chemistry, III edition, V. K. Ahluwalia and Rakesh Kumar Parashar.
8. Reactive intermediates in Organic Chemistry, N. S. Isaacs.

**BASIC PHYSICAL CHEMISTRY**  
**COURSE CODE: 21CHA12**

**Objectives**

- To understand thermal properties of chemical compounds.
- To study the rate of chemical reactions including fast reactions and factors influencing the reaction rate.
- To understand the theory of electrochemistry in solution.

**Course Outcome**

- The completion of this course will enable the students to gain the knowledge on fundamentals and theoretical background on the concepts of chemical thermodynamics, chemical kinetics and electrochemistry of solutions.
- This helps in understanding the stability and energetics of reaction.

**Pedagogy**

- Teaching through conventional method such as black board and chalk, and modern methods like power point presentation.
- To teach electrochemical aspects through animations.

**Course content**

**UNIT-I**

**[16 HOURS]**

**Chemical Thermodynamics: Entropy:** Physical significance, entropy changes in an ideal gas. Variation of entropy with temperature, pressure and volume. Entropy changes in reversible and irreversible processes.

**Free energy:** Helmholtz and Gibbs free energies, Gibbs-Helmholtz equation and its applications, Maxwell's relations and its applications. Nernst heat theorem: its consequences and applications. Third law of thermodynamics: statements, applications and comparison with Nernst heat theorem.

**Partial molar properties:** Physical significance, determination of partial molar volumes by intercept method and from density measurements. Chemical potential and its significance. Variation of chemical potential with temperature and pressure. Formulation of the Gibbs – Duhem equation. Derivation of Duhem-Margules equation.

**Fugacity:** Relation between fugacity and pressure, variation of fugacity with temperature and pressure. Determination of fugacity of gases.

**Activity and activity coefficient:** Variation of activity with temperature and pressure. Determination of activity co-efficient by vapour pressure, depression in freezing point, solubility measurements and by electrical methods.

**Thermodynamics of dilute solutions:** Raoult's law, Henry's law. Ideal and non-ideal solutions.

**UNIT-II**

**[16 HOURS]**

**Chemical Kinetics:** Complex reactions: Kinetics of parallel, consecutive and reversible reactions. Chain reactions: Branched chain reactions, general rate expression, Auto catalytic reactions (Hydrogen-Oxygen reaction), oscillatory reactions and explosion limits.

**Theories of reaction rates:** Collision theory and its limitations, Activated complex theory

(postulates -derivation) and its applications to reactions in solution. Energy of activation, other activation parameters - determinations and their significance. Lindemann theory, Hinshelwood's theory of unimolecular reactions.

**Potential energy surfaces:** Features and construction, theoretical calculations of  $E_a$ .

**Reactions in solution:** Ionic reactions - salt effects, effect of dielectric constant (single and double sphere models). Effect of pressure, volume and entropy change on the rates of reactions. Cage effect with an example.

**Fast reactions-** Introduction, study of fast reactions by continuous and stopped flow techniques, relaxation methods (T-jump and P-jump methods), flash photolysis, pulse and shock tube methods.

### UNIT-III

[16 HOURS]

**Electrochemistry of solutions:** Factor effecting electrolytic conductance. Debye-Huckel theory - Concept of ionic atmosphere. Debye-Huckel-Onsager equation of conductivity and its validity. Debye-Huckel limiting law (DHL), its modification for appreciable concentrations. A brief survey of Helmholtz-Perrin, Guoy-Chapman and Stern electrical double layer (no derivation). Transference number: True and apparent transference numbers, Abnormal transference numbers, effect of temperature on transference numbers. Liquid junction potential-determination and minimization.

**Energetics of cell reactions:** Effect of temperature, pressure and concentration on energetics of cell reactions (calculation of  $\Delta G$ ,  $\Delta H$  and  $\Delta S$ ).

**Irreversible electrode process:** Introduction, reversible and irreversible electrodes, reversible and irreversible cells. Polarization, over voltage - concentration over voltage, activation over voltage and ohmic over voltage. Experimental determination of over voltage. Equations for concentration over potential, stationary and non-stationary surface. Butler-Volmer equation, Tafel equation. Hydrogen oxygen over voltage. Effect of temperature, current density and  $pH$  on over voltage. Polarography- Half wave potential, application in qualitative and quantitative analysis.

**ESSENTIALS OF ANALYTICAL CHEMISTRY**  
**COURSE CODE: 21CHA13**

**Objectives**

- To familiarize statistical methods to validate analytical methods.
- To learn sampling techniques and conventional volumetric methods.
- To learn extraction and chromatographic methods for the separation and identification of different compounds.

**Course Outcome**

- To enhance the knowledge on usage of analytical terminologies
- To build the skills on statistical analysis and comparison of results
- To acquire the skills on sampling, purification, separation and data analysis using instrumental techniques.
- To excel the knowledge on various separation techniques
- Explore topics such as experimental design, sampling, calibration strategies, standardization, optimization, statistics and the validation of experimental results

**Pedagogy**

- Teaching through conventional method such as black board and chalk, and modern methods like power point presentation.
- To evaluate validation parameters, MS-Office tools *viz.*, MS-Excel sheets can be used.

**Course Content**

**Unit-I**

**Analytical Chemistry** – Objectives. Meaning and role of analytical chemists. Quantitative and qualitative analysis. Analytical process and steps in quantitative analysis. Meanings of the terms: analysis, determination and measurement, techniques, methods, procedures and protocols. Calculating and reporting the data. Measurement of central tendency and variability: Mean, median, range, standard deviation and variance.

Meaning of error. Determinate and indeterminate errors and minimization of errors. Accuracy and precision, distribution of random errors, the normal error curve. Propagation of determinate and indeterminate errors

**Statistical treatment of finite samples**- Student's t-test, confidence interval of mean. Comparison of two means and two standard deviations. Comparison of an experimental mean and a true mean. Criteria for the rejection of an observation- Q-test.

**Standardization and calibration**: Comparison with standards-direct comparison and titrations. External standard calibration-the least squares methods, regression equation and regression coefficient. Internal standard methods and standard-addition methods.

**Validation of analytical method**: Linearity, accuracy, precision, sensitivity, selectivity, robustness and ruggedness.

**Figures of merit of analytical methods** – sensitivity, detection and quantitation limit, linear dynamic range.

**Obtaining and preparing samples for analysis**: Importance of sampling, designing a sample plan-random, judgement, systematic-judgement, stratified and convenience sampling. Type of sample to collect - grab and composite samples. *In situ* sampling. Size of sample and number of samples. Implementing the sampling plan - solutions, gases and solids. Bringing solid samples into solution - digestion and decomposing.

**[16 HOURS]**

## UNIT – II

**Solvent extraction:** Theory-Nernst partition law, efficiency and selectivity of extraction.

**Extraction systems:** Extraction of covalent neutral molecules, extraction of uncharged metal chelates and synergic extraction, extraction of ion-association complexes-non chelated complexes, chelated complexes and oxonium systems. Use of salting out agents. Methods of extraction-batch and continuous extractions. applications.

**Solid Phase Extraction (SPE):** Principles, apparatus and instrumentation. Solid phase sorbents, extraction formats - Automated solid phase extraction. Solid phase micro extraction (SPME). Applications of SPE and SPME.

**Chromatography:** Definition, principles and mechanism of separation, classification of chromatographic techniques. General descriptions of column chromatography-frontal analysis, displacement analysis and elution analysis. General theory of column chromatography: characterizing a chromatogram-retention time, retention volume and baseline width. Chromatographic resolution, capacity factor, column selectivity. Column efficiency-band broadening-rate theory and plate theory. Peak capacity, non ideal behavior. Optimizing chromatographic separations using capacity factor, column selectivity and column efficiency- van Deemter equation, and its modern versions, Golay equation and Huber-Knox equations.

**Thin layer chromatography (TLC) -** Principles and procedures, stationary and mobile phases, solute- detection, alternative TLC procedures and applications of TLC.

[16 HOURS]

## Unit-III

**Gas chromatography (GC) -** Principles and types. Mobile phases, Sample injections, columns and stationary phases. Temperature control and solute detection; thermal conductivity detector (TCD), flame ionization detector (FID), nitrogen-phosphorus detector (NPD) and electron capture detector (ECD). Instrument control and data processing. GC-procedures- temperature programming and special procedures used in GC. Quantitative and qualitative analyses.

**High performance liquid chromatography (HPLC):** Principles, mobile phases, solvent delivery systems, sample injection system, column and stationary phases. Solute detection-UV- visible, fluorescence, refractive index and electrochemical detectors. Instrument control and data processing. Modes of HPLC. Optimisation of separations, qualitative and quantitative analyses.

**Ion-exchange chromatography (IEC):** Principles, apparatus and instrumentation, and applications.

**Size-exclusion chromatography (SEC):** Principles, apparatus and instrumentation, and applications.

**Affinity chromatography (AFC):** Principles, methodology and applications.

**Supercritical fluid chromatography (SFC):** Properties of supercritical fluids, instrumentation and operating variables, comparison of SFC with other chromatographic techniques, applications.

**Supercritical fluid extraction (SFE):** Advantages, instrumentation, choice of supercritical fluids, off-line and on-line extraction, applications.

**Electrophoresis (EP) and electrochromatography (EC):** Principles- high performance capillary electrophoresis and capillary electrochromatography, running buffers, supporting medium, sample injection, solutes- detection, instrument control and data processing. Modes of EP and EC- capillary zone electrophoresis (CZE), micellar electrokinetic chromatography (MEKC), capillary gel electrophoresis (CZE), capillary isoelectric focusing (CIEF). Capillary electrochromatography (CEC), features, basis of separations. Qualitative analysis by CE and CEC and applications.

**SOFT CORE**  
**ANALYTICAL CHEMISTRY PRACTICALS**

**COURSE CODE: 21CHA50**

**[128 HOURS]**

Safety measures in the laboratory; MSDS; reporting of values.

**Course Objective**

- To understand basic concepts by carrying out analytical experiments.
- The experimental results are subjected to validation of analytical parameters

**Course Outcomes**

- After studying this course the student to:
- Analyze various samples with different classical and simple instrumental skills.
- Obtain knowledge for selection of analytical methods with suitable technique being adopted for the analysis different samples like, water, laboratory chemicals and reagents, body fluids such as urine etc.
- Distinguish classical and instrumental methods.
- Propose and conduct experiment for quantification of individual analytes

**Pedagogy**

- Computer aided applications for the evaluation of experimental results.
- Each student performs experiments as per the protocol in practical classes.

**PART – I**

1. Determination of total acidity of vinegar and wines by acid-base titration.
2. Determination of purity of a commercial boric acid sample, and  $\text{Na}_2\text{CO}_3$  content of washing soda.
3. Determination of relative equivalent weight of a weak organic acid by titration with  $\text{NaOH}$ .
4. Determination of ephedrine and aspirin in their tablet preparations by residual acid-base titrimetry.
5. Determination of carbonate and bicarbonate in a mixture by  $p\text{H}$ -metric titration and comparison with visual acid-base titration.
6. Determination of carbonate and hydroxide-analysis of a commercial washing soda by visual and  $p\text{H}$ -titrimetry.
7. Determination of purity of a commercial sample of mercuric oxide by acid-base titration.
8. Determination of benzoic acid in food products by titration with methanolic  $\text{KOH}$  in chloroform medium using thymol blue as indicator.
9. Determination of the  $p\text{H}$  of hair shampoos and  $p\text{H}$  determination of an unknown soda ash.
10. Analysis of water/ waste water for acidity by visual,  $p\text{H}$  metric and conductometric titrations.
11. Analysis of water/ waste water for alkalinity by visual,  $p\text{H}$  metric and conductometric titrations.
12. Determination of ammonia in house-hold cleaners by visual and conductometric titration.
13. Determination of chromate and dichromate in mixture by acid-base titration: visual and  $p\text{H}$  metric methods.

14. Potentiometric determination of the equivalent weight and  $K_a$  for a pure unknown weak acid.
15. Determination of purity of aniline by non-aqueous acid-base titration by visual and potentiometric methods.
16. Determination of purity of ethylene glycol and glycerol by oxidimetric method using periodate (Malprade reaction).
17. Spectrophotometric determination of creatinine and phosphorus in urine.
18. Flame emission spectrometric determination of sodium, potassium and calcium in river/ lake water.

### **PART – II**

1. Determination of percentage of chloride in a sample by precipitation titration- Mohr, Volhard and Fajan's methods.
2. Determination of silver in an alloy and  $\text{Na}_2\text{CO}_3$  in soda ash by Volhard method.
3. Mercurimetric determination of chloride in blood or urine.
4. Determination of total hardness, calcium and magnesium hardness and carbonate and bicarbonate hardness of water by complexation titration using EDTA.
5. Determination of calcium in calcium gluconate/ calcium carbonate tablets/ injections and of calcium in milk powder by EDTA titration.
6. Determination of zinc in a sample of foot powder and thallium in a sample of rodenticide by EDTA titration.
7. Analysis of commercial hypochlorite and peroxide solution by iodometric titration.
8. Determination of copper in an ore/ an alloy by iodometry and tin in stibnite by iodimetry.
9. Determination of ascorbic acid in vitamin C tablets by titrations with  $\text{KBrO}_3$  and of vitamin C in citrus fruit juice by iodimetric titration.
10. Determination of iron in razor blade by visual and potentiometric titration using sodium metavanadate.
11. Determination of iron in pharmaceuticals by visual and potentiometric titration using cerium(IV) sulphate.
12. Determination of nickel in steel by synergic extraction and boron in river water/ sewage using ferroin.
13. Determination of total cation concentration of tap water by ion-exchange chromatography.
14. Determination of magnesium in milk of magnesium tablets by ion-exchange chromatography.
15. Cation exchange chromatographic separation of cadmium and zinc and their estimation by EDTA titration.
16. Gas chromatographic determination of ethanol in beverages.
17. Solvent extraction of zinc and its spectrophotometric determination.
18. Anion exchange chromatographic separation of zinc and magnesium followed by EDTA titration of the metals.
19. Separation and determination of chloride and bromide on an anion exchanger.
20. Separation of *o*- and *p*-nitroaniline and analysis by thin layer chromatography.

## INORGANIC CHEMISTRY PRACTICALS

COURSE CODE: 21CHA51

[128 HOURS]

### Objectives

- To understand basic concepts by carrying out different experiments.
- To develop the skill for the qualitative and quantitative analysis of various samples.

### Course Outcome

- Determination of various analytes presents in different ore samples by volumetric, gravimetric and spectrophotometric methods.
- The chemistry of redox, complexometric and indirect methods
- The principle in the semi-micro analysis of an inorganic salt mixture

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Handling the instrument and pyrolysis for quantitative determination of analyte.

## Course experiments

### PART – A

1. Determination of iron in haematite using cerium (IV) solution (0.02M) as the titrant, and gravimetric estimation of insoluble residue.
2. Estimation of calcium and magnesium carbonates in dolomite using EDTA titration, and gravimetric analysis of insoluble residue.
3. Determination of manganese dioxide in pyrolusite using permanganate titration.
4. Quantitative analysis of copper-nickel in alloy/mixture:
  - i. Copper volumetrically using  $\text{KIO}_3$ .
  - ii. Nickel gravimetrically using DMG

5. Determination of lead and tin in a mixture: Analysis of solder using EDTA titration.
6. Quantitative analysis of chloride and iodide in a mixture:
  - i. Iodide volumetrically using  $\text{KIO}_3$
  - ii. Total halide gravimetrically
7. Gravimetric analysis of molybdenum with 8-hydroxyquinoline.
8. Quantitative analysis of copper(II) and iron(II) in a mixture:
  - i. Copper gravimetrically as  $\text{CuSCN}$  and
  - ii. Iron volumetrically using cerium(IV) solution
9. Spectrophotometric determinations of:
  - a. Titanium using hydrogen peroxide
  - b. Chromium using diphenyl carbazide in industrial effluents
  - c. Iron using thiocyanate/1,10-phenanthroline method in commercial samples
  - d. Nickel using dimethylglyoxime in steel solution
10. Micro-titrimetric estimation of :
  - a) Iron using cerium(IV)
  - b) Calcium and magnesium using EDTA
11. Quantitative estimation of copper (II), calcium (II) and chloride in a mixture.
12. Circular paper chromatographic separation of: (Demonstration)
  - a. Iron and nickel
  - b. Copper and nickel

### **PART – B**

Semimicro qualitative analysis of inorganic mixtures containing **TWO** anions and **TWO** cations (excluding sodium, potassium and ammonium cations) and **ONE** of the following less common cations: W, Mo, Ce, Ti, Zr, V and Li.

#### **References**

7. Quantitative Chemical Analysis by Daniel C. Harris, 7<sup>th</sup> edition, (2006).

**ORGANIC CHEMISTRY PRACTICALS**  
**COURSE CODE: 21CHA52** **[128 HOURS]**

**Objectives**

- To understand synthetic methods by carrying out different experiments.
- To develop the skill for the separation and qualitative analysis of binary mixtures of organic compounds.

**Course Outcome**

- Students are involved in the multi-step synthesis of different organic compounds.
- Understand the qualitative analysis of binary mixture of organic compounds through separation, identification of functional groups and preparation of solid derivatives.

**Pedagogy**

- Each student performs experiments as per the protocol in practical classes.
- Experimental setup for the synthesis of organic compounds by every individual.

**Course experiments**

**PART-A**

Safety measures in the laboratory; MSDS; reporting of values and demonstration of KingDraw/ ChemDraw

**Multistep synthesis**

1. Preparation *p*-bromoaniline from acetanilide.
2. Preparation of *n*-butyl bromide from *n*-butyl alcohol.
3. Oxidation of cyclohexanol to adipic acid.
4. Esterification: Preparation of benzocaine from *p*-nitrotoluene.
5. Diazotization (Sandmeyer's reaction): Preparation of *p*-chlorobenzoic acid from *p*-toluidine.
6. Preparation benzilic acid from benzoin.
7. Preparation of *o*-hydroxy benzophenone from phenyl benzoate *via* Fries rearrangement.
8. Preparation of benzanilide from benzophenone oxime *via* Beckmann rearrangement.
9. Preparation of benzoic acid from benzaldehyde (Cannizzaro Reaction).
10. Preparation of 2,4-dinitrophenylhydrazine from 2,4-dinitrochlorobenzene.
11. Preparation of *m*-nitrobenzoic acid from methylbenzoate.
12. Preparation of chalcone.

**PART-B**

**Qualitative analysis:** Separation of binary mixtures, identification of functional groups and preparation of suitable solid derivatives.

**References**

6. Practical Organic Chemistry by Mann F. G. and Saunders.

## PHYSICAL CHEMISTRY PRACTICALS

COURSE CODE: 21CHA53

[128 HOURS]

### Objectives

- To understand the rate of chemical reactions and factors influencing the reaction rate by carrying out kinetic experiments.
- To understand basic concepts of electrochemistry by carrying out experiments.

### Course Outcome

- After the completion of this course, the students can able to develop the experimental skill and theoretical interpretation of experimental results of many physical chemistry experiments of chemical kinetics in solution phase, thermodynamics, electrochemistry and spectrophotometry.
- This helps in academics, research and industries.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- To optimize the reaction conditions for understanding the rate of chemical reactions.

### Course experiments

#### PART - A

1. Study of kinetics of hydrolysis of methyl acetate in presence of two different concentrations of HCl/H<sub>2</sub>SO<sub>4</sub> and report the relative catalytic strength.
2. Study of kinetics of reaction between K<sub>2</sub>S<sub>2</sub>O<sub>8</sub> and KI, first order, determination of rate constants at two different temperatures and  $E_a$ .
3. To study the kinetics of saponification of ethyl acetate by conductivity method at two different concentrations of NaOH and report the relative catalytic strength.
4. Determination of partial molar volume of salt-water system (NaCl-H<sub>2</sub>O/KCl-H<sub>2</sub>O/KNO<sub>3</sub>-H<sub>2</sub>O) systems.
5. To study the kinetics of reaction between acetone and iodine - determination of order of reaction with respect to iodine and acetone.
6. Study the kinetics of decomposition of diacetone alcohol by NaOH, determine the catalytic coefficient of the reaction and comparison of strength of alkali.
7. Determination of energy of activation for the bromide-bromate reaction.
8. Kinetics of reaction between sodium formate and iodine and determination of energy of activation.
9. Determination of heat of solution of organic acid (benzoic acid/salicylic acid) by variable temperature method (graphical method).
10. Determination of degree of association of benzoic acid in benzene by distribution method.
11. To determine the eutectic point of a two component system (Naphthalene-*m*-dinitrobenzene system).
12. Analysis of a binary mixture (Glycerol & Water) by measurement of refractive index.
13. Determination of the molecular weight of a polymer material by viscosity measurements (cellulose acetate/methyl acrylate).

#### PART – B

1. Conductometric titration of a mixture of HCl and CH<sub>3</sub>COOH against NaOH.
2. Conductometric titration of sodium sulphate against barium chloride.
3. pH titration of (a) HCl against NaOH (b) Copper sulphate against NaOH and (c) CH<sub>3</sub>COOH/HCOOH against NaOH - determination of  $K_a$ .
4. Determination of equivalent conductance of weak electrolyte (CH<sub>3</sub>COOH) at infinite

- dilution following Kohlrausch law.
5. Determination of dissociation constant and mean ionic activity coefficient of weak acids ( $\text{CH}_3\text{COOH}/\text{HCOOH}/\text{ClCH}_2\text{COOH}$ ) by conductivity method.
  6. Potentiometric titration of KI vs  $\text{KMnO}_4$  solution.
  7. Determination of dissociation constant of a weak acid ( $\text{CH}_3\text{COOH}/\text{HCOOH}/\text{ClCH}_2\text{COOH}$ ) by potentiometric method.
  8. Potentiometric titration of a mixture of halides ( $\text{KCl}+\text{KI}/\text{KCl}+\text{KBr}/\text{KBr}+\text{KI}$ ) against  $\text{AgNO}_3$ .
  9. To obtain the absorption spectra of coloured complexes, verification of Beer's law and estimation of metal ions in solution using a spectrophotometer.
  10. Potentiometric titration of  $\text{K}_2\text{Cr}_2\text{O}_7$  against FAS determination of redox potential and concentration of  $\text{Fe}^{2+}$  ions.
  11. Conductometric titration of oxalic acid against  $\text{NaOH}$  and  $\text{NH}_4\text{OH}$ .
  12. Coulometric titration  $\text{I}_2$  vs  $\text{Na}_2\text{S}_2\text{O}_3$ .
  13. Determination of acidic and basic dissociation constant and isoelectric point of an amino acid by pH metric method.
  14. Kinetics of photodegradation of indigocarmine (IC) using  $\text{ZnO}/\text{TiO}_2$  as photocatalyst and study the effect of  $[\text{ZnO}/\text{TiO}_2]$  and  $[\text{IC}]$  on the rate of photodegradation.

## SOFT CORE PAPERS

### TITRIMETRIC ANALYSIS

COURSE CODE: 21CHA54

### Objective

- To familiarize statistical methods to validate analytical methods.
- To learn sampling techniques and conventional volumetric methods.

### Course Outcome

After studying this course the student able to:

- Understand on quantitative and qualitative methods of analysis with relevant equilibrium chemistry.
- Develop the ideas with the fundamental aspects in analytical chemistry.
- Build the interest in students in developing good experimental protocols, and in interpreting

experimental results.

- Gain analytical knowledge for the quantitative analysis of various samples of different origin under titrimetric aspects.
- Learn statistical aspects from which the spirit of assessing the results will be enhanced.
- Learn method development and validation features so that they will become outstanding basement for their career in various industries.

### **Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## **Unit-I**

**Titrimetric analysis:** An overview of titrimetry. Principles of titrimetric analysis. Titration curves. Titrations based on acid-base reactions-titration curves for strong acid and strong base, weak acid and strong base and weak base and strong acid titrations. Selecting and evaluating the end point. Finding the end point by visual indicators, monitoring  $pH$  and temperature. Quantitative applications – selecting and standardizing a titrant, inorganic analysis-alkalinity, acidity and free  $CO_2$  in water and waste waters, nitrogen, sulphur ammonium salts, nitrates and nitrites, carbonates and bicarbonates. Organic analysis-functional groups like carboxylic acid, sulphonic acid, amine, ester, hydroxyl, carbonyl. Air pollutants like  $SO_2$ . Quantitative calculations. Characterization applications-equivalent weights and equilibrium constants.

**Acid-base titrations in non-aqueous media:** Role of solvent in acid-base titrations, solvent systems, differentiating ability of a solvent, some selected solvents, titrants and standards, titration curves, effect of water, determining the equivalence point, typical applications-determination of carboxylic acids, phenols and amines.

**Precipitation titrations:** Titration curves, feasibility of precipitation titrations, factors affecting shape - titrant and analyte concentration, completeness of the reaction, titrants and standards, indicators for precipitation titrations involving silver nitrate, the Volhard, the Mohr and the Fajan's methods, typical applications.

**[16 HOURS]**

## **UNIT – II**

**Complexometric titrations:** Complex formation reactions, stability of complexes, stepwise formation constants, chelating agents, EDTA - acidic properties, complexes with metal ions, equilibrium calculations involving EDTA, conditional formation constants, derivation of EDTA titration curves, effect of other complexing agents, factors affecting the shape of titration curves - completeness of reaction, indicators for EDTA titrations - theory of common indicators, titration methods employing EDTA - direct, back and displacement titrations, indirect determinations, titration of mixtures.

**Redox titrations:** Balancing redox equations, calculation of the equilibrium constant of redox reactions, calculating titration curves, detection of end point, visual indicators and potentiometric end point detection. Quantitative applications - adjusting the analyte's oxidation state, selecting and

standardizing a titrant. Inorganic analysis - chlorine residuals, dissolved oxygen in water, water in non-aqueous solvents. Organic analysis - chemical oxygen demand (COD) in natural and waste waters, titrations of mercaptans and ascorbic acid with  $I_3^-$  and titration of organic compounds using periodate.

**Automatic titrators:** Principles and theory of  $CO_2$ , sulphate, chloride and Karl Fisher titrators.

## CHEMISTRY OF SELECTED ELEMENTS COURSE CODE: 21CHA55

### Objectives

- To learn basic chemistry of some selected group elements from periodic table.
- To understand properties of metal-metal bonding and cluster compounds.

### Course Outcome

- Understand the chemistry of hydrogen and group 2 elements.
- The chemistry of pseudohalogens, interhalogens and their halogen compounds.
- The chemistry of xenon and other noble gas compounds.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching. Course content

### UNIT-I

**Compounds of hydrogen:** The hydrogen and hydride ions, Dihydrogen and hydrogen bonding. Classes of binary hydrides: Molecular hydrides, saline hydrides and metallic hydrides.

**The Group 1 elements:** Occurrence, extraction and uses. Simple compounds: Hydrides, halides, oxides, hydroxides, oxoacids, nitrides, solubility and hydration and solutions in liquid ammonia. Coordination and organometallic compounds. Applications.

**The Group 2 elements:** Occurrence, extraction and uses. General properties. Halides, hydrides

and salts of oxo acids. Complex ion in aqueous solution and complexes with amido and alkoxy ligands.

**The Group 15 elements:** Introduction, oxides and oxoacids of nitrogen and phosphorus.

[16 HOURS]

## UNIT-II

**The Group 17 elements:** Occurrence, recovery and uses. Trends in properties and pseudohalogens. **Interhalogens:** Physical properties and structures, chemical properties, cationic interhalogens. **Compounds with oxygen:** Halogen oxides, oxoacids and oxoanions. Trends in rates of redox reactions and redox properties of individual oxidation states.

**Chemistry of astatine.**

**The Group 18 elements:** Occurrence, recovery and uses. Synthesis and structure of xenon fluorides, Reaction of xenon fluorides, xenon-oxygen compounds, Organoxenon compounds, other compounds of noble gases.

**M-M bonds:** Multiple metal-metal bonds.

**Cluster compounds:** carbonyl and carbide clusters.

## CHEMISTRY OF NATURAL PRODUCTS-I

COURSE CODE: 21CHA56

### Objectives

- To learn the nomenclature, classification, purification, structure and synthesis of some natural products.
- To understand the biological functions of biomolecules.

### Course Outcome

- Acquire the knowledge of chemistry of lipids, prostaglandins and terpenoids.
- Understand the biological importance of chlorophyll and porphyrins.
- Chemistry of flavonoids and isoflavonoids.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern method like power point presentation is used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Lipids:** Nomenclature, classification, purification, structure and synthesis of fatty acids, phospholipids, sphingolipids. Biological importance of lipids (Lecithin, sphingolipids, oils and fats).

**Prostaglandins:** Introduction, classification and biological importance of PG's. Constitution of PGE1. Synthesis of PGE & F series.

**Terpenoids:** Introduction, classification and general methods of structural elucidation. Chemistry of pinene, camphor, caryophyllene, santonin. Biosynthesis of terpenoids.

### UNIT-II

[16 HOURS]

**Porphyrins:** Introduction, structure and biological functions of haemin. Vitamin B12: structure and as coenzyme in molecular rearrangement reactions; Chlorophyll: structure and biological importance.

**Flavonoids and Isoflavonoids:** Occurrence, nomenclature and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Kaempferol, Quercetin, wedelolactone, Butein, Daidzein. Biosynthesis of flavonoids and isoflavonoids: Acetate Pathway and Shikimic acid Pathway. Biological importance of flavonoids and isoflavonoids

4. Natural products: Their chemistry and biological significance, J. Mann, R. S. Davidson, J. B. Banthorpe and J. B. Harborne.
5. Synthetic drugs, Gurdeep R. Chatwal.
6. Heterocyclic chemistry by Achison.
7. Heterocyclic chemistry by Smith and Joule.
8. Heterocyclic chemistry by Pacquete.

## BIOPHYSICAL CHEMISTRY

COURSE CODE: 21CHA57

### Objectives

- To understand the physico-chemical principles of biological fluids.
- To learn the pharmacokinetics, pharmacodynamics, toxicokinetics of biological systems.

### Course Outcome

- After the completion of this course, the students gain the knowledge on theory and principles of biophysical chemistry and pharmacokinetics.
- This course helps to understanding the bio-availability and different pharmacokinetic parameters of drugs in the living system.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Biophysical Chemistry:** Electrophoresis - Principles of free electrophoresis, zone electrophoresis, gel electrophoresis and its applications in qualitative and quantitative study of proteins. Determination of isoelectric point of a protein. Electro-osmosis and streaming potential and its biological significance. Biological significance of Donnan membrane phenomenon. Micelles and its involvement during digestion and absorption of dietary lipids. Diffusion of solutes across bio-membranes and its application in the mechanism of respiratory exchange. -Salting In and -Salting Out of proteins. Osmotic behaviour of cells and osmo-regulation and its application in the evolution of excretory systems of organisms. Effect of temperature and pH on the viscosity of bio-molecules (albumin solution). Significance of viscosity in biological systems - mechanism of muscle contraction, polymerization of DNA and nature of blood flow through different vessels. Effect of temperature, solute concentration (amino acids) on surface tension. Biological significance of surface tension - stability of Alveoli in lungs, interfacial tension in living cells (Danielli and Davson model). Application of sedimentation velocity and sedimentation equilibrium method for molecular weight determination of proteins.

### UNIT-II

[16 HOURS]

**Pharmacokinetics:** Introduction, biopharmaceutics, pharmacokinetics, clinical pharmacokinetics, pharmacodynamics, toxicokinetics and clinical toxicology. Measurement of drug concentration in blood, plasma or serum. Plasma level-time curve, significance of measuring plasma drug concentrations.

**One compartment open model:** Intravenous route of administration of drug, elimination rate constant, apparent volume of distribution and significance. Calculation of elimination rate constant from urinary excretion data, clinical application.

**Two compartment model:** Plasma level-time curve, relationship between tissue and plasma drug concentrations, Apparent volumes of distribution. Drug clearance, clinical example. Plasma level-time curve for a three compartment open model.

Drug absorption: Factors affecting the rate of drug absorption - nature of the cell membrane, Route of drug administration - Oral drug absorption, Intravenous infusion and intravenous solutions, Effect of food on gastrointestinal drug absorption rate.

## SECOND SEMESTER

### COORDINATION CHEMISTRY

COURSE CODE: 21CHB10

#### Objectives

- To understand the preparation, properties, electronic configuration and structural elucidation of coordination compounds.
- To learn the reaction mechanism, stereochemistry and photochemistry of coordination compounds.

#### Course Outcome

- Gain the knowledge of preparative methods of coordination compounds and geometries of different coordination numbers.
- Understand the CFT and MOT bonding theories of metal complexes.
- Electronic spectra, magnetic properties and infrared spectroscopy of coordination compounds. In addition, understand the reaction mechanism and photochemistry of coordination compounds.

#### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

### Course content

#### UNIT-I

[16 HOURS]

**Preparation of coordination compounds:** Introduction, Preparative methods- simple addition reactions, substitution reactions, oxidation-reduction reactions, thermal dissociation reactions. Geometries of metal complexes of higher coordination numbers (2-12).

**Stability of coordination compounds:** Introduction, trends in stepwise stability constants, factors influencing the stability of metal complexes with reference to the nature of metal ion and ligands, the Irving-William series, chelate effect.

**Determination of stability constants:** Theoretical aspects of determination of stability constants of metal complexes by spectrophotometric and polarographic methods.

**Crystal field theory:** Salient features of CFT, d-orbital splitting in octahedral, tetrahedral, square planar and tetragonal complexes, Jahn-Teller distortions, measurement of  $10 Dq$  and factors affecting it. Evidences for metal-ligand covalency.

**Molecular Orbital Theory:** MOT to octahedral, tetrahedral and square planar complexes without and with pi-bonding.

#### UNIT-II

[16 HOURS]

**Electronic spectra:** Introduction, selection rules and intensities, electronic spectra of octahedral and tetrahedral complexes, Term symbols for  $d^n$  ions, Orgel and Tanabe-Sugano diagrams, charge-transfer spectra. Ligand-field transition. Charge transfer and energy applications. Optical rotatory dispersion and Circular dichroism. Magnetic circular dichroism.

**Magnetic properties:** Introduction, magnetic susceptibility and its measurements, spin and orbital contributions to the magnetic moment, the effects of temperature on  $\mu_{\text{eff}}$ , spin-cross over, ferromagnetism, anti-ferromagnetism and ferrimagnetism.

**Applications of infrared spectroscopy of coordination compounds:** Metal complexes of

ammine, nitro, nitrito, hydroxo, carbonato, sulphato, cyano, cyanato and thiocyanato complexes.

### UNIT-III

[16 HOURS]

**Reactions and Mechanisms:** Introduction. Substitution reactions- Inert and labile compounds, mechanisms of substitution. Kinetic consequences of Reaction pathways- Dissociation, interchange and association. Experimental evidence in octahedral substitution- Dissociation, associative mechanisms, the conjugate base mechanism, the kinetic chelate effect.

**Stereochemistry of reactions-** Substitution in *trans* and its complexes, isomerization of chelate rings. Substitution reactions of square-planar complexes-kinetics and stereochemistry of square-planar substitutions, evidence for associative reactions, explanations of the *trans* effect.

Electron-transfer processes: Inner-sphere mechanism and outer-sphere mechanism, conditions for high and low oxidation numbers.

**Photochemistry of coordination compounds:** Photochemistry of chromium(III) ammine compounds, Light-induced excited state spin trapping in iron(II) compounds and MLCT photochemistry in pentammineruthenium(II) compounds.

# SYNTHETIC ORGANIC CHEMISTRY

## COURSE CODE: 21CHB11

### Objectives

- To understand the reactions of organic compounds involving various reagents.
- To learn the synthesis and retro-synthesis of different organic compounds.

### Course outcome

- Students are familiar about chemistry of oxidants, reductants and their applications in the organic synthesis.
- Understand the various catalysts in organic synthesis by known naming reactions.
- Retro-synthesis and molecular rearrangement.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern method like power point presentation is used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Oxidation:** Oxidation with chromium and manganese reagents ( $\text{CrO}_3$ ,  $\text{K}_2\text{Cr}_2\text{O}_7$ , PCC, PDC, Sarret reagent,  $\text{MnO}_2$ ,  $\text{KMnO}_4$ ), peroxides and peracids, periodic acid,  $\text{OsO}_4$ ,  $\text{SeO}_2$ , NBS, Oppenauer oxidation, Sharpless epoxidation.

**Reduction:** Catalytic hydrogenation (homogeneous and heterogeneous) – catalysts (Pt, Pd, Ra-C, Ni, Ru, Rh), solvents and reduction of functional groups, catalytic hydrogen transfer reactions. Wilkinson catalyst,  $\text{LiAlH}_4$ ,  $\text{NaBH}_4$ , DIBAL-H, Sodium cyanoborohydride, Birch reduction, Leukart reaction (reductive amination), diborane as reducing agent, Meerwein-Ponndorf-Verley reduction, Wolff-Kishner reduction, Clemensen reduction, stannous chloride, Organoboron compounds: Introduction and preparations; Hydroboration and its applications; Reactions of organoboranes: isomerization reactions, oxidation, protonolysis, carbonylation, cyanidation. Reactions with aldehydes or ketones (*E* and *Z*-alkenes).

### UNIT-II

[16 HOURS]

**Reagents and reactions in organic synthesis:** Use of following reagents in organic synthesis and functional group transformations: Lithium diisopropylamide (LDA), Gilman reagent, dicyclohexyl carbodimide (DCC), dichlorodicyanoquinone (DDQ), Silane reagents-trialkylsilyl halides, trimethylsilyl cyanide, trimethyl silane; phase transfer catalyst, crown ethers, cyclodextrins, Ziegler-Natta catalyst, diazomethane, Woodward and Prevost hydroxylation, Stark enamine reaction, phosphorous ylides - Wittig and related reactions, Sulphur ylides – reactions with aldehydes and ketones, 1,3-dithiane anions - Umpolung reaction, Peterson reaction. Palladium reagents: Suzuki coupling, Heck reaction, Negishi reaction. Green Chemistry: Definition and principles, planning green synthesis in the laboratory, green preparations- aqueous reactions, solid state (solvent free) reactions, photochemical reactions, enzymatic transformations and reactions in ionic liquids.

## UNIT-III

[16 HOURS]

**Molecular rearrangements:** Introduction Carbon to carbon migration: Pinacol-pinacolone, Wagner-Meerwein, Benzidine, benzylic acid, Favorskii, Fries rearrangement, dienophile rearrangement. Carbon to nitrogen migration: Hofmann, Curtius, Lossen, Schmidt and Beckmann rearrangements. Miscellaneous rearrangements: Wittig, Smiles, Bayer-Villegier rearrangement and Barton reaction.

**Retrosynthesis:** Introduction to disconnection approach: Basic principles and terminologies used in disconnection approach. One group C-X and two group C-X disconnections. Synthons and synthetic equivalents. Retrosynthesis and synthesis of benzofurans, *p*-methoxy acetophenone, saccharine,  $\alpha$ -bisabolene, nuciferal, tetralone, ibuprofen; Functional group transformations in organic synthesis: nitro to keto, nitro to amine, acid to alcohol etc.

**PRINCIPLES OF PHYSICAL CHEMISTRY**  
**COURSE CODE: 21CHB12**

**Objectives**

- To understand the theoretical calculations of energies of simple molecules.
- To learn the calculation of different energies by statistical thermodynamics.
- To understand the basics of polymers, their kinetics and applications.

**Course Outcome**

- Principles of Quantum chemistry and theoretical calculations of energies of molecules and chemical reactions.
- Apply solutions of the Schrödinger equation for simple systems (particle in a box, rigid rotor, harmonic oscillator) to real systems (vibrational, rotational, and electronic energy states) in determining the energy of stationary states.
- Explain angular momentum as possessed by atomic or molecular systems, various descriptions of how angular momentum can be coupled, and how conservation of angular momentum is important to spectroscopy.
- Concepts and applicability of statistical thermodynamics in the calculations of different energies in the reacting system. Applications of phase rule for separation of the metals from ore.
- Fundamentals of polymers and their applications in controlling the quality and waste management of polymer product.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern method like power point presentation is used in class room teaching.
- Assigning the students to solve the problems to understand the concepts.

**Course content**

**UNIT-I**

**[16 HOURS]**

**Quantum Chemistry:** Introduction to quantum mechanics: Schrödinger wave equation, time-independent and time dependent Schrödinger wave equation and the relation between their solutions. Eigen functions and Eigen values. Physical interpretation of wave function. Concept of operators – Laplacian, Hamiltonian, Linear and Hermitian operators. Angular momentum operators and their properties. Commutative and non-commutative operators. Normalization, orthogonality and orthonormality of wave functions. Postulates of quantum mechanics. Solutions of Schrödinger wave equation for free particles, particle in a ring, particle in three dimensional box. Quantum mechanical degeneracy, tunnelling (no derivation). Wave equation for H-atom, separation and solution of R,  $\phi$  and  $\theta$  equations. Application of Schrodinger equation to rigid rotator and harmonic oscillator. Eigen functions and Eigen values of angular momentum. Ladder operator method for angular momentum.

## UNIT-II

[16 HOURS]

**Statistical thermodynamics:** Objectives of statistical thermodynamics, concept of distribution, types of ensembles. Thermodynamic probability and most probable distribution law. Partition functions – definition, evaluation of translational, rotational and vibrational and electronic partition functions for monoatomic, diatomic and polyatomic gaseous molecules. Sackur-Tetrode equation for entropy of translation function. Calculation of thermodynamic functions and equilibrium constants in terms of partition functions. Different distribution laws (Types of statistics): Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac Statistics (derivation of the three distribution laws). Comparison of Bose-Einstein and Fermi-Dirac Statistics with Maxwell-Boltzmann statistics. Problems and their solutions.

**Phase rule studies:** Thermodynamic derivation of phase rule. Application of phase rule to the two component systems - compound formation with congruent melting point and incongruent melting points, Roozeboom's classification. Application of phase rule to three component systems- systems of three liquids and systems of two salts and water.

## UNIT-III

[16 HOURS]

**Polymers:** Fundamentals of polymers - monomers, repeat units, degree of polymerization. Linear, branched and network polymers. Classification of polymers, Polymerization - condensation, addition, free radical, ionic, co-ordination polymerization and ring opening polymerization. Molecular weight and size, polydispersion. Average molecular weight concepts – number, weight and viscosity average molecular weight. Determination of molecular weights - viscosity method, osmotic pressure method, sedimentation and light scattering methods.

**Kinetics of Polymerization** - Condensation, addition, free radical, ionic, co-ordination polymerization.

**Phase transitions in polymers and thermal characterization:** Glass transition, crystallinity and melting- correlation with the polymer structure.

**Polymers in solution:** Criteria of polymer solubility, thermodynamics of polymer solutions.

**Colloids:** Types and classification, Micelles: Surface active agents, micellization, hydrophobic interaction, critical micellar concentration (CMC), factors affecting the CMC of surfactants, micellar catalysis.

# MOLECULAR SYMMETRY AND SPECTROSCOPY

## COURSE CODE: 21CHB13

### Objectives

- To understand the concepts of symmetry and symmetry operations and their application to CFT, hybridization, MOT and vibrational spectroscopy.
- To learn the theory and applications of microwave, vibration and Raman spectroscopy.
- To understand the principles and applications of UV-Visible and resonance Raman spectroscopy.

### Course outcome

- Molecular symmetry and applications of group theory to CFT, hybridization, MOT and vibrational spectroscopy.
- Theory and principles of Rotation, Vibration and Raman Spectroscopy.
- Theory and principles Electronic and Resonance Raman spectroscopy.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Molecular models are used to teach symmetry aspects of molecules
- Modern methods like power point presentation and animations are used in class room teaching.
- Students will be assigned to solve the numerical problems.

## Course content

### UNIT-I

[16 HOURS]

**Molecular symmetry and group theory:** Symmetry elements and symmetry operations.

**The Point Groups Used with Molecules:** Concept of a group, definition of a point group. Classification of molecules into point groups. Subgroups.

Hermann-Mauguin symbols for point groups. Multiplication tables ( $C_{2v}$ ,  $C_{2h}$  and  $C_{3v}$ ). Matrix notation for the symmetry elements. Classes and similarity transformation.

**Representation of groups:** The Great Orthogonality theorem and its consequences.

Character tables ( $C_s$ ,  $C_i$ ,  $C_2$ ,  $C_{2v}$ ,  $C_{2h}$  and  $C_{3v}$ ). Symmetry and dipole moment.

**Applications of group theory:** Group theory and hybrid orbitals.

**Symmetry in Chemical bonding:** Group theory to Crystal field theory and Molecular orbital theory (octahedral and tetrahedral complexes).

**Symmetry in Vibrational Spectroscopy:** Determining the symmetry groups of normal modes for non-linear molecules ( $H_2O$ ,  $NH_3$ ,  $CH_4$ ,  $trans-N_2F_2$ ) and linear molecules ( $CO$ ,  $HCl$ ,  $HCN$  and  $CO_2$ ) (Integration method).

### UNIT-II

[16 HOURS]

**Microwave spectroscopy:** Rotation spectra of diatomic Molecules - rigid and non rigid rotator model. Rotational quantum number and the selection rule. Effect of isotopic substitution on rotation spectra. Classification of polyatomic molecules based on moment of inertia. Rotation spectra of polyatomic molecules ( $OCS$ ,  $CH_3F$  and  $BCl_3$ ). Moment of inertia expression for linear tri-atomic molecules. Applications - Principles of determination of Bond length and moment of inertia from rotational spectra. Stark effect in rotation spectra and determination of dipole

moments.

**Vibration spectroscopy:** Vibration of diatomic molecules, vibrational energy curves for simple harmonic oscillator. Effects of anharmonic oscillation, expressions for fundamental and overtone frequencies. Vibration - rotation spectra of carbon monoxide. Vibration of polyatomic molecules – The number of degrees of freedom of vibration. Parallel and perpendicular vibrations ( $\text{CO}_2$  and  $\text{H}_2\text{O}$ ). Combination, difference and hot bands. Fermi resonance. Force constant and its significance. Theory of infrared absorption and theoretical group frequency. Intensity of absorption band and types of absorptions. Applications: Structures of small molecules:  $\text{XY}_2$  – linear or bent,  $\text{XY}_3$  – planar or pyramidal.

**Raman spectroscopy:** Introduction, Raman and Rayleigh scattering, Stokes and anti-Stokes lines, polarization of Raman lines, depolarization factor, polarizability ellipsoid. Theories of Raman spectra - classical and quantum theory. Rotation-Raman and vibration-Raman spectra. Raman activity of vibrations, rule of mutual exclusion principle. Vibration modes of some simple molecules and their activity.

### UNIT-III

[16 HOURS]

**UV Visible spectroscopy:** Quantitative aspects of absorption – Beer's law, Technology associated with absorption measurements. Limitations – real, chemical, instrumental and personal. Theory of molecular absorption. Vibration-rotation fine structure of electronic spectra. Types of absorption bands:  $n$  to  $\pi^*$ ,  $\pi$  to  $\pi^*$ ,  $n$  to  $\sigma^*$  and  $\sigma$  to  $\sigma^*$ , C-T and ligand field. Instrumentation.

**Applications:** Qualitative and quantitative analysis of binary mixtures, measurements of dissociation constants of acids and bases, determination of molecular weight. Woodward's empirical rules for predicting the wavelength of maximum absorption for olefins, conjugated dienes, cyclic trienes and polyenes,  $\alpha,\beta$ -unsaturated aldehydes and ketones, benzene and substituted benzene rings.

**Resonance Raman Spectroscopy:** Resonance Raman Effect and its applications. Non-linear Raman effects: Hyper, stimulated and inverse Raman effects. Coherent Anti-Stokes Raman Scattering and its applications.

### **SOFT CORE**

### **ANALYTICAL CHEMISTRY PRACTICALS**

**COURSE CODE: 21CHB50**

**[128 HOURS]**

Safety measures in the laboratory; MSDS; reporting of values.

#### **Course Objective**

- To understand basic concepts by carrying out analytical experiments.
- The experimental results are subjected to validation of analytical parameters

#### **Course Outcomes**

- After studying this course the student to:
  - Analyze various samples with different classical and simple instrumental skills.
  - Obtain knowledge for selection of analytical methods with suitable technique being adopted for the analysis different samples like, water, laboratory chemicals and reagents, body fluids such as urine etc.
  - Distinguish classical and instrumental methods.
  - Propose and conduct experiment for quantification of individual analytes

#### **Pedagogy**

- Computer aided applications for the evaluation of experimental results.
- Each student performs experiments as per the protocol in practical classes.

### **PART – I**

1. Determination of total acidity of vinegar and wines by acid-base titration.
2. Determination of purity of a commercial boric acid sample, and Na<sub>2</sub>CO<sub>3</sub> content of washing soda.
3. Determination of relative equivalent weight of a weak organic acid by titration with NaOH.
4. Determination of ephedrine and aspirin in their tablet preparations by residual acid-base titrimetry.
5. Determination of carbonate and bicarbonate in a mixture by pH-metric titration and comparison with visual acid-base titration.

6. Determination of carbonate and hydroxide-analysis of a commercial washing soda by visual and *pH*-titrimetry.
7. Determination of purity of a commercial sample of mercuric oxide by acid-base titration.
8. Determination of benzoic acid in food products by titration with methanolic KOH in chloroform medium using thymol blue as indicator.
9. Determination of the *pH* of hair shampoos and *pH* determination of an unknown soda ash.
10. Analysis of water/ waste water for acidity by visual, *pH* metric and conductometric titrations.
11. Analysis of water/ waste water for alkalinity by visual, *pH* metric and conductometric titrations.
12. Determination of ammonia in house-hold cleaners by visual and conductometric titration.
13. Determination of chromate and dichromate in mixture by acid-base titration: visual and *pH* metric methods.
14. Potentiometric determination of the equivalent weight and  $K_a$  for a pure unknown weak acid.
15. Determination of purity of aniline by non-aqueous acid-base titration by visual and potentiometric methods.
16. Determination of purity of ethylene glycol and glycerol by oxidimetric method using periodate (Malprade reaction).
17. Spectrophotometric determination of creatinine and phosphorus in urine.
18. Flame emission spectrometric determination of sodium, potassium and calcium in river/ lake water.

### PART – II

1. Determination of percentage of chloride in a sample by precipitation titration- Mohr, Volhard and Fajan's methods.
2. Determination of silver in an alloy and  $\text{Na}_2\text{CO}_3$  in soda ash by Volhard method.
3. Mercurimetric determination of chloride in blood or urine.
4. Determination of total hardness, calcium and magnesium hardness and carbonate and bicarbonate hardness of water by complexation titration using EDTA.
5. Determination of calcium in calcium gluconate/ calcium carbonate tablets/ injections and of calcium in milk powder by EDTA titration.
6. Determination of zinc in a sample of foot powder and thallium in a sample of rodenticide by EDTA titration.
7. Analysis of commercial hypochlorite and peroxide solution by iodometric titration.
8. Determination of copper in an ore/ an alloy by iodometry and tin in stibnite by iodimetry.
9. Determination of ascorbic acid in vitamin C tablets by titrations with  $\text{KBrO}_3$  and of vitamin C in citrus fruit juice by iodimetric titration.
10. Determination of iron in razor blade by visual and potentiometric titration using sodium metavanadate.
11. Determination of iron in pharmaceuticals by visual and potentiometric titration using cerium(IV) sulphate.

12. Determination of nickel in steel by synergic extraction and boron in river water/ sewage using ferroin.
13. Determination of total cation concentration of tap water by ion-exchange chromatography.
14. Determination of magnesium in milk of magnesium tablets by ion-exchange chromatography.
15. Cation exchange chromatographic separation of cadmium and zinc and their estimation by EDTA titration.
16. Gas chromatographic determination of ethanol in beverages.
17. Solvent extraction of zinc and its spectrophotometric determination.
18. Anion exchange chromatographic separation of zinc and magnesium followed by EDTA titration of the metals.
19. Separation and determination of chloride and bromide on an anion exchanger.
20. Separation of *o*- and *p*-nitroaniline and analysis by thin layer chromatography.

## INORGANIC CHEMISTRY PRACTICALS

COURSE CODE: 21CHB51

[128 HOURS]

### Objectives

- To understand basic concepts by carrying out different experiments.
- To develop the skill for the qualitative and quantitative analysis of various samples.

### Course Outcome

- Determination of various analytes presents in different ore samples by volumetric, gravimetric and spectrophotometric methods.
- The chemistry of redox, complexometric and indirect methods
- The principle in the semi-micro analysis of an inorganic salt mixture

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Handling the instrument and pyrolysis for quantitative determination of analyte.

## Course experiments

### PART – A

1. Determination of iron in haematite using cerium (IV) solution (0.02M) as the titrant, and gravimetric estimation of insoluble residue.
2. Estimation of calcium and magnesium carbonates in dolomite using EDTA titration, and gravimetric analysis of insoluble residue.
3. Determination of manganese dioxide in pyrolusite using permanganate titration.
4. Quantitative analysis of copper-nickel in alloy/mixture:
  - a. Copper volumetrically using  $\text{KIO}_3$ .
  - b. Nickel gravimetrically using DMG
5. Determination of lead and tin in a mixture: Analysis of solder using EDTA titration.
6. Quantitative analysis of chloride and iodide in a mixture:
  - a. Iodide volumetrically using  $\text{KIO}_3$
  - b. Total halide gravimetrically
7. Gravimetric analysis of molybdenum with 8-hydroxyquinoline.
8. Quantitative analysis of copper(II) and iron(II) in a mixture:
  - a. Copper gravimetrically as  $\text{CuSCN}$  and
  - b. Iron volumetrically using cerium(IV) solution
9. Spectrophotometric determinations of:
  - e. Titanium using hydrogen peroxide
  - f. Chromium using diphenyl carbazide in industrial effluents
  - g. Iron using thiocyanate/1,10-phenanthroline method in commercial samples
  - h. Nickel using dimethylglyoxime in steel solution
10. Micro-titrimetric estimation of :
  - c) Iron using cerium(IV)
  - d) Calcium and magnesium using EDTA
11. Quantitative estimation of copper (II), calcium (II) and chloride in a mixture.
12. Circular paper chromatographic separation of: (Demonstration)
  - c. Iron and nickel
  - d. Copper and nickel

### PART – B

Semimicro qualitative analysis of inorganic mixtures containing **TWO** anions and **TWO** cations (excluding sodium, potassium and ammonium cations) and **ONE** of the following less common cations: W, Mo, Ce, Ti, Zr, V and Li.

### References

1. Vogel's Text Book of Quantitative Chemical Analysis – 5<sup>th</sup> edition, J. Basset, R.C. Denney, G.H. Jeffery and J. Mendhom.

5. Macro and Semimicro Inorganic Qualitative Analysis by A.I. Vogel.
6. Semimicro Qualitative Analysis by F.J. Welcher and R.B. Halin.
7. Quantitative Chemical Analysis by Daniel C. Harris, 7<sup>th</sup> edition, (2006).

## ORGANIC CHEMISTRY PRACTICALS

COURSE CODE: 21CHB52

[128 HOURS]

### Objectives

- To understand synthetic methods by carrying out different experiments.
- To develop the skill for the separation and qualitative analysis of binary mixtures of organic compounds.

### Course Outcome

- Students are involved in the multi-step synthesis of different organic compounds.
- Understand the qualitative analysis of binary mixture of organic compounds through separation, identification of functional groups and preparation of solid derivatives.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Experimental setup for the synthesis of organic compounds by every individual.

### Course experiments

#### PART-A

Safety measures in the laboratory; MSDS; reporting of values and demonstration of KingDraw/ ChemDraw

### Multistep synthesis

1. Preparation *p*-bromoaniline from acetanilide.
2. Preparation of *n*-butyl bromide from *n*-butyl alcohol.
3. Oxidation of cyclohexanol to adipic acid.
4. Esterification: Preparation of benzocaine from *p*-nitrotoluene.
5. Diazotization (Sandmeyer's reaction): Preparation of *p*-chlorobenzoic acid from *p*-toluidine.
6. Preparation benzilic acid from benzoin.
7. Preparation of *o*-hydroxy benzophenone from phenyl benzoate *via* Fries rearrangement.
8. Preparation of benzanilide from benzophenone oxime *via* Beckmann rearrangement.
9. Preparation of benzoic acid from benzaldehyde (Cannizzaro Reaction).
10. Preparation of 2,4-dinitrophenylhydrazine from 2,4-dinitrochlorobenzene.
11. Preparation of *m*-nitrobenzoic acid from methylbenzoate.
12. Preparation of chalcone.

#### PART-B

**Qualitative analysis:** Separation of binary mixtures, identification of functional groups and preparation of suitable solid derivatives.

### References

1. Vogel' text book of practical organic chemistry, V edition, B. S. Furniss, A. J. Hannaford, P. W. G. Smith, A. R. Tatehell.
2. Elementary practical organic chemistry, Part-I: Small scale preparations, Part-II: Qualitative organic analysis, By Arthur I, Vogel.
3. Hand book of organic analysis, H. T. Clarke and Norman Collie.
4. Experiments in Organic Chemistry, Louis F. Fieser.
5. Laboratory manual of Organic Chemistry by B. B. Dey and M. V. Sitaraman.
6. Practical Organic Chemistry by Mann F. G. and Saunders.

## PHYSICAL CHEMISTRY PRACTICALS

COURSE CODE: 21CHB53

[128 HOURS]

### Objectives

- To understand the rate of chemical reactions and factors influencing the reaction rate by carrying out kinetic experiments.
- To understand basic concepts of electrochemistry by carrying out experiments.

### Course Outcome

- After the completion of this course, the students can able to develop the experimental skill and theoretical interpretation of experimental results of many physical chemistry experiments of chemical kinetics in solution phase, thermodynamics, electrochemistry and spectrophotometry.
- This helps in academics, research and industries.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- To optimize the reaction conditions for understanding the rate of chemical reactions.

### Course experiments

#### PART - A

1. Study of kinetics of hydrolysis of methyl acetate in presence of two different concentrations of HCl/H<sub>2</sub>SO<sub>4</sub> and report the relative catalytic strength.
2. Study of kinetics of reaction between K<sub>2</sub>S<sub>2</sub>O<sub>8</sub> and KI, first order, determination of rate constants at two different temperatures and  $E_a$ .
3. To study the kinetics of saponification of ethyl acetate by conductivity method at two different concentrations of NaOH and report the relative catalytic strength.
4. Determination of partial molar volume of salt-water system (NaCl-H<sub>2</sub>O/KCl-H<sub>2</sub>O/KNO<sub>3</sub>-H<sub>2</sub>O) systems.
5. To study the kinetics of reaction between acetone and iodine - determination of order of reaction with respect to iodine and acetone.
6. Study the kinetics of decomposition of diacetone alcohol by NaOH, determine the catalytic coefficient of the reaction and comparison of strength of alkali.
7. Determination of energy of activation for the bromide-bromate reaction.
8. Kinetics of reaction between sodium formate and iodine and determination of energy of activation.
9. Determination of heat of solution of organic acid (benzoic acid/salicylic acid) by variable temperature method (graphical method).
10. Determination of degree of association of benzoic acid in benzene by distribution method.
11. To determine the eutectic point of a two component system (Naphthalene-*m*-dinitrobenzene system).
12. Analysis of a binary mixture (Glycerol & Water) by measurement of refractive index.
13. Determination of the molecular weight of a polymer material by viscosity measurements (cellulose acetate/methyl acrylate).

#### PART – B

1. Conductometric titration of a mixture of HCl and CH<sub>3</sub>COOH against NaOH.
2. Conductometric titration of sodium sulphate against barium chloride.
3. pH titration of (a) HCl against NaOH (b) Copper sulphate against NaOH and (c) CH<sub>3</sub>COOH/HCOOH against NaOH - determination of  $K_a$ .
4. Determination of equivalent conductance of weak electrolyte (CH<sub>3</sub>COOH) at infinite

- dilution following Kohlrausch law.
5. Determination of dissociation constant and mean ionic activity coefficient of weak acids ( $\text{CH}_3\text{COOH}/\text{HCOOH}/\text{ClCH}_2\text{COOH}$ ) by conductivity method.
  6. Potentiometric titration of KI vs  $\text{KMnO}_4$  solution.
  7. Determination of dissociation constant of a weak acid ( $\text{CH}_3\text{COOH}/\text{HCOOH}/\text{ClCH}_2\text{COOH}$ ) by potentiometric method.
  8. Potentiometric titration of a mixture of halides ( $\text{KCl}+\text{KI}/\text{KCl}+\text{KBr}/\text{KBr}+\text{KI}$ ) against  $\text{AgNO}_3$ .
  9. To obtain the absorption spectra of coloured complexes, verification of Beer's law and estimation of metal ions in solution using a spectrophotometer.
  10. Potentiometric titration of  $\text{K}_2\text{Cr}_2\text{O}_7$  against FAS determination of redox potential and concentration of  $\text{Fe}^{2+}$  ions.
  11. Conductometric titration of oxalic acid against  $\text{NaOH}$  and  $\text{NH}_4\text{OH}$ .
  12. Coulometric titration  $\text{I}_2$  vs  $\text{Na}_2\text{S}_2\text{O}_3$ .
  13. Determination of acidic and basic dissociation constant and isoelectric point of an amino acid by pH metric method.
  14. Kinetics of photodegradation of indigocarmine (IC) using  $\text{ZnO}/\text{TiO}_2$  as photocatalyst and study the effect of  $[\text{ZnO}/\text{TiO}_2]$  and  $[\text{IC}]$  on the rate of photodegradation.

## SOFT CORE PAPERS

### TITRIMETRIC ANALYSIS

COURSE CODE: 21CHB54

#### Objective

- To familiarize statistical methods to validate analytical methods.
- To learn sampling techniques and conventional volumetric methods.

#### Course Outcome

After studying this course the student able to:

- Understand on quantitative and qualitative methods of analysis with relevant equilibrium chemistry.
- Develop the ideas with the fundamental aspects in analytical chemistry.
- Build the interest in students in developing good experimental protocols, and in interpreting

experimental results.

- Gain analytical knowledge for the quantitative analysis of various samples of different origin under titrimetric aspects.
- Learn statistical aspects from which the spirit of assessing the results will be enhanced.
- Learn method development and validation features so that they will become outstanding basement for their career in various industries.

### **Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## **Unit-I**

**Titrimetric analysis:** An overview of titrimetry. Principles of titrimetric analysis. Titration curves. Titrations based on acid-base reactions-titration curves for strong acid and strong base, weak acid and strong base and weak base and strong acid titrations. Selecting and evaluating the end point. Finding the end point by visual indicators, monitoring  $pH$  and temperature. Quantitative applications – selecting and standardizing a titrant, inorganic analysis-alkalinity, acidity and free  $CO_2$  in water and waste waters, nitrogen, sulphur ammonium salts, nitrates and nitrites, carbonates and bicarbonates. Organic analysis-functional groups like carboxylic acid, sulphonic acid, amine, ester, hydroxyl, carbonyl. Air pollutants like  $SO_2$ . Quantitative calculations. Characterization applications-equivalent weights and equilibrium constants.

**Acid-base titrations in non-aqueous media:** Role of solvent in acid-base titrations, solvent systems, differentiating ability of a solvent, some selected solvents, titrants and standards, titration curves, effect of water, determining the equivalence point, typical applications-determination of carboxylic acids, phenols and amines.

**Precipitation titrations:** Titration curves, feasibility of precipitation titrations, factors affecting shape - titrant and analyte concentration, completeness of the reaction, titrants and standards, indicators for precipitation titrations involving silver nitrate, the Volhard, the Mohr and the Fajan's methods, typical applications.

**[16 HOURS]**

## **UNIT – II**

**Complexometric titrations:** Complex formation reactions, stability of complexes, stepwise formation constants, chelating agents, EDTA - acidic properties, complexes with metal ions, equilibrium calculations involving EDTA, conditional formation constants, derivation of EDTA titration curves, effect of other complexing agents, factors affecting the shape of titration curves - completeness of reaction, indicators for EDTA titrations - theory of common indicators, titration methods employing EDTA - direct, back and displacement titrations, indirect determinations, titration of mixtures.

**Redox titrations:** Balancing redox equations, calculation of the equilibrium constant of redox reactions, calculating titration curves, detection of end point, visual indicators and potentiometric end point detection. Quantitative applications - adjusting the analyte's oxidation state, selecting and

standardizing a titrant. Inorganic analysis - chlorine residuals, dissolved oxygen in water, water in non-aqueous solvents. Organic analysis - chemical oxygen demand (COD) in natural and waste waters, titrations of mercaptans and ascorbic acid with  $I_3^-$  and titration of organic compounds using periodate.

**Automatic titrators:** Principles and theory of  $CO_2$ , sulphate, chloride and Karl Fisher titrators.

## CHEMISTRY OF SELECTED ELEMENTS COURSE CODE: 21CHB55

### Objectives

- To learn basic chemistry of some selected group elements from periodic table.
- To understand properties of metal-metal bonding and cluster compounds.

### Course outcome

- Understand the chemistry of hydrogen and group 2 elements.
- The chemistry of pseudohalogens, interhalogens and their halogen compounds.
- The chemistry of xenon and other noble gas compounds.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching. Course content

### UNIT-I

**Compounds of hydrogen:** The hydrogen and hydride ions, Dihydrogen and hydrogen bonding. Classes of binary hydrides: Molecular hydrides, saline hydrides and metallic hydrides.

**The Group 1 elements:** Occurrence, extraction and uses. Simple compounds: Hydrides, halides, oxides, hydroxides, oxoacids, nitrides, solubility and hydration and solutions in liquid ammonia. Coordination and organometallic compounds. Applications.

**The Group 2 elements:** Occurrence, extraction and uses. General properties. Halides, hydrides

and salts of oxo acids. Complex ion in aqueous solution and complexes with amido and alkoxy ligands.

**The Group 15 elements:** Introduction, oxides and oxoacids of nitrogen and phosphorus.

[16 HOURS]

## UNIT-II

**The Group 17 elements:** Occurrence, recovery and uses. Trends in properties and pseudohalogens. **Interhalogens:** Physical properties and structures, chemical properties, cationic interhalogens. **Compounds with oxygen:** Halogen oxides, oxoacids and oxoanions. Trends in rates of redox reactions and redox properties of individual oxidation states.

**Chemistry of astatine.**

**The Group 18 elements:** Occurrence, recovery and uses. Synthesis and structure of xenon fluorides, Reaction of xenon fluorides, xenon-oxygen compounds, Organoxenon compounds, other compounds of noble gases.

**M-M bonds:** Multiple metal-metal bonds.

**Cluster compounds:** carbonyl and carbide clusters.

## CHEMISTRY OF NATURAL PRODUCTS-I

COURSE CODE: 21CHB56

### Objectives

- To learn the nomenclature, classification, purification, structure and synthesis of some natural products.
- To understand the biological functions of biomolecules.

### Course Outcome

- Acquire the knowledge of chemistry of lipids, prostaglandins and terpenoids.
- Understand the biological importance of chlorophyll and porphyrins.
- Chemistry of flavonoids and isoflavonoids.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern method like power point presentation is used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Lipids:** Nomenclature, classification, purification, structure and synthesis of fatty acids, phospholipids, sphingolipids. Biological importance of lipids (Lecithin, sphingolipids, oils and fats).

**Prostaglandins:** Introduction, classification and biological importance of PG's. Constitution of PGE1. Synthesis of PGE & F series.

**Terpenoids:** Introduction, classification and general methods of structural elucidation. Chemistry of pinene, camphor, caryophyllene, santonin. Biosynthesis of terpenoids.

### UNIT-II

[16 HOURS]

**Porphyrins:** Introduction, structure and biological functions of haemin. Vitamin B12: structure and as coenzyme in molecular rearrangement reactions; Chlorophyll: structure and biological importance.

**Flavonoids and Isoflavonoids:** Occurrence, nomenclature and general methods of structure determination. Isolation and synthesis of Apigenin, Luteolin, Kaempferol, Quercetin, wedelolactone, Butein, Daidzein. Biosynthesis of flavonoids and isoflavonoids: Acetate Pathway and Shikimic acid Pathway. Biological importance of flavonoids and isoflavonoids

### References

2. Organic Chemistry, Vol-II by I. L. Finar.
3. Schaum's outline of theory and problems of Organic Chemistry, Harbert Meislich, Howard Nechamkin and Jacob Sharefkin.
4. Natural products: Their chemistry and biological significance, J. Mann, R. S. Davidson, J. B. Banthorpe and J. B. Harborne.
5. Synthetic drugs, Gurdeep R. Chatwal.
6. Heterocyclic chemistry by Achison.
7. Heterocyclic chemistry by Smith and Joule.
8. Heterocyclic chemistry by Pacquete.

## BIOPHYSICAL CHEMISTRY

COURSE CODE: 21CHB57

### Objectives

- To understand the physico-chemical principles of biological fluids.
- To learn the pharmacokinetics, pharmacodynamics, toxicokinetics of biological systems.

### Course Outcome

- After the completion of this course, the students gain the knowledge on theory and principles of biophysical chemistry and pharmacokinetics.
- This course helps to understanding the bio-availability and different pharmacokinetic parameters of drugs in the living system.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Biophysical Chemistry:** Electrophoresis - Principles of free electrophoresis, zone electrophoresis, gel electrophoresis and its applications in qualitative and quantitative study of proteins. Determination of isoelectric point of a protein. Electro-osmosis and streaming potential and its biological significance. Biological significance of Donnan membrane phenomenon. Micelles and its involvement during digestion and absorption of dietary lipids. Diffusion of solutes across bio-membranes and its application in the mechanism of respiratory exchange. -Salting In and -Salting Out of proteins. Osmotic behaviour of cells and osmo-regulation and its application in the evolution of excretory systems of organisms. Effect of temperature and pH on the viscosity of bio-molecules (albumin solution). Significance of viscosity in biological systems - mechanism of muscle contraction, polymerization of DNA and nature of blood flow through different vessels. Effect of temperature, solute concentration (amino acids) on surface tension. Biological significance of surface tension - stability of Alveoli in lungs, interfacial tension in living cells (Danielli and Davson model). Application of sedimentation velocity and sedimentation equilibrium method for molecular weight determination of proteins.

### UNIT-II

[16 HOURS]

**Pharmacokinetics:** Introduction, biopharmaceutics, pharmacokinetics, clinical pharmacokinetics, pharmacodynamics, toxicokinetics and clinical toxicology. Measurement of drug concentration in blood, plasma or serum. Plasma level-time curve, significance of measuring plasma drug concentrations.

**One compartment open model:** Intravenous route of administration of drug, elimination rate constant, apparent volume of distribution and significance. Calculation of elimination rate constant from urinary excretion data, clinical application.

**Two compartment model:** Plasma level-time curve, relationship between tissue and plasma drug concentrations, Apparent volumes of distribution. Drug clearance, clinical example. Plasma level-time curve for a three compartment open model.

Drug absorption: Factors affecting the rate of drug absorption - nature of the cell membrane, Route of drug administration - Oral drug absorption, Intravenous infusion and intravenous solutions, Effect of food on gastrointestinal drug absorption rate.

## THIRD SEMESTER

### ADVANCED INORGANIC CHEMISTRY

COURSE CODE: 21CHC10

#### Objectives

- To understand the fundamental concepts of organometallic chemistry and general principles of homogeneous and heterogeneous catalysis.
- To learn the concepts of metal clusters, silicates and silicones.

#### Course Outcome

- Fundamental concepts of organometallic chemistry and synthesis, structure and bonding in different organometallics and their applications.
- Homogeneous and heterogeneous catalysts and their applications in the synthesis of organic compounds in industries.
- Chemistry of main group elements, metal clusters, silicates and silicones and their applications in day to day life.

#### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

### Course content

#### UNIT-I

[16 HOURS]

**Fundamental concepts:** Introduction, Classification of organometallic compounds by bond type, nomenclature, the effective atomic number rule, complexes that disobey the EAN rule, common reactions used in complex formation.

**Organometallics of transition metals:** Preparation, bonding and structures of nickel, cobalt, iron and manganese carbonyls. Preparation and structures of metal nitrosyls.

**Ferrocene:** Preparation, structure and bonding. **Metal-carbene and metal-carbyne complexes.**

**Complexes containing alkene, alkyne, arene and allyl ligands:** Preparation, structure and bonding.

#### UNIT-II

[16 HOURS]

**General principles of Catalysis:** Language of catalysis. Homogeneous and heterogeneous catalysts.

**Homogeneous catalysis - Industrial Applications:** Alkene hydrogenation and hydroformylation, The Wacker's process, Monsanto acetic acid process and L-DOPA synthesis, alkene oligomerizations, water-gas shift reactions. The Reppe reaction.

**Heterogeneous catalysis** –The nature of heterogeneous catalysts. Alkene polymerization: Ziegler-Natta catalysis, Fischer-Tropsch carbon chain growth. New directions in heterogeneous catalysis.

**Zeolites as catalysts for organic transformation:** Uses of ZSM – 5.

**Alkene metathesis,** hydroboration, arylation or vinylation of olefins (Heck reaction).

**Biological and Medicinal Applications:** Organomercury, organoboron, organosilicon and organoarsenic compounds.

### UNIT-III

[16 HOURS]

**Chemistry of main group elements:** Diborane and its reactions, polyhedral boranes (preparation, properties, structure and bonding). Wade's rules, carboranes and metallocarboranes. Borazines. Phosphazenes, S-N compounds.

**Metal clusters:** Evidences and factors favoring of M-M bonding, Wade's-Mingo's-Lauher rules, bi, tri, tetra, penta and hexa nuclear metal carbonyl clusters.

Low and high nuclearity carbonyl clusters. Electron counting schemes in carbonyl clusters. The isolobal analogy.

**Silicates:** Structure, classification - silicates with discrete anions, silicates containing chain anion, silicates with layer structure, silicones with three dimensional net-work and applications.

**Silicones:** General methods of preparation, properties. Silicone polymers - silicone fluids, silicone greases, silicone resins, silicone rubbers and their applications.

# ORGANOMETALLIC AND PHOTOCHEMISTRY

## COURSE CODE: 21CHC11

### Objectives

- To understand the fundamental concepts of photochemistry and pericyclic reactions.
- To learn the synthesis and reactions of organometallic compounds.
- To learn the asymmetric synthesis of organic compounds.

### Course Outcome

- Basic concepts of photochemistry and pericyclic reactions and their usefulness in the synthesis of many organic compounds.
- Synthesis of organic compounds using different organometallic compounds as catalysts.
- Asymmetric synthesis of organic compounds using chiral compounds.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation is used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Photochemistry:** Light absorption and electronic transitions, Jablonski diagram, intersystem crossing, energy transfer, sensitizers, quenchers. Photochemistry of olefins, conjugated dienes, aromatic compounds, ketones-Norrish type-I and Norrish type-II reactions, enones, Paterno-Buchi reaction, di-pi methane rearrangement, photooxidation, photoreduction.

**Pericyclic reactions:** Electrocyclic reactions: Stereochemistry, symmetry and Woodward-Hofmann rules for electrocyclic reactions, FMO theory of electrocyclic reactions, correlation diagram for butadiene to cyclobutene and hexatriene to cyclohexadiene systems. Cycloaddition reactions: Classification, analysis by FMO and correlation diagram method. Cycloaddition reactions: [2+2] and [4+2] cycloadditions-FMO and correlation diagram method, Diels-Alder reaction, hetero Diels-Alder reaction and their applications. Intra and intermolecular 1,3-dipolar cycloadditions: involving nitrile oxide, nitrile imine, nitrile ylide and their application in organic synthesis. Sigmatropic reactions: Classification, stereochemistry and mechanisms. suprafacial and antarafacial shifts of H and carbon moieties. [3,3] and [5,5]-sigmatropic rearrangement, Claisen, Cope and aza-Cope rearrangement.

### UNIT-II

[16 HOURS]

**Chemistry of organometallic compounds:** Synthesis and reactions of organolithium (n-BuLi, PhLi), organocadmium, organomagnesium (Grignard reagent), organoselenium and organotellurium. Organoaluminium reagents: Preparation, site selective and stereoselective additions of nucleophiles mediated by organoaluminum reagents, reaction with acid chlorides, allyl vinyl ethers, 1,2-addition to imines and application in the synthesis of natural products. Organocopper reagents: Gilman reagent, preparation, reactions with aldehydes, ketones and imines. Application in the synthesis of brevicomin, Organozinc reagents: Preparation - oxidative addition and transmetallation, addition reactions of alkyl, aryl, allylic and propargylic zinc reagents, diastereoselective and enantioselective addition reaction with aldehydes, Reformatsky reaction. Organotin reagents: tributyltin hydride, Barton decarboxylation reaction, Barton deoxygenation reaction, Stille coupling, Stille-Kelley coupling reactions, Barton McCombie reaction, Keck stereoselective allylation and other applications.

## UNIT-III

[16 HOURS]

**Asymmetric synthesis:** Definition, importance, mechanism, energy consideration, advantages and limitations, methods of determination of enantiomeric excess. Methods of asymmetric induction:

**Topicity-Prochirality:** Substrate selectivity - Diastereoselectivity and enantioselectivity- Substrate controlled methods-use of chiral substrates - examples

**Auxiliary controlled methods:** Use of chiral auxiliaries - Chiral enolates-alkylation of chiral imines - Asymmetric Diels - Alder reaction

**Reagent controlled methods:** Use of chiral reagents - Asymmetric oxidation – Sharpless epoxidation - Asymmetric reduction - Use of lithium aluminium hydride and borate reagents. Synthesis and applications of oxazaborolidines, IPC-BBN, IPC2BH, (*S*)-BINAP-DIAMINE and (*R*)-BINAL-H. Use of (*R,R*)-DIPAMP, (*S,S*)-CHIRAPHOS, (*R,R*)-DIOP, SAMP, RAMP, *S*-Proline, *S*-PBMgCl, (-)-BOAlCl<sub>2</sub>, (+) and (-)-DET.

11. Organic chemistry by Clayden, Greeves, Warren and Wothers.

**ADVANCED PHYSICAL CHEMISTRY**  
**COURSE CODE: 21CHC12**

**Objectives**

- To understand the concepts of enzyme kinetics, industrial catalysis and linear free energy relationship.
- To learn the electrochemical aspects of batteries and electroplating.
- To understand the mechanism of corrosion prevention of metals by different methods.
- To understand the fundamentals of X-ray crystallography.

**Course Outcome**

- Applications of reaction kinetics help in correlating the rates of biological and chemical reactions.
- Theory and applications of electrochemical systems helps in the field of e-waste management and protection of metals.
- Fundamentals of X-ray crystallography and structural interpretation by various X-ray diffraction techniques.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animation are used in class room teaching.
- Students will be assigned to solve the numerical problems to understand the concepts.

**Course content**

**UNIT-I**

**[16 HOURS]**

**Homogeneous Catalysis:** Electronic and structural effects on acidity and basicity. Hard and soft acids and bases. Acidity functions: Hammett acidity function, Zuckerman-Hammett hypothesis, Bonnett hypothesis. Industrial catalysis: Catalyst carrier, promoter, inhibitor and catalyst poison.

**Enzyme kinetics:** Effect of substrate concentration (Michaelis - Menton equation), Effect of pH, effect of catalysts and inhibitors (substrate, zeolite,  $\text{Cr}^{3+}$ ,  $\text{Fe}^{2+}$  ZnO, U.V light), effect of temperature. A brief kinetic and mechanistic applications of glucose oxidase in the oxidation of glucose.

**Linear Free Energy Relationship:** Hammett equation, Taft equation, Okamoto Brown equation and its application to oxidation of amino acids and aromatic amines. Swain-Scott and Edward equation. Winstein - Grunwald relationship. Isokinetic relationship and significance of isokinetic temperature, Exner criterion.

**Kinetic Isotope Effect:** Theory of kinetic isotope effect - normal and inverse isotope effect, primary isotope effect, secondary isotope effect, solvent isotope effect.

**UNIT-II**

**[16 HOURS]**

**Electrochemical cells and batteries:** Introduction, galvanic and electrolytic cells, schematic representation of cells. Faraday's law, mass transfer in cells. Batteries: Classification, characteristics, primary, secondary and lithium batteries, fuel cells.

**Electroplating:** Definition, theory and mechanism of electroplating, effect of plating variables on the properties of electro deposits, comparative account of complexing and non-complexing baths (general treatment), additives on plating baths and their significance.

**Metallic coating:** Preparation of substrate surface, electroplating of Cu and Cr. Application of

Au and Ag plating.

**Corrosion:** Types of corrosion, basis of electrochemical corrosion, theories and mechanism of wet corrosion. Thermodynamic aspects of corrosion. Current – potential relations (Evan diagram) in corrosion cells. Factors influencing the rate of corrosion: Metal and environmental factors. Kinetic aspects corrosion: Corrosion rate measurement by different methods – chemical and electrochemical methods. General aspects of corrosion prevention and control – designing aspects, effect of alloying and surface modification. Corrosion prevention by painting, phosphating and anodic (passivation) and cathodic protection. Corrosion inhibitors: Introduction, classification, Characteristics and requirements of efficient corrosion inhibitors, Green inhibitors and their significance, Corrosion inhibition mechanism.

### UNIT-III

[16 HOURS]

**Fundamentals of X-ray crystallography:** Law of interfacial angles, laws of symmetry, Miller indices, Bragg equation (No derivation), Experimental methods – powder and rotating crystal methods, indexing of powder and rotating crystal photographs. Atomic scattering factor, structure factor, Fourier synthesis and electron density diagrams. Electron diffraction of gases, experimental technique, Scattering-Intensity curves, Wierl equation (no derivation), Radial distribution method determination of bond lengths and bond angles.

**Imperfections in atomic packing:** Types of imperfections, classification of imperfections, point defects, Schottky defects, Frenkel defects, disordered crystals, line defects, dislocation types, plane defects, small-angle and large-angle boundaries, stacking faults, crystal growth and twinning, non-stoichiometry.

**Imperfections and physical properties:** electrical, optical, magnetic, thermal and mechanical properties.

# CHEMICAL SPECTROSCOPY

COURSE CODE: 21CHC13

## Objectives

- To understand the basic concepts of spectroscopic techniques such as NMR, ESR, NQR, Mossbauer and photoelectron spectroscopy.
- To familiarize with the IR and mass spectroscopy.

## Course Outcome

- Understand the spectroscopic techniques such as NMR, IR, UV, and MS for recording and interpretation of spectra.
- Understand the characterization of chemical compounds.
- To learn electric and magnetic properties of radiation, molecules and bulk matter and solve the problems related to these properties.
- Understanding various fragmentation reactions of organic molecules.
- Predict the NMR, IR, UV, and MS spectra from a given molecular structure, including fragment-ions in MS.

## Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animation are used in class room teaching.
- Students will be assigned to solve the spectroscopic problems to understand the interpretation of spectra.

## Course content

### UNIT-I

[16 HOURS]

**NMR Spectroscopy:** Magnetic properties of nuclei (magnetic moment, g factor, nuclear spin), effect of external magnetic field on spinning nuclei, Larmor precession frequency, resonance conditions, population of nuclear magnetic energy levels, relaxation processes, relaxation time, line width and other factors affecting line width. Chemical Shift: Standards employed in NMR, factors influencing chemical shift: electronegativity, shielding and deshielding, van der Waals deshielding magnetic anisotropy, H-bonding, diamagnetic and paramagnetic anisotropies, spin-spin coupling, chemical shift values and correlation for protons bonded to carbon and other nuclei, Instrumentation. Chemical shift equivalence and magnetic equivalence, effects of chiral centre, Karplus curve-variation of coupling constants with dihedral angle. Complex NMR Spectra: Simplification of complex spectra-isotopic substitution, increased magnetic field strength, double resonance and lanthanide shift reagents, Nuclear Overhauser Effect (NOE), FT-NMR Spectroscopy and advantages.  $^{13}\text{C}$ -NMR Spectroscopy: multiplicity-Proton decoupling-Off resonance decoupling; Chemical shift, application of  $^{13}\text{C}$ ,  $^{19}\text{F}$ ,  $^{31}\text{P}$ ,  $^{11}\text{B}$  and  $^{15}\text{N}$ . Applications of NMR: Structural diagnosis, conformational analysis, keto-enol tautomerism, H-bonding. Solid state NMR and its applications.

**Multiple resonance spectroscopy:** Introduction to 2D-techniques: DEPT, COSY and NOESY.

### UNIT-II

[16 HOURS]

**Electron Spin Resonance Spectroscopy:** Basic principles, hyperfine couplings, the g values, factors affecting g values, isotropic and anisotropic hyperfine coupling constants, Zero

Field splitting and Kramer's degeneracy. Measurement techniques and applications to simple inorganic and organic free radicals and to inorganic complexes.

**NQR Spectroscopy:** Introduction, Principles, Quadrupolar nuclei, electric field gradient, nuclear quadrupole coupling constants, energies of quadrupolar transitions, effect of magnetic field. Applications.

**Mössbauer spectroscopy:** The Mössbauer effect, chemical isomer shifts, quadrupole interactions, magnetic splitting, measurement techniques and spectrum display, application to the study of  $\text{Fe}^{2+}$  and  $\text{Fe}^{3+}$  compounds; iron in very high oxidation states- $\text{Fe(V)}$  and  $\text{Fe(VI)}$  nitride complexes;  $\text{Sn}^{2+}$  and  $\text{Sn}^{4+}$  compounds, nature of M-L bond, coordination number and structure, detection of oxidation states and an inter halogen compound  $\text{I}_2\text{Br}_2\text{Cl}_4$ .

**Photoelectron Spectroscopy:** Introduction, principles, chemical shifts, photoelectron spectra of simple molecules. X-ray photoelectron and Auger electron spectroscopy- Principles and applications.

### UNIT-III

[16 HOURS]

**IR spectroscopy:** Introduction, instrumentation, sample handling, Characteristic group frequencies and skeletal frequencies. Finger print region, Correlation chart. Identification of functional groups-alkanes, alkenes, alkynes, aromatics, carbonyl compounds (aldehydes, ketones, esters and lactones), halogen compounds, sulphur and phosphorous compounds, alcohols, amides, lactams, amino acids and amines, Factors affecting group frequencies and band shapes: conjugation, resonance and inductance, hydrogen bonding and ring strain. tautomerism, *Cis-trans* isomerism. Applications of IR spectroscopy.

**Mass Spectrometry:** Basic principles, Instrumentation-Mass spectrometer, interpretation of mass spectra, resolution, molecular ions, meta-stable ions, Nitrogen rule and isotope ions. Different methods of ionization (chemical ionization, electron impact, field ionization-FAB and MALDI). Fragmentation processes-representation of fragmentation, basic fragmentation types and rules. Factors influencing fragmentations and reaction pathways. McLafferty rearrangement. Fragmentations (fragmentation of organic compounds with respect to their structure determination) associated with functional groups-alkanes, alkenes, cycloalkanes, aromatic hydrocarbons, halides, alcohols, phenols, ethers, acetals, ketals, aldehydes, ketones, quinines, carboxylic acids, esters, amides, acid chlorides, nitro compounds, amines & nitrogen heterocycles. Fragmentation patterns of glucose, myrcene, nicotine, retro Diels-Alder fragmentation. Composite problems involving the applications of UV, IR,  $^1\text{H}$  and  $^{13}\text{C}$ -NMR and mass spectroscopic techniques for the structural elucidation of organic compounds.

### **SOFT CORE**

#### **ANALYTICAL CHEMISTRY PRACTICALS**

**COURSE CODE: 21CHC50**

**[64 HOURS]**

#### **Objectives**

- To familiarize with the handling of instruments in the quantitative analysis of various samples.
- To understand the analysis of real samples like waste water, soil samples and biological samples and mixtures

#### **Course Outcomes**

After studying this course, the student to:

- Get experience on analysis of various complex mixtures by following multistep reactions.
- Acquire the knowledge on handling instruments and to overcome the general problems arises during the analysis.
- Acquire industrial skills required for sampling, analytical and interpretation and presentation of results.
- Possess adequate knowledge on literature search for developed analytical methods.

#### **Pedagogy**

- Each student performs experiments as per the protocol in practical classes.
- Computer aided applications are used for the evaluation of experimental results.

**[128 HOURS]**

#### **PART – III**

1. Determination of calcium in limestone by redox, acid-base and complexation titrations.
2. Determination of vitamin C in orange juice by titration with cerium(IV) and with 2,6-dichlorophenol indophenol.
3. Determination of mercury in an algicide by EDTA titration; and arsenic in ant control preparation by redox titration.
4. Determination of aluminium and magnesium in antacids by EDTA titration.
5. Analysis of a copper-nickel alloy sample for copper and nickel by EDTA titration using masking and selective demasking reactions.
6. Determination of saccharin in tablets by precipitation titration.
7. Determination of iodine value and saponification value of edible oils.
8. Determination of ascorbic acid in goose berry/bitter gourd by titrimetry and spectrophotometry using *N*-bromosuccinimide (NBS).
9. Analysis of a mixture of iron(II) and iron(III) by EDTA titration using pH control.

10. Determination of sulpha drugs by potentiometry using  $\text{NaNO}_2$  and iodometric assay of penicillin.
11. Solvent extraction method for determination of silver as ion-associate with 1,10-phenanthroline and bromopyragallool red.
12. Electrolytic determination of copper and lead in brass.
13. Polarographic determination of copper and zinc in brass.
14. Determination of sodium, potassium and calcium in mineral waters by atomic emission spectrometry.
15. Determination of iron in mustard seeds and phosphorus in peas by spectrophotometry.
16. Analysis of waste water for anionic detergents and phenol by spectrophotometry.
17. Fluorimetric determination of riboflavin (vit.  $\text{B}_2$ ) in tablets.
18. Colorimetric analysis of procaine by diazotization and coupling reaction.
19. Determination of manganese in steel by extraction-free spectrophotometry and molybdenum in steel by extractive spectrophotometry.
20. Determination of ethanol in wine by titrimetric and spectrophotometric dichromate methods

#### **PART – IV**

1. Analysis of waste waters for DO and COD by titrimetry.
2. Analysis of a ground water sample for sulphate by titrimetry (EDTA) and turbidimetry.
3. Potentiometric determination of formula and stability constant of a silver-ammonia complex ion.
4. Determination of aspirin, phenacetin and caffeine in mixture and APC tablets by solvent extraction and UV spectrophotometry.
5. Kinetic determination of urinary creatinine and purity of a commercial  $\text{H}_2\text{O}_2$  sample.
6. Determination of chromium(III) and iron(III) in a mixture by kinetic masking methods.
7. Catalytic determination of traces of selenium in biological materials and iodide in blood serum.
8. Photometric and potentiometric titration of iron(III) with EDTA.
9. Photometric and potentiometric titration of copper with EDTA.
10. Determination of copper(II) and iron(III) in mixture by photometric titration with EDTA.
11. Analysis of brackish water for chloride content by a) spectrophotometry (mercuric thiocyanate method), b) conductometry (silver nitrate) and c) potentiometry (silver nitrate).
12. Conductometric titration of sodium acetate with HCl and  $\text{NH}_4\text{Cl}$  with NaOH.
13. Ascorbic acid determination in natural orange juice by coulometry.
14. Spectrophotometric determination of iron in natural waters using thiocyanate and 1,10-phenanthroline as reagents.
15. Determination of fluoride in drinking water/ground water by spectrophotometry(alizarin red lake method).
16. Analysis of waste water for
  - a) Phosphate by molybdenum blue method

- b) ammonia-nitrogen by Nessler's method
  - c) nitrite-nitrogen by NEDA method
15. Analysis of a soil sample for
- a) Calcium carbonate and organic carbon by titrimetry.
  - b) Calcium and magnesium by EDTA titration.
16. Analysis of a soil sample for
- a) Nitrogen content by Kjeldahl method
  - b) Available phosphorus by spectrophotometry.
  - c) Nitrate-nitrogen/nitrite nitrogen/ammonia nitrogen by spectrophotometry.
  - d) Sodium and potassium by flame photometry.
17. Analysis of urine for
- a) Urea and uric acid by titrimetry and spectrophotometry.
  - b) Sulphate by precipitation titration after ion-exchange separation.
  - c) Sugar by Benedict's reagent.
18. Analysis of blood for
- a) cholesterol by spectrophotometry
  - b) Bicarbonate by acid-base titration.
19. Fluorimetric determination of quinine in an antimalarial tablet.

**INORGANIC CHEMISTRY PRACTICALS**  
**COURSE CODE: 21CHC51**

**[64 HOURS]**

**Objectives**

- To familiarize with the instrumental methods of analysis for determining metals present in the different samples.
- To familiarize with the preparation and characterization of different inorganic complexes.

**Course Outcome**

- Determination of alloy samples and understanding the electrochemical deposition of metals.
- Preparation and characterization of coordination compounds.
- Determination of composition, stability constant and magnetic susceptibility of metal complexes.

**Pedagogy**

- Each student performs experiments as per the protocol in practical classes.
- Spectroscopic tools are applied for the characterization of the synthesized complexes.

**Course experiments**

**PART-A**

1. Determination of bismuth, cadmium and lead in a mixture: Analysis of a low melting alloy (Wood's alloy).
2. Simultaneous spectrophotometric determination of chromium and manganese in a steel solution.
3. Determination of chromium(III) and iron(III) in a mixture: Kinetic masking method.
4. Electrogravimetric determination of:
  - a) Copper in copper sulphate
  - b) Nickel in nickel sulphate
  - c) Copper and nickel in alloy solution
  - d) Lead in lead nitrate.
5. Flame photometric determination of the following metal ions from different samples:
  - a) sodium b) potassium and c) sodium and potassium in a mixture.
6. Polarographic estimation of cadmium and zinc.
7. Determination of iron as the 8-hydroxyquinolate by solvent extraction method.
8. Quantitative determination of nickel using dithizone and 1,10-phenanthroline by synergistic extraction.
9. Spectrophotometric determination of the  $pK_a$  value of methyl red.
10. Semimicro gravimetric determination of aluminium.

**PART-B**

1. Preparation and characterization of:
  - a) Chloropentammine cobalt(III) chloride
  - b) Estimation of chloride in a complex by potentiometric or ion-exchange method

- c) Record the electronic absorption spectrum of a complex and verify TanabeSugano diagram.
2. Preparation of *cis*- and *trans*- dichlorobis(ethylenediammine) cobalt(III)chloride. Record the UV-Vis spectra and compare it with *cis*-form. Measure the molar conductance.
3. Preparation of hexammine cobalt(III) chloride and estimate cobalt ion.
4. Determination of magnetic susceptibility of any two compounds/complexes by Gouy method.
5. Determination of the composition of iron-phenanthroline complex by:
  - (a) Job's method
  - (b) mole-ratio method and
  - (c) Slope-ratio method.
6. Determine the stability constant of iron-tiron/iron-phenanthroline by Turner-Anderson method.
7. Preparation of potassium tris(oxalato)ferrate(III) and estimate the metal ion.
8. Preparation of acetyl acetonatomanganese(III) complex.
9. Preparation of tris(en)nickel(II) chloride and hexamine nickel(II) chloride complexes. Record electronic spectra and evaluate spectrochemical series.
10. Using chloropentammine cobalt(III) chloride, prepare nitro and nitritopentammine cobalt(III) chloride. Record the IR spectra of the isomers and interpret.
11. Estimate the chloride ion in a given complex by silver nitrate titration after ion-exchange separation.
12. Demonstration Experiments:
  - (a) Recording and interpretation of IR and NMR spectra of complexes.
  - (b) Spectrochemical series- Evaluation of Dq value.
  - (c) DNA interaction with metal complexes by UV-visible absorption and viscosity methods.

## ORGANIC CHEMISTRY PRACTICALS

COURSE CODE: 21CHC52

[64 HOURS]

### Objectives

- To understand the concepts of isolation and purification of natural products.
- To familiarize with the estimation of different functional groups in organic compounds.

### Course Outcome

- The isolation of caffeine, carotene, lycopene, cincole, azelaic acid and piperine from respective natural sources.
- Estimation of ketones, sugars, nitro and amino groups in natural products.
- Interpret UV, IR, NMR and MS data of different organic compounds.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Spectroscopic tools are applied for the characterization of isolated natural products.

### Course experiments

#### PART-A

1. Fractional crystallization: separation of mixture of naphthalene and biphenyl.
2. Thin layer chromatography: Separation of plant pigments.
3. Column chromatography: Separation of *o*- and *p*-nitro aniline
4. Isolation of piperine from pepper.
5. Isolation of caffeine from tea.
6. Isolation of azelaic acid from castor oil.
7. Isolation of carotene from carrot.
8. Isolation of lycopene from tomato.
9. Isolation of cincole from eucalyptus leaves.

#### PART-B

#### Isolation of natural products & estimations:

1. Estimation of ketones by haloform reaction.
2. Estimation of sugars by Bertrand's method.
3. Estimation of nitro groups.
4. Estimation of amino group.
5. Determination of enol content by Meyer's method.
6. Determination of iodine value of an oil or fat.
7. Determination of saponification value of oil.
8. Determination of equivalent weight of carboxylic acid by silver salt method

**Interpretation of Spectra:** Structural elucidation of some simple organic compounds by UV, IR, NMR and mass. Spectra have to be provided by the Teachers/ Examiners.

### References

2. Elementary practical organic chemistry, Part-III: Quantitative organic analysis, By Arthur I, Vogel.
3. Laboratory manual of Organic Chemistry by B. B. Dey and M. V. Sitaraman.
4. Practical Organic Chemistry by Mann F. G. and Saunders.
5. Natural products: A laboratory guide by Raphael Ikhan.

## PHYSICAL CHEMISTRY PRACTICALS

### Objectives

**COURSE CODE: 21CHC53**

**[64 HOURS]**

- To understand the significance of various factors influencing the reaction rate in proposing the reaction mechanism.
- To understand electrochemical and spectrophotometric methods of quantification of samples, and also determination of physico-chemical parameters of some important samples.

### Course Outcome

- Students can able to develop experimental skill and interpretation of plausible mechanisms of reactions.
- Gain practical knowledge on the theoretical basis of electrochemistry, thermodynamics, and spectrophotometry experiments.
- This helps in academics, research and industries.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Electrochemical and spectrophotometric tools are used to conduct the experiments.

## Course experiments

### PART-A

1. Determination of order of reaction for the acid hydrolysis of methyl acetate and evaluation of activation parameters.
2. Evaluation of Arrhenius parameters for the reaction between  $K_2S_2O_8$  and KI (First order reaction).
3. Study of kinetics of autocatalytic reaction between oxalic acid and  $KMnO_4$  and determine the order of reaction with respect to  $KMnO_4$ .
4. Kinetics of saponification of ethyl acetate by conductivity method and study the effect of dielectric constant of the medium (using  $CH_3OH$ ).
5. Study of effect of salt (ionic strength) on the kinetics of reaction between potassium persulphate and potassium iodide (second order reaction).
6. Spectrophotometric kinetics of oxidation of indigocarmine (IC) by chloramine-T (CAT) – Determination of order of reaction with respect to [CAT] and [IC].
7. To study the acid catalysed kinetics of oxidation of glycine by chloramine-T (CAT) - determination of order of reaction with respect to [CAT] and [glycine].
8. Study the phase diagram of three component system (Glacial acetic acid-Chloroform-water system / Glacial acetic acid-Acetone-Water system).
9. Study the rate of corrosion and inhibition efficiency of an inhibitor (thiourea) on mild steel/Al/Cu by weight loss method.

### PART-B

1. Conductometric titration of orthophosphoric acid against NaOH.
2. Conductometric titration of a mixture of HCl,  $CH_3COOH$  and  $CuSO_4$  against NaOH.
3. Conductometric titration of thorium nitrate with potassium tartarate.
4. Potentiometric titration of mixture of weak acids (acetic acid and monochloroacetic acid) against NaOH.
5. Determination of  $pK_a$  values of phosphoric acid by potentiometric / pH metric method.

- Potentiometric titration of mixture of KCl+KBr+KI against AgNO<sub>3</sub>.
- Potentiometric titration of FAS against ceric sulphate and sodium metavanadate, determine the concentration of FAS and redox potential.
- Potentiometric titration of lead nitrate against EDTA and determine the concentration of lead nitrate solution.
- Determination of *pK* value of an indicator (methyl orange/methyl red).
- Spectrophotometric analysis of a mixture of (a) KMnO<sub>4</sub> and K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>.
- Study of complex formation between ferric salt and salicylic acid.

**SOFT CORE**  
**KINETIC AND RADIOCHEMICAL METHODS OF ANALYSIS**  
**COURSE CODE: 21CHC54**

### Objectives

- To learn aspects of kinetic and radiochemical methods for analysis
- To understand the knowledge of applied aspects of recent needs by simple techniques

### Course Outcome

- To understand the reaction kinetics
- To gain the principles of radiochemical methods
- To understand the applicability of radiometric assays

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and information and communications technology are used in class room teaching.
- Students will be assigned to solve the numerical problems to understand electrochemical concepts.

### Course Content

#### Unit-I

[16 HOURS]

**Kinetic methods of analysis:** Analytical uses of reaction rates relative, basis of reaction rate

methods, rate laws-first and second order reactions relative rates of reactions, analytical utility of first or pseudo first order reactions, determination of reaction rates, types of kinetic methods- differential methods, integral methods, multicomponent analysis-neglect of reaction of slow- reacting component, logarithmic extrapolation method, reaction rate method, applications- catalyzed reactions, measurement methods for catalyzed reactions, micro determination of inorganic species like iodide, selenium, cobalt & mercury in complex materials, determination of organic species, non-catalytic reactions. Applications of enzyme-catalysed reactions for the analysis of substrates stoichiometric and rate methods, determination of urea, uric acid, blood glucose, galactose and blood alcohol, determination of enzymes-LDH, GOT and GPT. A brief outline of IR, UV, NMR, Mass spectroscopy as tools for kinetic study.

## UNIT – II

[16 HOURS]

**Radiometric methods:** Radioactive isotopes. Nuclear emissions- $\alpha$  and  $\beta$ -particles, neutrons, gamma rays and miscellaneous nuclear particles. Nuclear reactions, radiochemical decay and activity. Instrumentation and measurement of radioactivity. Radiation detectors-gas ionization, scintillation and semiconductor detectors. Pulse height analysis. Autoradiography. Statistics of radioactive measurements.

**Radiochemical analysis: Neutron activation methods-**neutrons and their sources. Interaction of neutrons with matter. Theory, experimental considerations and applications.

**Isotope dilution methods-**direct isotope dilution and inverse isotope dilution methods and their applications. Radiometric titrations. Radiorelease methods. Radioactive tracers.

**Radio immunoassay:** Principles of immunoassay. Specificity of immuno assays. Preparation of the antibody, incubation period for the assay, separation of the bound and free antigen. Fluorescence immunoassay. Enzyme immunoassay.

## FRONTIERS IN INORGANIC CHEMISTRY

COURSE CODE: 21CHC55

### Objectives

- To understand the basic concepts, synthesis and applications of materials.
- To learn the properties, fabrication and characterization of nanomaterials.

### Course Outcome

- Gain knowledge on design and synthesis of new inorganic materials.
- Fabrication and characterization of nanomaterials.
- Applications of ceramics, pigments, silicates and biomaterials.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Materials chemistry:** Historical Perspectives. Design of new materials through a Critical Thinking Approach. Materials sustainability.

**Synthesis of materials:** The formation of bulk material by different methods.

**Defects and ion transport:** Extended defects. Atom and ion diffusion. Solid electrolytes.

**Metal oxides, nitrides and fluorides:** Monoxides of the 3d metals, higher oxides and complex oxides, oxide glasses, nitrides and fluorides.

**Sulfides, intercalation compounds and metal rich phases:** Layered MS<sub>2</sub> compounds and intercalation, Chevrel phases.

**Ceramic materials:** Sol-gel process and applications of biomaterials of ceramics.

**Inorganic pigments:** Coloured pigments, white and black inorganic materials.

**Molecular materials and fullerides:** Fullerides, Molecular material chemistry.

**Silicates:** Structure, classification - silicates with discrete anions, silicates containing chain anion, silicates with layer structure, silicones with three dimensional net work and applications.

## UNIT-II

**Nanomaterials**-Introduction.

[16 HOURS]

**Fundamentals**-Terminology and history.

**Characterization and fabrication:** Top-down and bottom-up fabrication. Solution based synthesis of nanoparticles. Vapour-phase synthesis of nanoparticles. Templated synthesis of nanomaterials using frameworks, supports and substrates. Sonochemical microwave methods for the synthesis of nanoparticles.

Structural study of nanocomposites by different methods.

**Nanostructures and properties**

One-dimensional control: carbon nanotubes and inorganic nanowires.

Two-dimensional control: grapheme, quantum wells and solid-state super lattices.

Three-dimensional control: mesoporous materials and composites.

**Some applications of inorganic/organic/polymeric materials:** Optical, electrical, magnetic, and chemical and biosensors.

**CHEMISTRY OF NATURAL PRODUCTS-II**  
**COURSE CODE: 21CHC56**

**Objectives**

- To familiarize with the chemical concepts of alkaloids and steroids.
- To learn the structural elucidation and biological importance of alkaloids and steroids.

**Course Outcome**

- Chemistry of alkaloids and their biological significances.
- Synthesis and characterization of several alkaloids and steroids.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

**Course content**

**UNIT-I**

**[16 HOURS]**

**Alkaloids:** Introduction, classification, isolation and general methods of structural elucidation of alkaloids. Classification of alkaloids. Biological importance of alkaloids. Structural elucidation of nicotine, papaverine, quinine, reserpine and morphine. Biosynthesis of alkaloids (nicotine, coniine and cocaine).

**UNIT-II**

**[16 HOURS]**

**Steroids:** Introduction, Structural elucidation of cholesterol, bile acids, Ergosterol and its irradiation products. Sex hormones and corticosteroids: Synthesis of estrone, progesterone, androsterone, testosterone. Barton reaction for the synthesis of aldosterone. Brief discussion of homosteroids, norsteroids and oral contraceptives. Biological significance of anabolic steroids.

4. Natural products: Their chemistry and biological significance, J. Mann, R. S. Davidson, J. B. Banthorpe and J. B. Harborne.

**MATERIALS CHEMISTRY**

**COURSE CODE: 21CHC57**

**Objectives**

- To familiarize with the preparation and characterization of different types of nanomaterials.
- To learn the properties and applications of semiconductors and superconductors.

**Course Outcome**

- Understand the fundamentals and importance of different types of nanomaterials, their methods of preparation and characterization by different techniques.
- Basic aspects of semiconductors and superconductors, their properties and applications.

## Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Chemistry of nanomaterials:** Fundamentals and importance, metal nanoclusters, magic numbers, theoretical modelling of nanoparticles, geometric structure, electronic structure, reactivity, fluctuations, magnetic clusters, bulk to nano transitions. Semiconducting nanoparticles: optical properties, photo fragmentation, Coulombic explosion.

**Carbon nanoparticles:** Introduction, carbon molecules, nature of carbon bond, new carbon structure. Carbon clusters: Small carbon clusters, C<sub>60</sub>: Discovery, structure, alkali doping, super conductivity. Fullerenes and other bulky balls. Carbon nano-tubes: Fabrication structure, electrical properties, vibrational properties, mechanical properties. Quantum dots, Graphene, and applications of nanomaterials.

**Methods of preparation:** Plasma arc, Chemical vapour deposition (CVD), sol-gel, silica-gel, hydrolysis, condensation, polymerization of monomers to form nanoparticles, solvothermal, and hydrothermal methods, electrochemical, ball milling and pulsed laser methods. Characterization of nanomaterials (X-ray, IR, UV and SEM).

### UNIT-II

[16 HOURS]

**Semiconductors:** Metals, insulators and semiconductors. Band theory, energy bands, intrinsic and extrinsic semiconductors. Conductivity: electrons and holes, temperature dependence on conductivity, Optical properties: absorption spectrum, photoconductivity, photovoltaic effect and luminescence. Junction properties: metal-metal junctions, metal-semiconductor junctions, p-n junctions, transistors, industrial applications of semiconductors: Mixed oxides, spinels and other magnetic materials.

**Superconductors:** Introduction, critical temperature and zero resistivity, Meissner effect, critical magnetic field and its variation with temperature. Type - I and II super conductors, specific heat, isotope effect, basic concepts of BCS theory. High temperature (T<sub>c</sub>) superconductors and its applications.

7. Solid State Chemistry and its applications – A.R. West.
8. Principles of the Solid State – H.V. Keer.
9. Basic Solid State Chemistry, 2<sup>nd</sup> edition, Anthony R. West.
10. Solid State Chemistry: An Introduction, 3<sup>rd</sup> edition, Lesley E. Smart and Elaine A. Moore.
11. Introduction to Solid state Physics-C. Kittel, 5<sup>th</sup> edition, Wiley Eastern, Limited.
12. C.N.R. Rao and J. Gopalakrishna –New Directions in solid state chemistry| Cambridge University Press, Cambridge (1999).

**OPEN ELECTIVE (FOR NON-CHEMISTRY STUDENTS ONLY)**  
**GENERAL CHEMISTRY**  
**COURSE CODE: 21CHC80**

**Objectives**

- To understand the basic concepts of chemistry including periodic properties of elements, structure and bonding.
- To learn the applications of synthetic products and biological importance of natural products. .
- To understand the basic concepts of thermodynamics, chemical kinetics, ionic equilibria and electrochemistry.
- To learn the statistical evaluation of experimental data. Applications of titrimetric methods and separation techniques.

**Course Outcome**

- Periodic properties of elements, structure and bonding of ionic compounds as well as various concepts of acids and bases.
- Hybridization, bonding and molecular structure of simple organic molecules. And also, biological importance of natural products.
- Basic concepts of thermodynamics, chemical kinetics, electrochemistry and ionic equilibria and their applications.
- Statistical evaluation of experimental data, concept of titrimetric and chromatographic methods.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.
- Students will be assigned to solve the numerical problems to understand the concepts.

**Course content**  
**UNIT-I**

**[16 HOURS]**

**Periodic table and chemical periodicity:** Periodic properties of elements, State of Matter, their resources. Important periodic properties of the elements, covalent radii, ionic radii, ionization potential, electron affinity and electronegativity.

**Structure and Bonding:** Properties of ionic compounds, structure of crystal lattices (NaCl, CsCl, ZnS, Wurtzite and rutile), Lattice energy, Born-Haber Cycle, radius ratio rules and their limitations. MO treatment for homo- and heteronuclear diatomic molecules. VSEPR model to simple molecules. Factors affecting the radii of ions, covalent character in ionic bonds, hydration energy and solubility of ionic compounds.

**Concepts of Acids and Bases:** Review of acid base concepts. Lux-Flood and solvent system concepts. Hard-soft acids and bases. Applications.

**UNIT-II**

**[16 HOURS]**

**Bonding and molecular structure:** Introduction to organic chemistry, atomic orbitals, sigma and pi bond formation-molecular orbital (MO) method, sp, sp<sup>2</sup> and sp<sup>3</sup> hybridization, bond length, bond dissociation energies and bond angles (open chain and cyclic compounds). Electronegativity and polarity of the bonds. Classifications and reactions of organic compounds (with examples).

**Acids and bases:** Hydrogen bonding, resonance and inductive effective on strengths of acids and bases.

**Biological importance of natural products:** Amino acids, proteins, carbohydrates (cellulose, starch, glycogen), lipids (fats and oils, phospholipids), prostaglandins, nucleic acids, steroids, alkaloids, vitamins, flavonoids.

**Applications of synthetic products:** Dyes, drugs, polymers (plastics), soaps and detergents, pesticides and pheromones.

### UNIT-III

[16 HOURS]

**Thermodynamics:** First and second laws of thermodynamics. Concept of entropy and free energy, entropy as a measure of unavailable energy. Entropy and free energy changes and spontaneity of process.

**Chemical kinetics:** Rate and order of reaction. Factor affecting the rate of reaction. and determination Order of reaction. Energy of activation and its determination. Brief account of collision and activated complex theories.

**Ionic equilibria:** pH scale, buffer solutions, calculation of pH of buffer solutions, buffer capacity and buffer index, buffer mixtures.

**Solutions:** Concentration units, solutions of liquids in liquids, Raoult's law, ideal and non-ideal solutions.

**Electrochemistry:** Electrolytic conductance, specific, equivalent and molar conductance, ionic mobility and transference number, factors affecting the electrolytic conductance, Arrhenius theory of strong and weak electrolytes, assumptions of Debye-Huckel theory of strong electrolytes. Single electrode potential, reference electrodes, galvanic cells, emf of galvanic cells and construction of electrochemical cells.

### UNIT-IV

[16 HOURS]

**Basic Statistics and Data Handling:** Significant figures, accuracy and precision. Types of errors: Determinate error and indeterminate error. Definitions for statistics. Quantifying random error: Confidence limits, variance. Rejection of results.

**Applications of titrimetric methods:** Introduction, theory and applications of acid base titrimetry, complexometric titrations and redox titrimetry

**Separation techniques:** Purification-Crystallization, sublimation, fractional crystallization, distillation techniques (simple distillation, steam distillation, distillation under reduced pressure, and fractional distillation), solvent extraction.

**Chromatography:** Thin layer chromatography and ion-exchange chromatography and their applications in the separation of the components from the mixture.

**FOURTH SEMESTER**  
**HARD CORE**  
**BIOINORGANIC CHEMISTRY**  
**COURSE CODE: 21CHD10**

**Objectives**

- To understand the structural parameters of metallo-proteins and their biological role.
- To learn the biological properties of metal complexes in chemo and radio therapeutics.

**Course Outcome**

- Structural building blocks of proteins, nucleic acids and their metal ion interactions. Biological role of Na/K channel, Ca, Vit B12, and coenzymes.
- Biochemical reactions of several metallo-enzymes and oxygen transport proteins.
- Medicinal applications of metals and metal complexes, and also treatment of toxicity due to heavy metal ions.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

**Course content**

**UNIT-I**

**[16 HOURS]**

**Structural and molecular biology:** Introduction, The structural building blocks of proteins, the structural building block of nucleic acids. Metal ion interactions with nucleosides and nucleotides. General features of DNA - metal complex interaction.

**Bioenergetics:** Introduction, Redox reactions in metabolism, the central role of ATP in metabolism. Kinetic stability of ATP, Mitochondrial flow of electrons from NADH to O<sub>2</sub>. Phosphorylation and respiratory chain. Oxidative phosphorylation.

**Sodium and potassium-channels and pumps:** Introduction, transport across membranes. Potassium and sodium channels, The sodium-potassium ATPase, Macrocyclic crown ether compounds, cryptands and ionophores.

**Biochemistry of calcium:** Introduction - comparison of Ca<sup>2+</sup> and Mg<sup>2+</sup>. Biological roles of calcium, binding sites of calcium and proteins, storage of calcium, calcium in muscle contraction, calcium in blood clotting process.

**Vitamin B12 and Coenzymes:** Structural feature, names of different forms, chemistry of cobalamin, biochemical functions of cobalamins, model compounds. Special characteristics of B12 co-enzyme. Photosystems.

**UNIT-II**

**[16 HOURS]**

**Metal ion transport and storage:** Iron storage and transport: Transferrin, ferritin, phosvitin and gastroferrin. Iron transport in microbes: siderophores, *in vivo* microbial transport of iron.

**Oxygen transport and oxygen uptake proteins:** Properties of dioxygen (O<sub>2</sub>): thermodynamic and kinetic aspects of dioxygen as an oxidant, activation of dioxygen through complexation with metal ions. Haemoglobin (Hb) and Myoglobin (Mb) in oxygen transport mechanism: Introduction to porphyrin system, substituent effects on porphyrin rings, functions of Hb and Mb. Characteristics of O<sub>2</sub><sup>-</sup>-binding interaction with Hb and Mb. Model compounds for oxygen

carriers (Vaska's complex and cobalt(III) – Schiff base complexes). Hemerythrin and hemocyanin.

**Electron transport proteins and redox enzymes:** Iron – sulfur proteins (rubredoxins and ferredoxins) and cytochromes including cytochrome P450. Catalase and peroxidase: Structure and reactivity. **Superoxide dismutase:** Structure and reactivity.

**Molybdenum containing enzymes:** Aspects of molybdenum chemistry, Xanthine oxidase, aldehyde oxidase, sulfite oxidase, nitrogenase and nitrite reductase.

**Non-redox metalloenzymes - Structure and reactivity:** Carboxypeptidase-A, alcohol dehydrogenase, leucineaminopeptidase and carbonic anhydrase.

### UNIT-III

[16 HOURS]

**Medicinal Inorganic Chemistry: State of the Art, New Trends, and a Vision of the Future:**

Introduction, metals and human biochemistry, general requirements.

**Disease due to metal deficiency and treatment:** Iron, zinc, copper, sodium, potassium, magnesium, calcium and selenium.

**Metal complexes as drugs and therapeutic agents:** Introduction, Antibacterial agents, Antiviral agents, **Cancer Therapy:** Current Status and Mechanism of Action of Platinum-Based Anticancer Drugs. Non-platinum anticancer agents.

**Gold-Based Therapeutic Agents: A New Perspective:** Uses for the treatment of rheumatoid arthritis, **Diabetes:** Vanadium and diabetes,

**Metal-Based Radiopharmaceuticals:** Metal complexes as radio diagnostic agents.

**Treatment of toxicity due to inorganics:** General aspects of mechanism of metal ion toxicity,

- (i) Mechanism of antidote complex with poison, rendering it inert: arsenic, lead, mercury, iron and copper.
- (ii) Antidote accelerated metabolic conversion of poison to non-toxic product: cyanide and carbon monoxide.

# HETEROCYCLIC AND BIOORGANIC CHEMISTRY

COURSE CODE: 21CHD11

## Objectives

- To familiarize with the chemistry of heterocyclic compounds.
- To learn the synthesis and biological importance of carbohydrates, proteins and nucleic acid.

## Course Outcome

- Structure, reactivity and synthesis of several heterocyclic compounds.
- Synthesis, industrial and biological importance of carbohydrates.
- General synthesis of amino acids, peptides, nucleic acids and their biological significance.

## Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Heterocyclic compounds:** Nomenclature; Structure, reactivity, synthesis and reactions of furan, pyrrole, thiophene, indole, pyridine, quinoline, isoquinoline, pyrazole, imidazole, pyrone, coumarin, chromones, pyrimidines, purines. Synthesis and synthetic applications of azirines & aziridines, azetidines, oxazolines, isoxazolines, isoxazole, triazole and azepines and benzodiazepines.

### UNIT-II

[16 HOURS]

**Protecting groups:** Protection of hydroxyl, carboxyl, carbonyl, thiol and amino groups. Illustration of protection and deprotection in synthesis.

**Carbohydrates:** Introduction, Ring size determination of monosaccharides, configuration and conformations of monosaccharides, anomeric effect, Hudson's rules, epimerization and mutarotation. Synthesis, industrial and biological importance of glycosides, amino sugars, sucrose, maltose and lactose. Polysaccharides: General methods of structure elucidation. Industrial importance and biological importance of cellulose, starch, glycogen, dextran, hemicellulose, pectin, agar- agar. Photosynthesis and biosynthesis of carbohydrates.

### UNIT-III

[16 HOURS]

**Amino Acids:** General structure, physiological properties, protection of functional groups.

**Peptides:** Structure and conformation of peptide bond, peptide synthesis: Solution phase and Merrifield's solid phase synthesis, Racemization and use of HOBt, Synthesis of oxytocin and vasopressin, biological importance of insulin, selective cleavage of polypeptide bonds (chemical and enzymatic). **Proteins:** Structure determination: C and N terminal residue determination, primary, secondary, tertiary and quaternary structure determination, denaturing and renaturing of proteins.

**Nucleic acids:** Introduction, structure and synthesis of nucleosides and nucleotides, protecting groups for hydroxy group in sugar, amino group in the base and phosphate functions. Methods of formation of internucleotide bonds: DCC, phosphodiester approach and phosphoramidite methods. Solid phase synthesis of oligonucleotides. Structure of RNA and DNA, Crick-Watson model, role of nucleic acids in the biosynthesis of proteins.

## NUCLEAR, RADIATION AND PHOTOCHEMISTRY COURSE CODE: 21CHD12

### Objectives

- To understand the theory and applications of photochemistry.
- To learn the fundamentals and physico-chemical applications of radiation chemistry.
- To familiarize with the concepts of nuclear chemistry including radiochemical separation techniques and nuclear power reactors.

### Course Outcome

- Understand the principles of photochemistry, its experimental techniques and applications.
- Fundamentals of radiation chemistry, experimental methods of detection of radiation and applications of radioisotopes.
- General aspects of nuclear chemistry, different types of nuclear reactions, production and separation of radioisotopes and also basic features of different types of nuclear reactors.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

**[16 HOURS]**

**Nuclear chemistry:** Nuclear stability – nuclear forces, packing fraction, binding energy, liquid drop, shell and collective models. Radioactive decay – General characteristics, decay kinetics, parent –daughter decay growth relationships, determination of half-lives. Brief survey of alpha, beta and gamma decays. Nuclear reactions – Bethe's notation, types of nuclear reactions – specific nuclear reactions, photonuclear reactions, Oppenheimer – Phillips process, spallation reactions, Szilard-Chalmers process. Definition of Curie and related calculations. Production of radioisotopes and labelled compounds by bombardment.

**Radiochemical separation techniques:** carriers, solvent extraction and ion ion-exchange methods.

**Nuclear power reactors:** Types of nuclear power reactors, basic features and components of nuclear power reactors. An introduction to breeder reactors.

## UNIT-II

[16 HOURS]

**Radiation chemistry:** Introduction, units, interaction of electromagnetic radiation with matter, G-value, LET of radiation. Chemical dosimetry - Fricke and ceric sulphate dosimeters. Radiolysis - cysteine, water and biphenyl. Radioisotopes as tracers, use of isotopic tracers in the elucidation of reaction mechanism, structure determination and solubility of sparingly soluble substances.  $^{14}\text{C}$  dating, medical applications of isotopic tracers. Physico-chemical applications – isotope dilution method, activation analysis and radiometric titrations. Hazards in radiochemical work and radiation protection.

**Radiation detection and measurement:** Experimental techniques in the assay of radioisotopes. Radiation detectors – ionization chambers, proportional and Geiger-Muller counters – G.M. Plateau, dead time, coincidence loss, determination of dead time. Scintillation and semiconductor radiation detectors.

## UNIT-III

[16 HOURS]

**Photochemistry:** Introduction to photochemistry, laws of photochemistry, laws of light absorption, quantum yield and its determination, factors affecting quantum yield, Actinometry - Uranyl oxalate and potassium ferrioxalate actinometers, acetone and diethylketone actinometers. Term symbols for atoms and its significance. Photochemical properties of electronically excited molecules, nature of changes on electronic excitation, shapes of absorption band and Frank Condon principle. Experimental techniques to determine the intermediates in photochemical reactions. Photosensitization: by mercury, dissociation of  $\text{H}_2$ . Photochemical kinetics of: Decomposition of  $\text{CH}_3\text{CHO}$ , dissociation of  $\text{HI}$  and formation of  $\text{HCl}$ . Fluorescence and phosphorescence – theory and applications. Resonance fluorescence and quenching of fluorescence, Kinetics of collisional quenching (Stern-Volmer equation).

**Photocatalyst** – Principle, application of  $\text{ZnO}/\text{TiO}_2$  photocatalysts in the photo cleavage of dyes, environmentally hazardous waste and industrial effluents. Effect of photo degradation on COD value.

# INSTRUMENTAL METHODS OF ANALYSIS

COURSE CODE: 21CHD13

## Objectives

- To understand the theory, instrumentation and applications of atomic emission spectroscopy.
- To get excel the knowledge on electro analytical techniques
- To learn the principles, instrumentation and applications of thermal methods of analysis.

## Course Outcomes

After studying this course, the student to:

- Gain the knowledge on the differences between classical and instrumental methods of chemical analysis.
- Explain different types of instrumental methods employed in chemical analysis.
- Develop an understanding of the range and theories of instrumental methods available in analytical chemistry.
- Make clear distinctions among spectrometric, electro-analytical, thermal and microscopic methods.
- Gain knowledge pertaining to the appropriate instrumental techniques.
- Obtain the practical experience in selected instrumental methods of analysis.
- Develop the skills on instrumental methods for planning, developing, conducting, reviewing, conducting experiments and reporting results.

## Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.
- Students will be assigned numerical problems to understand the concepts.

## UNIT – I

**Flame photometry and Atomic absorption spectrometry:** Energy level diagrams-atomic absorption spectra. Flame characteristics. Flame atomizers and electrothermal atomization. Comparison of spectral interferences, chemical and physical interferences in FP and AAS. Background correction methods in AAS. Use of organic solvents. Quantitative techniques- calibration curve procedure and the standard addition technique. Typical commercial instruments for FP and AAS (Single and double beam atomic absorption spectrophotometers), applications of FES and AAS. Qualitative analysis and quantitative evaluations. Relative detectabilities of atomic absorption and flame emission spectrometry.

**Molecular luminescence spectrometry:** Theoretical basis for fluorescence and phosphorescence. Singlet and triplet excited states. Variables affecting luminescence-quantum efficiency, transition types, structure and structural rigidity, temperature and solvent effects, effect of pH, dissolved

oxygen and concentration effect. Excitation spectra vs emission spectra. Origin of fluorescence, relationship between fluorescence and concentration. Fluorescence instrumentation-fluorometers and spectrofluorometers. Sensitivity and selectivity. Modification necessary to measure phosphorescence. Applications of fluorometry: inorganic and organic analyses.

**Nephelometry and turbidometry:** Principles, instrumentation and applications.

[16 HOURS]

## UNIT – II

**Electroanalytical methods:** Classification. Potentiometers, galvanostats and potentiostats.

Potentiometric methods of analysis. Potentiometric electrochemical cells. The Nernst equation. Liquid junction potentials. Reference electrodes-SHE, calomel electrode and silver/ silver chloride electrode. Metallic indicator electrodes-electrodes of first kind and second kind. Redox electrodes. Membrane electrodes –membrane potential, selectivity of membranes. Glass ion selective electrodes. Crystalline solid state ion selective electrodes. Liquid-based ion selective electrodes. Gas sensing electrodes. Potentiometric biosensors. Quantitative applications. Activity vs concentration. Quantitative analysis using external standards and the method of standard additions. Measurement of *p*H. Clinical and environmental applications.

**Electrogravimetric analysis:** Theory, apparatus, cell processes, deposition and separation, electrolytic separation of metals, applications.

**Coulometric methods of analysis:** General discussion, coulometry at controlled potential, apparatus and general technique, applications, coulometric titrations (amperometric/coulometric)-principles, apparatus, comparison of coulometric titrations with conventional titrations, automatic coulometric titrations, applications.

**Amperometric titrations:** Principle, titration curve, apparatus and techniques, applications.

**Voltammetry:** Fundamentals of voltammetry. **Cyclic voltammetry:** Principles and applications. **Stripping analysis:** Stripping voltammetry-basic principles, electrodes used for stripping analysis, apparatus for stripping analysis, applications, determination of lead in water voltammetry with micro electrodes.

[16 HOURS]

## UNIT – III

**Thermal method of analysis:** Introduction,

**Thermogravimetric analysis (TGA):** Types of thermogravimetric analysis, principles and general thermal decomposition curve. Factors affecting the results-heating rate, furnace, instrument control/ data handling. Applications-purity and thermal stability, evaluation of correct drying temperature, analysis of complex mixture and determination of kinetic parameters of thermal degradation.

**Differential thermal analysis (DTA):** General principles. Theory-variables affecting the DTA curves. Instrumentation. Applications-analysis of the physical mixtures and thermal behaviour study. Determination of melting point, boiling point and decomposition point.

**Differential scanning calorimetry (DSC):** Basic principle. Instrumentation-power compensated DSC, Heat flux DSC. Applications- studies of thermal transitions and isothermal crystallization. Testing the purity of the pharmaceutical samples.

Thermomechanical analysis. Dynamic mechanical analysis.

**Enthalpimetric analysis:** Thermometric titrations and direct injection enthalpimetry: Principles,

apparatus and applications.

**Microscopic analysis:** Principle and mechanism in characterization of compounds by scanning electron and transmission electron microscopic (SEM & TEM) techniques. Components of instruments of SEM and TEM.

**SOFT CORE  
ANALYTICAL CHEMISTRY PRACTICALS**

**COURSE CODE: 21CHD50**

**[64 HOURS]**

**Objectives**

- To familiarize with the handling of instruments in the quantitative analysis of various samples.
- To understand the analysis of real samples like waste water, soil samples and biological samples and mixtures

**Course Outcome**

After studying this course, the student to:

- Get experience on analysis of various complex mixtures by following multistep reactions.
- Acquire the knowledge on handling instruments and to overcome the general problems arises during the analysis.
- Acquire industrial skills required for sampling, analytical and interpretation and presentation of results.
- Possess adequate knowledge on literature search for developed analytical methods.

**Pedagogy**

- Each student performs experiments as per the protocol in practical classes.
- Computer aided applications are used for the evaluation of experimental results.

**[128 HOURS]**

**PART – III**

1. Determination of calcium in limestone by redox, acid-base and complexation titrations.
2. Determination of vitamin C in orange juice by titration with cerium(IV) and with 2,6-dichlorophenol indophenol.
3. Determination of mercury in an algacide by EDTA titration; and arsenic in ant control preparation by redox titration.
4. Determination of aluminium and magnesium in antacids by EDTA titration.
5. Analysis of a copper-nickel alloy sample for copper and nickel by EDTA titration using masking and selective demasking reactions.
6. Determination of saccharin in tablets by precipitation titration.
7. Determination of iodine value and saponification value of edible oils.
8. Determination of ascorbic acid in goose berry/bitter gourd by titrimetry and spectrophotometry using *N*-bromosuccinimide (NBS).
9. Analysis of a mixture of iron(II) and iron(III) by EDTA titration using *pH* control.
10. Determination of sulphadiazine drugs by potentiometry using  $\text{NaNO}_2$  and iodometric assay of penicillin.
11. Solvent extraction method for determination of silver as ion-associate with 1,10-phenanthroline and bromopyragallol red.
12. Electrolytic determination of copper and lead in brass.

13. Polarographic determination of copper and zinc in brass.
14. Determination of sodium, potassium and calcium in mineral waters by atomic emission spectrometry.
15. Determination of iron in mustard seeds and phosphorus in peas by spectrophotometry.
16. Analysis of waste water for anionic detergents and phenol by spectrophotometry.
17. Fluorimetric determination of riboflavin (vit.B<sub>2</sub>) in tablets.
18. Colorimetric analysis of procaine by diazotization and coupling reaction.
19. Determination of manganese in steel by extraction-free spectrophotometry and molybdenum in steel by extractive spectrophotometry.
20. Determination of ethanol in wine by titrimetric and spectrophotometric dichromate methods

#### **PART – IV**

1. Analysis of waste waters for DO and COD by titrimetry.
2. Analysis of a ground water sample for sulphate by titrimetry (EDTA) and turbidimetry.
3. Potentiometric determination of formula and stability constant of a silver-ammonia complex ion.
4. Determination of aspirin, phenacetin and caffeine in mixture and APC tablets by solvent extraction and UV spectrophotometry.
5. Kinetic determination of urinary creatinine and purity of a commercial H<sub>2</sub>O<sub>2</sub> sample.
6. Determination of chromium(III) and iron(III) in a mixture by kinetic masking methods.
7. Catalytic determination of traces of selenium in biological materials and iodide in blood serum.
8. Photometric and potentiometric titration of iron(III) with EDTA.
9. Photometric and potentiometric titration of copper with EDTA.
10. Determination of copper(II) and iron(III) in mixture by photometric titration with EDTA.
11. Analysis of brackish water for chloride content by a) spectrophotometry (mercuric thiocyanate method), b) conductometry (silver nitrate) and c) potentiometry (silver nitrate).
12. Conductometric titration of sodium acetate with HCl and NH<sub>4</sub>Cl with NaOH.
13. Ascorbic acid determination in natural orange juice by coulometry.
14. Spectrophotometric determination of iron in natural waters using thiocyanate and 1,10-phenanthroline as reagents.
15. Determination of fluoride in drinking water/ground water by spectrophotometry(alizarin red lake method).
16. Analysis of waste water for
  - a) Phosphate by molybdenum blue method
  - b) ammonia-nitrogen by Nessler's method
  - c) nitrite-nitrogen by NEDA method
15. Analysis of a soil sample for
  - a) Calcium carbonate and organic carbon by titrimetry.
  - b) Calcium and magnesium by EDTA titration.

16. Analysis of a soil sample for
  - a) Nitrogen content by Kjeldahl method
  - b) Available phosphorus by spectrophotometry.
  - c) Nitrate-nitrogen/nitrite nitrogen/ammonia nitrogen by spectrophotometry.
  - d) Sodium and potassium by flame photometry.
17. Analysis of urine for
  - a) Urea and uric acid by titrimetry and spectrophotometry.
  - b) Sulphate by precipitation titration after ion-exchange separation.
  - c) Sugar by Benedict's reagent.
18. Analysis of blood for
  - a) cholesterol by spectrophotometry
  - b) Bicarbonate by acid-base titration.
19. Fluorimetric determination of quinine in an antimalarial tablet.

## INORGANIC CHEMISTRY PRACTICALS

COURSE CODE: 21CHD51

[64 HOURS]

### Objectives

- To familiarize with the instrumental methods of analysis for determining metals present in the different samples.
- To familiarize with the preparation and characterization of different inorganic complexes.

### Course Outcome

- Determination of alloy samples and understanding the electrochemical deposition of metals.
- Preparation and characterization of coordination compounds.
- Determination of composition, stability constant and magnetic susceptibility of metal complexes.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Spectroscopic tools are applied for the characterization of the synthesized complexes.

## Course experiments

### PART-A

1. Determination of bismuth, cadmium and lead in a mixture: Analysis of a low melting alloy (Wood's alloy).
2. Simultaneous spectrophotometric determination of chromium and manganese in a steel solution.
3. Determination of chromium(III) and iron(III) in a mixture: Kinetic masking method.
4. Electrogravimetric determination of:
  - a) Copper in copper sulphate
  - b) Nickel in nickel sulphate
  - c) Copper and nickel in alloy solution
  - d) Lead in lead nitrate.
5. Flame photometric determination of the following metal ions from different samples:
  - a) sodium b) potassium and c) sodium and potassium in a mixture.
6. Polarographic estimation of cadmium and zinc.
7. Determination of iron as the 8-hydroxyquinolate by solvent extraction method.
8. Quantitative determination of nickel using dithizone and 1,10-phenanthroline by synergistic extraction.
9. Spectrophotometric determination of the  $pK_a$  value of methyl red.
10. Semimicro gravimetric determination of aluminium.

### PART-B

1. Preparation and characterization of:
  - a) Chloropentammine cobalt(III) chloride
  - b) Estimation of chloride in a complex by potentiometric or ion-exchange method
  - c) Record the electronic absorption spectrum of a complex and verify Tanabe Sugano diagram.
2. Preparation of *cis*- and *trans*- dichlorobis(ethylenediamine) cobalt(III)chloride. Record the UV-Vis spectra and compare it with *cis*-form. Measure the molar conductance.

3. Preparation of hexammine cobalt(III) chloride and estimate cobalt ion.
4. Determination of magnetic susceptibility of any two compounds/complexes by Gouy method.
5. Determination of the composition of iron-phenanthroline complex by:
  - (d) Job's method
  - (e) mole-ratio method and
  - (f) Slope-ratio method.
6. Determine the stability constant of iron-tiron/iron-phenanthroline by Turner-Anderson method.
7. Preparation of potassium tris(oxalato)ferrate(III) and estimate the metal ion.
8. Preparation of acetyl acetonatomanganese(III) complex.
9. Preparation of tris(en)nickel(II) chloride and hexamine nickel(II) chloride complexes. Record electronic spectra and evaluate spectrochemical series.
10. Using chloropentammine cobalt(III) chloride, prepare nitro and nitropentammine cobalt(III) chloride. Record the IR spectra of the isomers and interpret.
11. Estimate the chloride ion in a given complex by silver nitrate titration after ion-exchange separation.
12. Demonstration Experiments:
  - (d) Recording and interpretation of IR and NMR spectra of complexes.
  - (e) Spectrochemical series-Evaluation of Dq value.
  - (f) DNA interaction with metal complexes by UV-visible absorption and viscosity methods.

8. Spectrophotometric Determination of Elements – Z. Marczenko

## ORGANIC CHEMISTRY PRACTICALS

**COURSE CODE: 21CHD52**

**[64 HOURS]**

### Objectives

- To understand the concepts of isolation and purification of natural products.
- To familiarize with the estimation of different functional groups in organic compounds.

### Course Outcome

- The isolation of caffeine, carotene, lycopene, cincole, azelaic acid and piperine from respective natural sources.
- Estimation of ketones, sugars, nitro and amino groups in natural products.
- Interpret UV, IR, NMR and MS data of different organic compounds.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Spectroscopic tools are applied for the characterization of isolated natural products.

## Course experiments

### PART-A

1. Fractional crystallization: separation of mixture of naphthalene and biphenyl.
2. Thin layer chromatography: Separation of plant pigments.
3. Column chromatography: Separation of *o*- and *p*-nitro aniline
4. Isolation of piperine from pepper.
5. Isolation of caffeine from tea.
6. Isolation of azelaic acid from castor oil.
7. Isolation of carotene from carrot.
8. Isolation of lycopene from tomato.
9. Isolation of cincole from eucalyptus leaves.

### PART-B

#### Isolation of natural products & estimations:

1. Estimation of ketones by haloform reaction.
2. Estimation of sugars by Bertrand's method.
3. Estimation of nitro groups.
4. Estimation of amino group.
5. Determination of enol content by Meyer's method.
6. Determination of iodine value of an oil or fat.
7. Determination of saponification value of oil.
8. Determination of equivalent weight of carboxylic acid by silver salt method

**Interpretation of Spectra:** Structural elucidation of some simple organic compounds by UV, IR, NMR and mass. Spectra have to be provided by the Teachers/ Examiners.

#### References

3. Laboratory manual of Organic Chemistry by B. B. Dey and M. V. Sitaraman.
4. Practical Organic Chemistry by Mann F. G. and Saunders.
5. Natural products: A laboratory guide by Raphael Ikhan.

## PHYSICAL CHEMISTRY PRACTICALS

### Objectives

**COURSE CODE: 21CHD53**

**[64 HOURS]**

- To understand the significance of various factors influencing the reaction rate in proposing the reaction mechanism.
- To understand electrochemical and spectrophotometric methods of quantification of samples, and also determination of physico-chemical parameters of some important samples.

### Course Outcome

- Students can able to develop experimental skill and interpretation of plausible mechanisms of reactions.
- Gain practical knowledge on the theoretical basis of electrochemistry, thermodynamics, and spectrophotometry experiments.
- This helps in academics, research and industries.

### Pedagogy

- Each student performs experiments as per the protocol in practical classes.
- Electrochemical and spectrophotometric tools are used to conduct the experiments.

## Course experiments

### PART-A

1. Determination of order of reaction for the acid hydrolysis of methyl acetate and evaluation of activation parameters.
2. Evaluation of Arrhenius parameters for the reaction between  $K_2S_2O_8$  and KI (First order reaction).
3. Study of kinetics of autocatalytic reaction between oxalic acid and  $KMnO_4$  and determine the order of reaction with respect to  $KMnO_4$ .
4. Kinetics of saponification of ethyl acetate by conductivity method and study the effect of dielectric constant of the medium (using  $CH_3OH$ ).
5. Study of effect of salt (ionic strength) on the kinetics of reaction between potassium persulphate and potassium iodide (second order reaction).
6. Spectrophotometric kinetics of oxidation of indigocarmine (IC) by chloramine-T (CAT) – Determination of order of reaction with respect to [CAT] and [IC].
7. To study the acid catalysed kinetics of oxidation of glycine by chloramine-T (CAT) - determination of order of reaction with respect to [CAT] and [glycine].
8. Study the phase diagram of three component system (Glacial acetic acid-Chloroform-water system / Glacial acetic acid-Acetone-Water system).
9. Study the rate of corrosion and inhibition efficiency of an inhibitor (thiourea) on mild steel/Al/Cu by weight loss method.

### PART-B

1. Conductometric titration of orthophosphoric acid against NaOH.
2. Conductometric titration of a mixture of HCl,  $CH_3COOH$  and  $CuSO_4$  against NaOH.
3. Conductometric titration of thorium nitrate with potassium tartarate.
4. Potentiometric titration of mixture of weak acids (acetic acid and monochloroacetic acid) against NaOH.
5. Determination of  $pK_a$  values of phosphoric acid by potentiometric / pH metric method.

- Potentiometric titration of mixture of KCl+KBr+KI against AgNO<sub>3</sub>.
- Potentiometric titration of FAS against ceric sulphate and sodium metavanadate, determine the concentration of FAS and redox potential.
- Potentiometric titration of lead nitrate against EDTA and determine the concentration of lead nitrate solution.
- Determination of *pK* value of an indicator (methyl orange/methyl red).
- Spectrophotometric analysis of a mixture of (a) KMnO<sub>4</sub> and K<sub>2</sub>Cr<sub>2</sub>O<sub>7</sub>.
- Study of complex formation between ferric salt and salicylic acid.

## SOFT CORE

### DISSERTATION/PROJECT WORK–SOFT CORE

#### COURSE CODE: 21CHD54

### Course Outcome

After studying this course, a student will be to:

- Carry out literature survey on the problem/s to be solved.
- Learn and follow suitable research methodologies to propose and to perform Experiments.
- Attain the state of ability to take up research work.
- Better understanding about research articles, patents, book chapters or books on relevant research problem.
- Acquire skills of writing research reports in the form of articles or thesis.

Student may take up Project Work/ Dissertation under the guidance of the faculty of the department during the IV Semester as a Soft Core course.

**SOFT CORE**  
**AUTOMATED METHODS AND REAL SAMPLE ANALYSIS**  
**COURSE CODE: 21CHD55**

**Course content**

**Objectives**

- To understand the instrumentation and applications of automated methods of analysis.
- To familiarize with analysis of real samples and clinical analysis.

**Course Outcome**

- Understand various types of automated methods of analysis.
- Identify activities that can be fully or partially automated.
- Automated chemical analysis will be very helpful in the clinical as well as pharmaceutical field to perform the purity analysis of the sample, although the sample size is very small, expensive and fast analysis.

**Pedagogy**

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.
- Students will be assigned numerical problems to understand the concepts.

**UNIT-I**

**[16 HOURS]**

**Automated methods of analysis:** An overview, definition, distinction between automatic and automated systems, advantages and disadvantages by automation, types of automated techniques. Nondiscrete techniques, segmented flow methods and basic equipment, special techniques and devices, theoretical considerations and problems, applications. Single channel and multi channel auto analysers, BUN analyzers, automatic glucose analyzers and ammonia in water analyzers, COD analyzers, CFA in industry. Non-segmented flow methods: Flow injection analysis. Principles, types of dispersion, factors affecting dispersion, applications of small, medium and large dispersions. Stopped flow methods, flow injection titrations. Discrete methods: Centrifugal fast scan analyzer, automatic multipurpose analyzers, Automatic elemental analyzer, automated analyzer based on multi layer film-principles, film structure, instrumentation applications. Comparison of discrete and non-discrete methods. Advantages of flow injection measurements over continuous flow measurements.

**UNIT-II**

**[16 HOURS]**

Analysis of real samples-real sample, choice of analytical method-defining the problem, investigating the literature, choosing or devising a method, testing the procedure, analysis of standard samples, using other methods, standard addition to the sample. Accuracy in the analysis of complex materials.

**Decomposing and dissolving the sample-** sources of error in decomposing and dissolution. Decomposing samples with inorganic acids. Microwave decomposition. Combustion methods for decomposing organic samples. Decomposition of inorganic materials with fluxes.

**Clinical Analysis-** Introduction, features of clinical analysis. Composition of blood, collection and preservation of samples. Common determinations - serum electrolytes, blood glucose and blood urea nitrogen, uric acid, albumin and globulins, acid and alkaline phosphates, barbiturates,

chloride, sodium and potassium, bicarbonate, serum creatinine and cholesterol. Urine analysis- Principle components. Sample collection and preservation. Determination of creatinine, chloride, uric acid, ammonia, ascorbic acid, bilirubin and calcium.

## **BIOINORGANIC PHOTOCHEMISTRY** **COURSE CODE: 21CHD56**

### Objectives

- To understand the photochemistry of inorganic compounds.
- To familiarize with the applications of fluorescents and chromogenic sensing and labeling.
- To learn photodynamic inactivation of microorganisms.

### Course Outcome

- Basic concepts of photochemistry and photochemical reactions.
- Understand many organometallic compounds as fluorescent agents in the detection of cations, anions and toxic ions in the living system.
- Theory of photodynamics, and photocatalysis.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## **Course content**

### **UNIT-I**

**[16 HOURS]**

#### **Introduction, Philosophy of bioinorganic photochemistry**

**Fundamentals:** Light and matter. Nature of light, Accessible light sources and Interaction between light and matter.

**Formation and properties of electronic excited states:** Wave mechanics and quantum numbers and Electronic excitation.

**Photophysical deactivation of electronic excited states:** Spontaneous deactivation, Quenching and Coordination and organometallic compounds.

**Photochemical reactions:** Photochemical reaction channels, Intramolecular photoreactions, Photodissociation and photoionization, Photoisomerization, Intermolecular photoreactions, the coordination compound specificity. Ligand field photochemistry, Photochemistry from LC or LLCT states, Inner-sphere charge transfer photochemistry, Outer-sphere charge transfer photochemistry, Photosensitized reactions, Homogeneous photocatalysis.

**Natural photo-processes involving inorganic compounds**

**From interstellar space to planetary atmospheres:** Homogeneous systems: from interstellar space to planetary atmospheres and primitive soup models. Heterogeneous photochemistry in ice phases.

## UNIT-II

[16 HOURS]

**Applications: Fluorescent and chromogenic sensing and labeling:** Cations as targets in biochemical sensing Cations common in biological systems, Fluorescent detection of toxic cations, Fluorescent and chromogenic sensing of anions, Common anions and Toxic anions. Optical detection of neutral molecules. Nanoparticles in biochemical sensing and labeling.

**Therapeutic strategies;** Photobio-stimulation, Photo-activation of drugs, Photodynamic therapy, Mechanisms of PDT and PTT. Photosensitizers, Inorganic photosensitizers, Supporting role of metal ions in photodynamic therapy, and Combination of polypyrrolic photosensitizers and metallo-pharmaceuticals, Recent PDT development and Nanomedical methods.

**Photodynamic inactivation of microorganisms:** Bacteria, Viruses, Fungi and Parasites.

**Phototoxicity and photoprotection:** Chemical and physical photoprotection. Inorganic sunscreens.

**Photocatalysis in environmental protection:** Development of homo- and heterogeneous methods. Homogeneous photocatalysis and heterogeneous photocatalysis. Water and air detoxification. Other applications of photocatalysis.

## MEDICINAL CHEMISTRY

COURSE CODE: 21CHD57

### Objectives

- To familiarize with the methods of isolation, structural elucidation and synthesis of carotenoids and vitamins.
- To learn the basics of medicinal chemistry.
- To understand the synthesis and applications of synthetic drugs.

### Course Outcome

- To acquire the knowledge of biological significances of Carotenoids and vitamins.
- Understand the pharmacodynamics, pharmacokinetics and chemotherapy of several drugs.
- Synthesis and mechanism of drug actions of antimalarial, anticancer agents and cardiovascular drugs.

## Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are used in class room teaching.

## Course content

### UNIT-I

[16 HOURS]

**Carotenoids:** Methods of isolation. Structure elucidation and synthesis of  $\beta$ -carotene. Structural relationship of  $\alpha$ -,  $\beta$ - and  $\gamma$ -carotenes.

**Vitamins:** Introduction, constitution, synthesis and biological significance of thiamine, riboflavin, pyridoxine, biotin, ascorbic acid, vitamin A1 & A2, E1 and E2, B12 and K groups.

### UNIT-II

[16 HOURS]

**Medicinal chemistry:** Introduction, pharmacodynamics, pharmacokinetics, chemotherapy, metabolites antimetabolites, agonists and antagonists. Classification of drugs on the basis of therapeutic action. Concept of pro drug and soft drug. Theories of drug activity: Occupancy theory, rate theory, induced fit theory, concept of drug receptors. Evaluation methods: Free-Wilson analysis, Hansch-analysis,  $ID_{50}$  and  $IC_{50}$  (mathematical derivation of equation excluded).

**Antipyretics:** Aspirin, paracetamol, phenacetin, novalgin and their mechanism of action.

**Antimalarials:** Structure, synthesis and mechanism of action of quinine and chloroquine.

**Hypnotics:** Analgesics and sedatives: phenobarbital, chlordiazepoxide, meprobamate.

**Stimulants:** Structure, action and synthesis of caffeine.

**Antineoplastics:** Structure, pharmacological action and synthesis of 5-fluorouracil, chlorambucil, cyclophosphamide and podophyllotoxin.

**Cardiovascular drugs:** Introduction, synthesis of diltiazem, verapamil, methyldopa, atenolol and oxprenolol.

### References

4. Synthetic drugs, Gurdeep R. Chatwal.
5. Medicinal chemistry by Graham Patrick.

## QUANTUM CHEMISTRY AND BIOSENSORS

COURSE CODE: 21CHD58

### Objectives

- To understand the applications of quantum mechanics to HMO theory.
- To learn the basics of biosensors and their applications.

### Course Outcome

- Applications of quantum chemical methods in the theoretical evaluation of energies of molecules and reactions.
- Development of chemical and biochemical sensors and their applications in the determination of biomolecules.

### Pedagogy

- Conventional method such as black board and chalk is used.
- Modern methods like power point presentation and animations are also used in class room teaching.
- Students will be assigned to solve the numerical problems.

## Course content

### UNIT-I

**16 HOURS]**

**Applications of quantum mechanics:** Variation theorem: Statement and proof, application of variation theorem to a particle in one dimensional box, linear oscillator, H and He-atoms. Molecular orbital theory, LCAO-MO approximation, application to hydrogen molecule ion ( $H_2^+$ ), energy levels of  $H_2^+$ , bonding and antibonding molecular orbitals, energy distribution, potential energy diagrams. Valence bond theory (VB), theory of  $H_2$  molecule, Heitler-London method, energy levels, various modifications of Heitler-London wave function. Comparison of MO and VB theories. SCF method for many electron atom. Slater Orbitals –Effective nuclear charge (ENC), expressions for slater orbitals for 1s, 2s, 3s, 2p and 3d electrons (no derivation), Slater's rules for calculation of ENC. Theories of valence – Introduction, linear and non-linear variation functions, secular equations, coulombic, exchange, normalization and overlap integrals, secular determinants.

**Huckel molecular orbital theory:** Outline of method, assumptions. Application to ethylene, allyl radical, cyclopropenyl radical, butadiene, cyclobutadiene, bicyclobutadiene and benzene. Calculation of delocalization energy, charge density,  $\pi$ -mobile bond order and free valence.

### UNIT-II

**[16 HOURS]**

**Biosensors:** Introduction, electrochemical biosensors: Amperometric, potentiometric and conductometric biosensors. Optical based biosensors: Surface plasma resonance, chemiluminescence, fibre optic biosensors, piezoelectronic sensors, mass selective and thermal sensors. Bio-recognition elements in biosensors, immobilization methods, principles of biorecognition, natural, semi-synthetic and synthetic biorecognition elements. Metabolism sensors: Glucose sensors, galactose sensors. Determination alcohol, ascorbic acid, D-isocitrate, oxalate, oxaloacetate, nitrite, nitrate, carbon monoxide, glycerol, triglycerides and sucrose. Biosensors using coupled enzyme reactions.

**Applications of biosensors:** Determination of glucose in blood, survey of biosensor methods for the determination of glucose. Determination of copper (I) in water using anodic stripping voltammetry.

## M.Com COURSE STRUCTURE AND SYLLABUS

BATCH 2022-23

### MINIMUM CREDITS REQUIRED FOR M.COM DEGREE

I to IV Semesters	HARD CORE COURSE		SOFT CORE COURSE		OPEN ELECTIVE COURSE		TOTAL	
	Number	Credits	Number	Credits	Number	Credits	Number	Credits
Total	12	48	7	28	1	4	20	80

### Semester wise requirements of course and credits

Semester	HARD CORE COURSE		SOFT CORE COURSE		OPEN ELECTIVE COURSE		TOTAL	
	Number	Credits	Number	Credits	Number	Credits	Number	Credits
I	4	16	1	4	-	-	5	20
II	3	12	2	8	-	-	5	20
III	2	8	2	8	1	4	5	20
IV	3	12	2	8	-	-	5	20
Total	12	48	7	28	1	4	20	80

### First Semester M.Com

Sl. No.	Course Code	Title of the course	Hard core/ Soft core/	Number of Credits			
				L	T	P	TOTAL
HC01	MCA010	Accounting Theory	HC	3	1	0	4
HC02	MCA080	Corporate Governance and Business ethics	HC	3	1	0	4
HC03	MCA090	Advanced Financial Management	HC	3	1	0	4
HC04	MCA100	Strategic Marketing	HC	3	1	0	4
SC01	MCA210	Business Policy and Environment	SC	3	1	0	4
SC02	MCA220	Statistics for Business Decisions	SC	3	1	0	4

**Note:** students can register for any one of the above soft cores.(HC:4 + SC:1=5)

### Second semester M.Com

Sl. No.	Course Code	Title of the course	Hard core/ Soft core	Number of Credits			
				L	T	P	TOTAL
HC05	MCB030	Organizational Behavior	HC	3	1	0	4
HC06	MCB050	Entrepreneurial Development	HC	3	1	0	4
HC07	MCB010	Capital Market Instruments	HC	3	1	0	4
SC05	MCB240	Human Resource Management	SC	3	1	0	4
SC06	MCB270	Management of Financial Services	SC	3	1	0	4
SC07	MCB250	Banking Technology	SC	3	1	0	4
SC	MCB	Security Analysis and portfolio Management	SC	3	1	0	4

**Note:** Students can register for any two of the above soft cores.(HC:3+SC:2=5)

### Third Semester M.Com

Sl. No.	Course Code	Title of the course	Hard core/ Soft core/ Open elective	Number of Credits			
				L	T	P	TOTAL
HC08	MCC010	International Business	HC	3	1	0	4
HC09	MCC030	Business Research Methods	HC	3	1	0	4
SC15	MCC230	Elective- Paper- 1	SC	3	1	0	4
SC17	MCC250	Elective – Paper -1	SC	3	1	0	4
OE	580	Personal Financial Management	OE	3	1	0	4

#### Note

1. Students can register for Two of the elective groups as soft core.
2. Non-commerce students can register for open-elective. (HC:2+SC:2+OE:1=5)

### Fourth Semester M.Com

Sl. No.	Course Code	Title of the course	Hard core/ Soft core/ Open elective	Number of Credits			
				L	T	P	TOTAL
HC11	MCD010	International Accounting	HC	3	1	0	4
HC12	MCD020	Current Trends in Business and Commerce	HC	3	1	0	4
SC12	MCD220	Project Work	HC	0	1	3	4
SC16	MCD230	Elective – Paper 2	SC	3	1	0	4
SC18	MCD250	Elective- Paper 2	SC	3	1	0	4

**Note: 1** Project work is a Hard Core course. Internship reports for 20 Marks, C1-20 Marks, C2-20 (VIVA-Voce) Marks for VIVA and 40 Marks for project report. Project Internship will commence in the III semester.

**Note: 2** Guiding 4 students for Project work is considered to be equal to 01 hour of class room teaching (HC: 3+SC: 2=5).

## **Elective Group**

Any two groups from the available electives shall be selected by a student at the commencement of the III Semester. Once groups are selected, no change in the selected group will be allowed later. While the first papers of the selected group will be taught in Semester III, second papers of the selected group will be taught in Semester IV as Soft Core Courses. The Department will announce in the beginning of the third semester, any two or more elective groups which will be offered during III and IV semesters depending upon the availability of faculty members and the demand for electives.

### **Group A: Financial Accounting**

1. Contemporary Areas of Financial Accounting
2. International Financial Reporting Standards (IFRS)

### **Group B: Financial Management**

1. Futures, Options & Swaps
2. Strategic Financial Decisions

### **Group C: Business Taxation**

1. Indirect Tax Laws and Practice- GST and Customs duty.
2. Corporate Tax Laws and Planning

### **Group D: Cost Management**

1. Cost Accounting for Decision Making
2. Cost Management

**PROGRAM OUTCOME:**

- PO1 Understand role of accounting and finance in the present business scenario.
- PO2 Identify the latest trends in banking and finance
- PO3 Use wide varieties of tools and techniques to meet the emerging opportunities and challenges
- PO4 Become an entrepreneur based on the knowledge gained.
- PO5 Strengthen the knowledge base to take up CA/ICWA/ICS and other competitive examination
- PO6 Acquire the ability to engage in independent & lifelong learning in the broader context of social and technical changes.
- PO7 Accept the challenges of business world
- PO8 Enhance logical thinking and decision making ability

**PROGRAM SPECIFIC OUTCOME:**

- PSO1 Inculcate the knowledge of business and the techniques of managing the Business with special focus on Accounting, finance, and financial services
- PSO2 Identify knowledge based accounting principles and the latest application oriented corporate accounting methods.
- PSO 3 Develop decision making skill through costing methods and practical application of management accounting principles.
- PSO 4 Enhance taxation skills through a thorough understanding of tax laws

## M.COM- SYLLABUS

### First Semester

#### HC01: MCA010 ACCOUNTING THEORY

- 1. Course Description:** The course provides the coverage of the meaning of accounting theory, its types, approaches to formulate accounting theory; the IASB's conceptual framework; recognition, measurement and disclosure of elements of financial statements.
- 2. Course Outcome:**
  - CO1 Acquaint a set of logical principles for evaluation and development of sound accounting practices.
  - CO2 knowledge on conceptual framework of accounting theory
  - CO3 Critical thinking skills to analyze and interpret accounting transactions.
  - CO4 Understand the recognition, measurement and disclosure principles of elements of financial statements.
- 3. Pedagogy:** Course activities consist of lectures, case study analysis, group discussions, seminar presentation, assignment writing and tests. Reading and analysis of annual reports of companies will be the integral part of instruction.
- 4. Course Contents:**

**Module 1: The Meaning of Accounting Theory:** The meaning of accounting theory; relationship with accounting research and practice. Types of accounting theories- syntactical, semantical and behavioral theories. Approaches to formulation of Accounting Theory. Ownership theories - proprietary, entity and fund theories.

Strategic Management-Subba Rao.

**1. Course Description:**

The course comprises of probability theories, sampling techniques, time series analysis and multivariate analysis.

**2. Course Outcome:**

- CO1 Knowledge about application of probability theory and sampling in different areas of commerce
- CO2 Analyze the various methods of theoretical probability distribution
- CO3 Application of different tools in taking business decisions
- CO4 Learn the advanced application oriented tests – F Distribution and Anova

**3. Pedagogy:**

Class room teaching of basic statistical models shall be followed by solving problems involving business applications. Assigned problems are to be worked on an individual basis, followed by group discussion of case problems.

**4. Course Contents:**

**Module 1: Probability:** Meaning, terminology, types and rules. Random variables and use of expected value in decision making. Binomial, Poisson and Normal probability distributions- their characteristics and applications in business decisions.

**Module 2: Sampling:** Meaning of sample and population. Probability and non-probability methods of sampling. Use of random digits to choose random samples. Sampling from normal and non-normal populations. The Central limit theorem. Use of sampling in business decisions

**Module 3: Time Series Analysis :** Variations in time series. Cyclical, seasonal and irregular variations. Trend analysis. Application of time series analysis in forecasting.

**Module 4: Multivariate Analysis:** Multiple regression and correlation analysis. Analysis of Variance. Application of multivariate analysis in business decisions. Using Statistical Package for Social Sciences (SPSS) to solve problems.

## **SC : MCB SECURITY ANALYSIS AND PORTFOLIO MANAGEMENT**

### **1. Course Outcome:**

CO1	Knowledge about practical aspects of investment analysis
CO2	Understand the functions of SEBI
CO3	Analyze the various investment alternatives
CO4	Learn the skills to construct investment portfolio

### **2. Pedagogy:**

In the LTP framework the Lecture sessions focus on building conceptual clarity and providing basic information on the nature and role of nonprofit sector. The reinforcement through Tutorial sessions focus on group exercises related to Indian nonprofit sector. Practical exercises involve field reports by students, both at individual and group levels.

### **3. Course Contents:**

**Module 1:** Investment Setting - Securities – Sources of investment information – Security market indications – Security Contract regulation Act. Investor Protection. Over view of capital market, Institutional structure in capital market, Reforms and state of capital market, New issue market and problems, Securities and Exchange Board of India (SEBI), Debt Market.

**Module 2:** Fundamental Analysis - Economic Analysis – Economic forecasting and stock Investment Decisions – Forecasting techniques. Industry Analysis – Industry classification. Economy and Industry Analysis. Industry life cycle – Company Analysis Measuring Earnings – Forecasting Earnings – Applied Valuation Techniques – Graham and Dodds investor ratios.

**Module 3:** Technical Analysis - Fundamental Analysis Vs Technical Analysis – Charting methods – Market Indicators. Trend – Trend reversals – Patterns - Moving Average – Exponential moving Average – Oscillators – ROC Momentum – MACD – RSI – Stoastics.

**Module 4:** Portfolio Theory – Portfolio Construction – Diagnostics Management – Performance Evaluation – Portfolio revision- Mutual Funds.

**1. Course Outcome:**

- CO1 Evaluate various research decisions
- CO2 Learn the methods of data collection
- CO3 Analysis and interpretation of data
- CO4 Equip the skills of report writing

**2. Pedagogy:**

The lecture sessions focus on providing conceptual understanding and analytical setting for select aspects of the course content. This session focuses on student involved and student driven content study. Identified groups of students make presentations and interact with both the faculty and the other students. The aspects reinforced through lecture and tutorial is taken up for practical study. Here the students would undertake field exercises related to different aspects of the course content.

**3. Course Content:**

**Module 1: Introduction:** Objectives and Role of Business Research–Distinct Features of Business Research-Theoretical Setting for Business Research–Ethical Issues in Business Research.

**Module 2: Research Process:** Developing a Research Proposal–Exploratory Research and Qualitative Analysis–Sources of Data- Methods of data collection–Techniques of Communicating with Respondents.

**Module 3: Managing Research Assignment:** Questionnaire Design-Sampling and Fieldwork Techniques-Measurement and Scaling Concepts-Attitude Measurement.

**Module 4: Analysis and Presentation:** Application of Univariate, Bivariate and Multivariate methods of Statistical Analysis-Methods of Business Research Report Writing–Language-Referencing-Bibliography.

## GROUP D: COST MANAGEMENT

### Elective Paper-1

#### SC17: COST ACCOUNTING FOR DECISION MAKING

##### 1. Course Description:

This course provides the coverage of concept of cost behavior analysis, break even analysis, multi product break even analysis, graphs, marginal costing and managerial decisions and direct costing.

##### 2. Course Objectives:

The course in marginal costing and decision making is aimed at equipping the students with the knowledge and skill relating to marginal costing as a tool for evaluating a wide range of managerial decisions involving make-or-buy, pricing, export offers, temporary short-term of operations, discontinuance of a product line, etc.,

##### 3. Pedagogy:

Course activities consist of lectures, case study analysis, group discussions, seminar presentation, assignment writing and tests. Solving problems and evaluating decisions involving the financial and cost data of selected firms will be integral part of instruction.

##### 4. Course Contents:

**Module 1: Introduction:** Meaning- terminology- Scope & Concepts- Cost Behavior Analysis- Break Even Analysis- Approaches of Break Even Analysis in relation to cost & revenue. Factors- Multiproduct Break Even Analysis- Assumptions Underlying Break Even Analysis- Limitations of Break Even Analysis- Case Studies.

**Module 2: Contribution Concepts & Short term Profitability Analysis:** Profitability Analysis Under Constrained Conditions- Profit- Volume Ratio & its Uses- Profit Volume Graphs – Case Studies.

**Module 3: Marginal Costing & Managerial Decisions:** Profit Planning- Pricing Decision – Production Decision – Make and Buy Decision Joint & By-product Decision – Distribution Cost Analysis- Case Studies.

**Module 4: Standard Costing:** Objectives-Principles-Determination of Standards for Material-Labor- Direct Expenses & Overhead Costs-Variable and Fixed Costs-Case Studies.Variance Analyses: Material, Labor, and Overhead Variances-sales & Profit Variances-Disposition of Variances-Assessing the Significance of Standard Cost Variance-Standard Cost Accounting-Case Studies.

**1. Course Description:** This course is designed to provide a deeper understanding of Personal Financial Management. It focuses on basics of personal financial management, personal savings and investment plans, computation of return and risk factor of personal savings and investments, retirement savings plans.

**2. Course Outcome:**

CO1: Understand personal financial management process.

CO2: Plan personal budget effectively.

CO3: Recognize the significance of financial planning in the changing personal and financial environment.

CO4: Assess the merits of various investment alternatives of personal financial planning.

**3. Pedagogy:** Method of instruction consists of lectures, case study design and analysis, group discussions, seminar presentation, writing assignments and tests. Interaction individual investors with different profiles by age, income, sex, occupation, and region.

**4. Course Contents:**

**Module 1: Basics of Personal Financial Management:** Basics of Personal Financial Management: Budget, The Personal Financial Planning Process, Preparation of Personal Budget, Personal Financial Statements, Personal Income Tax Planning. Case studies on personal financial planning of individuals.

**Module 2: Personal Savings & Investment:** Investment Criteria- liquidity, safety and profitability. Savings instruments of Post Office and Banks. Chit Funds. Investment in Shares, Debentures, Corporate and Government Bonds, Mutual Fund. Investment in Physical Assets – Real Estate, Gold and Silver, Gold certificates. Risk and Return associated with these investments. Case studies on risk and return perception of retail investors on various investments.

**Module 3: Computation of Return and Risk of Personal Investment:** Present Value and Future Value of a Single Amount and an Annuity. Computation of interest, dividend and capital gains on personal investments. Impact of leverage on return. Personal tax planning,

**Module 4: Retirement Savings Plans:** Retirement Savings Plans:, Gratuity plans from the government. Life Insurance types. Health insurance. Pension Plans- Defined Contribution Plan and Defined Benefit Plan. Provident Fund, Gratuity. Life Insurance Plans. General Insurance Plans. Reverse Mortgage Plans.

**INTERNATIONAL ACCOUNTING**

**1. Course Description:** This course is designed to provide a deeper understanding of international accounting issues related to global financial reporting. It focuses on major diversities and challenges of financial reporting in the global arena, harmonization and international financial reporting standards. It also covers accounting for foreign currency transactions and major translation methods. It focuses on main issues in international financial statement analysis.

**2. Course Outcome:**

- CO1 Understand international accounting issues related to global financial reporting.
- CO2 Examine, analyze and assess theoretical and practical aspects of accounting harmonization.
- CO3 Identify major diversities and challenges of financial reporting in the global arena and IFRS.
- CO3 Learn the techniques of international financial statement analysis

**3. Pedagogy:** Method of instruction consists of lectures, analysis of international financial statements, group discussions, seminar presentations, writing assignments and tests. Reading and analysis of annual reports of multi-national organizations will be integral part of instruction.

**4. Course Contents:**

**Module 1: International Financial Reporting:** Definition and scope of international accounting. Main causes of diversity in international financial reporting. Harmonization vs. standardization. Rationale for and obstacles to harmonization. Role of regional and international organizations engaged in accounting harmonization – EU, ASEAN, IASB, IFAC, IOSCO, OECD, U.N., etc. Case studies on current evidence on accounting harmonization at regional level and global level.

**Module 2: International Financial Reporting Standards (IFRS):** The structure of IFRS. Process of IFRS Standard Setting. Constraints. Conceptual Framework for Financial Reporting under IFRS. Hierarchy of Standards. IFRS adoption or convergence. Case studies on compliance with IFRS by Indian Companies and MNCs.

**Module 3: Accounting for Foreign Exchange Rate Fluctuations:** An overview of foreign currency markets and exchange rates. Foreign exchange exposures. Accounting for spot and forward foreign currency transactions. Foreign currency translation methods- current rate method, current/non-current method, monetary/non-monetary method and temporal method. IFRS on foreign currency exchange accounting. Case studies on the annual reports of companies.

**Module 4: International Financial Statement Analysis:** Main issues in international financial statement analysis –understandability, availability, reliability, comparability and timeliness of financial information. Language, terminology and format. Techniques of financial statement analysis-horizontal, vertical, trend and ratio analysis. Analysis of income statement, balance sheet and cash flow statements of multinational corporations.

## **HC12: MCD020 CURRENT TRENDS IN BUSINESS AND COMMERCE**

### **Course Outcome:**

- CO1 Understand changing business and financial environment
- CO2 Equip the skills required for competitive examinations and JRF, NET and SLET
- CO3 Develop analyzing and decision making skills on current topics of business
- CO4 Identify the reforms in areas of banking, insurance, capital markets and taxation.

**Pedagogy:** LTP Model of facilitating learning process, working out MCQ's and group discussions.

### **Course contents:**

1. All the compulsory subjects of M.Com programme.
2. The study of trends in the area of business and commerce – Trading, manufacturing, Finance, Capital Market, Foreign Trade, Foreign Exchange, Industrial relations, International Business and Collaborations, Taxation, Internal Marketing Scenario.
3. Trends in Inflation, Economics Development, Employment, Industry and Agriculture, World Economics and Trade Problems; Social, Economic and Political event in the Country and the world.

### **Reference:**

2. Yojana
3. The Economic Times Daily
4. Business Line Daily
5. Business Standards
6. Business India

## GROUP C: BUSINESS TAXATION

### Elective Paper-2: SC12: MCD230 CORPORATE TAX LAW AND PLANNING

**1. Course Description:** This course is focus on different heads of income, taxable in the hands of companies, computation of gross total income, deduction, exemptions, set off and carry forward of loss. Tax planning relating to various managerial decisions for reducing the tax burden, allocation of investments, and maximize the company wealth. As a tax consultant of the corporate tax laws of the company to give advice to the drawing officers regarding TDS, advance payment of tax and remittances of tax, for his employees.

#### 2. Course Outcome:

- CO1 Understand the incidence of tax on residential status of the companies
- CO2 Understand the different types of companies under corporate income tax act.
- CO3 Know the different sources of income for corporate assesses.
- CO4 Become a manger of a company/tax consultant and reduce the tax burden and maximize the company's wealth
- CO5 Understand the impudence of tax planning with various managerial decisions

#### 3. Pedagogy:

1. The course content is covered class room lecture, remedial class for non tax students, student's seminar, case discussion, and work out the problem on the company problems as student, as consultant and as a tax authority and also visiting company and tax office for practical exposure.
2. Compulsory Activities - Each candidate must compute the returns and file online-at least two corporate assesses.

#### 4. Course Content:

**Module 1: Definition of company**-Indian company, Domestic Company, Foreign Company, Widely Held Company, Closely held company, Residential Status of a company and incidence of Tax.

**Module 2: Computation of Taxable income of companies**- Computation of table income under different heads of income-House property, Profit and gain from business or profession, Capital gain and income other sources, carry forward and set off of losses in case of companies. Deduction from Gross Total income. Minimum Alternative Tax.-**Legal Case study**.

**Module 3: Tax Planning**- Tax avoidance and tax evasion. Tax planning with corporate dividend, Dividend policy- bonus shares. Tax planning with reference to specific managerial decisions- Make or Buy, Own or Lease, Purchase by installment or by Hire, Repair, Replace, Renewal or Renovation, shout down or continue.- **Legal Case study**.

**Module 4: Procedure for assessment**- Deduction of Tax at Source, Advance payment of Tax, Tax returns, refunds appeals and revision.- **Legal Case study**. Each student must compute the returns and file online-at least two corporate assesses.

**GROUP D: COST MANAGEMENT**  
**Elective Paper-2 -SC18: COST MANAGEMENT**

**1. Course Description:**

This course provides the coverage of a broader framework of various tools and strategies used for cost management and control.

**2. Course Objectives:**

The course is aimed at helping the students to:

- (i). Understand the scope and need for cost control and management.
- (ii) . Familiarize themselves with the basic cost control and management tools.,
- (iii). Understand the importance of statistical tools and operation research in cost control and management.

**3. Pedagogy:**

Course activities consist of lectures, case study analysis, group discussions, seminar presentation, assignment writing and tests.

**4. Course Contents:**

**Module 1: Cost Management**-Nature; Cost Management System; Cost Management ; Components of CM. Activity-Based Management [ABM]: Concept and Uses; Relationship between Activity – Based Costing and ABM; Operational ABM and Strategic ABM; Techniques of ABM; Implementation Steps in ABM.

**Module 2: Pricing Strategies**- Factors Influencing Pricing Decisions; Short run Vs. Long Run Pricing Strategy; Cost-Based Pricing; Economic Approach to Pricing; Pareto Analysis in Pricing Decisions. Activity-Based- Budgeting (ABB): ABB and Traditional Budgeting; ABB Process; Capacity Utilization; Role of ABB in Cost Management.

**Module 3:** Designing Costing Systems for Job and Process Oriented manufacturing environments – Cost Estimation and Regression Analysis – and cost volume profit Analysis.

**Module 4: Application of Operation Research and Statistical Tools in cost management:** Linear Programming, Network Analysis, Assignment, Transportation and Time Series Analysis- Time series analysis including moving totals and averages.

## **PROGRAMME: MASTER OF SCIENCE IN COMPUTER SCIENCE**

### **2 Years /4 Semesters (under CBCS-CAGP)**

#### **ADMISSIONS:**

- i) 50% seats of the total intake for M.Sc., Computer Science Programme of the College will be filled-up by University of Mysore through Centralized Admission Cell as per University regulations.
- ii) Remaining 50% seats will be filled-up by the College under College Quota.

#### **ADMISSION REQUIREMENT**

**Eligibility** - All students who have 45% (40% for SC/ST) in their B.Sc degree (from Recognised University/ Open University) with Mathematics as one subject and any one-two among Electronics, Instrumentation, Computer Science or Computer Maintenance and Physics as other subject. OR Student with B.Sc (IT) are permitted provided they have not studied Mathematics in their 2 years PUC. OR Diploma (in Electronics, Computer Science and Information Technology) holders with B.Sc (IT) are permitted if they have SSLC level Mathematics. OR BCA degree from recognized University OR equivalent to this from any other recognized University in India or abroad is also permitted.

#### **PROGRAMME OUTCOMES:**

**After Completing the M.Sc Program Students will be able to:**

- PO1. Identify, formulate, and solve computer science problems
- PO2. Design, implement, test, and evaluate a computer system, component, or algorithm to meet desired needs
- PO3. Receive the broad education necessary to understand the impact of computer science solutions in a global and societal context
- PO4. Communicate effectively
- PO5. Success in research or industry related to computer science
- PO6. Have solid knowledge in computer science and engineering, including programming and languages, algorithms, theory, databases, etc.
- PO7. Integrate well into and contribute to the local society and the global community related to computer science
- PO8. Practice high standard of professional ethics
- PO9. Draw on and integrate knowledge from many related areas

**PROGRAMME SPECIFIC OUTCOMES:**

PSO1. Programmers or the Software Engineers with the sound knowledge of practical and theoretical concepts for developing software.

PSO2. Serve as the Computer Engineers with enhanced knowledge of computers And its building blocks. Work as the Hardware Designers/Engineers with the knowledge of Networking Concepts.

PSO3. Work as the System Engineers and System integrators Serve as the System Administrators with thorough knowledge of DBMS.

PSO4. Work as the Support Engineers and the Technical Writers

PSO5. Work as IT Sales and Marketing person.

PSO6. Serve as the IT Officers in Banks and cooperative societies.

PSO7. Computer Scientist in research and R & D laboratories.

PSO8. Faculty for Graduate and Under graduate Colleges.

**MSc. in Computer Science 2021-23****I Semester**

<b>Course</b>	<b>L:T:P</b>	<b>Credit Value</b>
HC1 (Data Structures and Algorithms)	3:0:1	4
HC2 (System Software)	2:1:1	4
HC3 (Computer Networks)	2:1:1	4
SC1		4
SC2		4
<b>TOTAL</b>		<b>20</b>

**II Semester**

<b>Course</b>	<b>L:T:P</b>	<b>Credit Value</b>
HC4 (Analysis and Design of Algorithms)	2:1:1	4
HC5 (Operating System and Unix)	2:0:2	4
HC6 (Computer Graphics)	3:0:1	4

11	Pattern Recognition	3:0:1	4
12	Image Processing	2:1:1	4
13	Software Testing	3:0:1	4
14	Computational Techniques	3:0:1	4
15	Graph Theory	3:1:0	4
16	OOAD	2:1:1	4

17	Probability and Statistics	3:1:0	4
18	Data Mining	2:1:1	4
19	Artificial Intelligence	3:1:0	4
20	.NET Technologies	2:0:2	4
21	Object Oriented Modeling and Design with UML	2:1:1	4
22	Android Application Development	2:0:2	4
23	Advanced Database Management Systems	2:1:1	4
24	Compiler Design	3:0:1	4

## SCHEME OF EXAMINATION AND ASSESMENT:

In view of the CBCS syllabus, Each Course is Assess with Components . Component 1 (C1), Component 2 (C2), and Component 3 (C3),

The following is the scheme which will be followed for the assessment of marks for both theory (HC/ SC/ OE) as well as practicals (HC/ SC) irrespective of the Credits associated with each Course. Thirty percent of the marks will be assessed for the internals (C1 and C2) and remaining seventy percent will be for the semester end examinations (C3). Each Course carries 100 marks and hence thirty marks for internal assessment and remaining seventy marks will be for Semester End Examinations. Out of thirty marks for internals, fifteen marks will be allotted to each C1 and C2 components.

Each theory Course (HC/ SC/ OE) consists of three components namely C1, C2 and C3. C1 and C2 are designated as Internal Assessment (IA) and C3 as Semester End Examination. Each Course (HC/ SC/ OE) carries 100 Marks and hence the allotment of marks to C1, C2 and C3 Components will be fifteen, fifteen and seventy marks respectively. i.e.,

C1 Component : 15 Marks	Internal Assessment Marks
C2 Component : 15 Marks	
C3 Component : 70 Marks	Semester End Examination
Total :	100 Marks

The above will be followed in common for all the theory (HC/ SC/ OE) Courses in all the four semesters.

## **DATA STRUCTURES & ALGORITHMS**

**3:0:1**

**Course Code: CSA100**

**Course Outcomes:** At the end of the course students will be able to:

- CO1. Select appropriate data structures as applied to specified problem definition.
- CO2. Implement operations like searching, insertion, and deletion, traversing mechanism etc. on various data structures.
- CO3. Implement Linear and Non-Linear data structures.
- CO4. Implement appropriate sorting/searching technique for given problem.
- CO5. Design advance data structure using Non Linear data structure.

### **UNIT I: Introduction**

Introduction to Stages in Problem Solving, Difference between Data Type, Data Structure and Storage Structure, Formal Definition of Data Structure, Classification of Data Structure  
Analysis of Algorithms: Algorithm, Time Complexity and Space Complexity, O-Notation, Omega Notation and Theta Notation.  
Primitive Data Structure: Integer, Real, Character and Boolean and Its Storage Representation

### **UNIT II: Non-Primitive Data Structures**

Arrays: Introduction to Array Data Structure and Its Representation, Sparse Matrix Representation. Introduction to Structures  
Stacks: Introduction, Implementation Using Arrays, Applications - Tower Of Hanoi, Expression Evaluation, Conversion of Expressions

### **UNIT III: Stacks and Queues**

Queue: Introduction, Types – Ordinary, Circular, Doubly Ended, Priority, Implementation Using Arrays

Linked List: Introduction, Types, Operations, Implementation of Stacks and Queues Using Linked List

#### **UNIT IV: Non-Linear Data Structures**

Graphs: Introduction, Basic Terminologies, Graph Representation – Adjacency and Incidence Matrix Representation

Trees: Introduction, Binary Tree Representation – Array and Linked List Representations, Traversals – Preorder, In-order, Post order, Binary Search Tree, Introduction to B-Trees

Hash Tables: Direct Address Tables, Hash Tables, Hash Functions, Open and Closed Addressing

#### **References:**

1. Data Structures and Algorithms, 2<sup>nd</sup> Edition, 2006 , Andrew Tanenbaum
2. “An Introduction to Data Structures, with Applications” McGraw Hill, Kongakusha 1976, Trembley and Sorenson
3. “Data Structures” SBCS Publication, 1980, Horowitz and Sahni
4. Data Structures using c, A K Sharma
5. Data Structures and program design in C, Kruse Robert L
6. Data Structures and analysis in C, Mark Allen Weiss
7. Data Structures and Algorithms, Alfred V AHO and Jeffrey D Ullman

**SYSTEM SOFTWARE**

**2:1:1**

**Course Code:CSA110**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Understand fundamentals of language processing and grammar

CO2. Apply knowledge of compilation and code optimization steps to mimic a simple compiler

CO3. Demonstrate the working of various system software like assembler, loader, linker, editor and device driver

**UNIT 1**

Background: Machine Structure, Evolution of the components of a programming system, evolution of operating system, operating system user view point functions, facilities

General Machine Structure, General Approach to a new machine, Machine Structure – 360 and 370, Assembly Language

**UNIT 2**

Assemblers: General design procedure, design of an assembler.

Macro language and macro processor, macro instructions, features of macro, implementation

**UNIT 3**

Loaders, different types of loaders, loader schemes, design of an absolute loader, design of direct linking loader.

Compilers: Structure and phases

**UNIT 4**

Lex and yacc: The Simplest lex Program, Recognizing Words with Lex, Parser-Lexer

Communication, Regular Expressions, Grammars, Shift/Reduce Parsing, Structure of lex and yacc Programs, Programs in lex and yacc

**References:**

1. Systems Programming by Donovan
2. Principles of Compiler design by Ullman
3. System programming by Dhamdhare
4. Lex and yacc by John R Levine, Tony Mason and Doug Brown
5. System Software- Prof. Liland L Beck.
6. System Software- Prof. John R Levine

**COMPUTER NETWORKS**

**2:1:1**

**Course code:CSA120**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Master the terminology and concepts of the OSI reference model and the TCP-IP reference model.

CO2. Study the basic taxonomy and terminology of the computer networking and enumerate the layers of OSI model and TCP/IP model.

CO3. Master the concepts of protocols, network interfaces, and design/performance issues in local area networks and wide area networks

CO4. Acquire knowledge of Application layer and Presentation layer paradigms and protocols.

CO5. Study Session layer design issues, Transport layer services, and protocols.

CO6. Gain core knowledge of Network layer routing protocols and IP addressing.

CO7. Study data link layer concepts, design issues, and protocols.

CO8. Read the fundamentals and basics of Physical layer, and will apply them in real time applications.

CO9. Familiar with wireless networking concepts

CO10. Familiar with contemporary issues in networking technologies

CO11. Familiar with network tools and network programming

**UNIT 1**

**USES OF COMPUTER NETWORK:** Business Applications, Home Applications, Mobile Users, Social Issues

**NETWORK HARDWARE:** Local Area Networks, Metropolitan Area Networks, Wide Area Networks, Wireless Networks, Home Networks, Internetworks

**NETWORK SOFTWARE:** Protocol Hierarchies, Design Issues for the Layers, Connection-Oriented and Connectionless Service, Service Primitives, the Relationship of Services to Protocols

**REFERENCE MODELS:** The OSI Reference Model, The TCP/IP Reference Model, A comparison of OSI and TCP/IP Reference Model

## **UNIT 2**

### **THE PHYSICAL LAYER**

**THE THEORETICAL BASIS FOR DATA COMMUNICATION:** Fourier Analysis, Bandwidth-Limited Signals, The Maximum Data Rate of a Channel

**GUIDED TRANSMISSION MEDIA:** Magnetic Media, Twisted Pairs, Coaxial Cable, Fiber Optics

**WIRELESS TRANSMISSION:** The Electromagnetic Spectrum, Radio Transmission, Microwave Transmission, Infrared and Millimeter Waves, Light wave Transmission

**COMMUNICATION SATELLITES:** Geostationary Satellites, Medium-Earth Orbit Satellites, Low-Earth Orbit Satellites, Satellites versus Fiber

### **THE DATA LINK LAYER**

**DATA LINK LAYER DESIGN ISSUES:** Services Provided to the Network Layer, Framing, Error Control, Flow Control

**ERROR DETECTION AND CORRECTION:** Error-Correcting Codes, Error-Detecting Codes

**ELEMENTARY DATA LINK PROTOCOLS:** A Utopian Simplex Protocol, A Simplex Stop-and-Wait Protocol

**SLIDING WINDOW PROTOCOLS:** A One-Bit Sliding Window Protocol, A Protocol Using Go-Back-N

## **UNIT 3**

### **THE MEDIUM ACCESS CONTROL SUBLAYER**

**THE CHANNEL ALLOCATION PROBLEM:** Static Channel Allocation, Dynamic Channel Allocation

**MULTIPLE ACCESS PROTOCOLS:** ALOHA, Carrier Sense Multiple Access Protocols, Collision-Free Protocols, Limited-Contention Protocols

**ETHERNET:** Ethernet Cabling, Manchester Encoding, The Ethernet MAC sub layer protocol, the binary exponential back off algorithm, Ethernet Performance, Switched Ethernet, IEEE 802.2: Logical Link Control

### **THE NETWORK LAYER**

**NETWORK LAYER DESIGN ISSUES:** Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit and Datagram Networks

ROUTING ALGORITHMS: The Optimality Principle, Shortest Path Algorithm, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing

CONGESTION CONTROL ALGORITHMS: Approaches to Congestion Control, Traffic-Aware Routing, Admission Control, Traffic Throttling, Traffic Shaping

INTERNETWORKING: How Networks Differ, How Networks Can Be Connected, Tunneling, Internetwork Routing, Fragmentation

THE NETWORK LAYER IN THE INTERNET: The IP Protocol, IP Addresses, IPv6

#### **UNIT 4**

THE TRANSPORT LAYER

THE TRANSPORT SERVICE: Services Provided to the Upper Layers, Transport Service Primitives

ELEMENTS OF TRANSPORT PROTOCOLS: Addressing, Connection Establishment, Connection Release, Error Control and Flow Control, Multiplexing, Crash Recovery

THE INTERNET TRANSPORT PROTOCOLS: UDP: Introduction to UDP, Remote Procedure Call, Real-Time Transport Protocols

THE INTERNET TRANSPORT PROTOCOLS: TCP: Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, TCP Connection Management Modeling, TCP Sliding Window, TCP Timer Management

THE APPLICATION LAYER

DNS—THE DOMAIN NAME SYSTEM: The DNS Name Space, Resource Records, Name Servers

ELECTRONIC MAIL: Architecture and Services, The User Agent, Message Formats, Message Transfer, Final Delivery

NETWORK SECURITY:

CRYPTOGRAPHY: Introduction to Cryptography, Substitution Ciphers, Transposition Ciphers, Two Fundamental Cryptographic Principles

SYMMETRIC-KEY ALGORITHMS: DES—The Data Encryption Standard, Cipher Modes

PUBLIC-KEY ALGORITHMS: RSA, Other Public-Key Algorithms

DIGITAL SIGNATURES: Symmetric-Key Signatures, Public-Key Signatures

MANAGEMENT OF PUBLIC KEYS: Certificates

5. Computer & Networks with Internet Applications, 4th Edition, Pearson Education, 2004, Douglas E. Comer

**ANALYSIS AND DESIGN OF ALGORITHMS**

**2:1:1**

**Course Code:CSB060**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Analyze different scenarios for running time of algorithms using asymptotic notations and Design using Recursion.
- CO2. Apply divide and conquer strategy for design of various algorithms.
- CO3. Develop algorithms for well known problems using greedy methods.
- CO4. Describe and apply dynamic-programming approach for designing graph and matrix based algorithms.
- CO5. Understand the concept of backtracking for traversal and search algorithms.
- CO6. Apply the knowledge earned to determine the efficiency of algorithms considering time and space tradeoffs.

**UNIT 1**

**INTRODUCTION:** Algorithm specification, pseudo code conventions

**PERFORMANCE ANALYSIS:** Space Complexity, Time Complexity, Asymptotic Notation, Mathematical Analysis: Recursive and Non recursive algorithms

**BRUTE FORCE –** Bubble Sort, Selection Sort, Sequential Search, String Matching

**UNIT 2**

**DIVIDE- AND – CONQUER:** General Method, Binary Search, Finding the Maximum and Minimum, Merge Sort, Quick Sort, Strassen's Matrix Multiplication

**THE GREEDY METHOD:** The General Method, Knapsack Problem, Tree Vertex Splitting, Job Sequencing with Deadlines, Minimum-Cost Spanning Trees - Prim's Algorithm, Kruskal's Algorithm, Optimal Storage on Tapes, Optimal Merge Patterns, Single-Source Shortest Paths.

**UNIT 3**

**DYNAMIC PROGRAMMING:** The General Method, Binomial Coefficient, Multistage Graphs, All Pairs Shortest Paths Single-Source Shortest Paths: General Weights, String Editing, 0/1 Knapsack, the Traveling Salesperson Problem

**BACKTRACKING:** The General Method, the 8-Queens Problem, Sum of Subsets, Graph Coloring, Hamiltonian Cycles

#### UNIT 4

Elementary Graph Problems: Depth First Search, Breadth First Search, Topological Sort

NP-Hard and NP-Complete Problems: Basic Concepts, Nondeterministic Algorithms, The Classes NP-Hard And NP-Complete

NP-Hard Graph Problems: Clique Decision Problem (CDP), Node Cover Decision Problem, Chromatic Number Decision Problem (CNDP), Traveling Salesperson Decision Problem (TSP), AND/OR Graph Decision Problem (AOG)

4. Introduction to the design and analysis of algorithm: Anany Levitin.
5. Design and analysis of algorithm: S Shridhar.

**OPERATING SYSTEM and UNIX**

**2:0:2**

**Course Code:CSB070**

**Course Outcomes:**

At the end of the course student will be able to:

- CO1. Understand device drivers
- CO2. Write applications with improved performance and stability
- CO3. Write set of small commands and utilities that do specific tasks well
- CO4. Run multiple programs each at the same time without interfering with each other or crashing the system.
- CO5. Implement Commands of UNIX.
- CO6. Implement various file processing commands and shell Programming.

**UNIT 1**

Introduction to Operating System, Operating System Structures

Process Management: Processes, CPU Scheduling

**UNIT 2**

Deadlocks, Storage Management: Memory management, Virtual Memory, File-System Interface

**UNIT 3**

Introduction: Why UNIX? The Unix Environment, UNIX Structure, accessing UNIX, UNIX commands

File Systems: File Names, File Types, Regular Files, Directories, File System Implementation, Operations unique to directories, Operations unique to regular files, Operations common to both.

Vi editor, local commands, range commands in vi, global commands in vi, rearrange text in vi, ex editor.

**UNIT 4**

Introduction to shells: Unix Session, Standard Streams, Redirection, pipes, tee command, command execution, command line editing, quotes, command substitution, job control, aliases, variables, predefined variables, options, shell/environment customization.

Security and file permission: User and groups, Security levels, changing permissions, User masks, Changing ownership and group, Regular expressions: Atoms, Operators, grep: operation, grep family, Searching for file content, sed and awk.

C Shell Programming: Basic script concepts, Expressions, Decision making selections,, Built in commands, Scripting techniques, Shell environment & Script, Script examples

6. Operating System: A Modern Perspective , Gary J Nutt.

**COMPUTER GRAPHICS**

**3:0:1**

**Course code:CSB080**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Utilize the components of a graphics system and become familiar with building approach of graphics system components and algorithms related with them.

CO 2. Learn the basic principles of 3- dimensional computer graphics.

CO3. Provide an understanding of how to scan convert the basic geometrical primitives, how to transform the shapes to fit them as per the picture definition.

CO4. Provide an understanding of mapping from a world coordinates to device coordinates, clipping, and projections.

CO 5. Implement the applications of computer graphics concepts in the development of computer games, information visualization, and business applications.

CO6. Comprehend and analyze the fundamentals of animation, virtual reality, underlying technologies, principles

**UNIT 1**

Introduction, Video Display Devices, Refresh Cathode-Ray Tubes, Raster-Scan Display, Random-Scan Displays, Color CRT Monitors, Flat-Panel Displays, Raster Scan Systems, Input devices.

Output primitives: Points & Lines, Line Drawing Algorithms, Loading the Frame Buffer, Circle Generating Algorithms, Pixel Addressing and Object Geometry

**UNIT 2**

Two dimensional transformations Basic & other transformations, Matrix representations, Homogeneous coordinates Composite transformations, General-pivot-point transformations.

Three Dimensional Transformations: Introduction to 3D Translation, Rotation & Scaling, Other Transformations, Modeling and Co-ordinate Transformations.

### UNIT 3

Three Dimensional Viewing :Viewing Pipeling, window to viewport transformations, Projections, Types of projections.

Graphical User Interface & Interactive Input Methods : The User Dialogue, Windows & Icons, feedback, Input of Graphical Data, Interactive Picture Construction Techniques, Basic Positioning Methods, Constraints, Grids, Gravity Field, Rubber-Band Methods, Dragging, Painting & Drawing

### UNIT 4

Curves & Surfaces: Properties, Bezier curves properties, Design techniques, Bezier surfaces, Displaying curves & surfaces

Hidden line removal algorithms

Introduction to fractals, Serpinsky's triangle, Construction, Koch curves.

Windowing & Clipping: Clipping operations, Line clipping algorithms, point clipping, text clipping, polygon clipping algorithms, Exterior clipping

**SOFTWARE ENGINEERING**

**3:1:0**

**Course Code:CSC040**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Understand the nature of software development and software life cycle process models, agile software development, SCRUM and other agile practices.

CO2 Learn methods of capturing, specifying, visualizing and analyzing software requirements.

CO3. Understand concepts and principles of software design and user-centric approach and principles of effective user interfaces.

CO 4. Basics of testing and understanding concept of software quality assurance and software configuration management process.

CO 5. Understand need of project management and project management life cycle.

CO 6. Understand project scheduling concept and risk management associated to various types of projects.

**UNIT 1**

INTRODUCTION TO SOFTWARE ENGINEERING: Software and Software Engineering, phases in Software Development, Software Development Process models, Agile modeling, Introduction to metrics.

**UNIT 2**

SOFTWARE REQUIREMENT SPECIFICATION: Role of SRS, Problem Analysis, Requirement specification, validation, metrics, Monitoring and control

PLANNING A SOFTWARE PROJECT: Cost Estimation, Project Scheduling, Staffing personal planning, Team Structure, Software Configuration Management, Quality Assurance Plans, Project Monitoring plans, Risk Management.

**UNIT 3**

SYSTEM DESIGN: Design Objectives, design principles, Module level Concepts, Design methodology – object oriented approach Design Specification, Verification, Metrics, monitoring and control.

DETAILED DESIGN: Module Specification, Detailed design and process design Language, Verification

#### UNIT 4

CODING: Programming practice, Verification, Metrics

TESTING: Testing Fundamentals, Fundamental testing, Structural Testing. Testing process  
Clean Room approach

#### References:

**THEORY OF LANGUAGES**

**3:1:0**

**Course Code:CSC070**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Design different types of Finite Automata and Machines as Acceptor, Verifier and Translator.

CO2. Understand, design, analyze and interpret Context Free languages, Expression and Grammars.

CO3. Design different types of Push down Automata as Simple Parser.

CO4. Design different types of Turing Machines as Acceptor, Verifier, Translator and Basic computing machine.

**UNIT - 1**

**INTRODUCTION TO FINITE AUTOMATA:** Introduction to Finite Automata; The central concepts of Automata theory; Deterministic finite automata; Nondeterministic finite automata.

**FINITE AUTOMATA, REGULAR EXPRESSIONS:** An application of finite automata; Finite automata with Epsilon-transitions; Regular expressions; Finite Automata and Regular Expressions

**UNIT - 2**

**REGULAR LANGUAGES, PROPERTIES OF REGULAR LANGUAGES:** Regular languages; Proving languages not to be regular languages; Closure properties of regular languages; Equivalence and minimization of automata.

**CONTEXT-FREE GRAMMARS AND LANGUAGES:** Context –free grammars; Parse trees; Ambiguity in grammars and Languages.

**UNIT – 3**

**PUSHDOWN AUTOMATA:** Definition of the Pushdown automata; the languages of a PDA; Equivalence of PDA's and CFG's; Deterministic Pushdown Automata.

**PROPERTIES OF CONTEXT-FREE LANGUAGES:** Normal forms for CFGs; The pumping lemma for CFGs; Closure properties of CFL

#### UNIT - 4

TURING MACHINE: The turing machine; Extensions to the basic Turing Machines;

UNDECIDABILITY: A Language that is not recursively enumerable; An Undecidable problem that is RE; Post's Correspondence problem

#### REFERENCES:

**DATABASE MANAGEMENT SYSTEM**

**2:1:1**

**Course Code:CSC060**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Explain the features of database management systems and Relational database.
- CO2. Design conceptual models of a database using ER modelling for real life applications and also construct queries in Relational Algebra.
- CO3. Create and populate a RDBMS for a real life application, with constraints and keys, using SQL.
- CO4. Retrieve any type of information from a data base by formulating complex queries in SQL.
- CO5. Analyze the existing design of a database schema and apply concepts of normalization to design an optimal database.
- CO6. Build indexing mechanisms for efficient retrieval of information from a database

**UNIT 1**

Introduction and conceptual modeling databases and Database users, Data modeling using the entity relationship (ER) model, the enhanced entity – relationship (EER) model.

**UNIT 2**

Relational model: Concepts constraints, Languages, Design and programming.

The relational data model and relational database constraints, Relational algebra and relational calculus, Introduction to SQL Programming technique

**UNIT 3**

Database design theory and methodology functional dependencies and Normalization for relational database, Relational database design algorithms and further dependencies, practical database design methodology and use of UML diagrams.

**UNIT 4**

Introduction to transaction processing concepts and theory recovery

**REFERENCES**

## Softcore:

### PRINCIPLES OF PROGRAMMING LANGUAGES AND ‘C’

2:1:1

#### Course Code:

#### Course Outcomes:

At the end of the course students will be able to:

- CO1. Analyzing semantic issues associated with function implementations, including variable binding, scoping rules, parameter passing, and exception handling.
- CO2. Implementation techniques for interpreted functional languages.
- CO3. Using object-oriented languages.
- CO4. Familiar with design issues of object-oriented and functional languages.
- CO5. Familiar with language abstraction constructs of classes, interfaces, packages, and procedures.
- CO6. Familiar with implementation of object-oriented languages.
- CO7. Familiar with using functional languages

#### UNIT 1: Preliminaries

Reasons for studying concepts of programming languages, Programming domains, Language evaluation criteria, Implementation methods Names, Bindings, Type Checking, and Scopes Introduction, Names, Variables, The concept of Binding, Type Checking, String Checking, Type Compatibility, Scope, Scope and Lifetime, Referencing Environments, Named Constants, Variable Initialization.

#### UNIT 2: Data Types

Introduction, Primitive Data types, Character String Types, User-Defined Ordinal Types, Array Types and Associative Arrays, Record Types, Union Types, Set Types, Pointes Types.

Expression, Assignment Statements and Statement Level Control Structures

Introduction, Arithmetic Expressions, Overloaded Operators, Type Conversions, Relational And Boolean Expressions, Short-Circuit Evaluation, Assignment Statements, Mixed-Mode assignment.

### UNIT 3

Compound Statements, Selection Statements, Iterative Statements, Unconditional Branching, Guarded Commands, Conclusion.

Subprograms: Introduction, fundamentals, design issues, local referencing environments, parameter passing methods, overloaded programs, generic subprograms, coroutines, user defined overloaded operators

### UNIT 4

C LANGUAGE: C Fundamentals, Operation data input and output, Control statements, Function Storage classes, Arrays, Pointers, structures and unions, Enumeration, Command line parameters, Macros, 'C' processor.

#### **Reference:**

1. Concepts of Programming Languages, Eight Edition, Pearson, Robert W. Sebesta
2. Foundation for Programming Languages, John C Mitchell
3. Principles of Programming Language, Chopra Rajiv
4. Principles of Programming Language, Dowek
5. Types and Programming Languages, Benjamin C Pierce
6. Programming Languages: Principle and Practices ,3<sup>rd</sup> Edition, Kenneth C Louden

## **INTERNET TECHNOLOGY**

**2:0:2**

**Course Code:CSD220**

### **Course Outcomes:**

At the end of the course students will be able to:

- CO1. Develop analytical ability in network technology.
- CO2. Create quality websites
- CO3. Work individually as a web designer and set up their own business
- CO4. Get the job opportunities in most companies for professional web designers and build websites more visually elegant and interactive
- CO5. Implement interactive web page(s) using HTML, CSS and JavaScript.
- CO6. Design a responsive web site using HTML5 and CSS3.

### **UNIT 1**

Fundamentals: introduction to the Internet, WWW, Web Browsers, Web Servers, URL, Multipurpose Internet Mail Extensions (MIME), HTTP, Security, Introduction to HTML: Origins and Evolution, Basic Syntax, Document Structure, Basic tags, Images, Links, Lists, Tables, Forms, Frames.

### **UNIT 2**

Introduction to XML: Syntax of XML, XML Document Structure, Document Type Definition.

Introduction to XHTML: Origins and Evolution, Basic Syntax, Document Structure, Basic tags, Images, Links, Lists, Tables, Forms, Frames, Syntactic difference between HTML and XHTML.

Cascading Style Sheets (CSS): Introduction, levels of style sheets, Selector Forms, Property value forms, Font properties, Color, Alignment of Text, Box model, Background Images, <span> and <div> tags.

### **UNIT 3**

The basics of JavaScript: Overview, Object Orientation and JavaScript, General syntactic characteristics, Primitives, Operations and Expressions, Screen Output and Keyboard Input, Control Statements, Objects, Arrays, Functions, Constructors, Errors.

JavaScript and XHTML Documents: Element access, Events and Event Handling, Handling Events from Body elements, Handling Events from Button elements, Handling Events from Text Box and password elements.

Dynamic Documents with JavaScript: Introduction, Positioning Elements, Moving Elements, Element Visibility, Changing Colors and Fonts, Dynamic Content, Stacking Elements, Locating Mouse Cursor, Reacting to Mouse Click, Slow Movement of Elements, Dragging and Dropping Elements.

#### **UNIT 4**

Introduction to PHP: Origins and Uses, Overview, General Syntactic Characteristics, Primitive, Operations and Expressions, Output, Control Statements, Arrays, Functions, Form Handling, Cookies.

#### **REFERENCES:**

1. Programming the World Wide Web – by Robert W. Sabesta 4<sup>th</sup> Edition Pearson Publications

5. Web programming and Internet Technologies: An E Commerce approach- By Porter ` Seobey and Pawan Lingras.
6. Internet Technology and Information services by Joseph Miller

**JAVA Programming**

**2:0:2**

**Course Code:CSA270**

**Course Outcomes:**

At the end of the course students will be able to:

- C01. Understand concept of Object Oriented Programming & Java Programming Constructs.
- C02. Understand basic concepts of Java such as operators, classes, objects, inheritance, packages ,Enumeration and various keywords.
- C03. Understand the concept of exception handling and Input/Output operations.
- C04. Design the applications of Java & Java applet.
- C05. Analyze & Design the concept of Event Handling and Abstract Window Toolkit.

**UNIT 1**

History and evolution of Java, An overview of Java, Data types, variables and arrays, Operators, Control statements- Introducing classes ,A closer look at methods and classes, Inheritance, Packages and interfaces.

**UNIT 2**

Exception handling, Multithreaded Programming, Enumeration, Autotoxins, I/O, Applets

**UNIT 3**

Networking, Event handling, Swings.

**UNIT 4**

String handling, Collection framework, Introduction to J2EE, Java servlet, Java server pages (JSP) and HTML, JDBC objects.

**REFERENCES:**

1. The complete reference Java – 7<sup>th</sup> Edition – Herbert Schildt – Tata Mcgraw hill Edition.
2. The complete reference J2EE – Jem Keogh – Tata Mcgraw hill Edition.

8. Core Servlet and Java Server pages- Hall, M-Brown L

## **MULTIMEDIA**

**3:1:0**

### **Course Code:**

### **Course Outcomes:**

At the end of the course students will be able to:

- CO1. Understand various file formats for audio, video and text media.
- CO2. Develop various Multimedia Systems applicable in real time.
- CO3. Design interactive multimedia software.
- CO4. Apply various networking protocols for multimedia applications.
- CO5. Develop understanding of technical aspect of Multimedia Systems

### **UNIT 1**

Introduction to Multimedia (MM) Communication, Scope, Range, Feasibility and Challenges of MM Communication Key aspects of MM: Compression, Coding, Transmission and Replay.

### **UNIT 2**

Types of Compression: Quantization, Coding as PCM, DPCM, ADPCM. Simple Encoder and Decoders based on PCM Samples. Introduction to Transform domain Compression. Introduction to Audio part of MPEG, Psychoacoustics

### **UNIT 3**

Compression in Spatial Domain Algorithms for Data Compression in Transform Domain: DCT. Variable Length Coding, Huffman code. Variable Length Coding: Arithmetic Coding. Introduction to JPEG 2000 Standard, Encoders-Decoders based on this. Audio Compression and MPEG Audio

### **UNIT 4**

Fundamental concepts of Video. MPEG Architecture Details: Audio-Video- Systems. Video Coding standard related to H.263 and H. 264. MPEG- 1, 2 Video. MPEG- 4 : Video. Streaming and Transport Issues: Multiplexing, Synchronization and File formats. Errors in MPEG and Error handling, Concealment. Buffer structures and Buffer Management

Introduction to MPEG-7 and MPEG-21., HDTV. Content based Image Retrievals and Digital Libraries.

**References:**

6. Multimedia: Making it work, 9<sup>th</sup> edition, Tay Vaughan

## **MICROCONTROLLERS**

**3:1:0**

### **Course Code:**

### **Course Outcomes:**

At the end of the course students will be able to:

- CO1. Describe the architecture of 8051 microcontroller and write embedded program for 8051 microcontroller.
- CO2. Design the interfacing for 8051 microcontroller.
- CO3. Understand the concepts of ARM architecture.
- CO4. Demonstrate the open source RTOS and solve the design issues for the same.
- CO5. Select elements for an embedded systems tool.
- CO6. Understand the concept and architecture of embedded systems

### **UNIT 1**

Introduction, Numbering system and binary arithmetic,

### **UNIT 2**

The 8051 Architecture, Basic assembly language programming concepts, Moving data,

### **UNIT 3**

Logical operations, Arithmetic operations Jump and call instructions

### **UNIT 4**

An 8051 Microcontroller design, Applications

### **References**

1. “The 8051 Microcontroller”, 3<sup>rd</sup> Edition, Thomson India edition, 2007, Kenneth Ayala
2. “Programming and customizing the 8051 microcontroller”, Tata McGraw-Hill edition, 2006, Myke prick
3. “The 8051 Microcontroller and embedded systems”, Pearson India, 2006, Muhammad Ali Mazidi & Janice Gillispie Mazidi,
4. Microcontroller and Embedded System, Mazidi, M A- Mazidi
5. Microcontroller: Architecture, Programming and application, Ayala, Kenneth

## **DISCRETE MATHEMATICS**

**3:1:0**

**Course Code:CSA260**

### **Course Outcomes:**

At the end of the course students will be able to:

- CO1. Construct simple mathematical proofs and possess the ability to verify them.
- CO2. Have substantial experience to comprehend formal logical arguments .
- CO3. skillfull in expressing mathematical properties formally via the formal language of propositional logic and predicate logic.
- CO4. Specify and manipulate basic mathematical objects such as sets, functions, and relations and will also be able to verify simple mathematical properties that these objects possess.
- CO5. Apply basic counting techniques to solve combinatorial problems .
- CO6. Use various techniques of mathematical induction (weak, strong and structural induction) to prove simple mathematical properties of a variety of discrete structures

### **UNIT 1**

Set Theory: Sets and Subsets. Operations on sets, Countable and uncountable sets, The addition principal, the concept of probability.

Mathematical Logic: Propositions, Logical Connectives, Tautologies; Contradictions, Logical equivalence, Application to switching networks, Duality, Commentates NAND and NOR, Converse, Inverse and Contrapositive, Rules of inference.

### **UNIT 2**

Open statements; Quantifiers, Logical Implication involving Quantifiers, Statements with more than one variable, Methods of proof and disproof, Mathematical Induction.

### **UNIT 3**

Relations and Ordering: Cartesian products of sets, Relations, Paths in relations and digraphs, Operations on relations, Composition of relations, Properties of relations, Equivalence relations, Partial orders, Total Orders, External elements in posets, Lattices.

Functions: Functions, Types of functions, Composition of function, Invertible functions, Permutation Function.

### **UNIT 4**

Fundamental principles of counting: Principles of inclusion and exclusion: The rule of sum and product, Permutations, combinations: The binomial theorem, combinations with repetition,

Ramsey number, the Catalan numbers, sterling number and bell numbers, Generalizations of principles, the pigeonhole principle, Derangements-Nothing is in its Right place, Rook polynomials, Arrangements with Forbidden positions.

4. Discrete Mathematics and Application by Kenneth H Rosen.
5. Discrete Mathematics by Norman L Biggs.

**SIMULATION & MODELLING**

**3:1:0**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Understand the definition of simulation and how to develop and analyze a simulation model
- CO2. Understand the fundamental logic, structure, components and management of simulation modeling
- CO3. Demonstrate knowledge of how to use Arena
- CO4. Build a simulation model with basic operations and inputs
- CO5. Build a simulation model with detailed operations
- CO6. Perform statistical analysis of output from terminating simulation

**UNIT 1**

Introduction, Simulation of prepursuit problem, A system & its model, Simulation of an inventory problem, The basic nature of simulation

Simulation of continuous systems: A chemical reactor, Numerical integration vs continuous system simulation, Selection of an integration formula, Runge Kutta integration formulas, simulation of a servo system, Simulation of a water reservoir system, Analog vs digital simulation

**UNIT 2**

Discrete system simulation

Fixed time-step vs event to event model, On simulating randomness, Generation of random numbers, Generation of non uniformly distributed random numbers, Monte Carlo computation vs stochastic simulation

**UNIT 3**

Simulation of queuing systems

Rudiments of queuing theory, simulation of single server queue, Simulation of two server queue, Simulation more general queues.

Simulation of PERT network

#### UNIT 4

Network model of a project, Analysis of an activity network, Critical path computation, Uncertainties in activity duration, Simulation of an activity network, Computer program for simulation, Resource allocation and cost considerations, Inventory control & forecasting Elements of inventory theory, More complex inventory models, simulation examples, Generation of Poisson & erlang variates, Forecasting & regression analysis  
Design and Evaluation of Simulation Experiments  
Length of simulation runs, Variance reduction techniques, Experimental layout, validation

4. Fundamentals of Modeling separation Process- C D Holand.
5. Process Modeling-M M Denn

**OPERATIONS RESEARCH**

**3:1:0**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

CO1: Formulate and solve mathematical model (linear programming problem) for a physical situations like production, distribution of goods and economics.

CO2: Apply the concept of simplex method and its extensions to dual simplex algorithm.

CO3: Solve the problem of transporting the products from origins to destinations with least transportation cost.

CO4: Convert and solve the practical situations into non-linear programming problem.

CO5: Identify the resources required for a project and generate a plan and work schedule

**UNIT 1**

Introduction: formulation of LP problems, graphical solution of LP problems, General formulation of L P problems, Slack & Surplus variables, Standard form, Matrix form, Simplex method, Revised Simplex method, Dual simplex

**UNIT 2**

Assignment model, Transportation model, Game theory

Probability: Introduction, Basic terms of probability, The Addition law of probability, discrete & continuous, variables, random variables, probability distribution of random variables, Mean variance& standard deviation, Mathematical expectation of a random variable.

**UNIT 3**

Queuing theory

Introduction, queuing system, distribution, Kendall's Notation, Classification, model I (m/m/1).

**UNIT 4**

Project management by PERT CPM

Introduction, history, Applications, Basic steps, Network diagram representation, rules of drawing network diagram, labeling Fulkerson's I-J rule, Time estimates & Critical path, PERT, Resource allocation, Uses of PERT/CPM.

**References:**

1. Operations Research - S D Sharma

4. Operation research: An Introduction by Hamdy A Taha.
5. Operation research: Application and algorithm by Wayne L Winston.

**MOBILE COMMUNICATION**

**3:1:0**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Design a mobile cellular network
- CO2. Optimize a radio channel system
- CO3. Select the apt diversity scheme for a given wireless system to improve the performance.
- CO4. Perform efficient spectral allocation using multiple access techniques such as CDMA, and OFDM.
- CO5. Select the correct MAC protocol and routing algorithm for mobile ad-hoc networks.
- CO6. Optimize the mobile ad-hoc network, MAC protocols and routing algorithms as per application.

**UNIT 1**

Introduction, Applications, History of wireless communication, reference model, Wireless transmission, Frequencies for radio transmission, signals, Antennas, Signal propagation Multiplexing, Modulation, Spread spectrum

**UNIT 2**

Cellular Systems, Medium Access control, Motivation for a specialized MAC, SDMA, FDMA, TDMA, CDMA, Comparison.

**UNIT 3**

Telecommunications Systems, GSM, DECT, TETRA, UMS & IMT 2000  
Satellite Systems, history, Applications, Basics, Classical TCP improvements, TCP over 2.5/3G wireless networks, performance enhancing proxies

**UNIT 4**

Support for mobility, File Systems World Wide Web, Wireless Application protocol

**References:**

1. Cellular and Mobile Communication- Krishna.
2. Cellular Mobile Communication – V S Bhagat
3. Cellular and Mobile Communication- V Jeyasri Arokiamary.
4. Wireless Communication and Networks – William Stallings.

5. Cellular Communication; A Comprehensive and practical guide- Nishith Tripathi and Jeffreyreed.

**C++**

**2:0:2**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

CO1 . Understand the features of C++

CO2. Understand the relative merits of C++ as an object oriented programming language

CO3. Understand how to produce object-oriented software using C++

CO4. Understand how to apply the major object-oriented concepts to implement object oriented programs in C++, encapsulation, inheritance and polymorphism

CO5 Understand advanced features of C++ specifically stream I/O, templates and operator overloading

### **Unit I**

Quick overview of C : Expressions - Statements - Arrays and Null-Terminated Strings – Pointers - Functions – Structures, Unions, Enumerations and User-Defined Types – C Style Console I/O – File I/O -.

### **Unit II**

An Overview of C++ - Classes and Objects – Arrays, Pointers, References, and the Dynamic Allocation Operators

### **Unit III**

Function Overriding, Copy Constructors and Default Arguments – Operator Overloading - Inheritance – Virtual Functions and Polymorphism

### **Unit IV**

Templates – Exception Handling - The C++ I/O System Basics

**PATTERN RECOGNITION**

**3:0:1**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

- C01. Explain and compare a variety of pattern classification, structural pattern recognition, and pattern classifier combination techniques.
- C02. Summarize, analyze, and relate research in the pattern recognition area verbally and in writing.
- C03. Apply performance evaluation methods for pattern recognition, and critique comparisons of techniques made in the research literature.
- C04. Apply pattern recognition techniques to real-world problems such as document analysis and recognition.
- C05. Implement simple pattern classifiers, classifier combinations, and structural pattern recognizers.

**UNIT 1**

Machine perception, pattern recognition systems, Design Cycle, Learning and adaption, models of Pattern recognition

**UNIT 2**

Bayesian Decision Theory

Introduction, Bayesian, Decision theory- Two category classification, classifiers-Two category case and multi category case, missing and noisy features.

**UNIT 3**

Nonparametric Techniques

Introduction, Density estimation, Parzen window, KN neighbor estimation, The nearest neighbor rule, Metrics and Nearest Neighbor Classification, Error analysis of nearest decision rule

**UNIT 4**

Introduction, Heirarchical clustering techniques, partitional clustering techniques Dimensionality reduction techniques Introduction, principle component analysis, Fisher Linear Dicriminant Analysis, Spectral clustering based dimensionality reduction

**References:**

3. Pattern Recognition and machine Learning, Cristopher M Bishop,
4. Pattern Recognition ( Blue Ant) – Willian Gibsom.
5. Pattern Recognition, 4<sup>th</sup> Edition- Sergios Theodoridis and Konstantios Koutroumbas

## **IMAGE PROCESSING**

**2:1:1**

### **Course Code:**

### **Course Outcomes:**

At the end of the course students will be able to:

- C01. Analyze general terminology of digital image processing.
- C02. Examine various types of images, intensity transformations and spatial filtering.
- C03. Develop Fourier transform for image processing in frequency domain.
- C04. Evaluate the methodologies for image segmentation, restoration etc.
- C05. Implement image process and analysis algorithms.
- C06. Apply image processing algorithms in practical applications.

### **UNIT I**

Introduction, digital image fundamentals

### **UNIT II**

Image enhancement in the spatial domain, Image enhancement in the frequency domain

### **UNIT III**

Image restoration, color image processing

### **UNIT IV**

Wavelets and multi-resolution processing image compression

### **References:**

1. Digital Image Processing-Rafel C.Gonzalez and Richard E Words.
2. The Image Processing hand Book- John C Cruss.
3. Fundamentals of Digital Image Processing- Anil K Jain.
4. Digital Image Processing –Jayaraman S.
5. Digital Image Processing- Sanjay M Shah Munesh Chandra Trivedi

**SOFTWARE TESTING**

**3:0:1**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

CO1.Check Various test processes and continuous quality improvement

CO2.Verify Types of errors and fault models

CO3.Check Methods of test generation from requirements

CO4.Check Behavior modeling using UML: Finite state machines (FSM)

CO5.Test generation from FSM models

CO6.Input space modeling using combinatorial designs

**UNIT 1**

Assessing Testing Capabilities and Competencies, Building a software Testing Environment: Building a software Testing Strategy, Establishing a Software Testing Methodology, Determining your Software Testing Techniques, Selecting and Installing Software Testing Tools.

**UNIT 2**

The Eleven-Step Testing Process: Eleven-Step Testing Process Overview, Step1: Access Project Management Development Estimate and status, Step2: Develop Test Plan, Step3: Requirement Phase Testing,

**UNIT 3**

Step4: Design Phase Testing, step 5: Requirement Phase Testing, Step6: Execute Test and Record Results,

**UNIT 4**

Step7: Acceptance Test Results Step8: Report Test Results, Step9: Testing Software Installing, Step10: Test Software Changes, Step11: Evaluate Test Effectiveness.

**GRAPH THEORY**

**3:1:0**

**Course Code:CSB270**

**Course Outcomes:**

At the end of the course students will be able to:

CO1. Explain basic concepts in combinatorial graph theory

CO2. Define how graphs serve as models for many standard problems

CO3. Discuss the concept of graph, tree, Euler graph, cut set and Combinatorics.

CO4. See the applications of graphs in science, business and industry.

**UNIT 1**

Introduction to Graph theory: Basic terminologies—direct & undirect graphs, walks, paths & circuits, sub-graphs and complements, Graph Isomorphism, vertex degree and regular graphs,

**UNIT 2**

Konigsberg bridge problem & Euler graphs. Hamilton graphs & traveling salesman problem, planar graphs- definition & examples, Bipartite & Kuratowskis graphs, Euler's formula & detection of planarity, Dual of Planar graphs,

**UNIT 3**

Graph Coloring: Proper coloring & chromatic number of graphs, Chromatic polynomial, four color problems, Trees: Optimization & Matching: Trees; Definition & Properties, Rooted & binary rooted trees, ordered trees & trees sorting. Weighted trees & prefix codes

**UNIT 4**

Spanning trees, optimization, Networks, Cutset, Edge & Vertex connectivity of a graph, Max-flow Min-cut theorem and its applications, Matching theory and its applications

**References:**

1. Graph Theory, V.K Balakrishnan, Schaum Series, McGrawHill, 1997

4. Hand Book of Graph Theory, Jonathan L Gross and Jay Yellen.
5. Graph Theory with application to Engineering and Computer science, Narsingh Deo.

**OOAD**

**2:1:1**

**Course Code:**

**Course Outcomes**

At the end of the course students will be able to:

CO1. Analyse, design, document the requirements through use case driven approach.

CO2. Identify, analyse, and model structural and behavioural concepts of the system.

CO3. Develop, and explore the conceptual model into various scenarios and applications.

CO4. Apply the concepts of architectural design for deploying the code for software  
Implementation of Object Oriented concepts using C++

**UNIT II**

Introduction, Object orientation, OO development, OO themes, OO modeling ,History. Modeling, Abstraction, Models .Class Modeling Object & class, Link & Association concepts, Generalization & Inheritance, sample Class Model, Navigation of class models. Advanced class modeling: advanced object & class concepts, Association end N ary Association, Aggregation, Abstract Classes, Multiple Inheritance, Meta Data, Reification, Constraints, Derived Data.

**UNIT III**

State modeling: Events, States, Transitions & Conditions, State Diagrams, State Diagram behavior. Advanced state modeling, interaction modeling.

**UNIT IV**

System design: Overview of System design, Estimating performance, making a Reuse plan, Breaking a System into Subsystems, Identifying concurrency, Allocation of subsystems, Management of Data Storage.

**Reference:**

1. Object Oriented Analysis and Design – Blaha, Rambaugh.
2. Object Oriented Analysis and Design with the Unified Process- W Satzinger, Robert B Jackson and Stephen D Burd.
3. Object Oriented Analysis and Design with application, 3<sup>rd</sup> edition- Grady Booch, Robert A Maksimchuk, Michael W Engel
4. Object Oriented Analysis and Design with application- Grady Booch.

## **PROBABILITY AND STATISTICS**

**3:1:0**

### **Course Code:**

### **Course Outcomes**

At the end of the course students will be able to:

- CO1. Apply probability theory to set up tree diagrams
- CO2. Apply probability theory via Bayes' Rule
- CO3. Describe the properties of discrete and continuous distribution functions
- CO4. Use method of moments and moment generating functions
- CO5. Assess the consistency, efficiency and unbiasedness of estimators
- CO6. Apply method of maximum likelihood estimation
- CO7. Apply the Central Limit Theorem
- CO8. Use statistical tests in testing hypotheses on data

### **UNIT 1**

Introduction, basic terminology, Interpretation of probability: Axioms of probability, Some elementary theorems, Conditional probability, Mathematical Expectation

### **UNIT 2**

Probability Distributions: Introduction, Discrete probability distributions continuous probability distributions, The expected value of a random variable Chebyshev's Theorem

### **UNIT 3**

Sampling distributions, Populations and samples, Sampling distribution, The sampling distribution of the mean, sampling distributions of proportions, sampling distributions of mean, chi squared distribution, F distribution.

### **UNIT 4**

Estimation and inference theory, introduction, point estimation, interval distribution, bayesian estimation, test of hypot, Introduction to ANOVA.

### **References:**

1. Probability and Statistics: Bheeshma Rao
2. Probability and Statistics, 4<sup>th</sup> edition, Degroot, Schervish.
3. Probability and Statistics for Engineering and Science, 8<sup>th</sup> edition, Jay L Devore.
4. Probability and Statistics, Michael Akritas.

5. An Introduction to Probability and Statistics, 3<sup>rd</sup> edition, Vijay K Rohatgi and A K MD Ehsanes Saleh.

**DATA MINING**

**2:1:1**

**Course Code:CSD230**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Demonstrate an understanding of the importance of data mining and the principles of business intelligence
- CO2. Organize and Prepare the data needed for data mining using pre preprocessing techniques
- CO3. Perform exploratory analysis of the data to be used for mining.
- CO4. Implement the appropriate data mining methods like classification, clustering or Frequent Pattern mining on large data sets.
- CO5. Define and apply metrics to measure the performance of various data mining algorithms.

**UNIT 1**

Introduction, what kind of patterns can be mined? which technologies are used? which kind of applications are targeted?, major issues in Data mining.

Getting to know your data: Data objects and attribute types, basic statistical description of data, Data Visualisation, Measuring Data similarity and dissimilarity.

**UNIT 2**

Data Preprocessing: data cleaning, Data integration, Data Reduction, Data transformation and Data Discretization

**UNIT 3**

Mining frequent patterns, Associations and correlations: Basic concepts, Frequent mining methods, pattern Evaluation methods, Pattern mining in Multilevel multi dimensional space, Decision tree induction.

**UNIT 4**

Cluster analysis, partitioning methods, heirarchical methods, density based methods, grid based methods, evaluation of clustering.

**References:**

1. Data Mining: Concepts and Techniques, Third Edition, Jaiwei Han, Micheline Kamber, Jian Pei.
2. Learning Data Mining with Python, 2<sup>nd</sup> edition, Robert Layton.
3. Data Mining; The Text book, Charu C Aggarwal.
4. Data Mining, 4<sup>th</sup> edition: Practical Machine learning Tools and Techniques by Lan H Witten and Fibe Frank.
5. Introduction to Data Mining – Pang- Ning Tan and Micheal Steinbach

## **ARTIFICIAL INTELLIGENCE**

**3:1:0**

### **Course Code:**

### **Course Outcomes**

**CO 1.** At the end of the course students will be able to:

CO 1. Create appreciation and understanding of both the achievements of AI and the theory underlying those achievements.

CO 2. Know concepts of a Rational Intelligent Agent and the different types of Agents that can be designed to solve problems

CO 3. Review the different stages of development of the AI field from human like behavior to Rational Agents.

CO4. Impart basic proficiency in representing difficult real life problems in a state space representation so as to solve them using AI techniques like searching and game playing.

CO5. The basic issues of knowledge representation and Logic and blind and heuristic search, as well as an understanding of other topics such as minimal, resolution, etc. that play an important role in AI programs.

CO6. Introduce advanced topics of AI such as planning, Bayes networks, natural language processing and Cognitive Computing.

### **UNIT 1**

AI problems, AI techniques, defining the problem as state space search, production systems, problem characteristics

Heuristic Search: Generate and test, hill climbing, BFS, Problem Reduction, Constraint Satisfaction, Means-End Analysis

### **UNIT 2**

Knowledge Representation: Representations and mappings, approaches to knowledge representation

procedural v/s declarative knowledge, normal forms in predicate logic and clausal forms, non-monotonic reasoning

Declarative Representations: semantic nets, conceptual dependency, frames, scripts

### UNIT 3

Game playing: minimax search procedure, adding alpha-beta cut offs

Planning: An Example Domain – the blocks world, Components, goal stack planning

### UNIT 4

Expert systems: expert systems v/s conventional computers, expert system shells, explanation based learning.

Learning: Learning from observation - Inductive learning – Decision trees – Explanation based learning – Reinforcement Learning, Neural Networks, Introduction to Natural Language Processing.

4. Artificial Intelligence, Jeorge F Luger
5. Artificial Intelligence, Saroj kaushik

## **.NET TECHNOLOGIES**

**2:0:2**

**Course Code:CSB280**

### **Course Outcomes**

At the end of the course students will be able to:

- CO1. Design web applications using .NET
- CO2. Use .NET controls in web applications.
- CO3. Debug and deploy .NET web applications
- CO4. Create database driven .NET web applications and web services

### **Unit 1**

Benefits of .NET Framework, Architecture of .NET Framework 4.0, Components of .NET Framework 4.0: CLR, CTS, Metadata and Assemblies, .NET Framework Class Library, Windows Forms, ASP .NET.

Need of C#, C# Pre-processor Directives, Creating a Simple C# Console Application, Identifiers and Keywords. Data Types, Variables and Constants: Value Types, Reference Types, Type Conversions, Boxing and Unboxing, Variables and Constants. Expression and Operators: Operator Precedence, Using the :: (Scope Resolution) Operator and Using the *is* and *as* Operators. Control Flow statements: Selection Statements, Iteration Statements and Jump Statements.

### **Unit 2**

Arrays and Strings: One Dimensional and Multidimensional Arrays, Jagged Arrays  
Classes and Objects: Creating a Class, Creating an Object, Using this Keyword, Creating an Array of Objects, Using the Nested Classes, Defining Partial Classes and Method, Returning a Value from a Method and Describing Access Modifiers. Static Classes and Static Class Members. Properties: Read-only Property, Static Property, Accessibility of accessors and Anonymous types. Indexers, Structs: Syntax of a struct and Access Modifiers for structs. Strings: Constructing Strings, Operating on Strings, Arrays of Strings, The String Class

### **Unit 3**

Encapsulation: Encapsulation using accessors and mutators, Encapsulation using Properties.  
Inheritance: Inheritance and Constructors, Sealed Classes and Sealed Methods, Extension methods. Polymorphism: Compile time Polymorphism/Overloading, Runtime Polymorphism/

Overriding. Abstraction: Abstract classes, Abstract methods. Interfaces: Syntax of Interfaces, Implementation of Interfaces and Inheritance.

Delegates: Creating and using Delegates, Multicasting with Delegates. Events: Event Sources, Event Handlers, Events and Delegates, Multiple Event Handlers. Exception Handling: The try/catch/finally statement, Checked and Unchecked Statements.

#### **Unit 4**

Introduction, Windows Forms, Life Cycle, Event Handling: A Simple Event- Driven GUI, Visual Studio Generated GUI Code, Delegates and Event- Handling Mechanism, Another Way to Create Event Handlers, Locating Event Information. Control Properties and Layout, Labels, TextBoxes and Buttons, GroupBoxes and Panels, CheckBoxes and RadioButtons, ToolTips, Mouse-Event Handling, Keyboard-Event Handling. Menus, MonthCalendar Control, ListBox Control, CheckedListBox Control, ComboBox Control, TreeView Control, ListView Control, TabControl Control ; Building an Multiple Document Interface (MDI) Application. Introduction to ADO.NET

#### **References:**

4. The Complete Reference C#, Herbert Schildt.
5. The Complete Reference ASP.NET, Robert Standefer III

**OBJECT ORIENTED MODELING AND DESIGN WITH UML**

**2:1:1**

**Course Code:**

**Course Outcomes**

At the end of the course students will be able to:

CO1. Design & Programming course is a unique course that teaches students how to use object-oriented techniques to build software.

CO2. Gathering requirements & end with implementation.

CO3. Analyze and design classes, their relationships to each other in order to build a model of the problem domain.

CO4. Use common UML diagrams throughout this process, such as use-case, class, activity & other diagrams.

CO5. Create The diagrams through a free tool.

CO6. Capture and manage requirements.

**Unit I**

INTRODUCTION : Object-Oriented Analysis and Design - Iterative, Evolutionary, and Agile. -

Case Studies : The NextGen POS System - INCEPTION : Inception is Not the Requirements

Phase – Evolutionary Requirements - Use Cases – Other Requirements:NextGen Example

**Unit II**

ELABORATION ITERATION 1: Basics – Domain Models – System Sequence Diagrams –

Operation Contracts – Requirements to Design-Iteratively – Logical Architecture of UML

Package Diagrams

**Unit III**

On to Object Design – UML Interaction Diagrams – UML class Diagrams - GRASP : Designing

Objects with Responsibilities – Object Design Example with GRASP:NextGen POS system –

Designing for Visibility – Mapping Designs to Code

**Unit IV**

ELABORATION ITERATION 2: UML Tools and UML as Blueprint – Quick Analysis Update:

NextGen POS – Iteration 2: More Patterns – GRASP: More Objects with Responsibilities –

applying GoF Design Patterns

4. Object Oriented Modeling and Design with UML, 2<sup>nd</sup> edition, Michael R Blaha, James R Rumbaugh.
5. Object Oriented Systems and Analysis and Design using UML, Simon Benneth, Steve McRovv and Ray Farmer.

## **ANDROID APPLICATION DEVELOPMENT**

**2:0:2**

### **Course Code:**

### **Course Outcomes**

At the end of the course students will be able to:

- CO1. Describe and compare different mobile application models/architectures and patterns.
- CO2. Apply mobile application models/architectures and patterns to the development of a mobile software application.
- CO3. Describe the components and structure of a mobile development framework (Google's Android Studio).
- CO4. Apply a mobile development framework to the development of a mobile application.
- CO5. Demonstrate advanced Java programming competency by developing a maintainable and efficient cloud based mobile application

### **Unit 1**

Introduction to Android & Open Handset Alliance

Installation of Android Studio and other Development Environments like Gradle.

Understanding Android File System.

Creating First Android Application

Understanding Intent, Activity, Service, Content Providers, Broadcast Receivers.

Understanding Android Application, Manifests, Layouts, Drawables, Styles, Android Activity, View

Understanding Android XML based layout (Linear Layout, Relative Layout, Frame Layout).

Introduction to Android Life Cycle Events

initialization and Button Click Listeners.

### **Unit 2**

Development of Simple app containing Dialog Box, Intents, Toast, Spinners, Listeners examples.

Android Listview / GridView and Adapters

Android Date Picker Dialog, Time Picker Dialog

Launching sub Activity

Building Custom ListView and Understanding Adapters in detail

Understanding SQLite database. Populating database.

Developing simple app by using SQLite database (insert, delete, update)

### **Unit 3**

Working with web server basics

Background loading, AsyncTask , Using Threads

Developing simple app by downloading image from web and showing it in ImageView

Understanding Importance of External Libraries and demonstration of simple external library

Image lazy loading, Image loading in list view, grid view

### **Unit 4**

Working with Google Maps

ViewPager

Introduction to fragment, add, remove, replace fragment

ViewPager

Side Navigation Drawer

Action bar/ Toolbar

ViewPager Adapter / Swipe View

### **References:**

**ADVANCED DATABASE MANAGEMENT SYSTEM**

**2:1:1**

**Course Code:**

**Course Outcomes**

At the end of the course students will be able to:

- CO1. Evaluate and Apply Advanced Database Development Techniques.
- CO2. Evaluate Database Systems.
- CO3. Administer Database Systems.
- CO4. Design & Implement Advanced Database Systems.

**Unit 1**

Disk storage, Basic file Structures and hashing, indexing structures for files.  
Algorithms for query optimization.

**Unit 2**

Physical database design and tuning, Introduction to transaction, Concurrency control techniques.  
Concept for object databases, Object databases standard and design, database security.

**Unit 3**

Enhanced datamodels for advanced applications, distributed databases and client server architectures, Emerging database technologies and applications.

**Unit 4**

Definition of NoSQL, History of NoSQL and Different NoSQL products, NoSQL Basics. Exploring one among MongoDB/CouchDB/Cassandra along with Java/Ruby/Python interface : Interfacing and Interacting with NoSQL, NoSQL Storage Architecture, CRUD operations, Querying, Modifying and Managing NoSQL Datastores, Indexing and ordering datasets

**References:**

1. Fundamentals of Database System :5<sup>th</sup> Edition ,Navathe

3. Database Management System, Raghu Ramakrishnan and Johannes Gehrke.
4. Data Schemes: Models and algorithms (Advances in Database Systems), Charu C Aggarwal.
5. Multilevel secure Transaction Processing (Advances in Database system), Vijay Atluri and Sushin Jajodia.

## **COMPILER DESIGN**

**3:0:1**

### **Course Code:**

### **Course Outcomes**

At the end of the course students will be able to:

- CO1. Construct a parse tree, or explain why no parse tree exists, given a BNF grammar and a string over the appropriate alphabet.
- CO2. Implement a lexical analyzer from a specification of a language's lexical rules.
- CO3. Compute the FIRST set for a BNF grammar.
- CO4. Compute the FOLLOW set for a BNF grammar.
- CO5. Determine FIRST intersect FIRST constraint satisfaction - determine if a BNF grammar satisfies the constraint on intersection of FIRST sets required for single-symbol-lookahead, top-down, lookahead parsing ()
- CO6. Determine FIRST intersect FOLLOW constraint satisfaction - determine if a BNF grammar satisfies the constraint on intersection of FIRST and FOLLOW sets required for single-symbol-lookahead, top-down, lookahead parsing ()

### **Unit-1**

Introduction, Classification of grammars. Context free grammars. Deterministic finite state automata (DFA) Non-DFA.

Lexical analysis :Language processors; The structure of a Compiler; The evolution Of programming languages; The science of building a Compiler; Applications of compiler technology; Programming language basics. Lexical analysis: The Role of Lexical Analyzer; Input Buffering; Specifications of Tokens; Recognition of Tokens.

### **Unit-2**

SyntaxAnalysis

Introduction; Context-free Grammars; Writing a Grammar. Top-down Parsing; Bottom-up Parsing.

Introduction to LR Parsing: Simple LR; More powerful LR parsers (excluding Efficient construction and compaction of parsing tables) ; Using ambiguous grammars; Parser Generators.

### **Unit-3**

Intermediate Code Generation

Variants of syntax trees; Three-address code; Translation of expressions; Control flow; Back patching; Switch-statements; Procedure calls.

Run-Time Environments

Storage Organization; Stack allocation of space; Access to non-local data on the stack; Heap management; Introduction to garbage collection.

### **Unit-4**

Code Generation

Issues in the design of Code Generator; The Target Language; Addresses in the target code; Basic blocks and Flow graphs; Optimization of basic blocks; A Simple Code Generator  
Code optimization. Folding, redundant sub-expression evaluation. Optimization within iterative loops.

**OPEN ELECTIVES**

**2:0:2**

**OP1: COMPUTER FUNDAMENTALS**

**Course Code:**

**Course Outcomes:**

At the end of the course students will be able to:

- CO1. Use technology ethically, safely, securely, and legally.
- CO2. Identify and analyze computer hardware, software, and network components.
- CO3. Design basic business web pages using current HTML/CSS coding standards.
- CO4. Install, configure, and remove software and hardware.
- CO5. Use systems development, word-processing, spreadsheet, and presentation software to solve basic information systems problems.

**UNIT 1**

**INTRODUCTION**

Computer, Characteristic of Computer, History of Computer, Components of Computer  
Key Factors of Computers: Hardware, Software - types of Software (Application and system), forms of software (firmware, shareware, freeware), Translator - Assembler, Compiler and Interpreters. Computer Application – Business, Scientific, Entertainment and educational.

**CLASSIFICATION OF COMPUTERS**

Mode of operations – Analog, Digital and hybrid Computers  
Size and capabilities – Micro, Mini, Main frame and Super computer

**UNIT 2**

**MEMORY UNITS**

Primary memory - RAM, ROM, PROM, EPROM, EEPROM, Flash memory  
Secondary memory – Magnetic disk (Hard disk, Zip disk, Jaz disk, Super disk)  
Optical disk (CD, CD – R, CD – RW, DVD), Magneto-optical disk device

**COMPUTER PERIPHERALS DEVICES AND INTERFACES**

Input devices – Working principle of Keyboard and mouse, Functional capabilities of Scanner, Digital Camera, OMR, OCR, touch pad, touch screen. Output Devices – Monitor, Printer, Plotter and projector.

Processors, Classification of Processors on speed, Motherboard, Power Supply, I/O Ports and its Maintenance

### **PROGRAMMING LANGUAGES**

Machine, Assembly language and High Level Language

### **UNIT 3**

Introduction to Windows, Elements of Word Processing, Spread Sheet, Presentations .

Nudi/Baraha.

### **UNIT 4: INTERNET**

Basics of Internet: www, HTTP, DNS, IP address, Email, Web browsers, Search Engines

HTML: Introduction to HTML, CSS

E-Commerce: Introduction, Types, Advantages of e-commerce, Applications, survey on popular e-commerce sites

E-governance, Introduction to Cyber Ethics

## Preamble

The subject wise expert committee to draft model curriculum contents in Mathematics constituted by the Department of Higher Education, Government of Karnataka, Bangalore vide GO No. ED 260 UNE 2019 (PART-1) DATED 13.08.2021 is pleased to submit its partial report on the syllabus for the First Year (First & Second Semesters) B.Sc.(Basic/Honors) Mathematics and detailed Course Structure for B.Sc.(Honors) Mathematics and M.Sc. (One Year) Mathematics.

The committee discussed various models suggested by the Karnataka State Higher Education Council in its joint meetings with the Chairpersons of Board of Studies of all state universities in Karnataka and resolved to adopt Model IIA *Bachelor of Science (Basic)* for the subjects with practical's with Mathematics as Major/Minor.

To achieve the core objectives of the National Education Policy 2020 it is unanimously resolved to introduce computer based practical's for the Discipline Core (DSC) courses by using Free and Open Source Software's (FOSS) tools for implementation of theory based on DSC courses as it is also suggested by the LOCF committee that the papers may be taught using various Computer Algebra System (CAS) software's such as Mathematica, MATLAB, Maxima and R to strengthen the conceptual understanding and widen up the horizon of students' self-experience. In view of these observations the subject expert committee suggested the software's Python /R / wxMaxima/Scilab/Maple/MatLab/Mathematica for hands on experience of implementation of mathematical concepts in computer based lab.

The expert committee suggests the implementation this curriculum structure in all the Departments of Mathematics in Universities/Colleges in Karnataka.

The subject expert committee designed the Course Learning Outcome (CO) to help the learners to understand the main objectives of studying the courses by keeping in mind of the Programme outcomes (PO) of the graduate degree with honors in Mathematics or a graduate degree with Mathematics as a major subject.

As the Mathematics subject is a vast with several branches of specializations, it is difficult for every student to learn each branch of Mathematics, even though each paper has its own importance. Hence the subject expert committee suggests number of elective papers (for both Discipline electives and Open Electives) along with Discipline Core Courses. The BoS in Mathematics of universities may include additional electives based on the expertise of their staff and needs of the students'. A student can select elective paper as per her/his needs and interest.

The subject expert committee in Mathematics suggests that the concerned Department / Autonomous Colleges/Universities to encourage their faculty members to include necessary topics in addition to courses suggested by the expert committee.

**Name of the Degree Program** : B.Sc. Discipline  
**Course** : Mathematics  
**Year of Implementation** : 2021-22

**Programme Outcomes (PO): By the end of the program the students will be able to:**

PO 1	<b>Disciplinary Knowledge:</b> Bachelor degree in Mathematics is the culmination of in-depth knowledge of Algebra, Calculus, Geometry, differential equations and several other branches of pure and applied Mathematics. This also leads to study the related areas such as computer science and other allied subjects
PO 2	<b>Communication Skills:</b> Ability to communicate various mathematical concepts effectively using examples and their geometrical visualization. The skills and knowledge gained in this program will lead to the proficiency in analytical reasoning which can be used for modeling and solving of real life problems.
PO 3	<b>Critical Thinking and Analytical Reasoning:</b> The students undergoing this programme acquire ability of critical thinking and logical reasoning and capability of recognizing and distinguishing the various aspects of real life problems.
PO 4	<b>Problem Solving:</b> The Mathematical knowledge gained by the students through this programme develop an ability to analyze the problems, identify and define appropriate computing requirements for its solutions. This programme enhances students overall development and also equip them with mathematical modeling ability, problem solving skills.
PO 5	<b>Research Related Skills:</b> The completing this programme develop the capability of inquiring about appropriate questions relating to the Mathematical concepts in different areas of Mathematics.
PO 6	<b>Information/Digital Literacy:</b> The completion of this programme will Enable the learner to use appropriate software's to solve system of algebraic equation and differential equations.
PO 7	<b>Self – Directed Learning:</b> The student completing this program will develop ability of working independently and to make an in-depth study of various notions of Mathematics.
PO 8	<b>Moral and Ethical Awareness/Reasoning:</b> : The student completing this program will develop an ability to identify unethical behavior such as fabrication, falsification or misinterpretation of data and adopting objectives, unbiased and truthful actions in all aspects of life in general and Mathematical studies in particular.
PO 9	<b>Lifelong Learning:</b> This programme provides self directed learning and lifelong learning skills. This programme helps the learner to think independently and develop algorithms and computational skills for solving real word problems.
PO 10	Ability to peruse advanced studies and research in pure and applied Mathematical sciences.

## **PROGRAMME SPECIFIC OUTCOME:**

### **Bachelor of Science in**

#### **(i) Physics and Mathematics**

#### **(ii) Mathematics and Computer Science**

**After completing the graduation in the above discipline, they are able to:**

**PSO1:** Find carrier opportunities in organization, industries/civil service exam/teaching where a high level competence in mathematics and physics is demanded

**PSO2:** Develop proficiency in the analysis of complex physical problems and the use mathematical or other appropriate technique to solve them

**PSO3:** Apply for research in Mathematics or in Physics

**PSO4:** Apply for research in Mathematics or Computer Science

**PSO5:** Find jobs at all levels in corporate field

**PSO6:** Demonstrate skills in the use of computers for control, data acquisition and data analysis in experimental investigation.

## Assessment

### Weight age for the Assessments (in percentage)

Type of Course	Formative Assessment/ Internal Assessment	Summative Assessment (S.A.)
Theory	40%	60%
Practical	50%	50%
Projects	--	--
Experiential Learning (Internship etc.)	--	--

## **THEORY EXAMINATION (For Discipline Specific Courses):**

### **Internal Assessment**

**(i) C1 Component:** 20 Marks. This will be based on test for 10 marks and seminar for 10 marks. This should be completed by the 8th week of the semester.

**C2 Component:** 20 Marks. This will be based on test for 10 marks and assignment for 10 marks. This should be completed by the 15th week of the semester.

**(ii) C3 Component (Main Examination of 2.30 hours duration):** 60 Marks. The pattern of the question paper will be as follows:

**There will be 04 questions. All questions must be answered. All questions carry 15 marks.**

### **Question Paper Pattern**

**Question 1.** This question covers unit I of the syllabus. There will be 5 sub- questions each carrying 5 marks. The student has to answer any three of the 5 sub-questions.

**Question 2.** This question covers unit II of the syllabus. There will be 5 sub- questions each carrying 5 marks. The student has to answer any three of the 5 sub-question

**Question 3.** This question covers unit III of the syllabus. There will be 5 sub- questions each carrying 5 marks. The student has to answer any three of the 5 sub-questions.

**Question 4.** This question covers unit IV of the syllabus. There will be 5 sub- questions each carrying 5 marks. The student has to answer any three of the 5 sub-questions.

## **PRACTICAL EXAMINATION (For Discipline Specific Courses):**

### **(i) Internal Assessment: 25 (10 +10+5)**

This will be based on C1-test (10 marks), C2-test (10 marks), Seminar/Practical record maintenance (5 marks)). This should be completed by the 15th week of the semester.

### **(ii) Main Examination (2 hours duration):25 (20 + 5)**

There will be 3 questions each carrying equal marks. The student has to answer any two of the 3 questions. Each student will be subjected to viva-voce examination, based on practical syllabus, for 5 marks.

## **THEORY EXAMINATION (For Open Elective (OE) papers):**

### **(i) Internal Assessment**

**C1 Component:** 20 Marks. This will be based on test for 10 marks and seminar for 10 marks. This should be completed by the 8th week of the semester.

**C2 Component:** 20 Marks. This will be based on test for 10 marks and assignment for 10 marks. This should be completed by the 15th week of the semester.

**(ii) C3 component (Main Examination of 2.30 hours duration):** 60 Marks. The pattern of the question paper will be as follows:

**There will be 03 questions. All questions must be answered. All questions carry 20 marks.**

**Question 1.** This question covers unit I of the syllabus. There will be 6 sub- questions each carrying 5 marks. The student has to answer any four of the 6 sub-questions.

**Question 2.** This question covers unit II of the syllabus. There will be 6 sub- questions each carrying 5 marks. The student has to answer any four of the 6 sub-questions.

**Question 3.** This question covers unit III of the syllabus. There will be 6 sub- questions each carrying 5 marks. The student has to answer any four of the 6 sub-questions.

1. Minimum marks for Securing Credits: 30% in Theory Examination and 40% overall.
2. Minimum credits for getting B.Sc. Degree: As per NEP regulations.
3. Award of certificate/diploma/degree: As per NEP regulations.

# Syllabus for B.Sc. with Mathematics as Major Subject

## SEMESTER – I

<b>Algebra - I and Calculus – I</b>	
<b>Teaching Hours: 4 Hours/Week</b>	<b>Credits: 4</b>
<b>Total Teaching Hours: 56 Hours</b>	<b>Max. Marks: 100 (S.A.-60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSA43032 / FSA43034</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn to solve system of linear equations.
- Solve the system of homogeneous and non homogeneous linear of  $m$  equations in  $n$  variables by using concept of rank of matrix.
- Students will be familiar with the techniques of integration and differentiation of function with real variables.
- Students learn to solve polynomial equations.
- Learn to apply Reduction formulae.

**Unit-I: Matrix:** Recapitulation of Symmetric and Skew Symmetric matrices, Algebra of Matrices; Row and column reduction to Echelon form. Rank of a matrix; Inverse of a matrix by elementary operations; Solution of system of linear equations; Criteria for existence of non-trivial solutions of homogeneous system of linear equations. Solution of non-homogeneous system of linear equations. Cayley- Hamilton theorem, inverse of matrices by Cayley-Hamilton theorem (Without Proof). **14 Hours**

**Unit-II: Theory of equations:** Euclid's algorithm, Polynomials with integral coefficients, Remainder theorem, Factor theorem, Fundamental theorem of algebra(statement only), Irrational and complex roots occurring in conjugate pairs, Relation between roots and coefficients of a polynomial equation, Symmetric functions, Transformation, Reciprocal equations, Descartes' rule of signs, Multiple roots, Solving cubic equations by Cardon's method, Solving quartic equations by Descarte's Method. **14 Hours**

**Unit-III: Polar Co-ordinates:** Polar coordinates, angle between the radius vector and tangent. Angle of intersection of two curves (polar forms), length of perpendicular from pole to the tangent, pedal equations. Derivative of an arc in Cartesian, parametric and polar forms, curvature of plane curve-radius of curvature formula in Cartesian, parametric and polar and pedal forms- center of curvature, circle of curvature. **14 Hours**

**Unit-IV: Successive Differentiation and Integral Calculus-I:** nth Derivative of Standard functions  $e^{as+b}$ ,  $a^s$ ,  $(ax + b)^n$ ,  $\log(ax + b)$ ,  $\sin(ax + b)$ ,  $\cos(ax + b)$ ,  $e^{as} \sin(bx + c)$ ,  $e^{as} \cos(bx + c)$ , Leibnitz theorem and its applications. Recapitulation of definite integrals and its properties. Reduction formulae for  $\int \sin^n x \, dx$ ,  $\int \cos^n x \, dx$ ,  $\int \sin^n x \cos^n x \, dx$ ,  $\int \tan^n x \, dx$ ,  $\int \cot^n x \, dx$ ,  $\int \sec^n x \, dx$ ,  $\int \operatorname{cosec}^n x \, dx$ ,  $\int x^n \sin x \, dx$ ,  $\int x^n \cos x \, dx$ ,  $\int x^n e^{as} \, dx$ ,  $\int x^n (\log x)^N \, dx$  with definite limits. **14 Hours**

**Reference Books:**

1. University Algebra - N.S. Gopala Krishnan, New Age International (P) Limited.
2. Algebra – Natarajan, Manicavasagam Pillay and Ganapathy.
3. Theory of Matrices - B S Vatsa, New Age International Publishers.
4. Matrices - A R Vasista, Krishna Prakashana Mandir.
5. Differential Calculus - Shanti Narayan, S. Chand & Company, New Delhi.
6. Applications of Calculus, Debasish Sengupta, Books and Allied (P) Ltd., 2019.
7. Calculus – Lipman Bers, Holt, Rinehart & Winston.
8. Calculus - S Narayanan & T. K. Manicavachogam Pillay, S. Viswanathan Pvt. Ltd., vol. I & II.
9. Schaum's Outline of Calculus - Frank Ayres and Elliott Mendelson, 5th ed. USA: Mc. Graw.
10. Shanthinarayan – Integral Calculus, New Delhi: S. Chand and Co. Pvt. Ltd.
11. Shanthinarayan and P K Mittal, Integral Calculus, Reprint. New Delhi: S. Chand and Co. Pvt. Ltd., 2013

<b>Algebra - I and Calculus-I Practical</b>	
<b>Practical Hours : 4 Hours/Week</b>	<b>Credits: 2</b>
<b>Total Practical Hours: 56 Hours</b>	<b>Max. Marks: 50</b> <b>(S.A.-25 + I.A.-25)</b>
<b>Course Code</b>	<b>FSA43332 / FSA43334</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn Free and Open Source Software (FOSS) tools for computer programming
- Solve problem on algebra and calculus theory studied in FSA43032/FSA43034 by using FOSS software's.
- Acquire knowledge of applications of algebra and calculus through FOSS

**Practical/Lab Work to be performed in Computer Lab (FOSS) Suggested**

**Software's: wxMaxima / Scilab / Python /R.**

**Introduction to the software and commands related to the topic.**

1. Computation of addition and subtraction of matrices,
2. Computation of Multiplication of matrices.
3. Computation of Trace and Transpose of Matrix
4. Computation of Rank of matrix and Row reduced Echelon form.
5. Computation of Inverse of a Matrix using Cayley-Hamilton theorem.
6. Solving the system of homogeneous and non-homogeneous linear algebraic equations.
7. Finding the nth Derivative of  $e^{ax}$ , trigonometric and hyperbolic functions
8. Finding the nth Derivative of algebraic and logarithmic functions.
9. Finding the nth Derivative of  $e^{ax} \sin(bx + c)$ ,  $e^{ax} \cos(bx + c)$ .
10. Finding the roots of the equation, factoring.
11. Finding the angle between the radius vector and tangent.
12. Finding the curvatures of the given curves.

**Open Elective  
(For Students of all Streams)**

<b>Mathematical Aptitude-I</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100 (S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSA840</b>

**Course Learning Outcomes:** This course will enable the students to

- have a strong base in the fundamental mathematical concepts.
- grasp the approaches and strategies to solve problems with speed and accuracy
- gain appropriate skills to succeed in preliminary selection process for recruitment

**Unit-I:** Number System, Types of Numbers, series (AP and GP), Algebraic operations BODMAS, Divisibility, LCM and HCF, Fraction, Simplification. **14 Hours**

**Unit-II:** Time and Distance, Problems based on Trains, Boats and Streams.

**14 Hours**

**Unit-III:** Time, work and wages, Pipes and Cistern, Problems on Clock, Problems on Calendar.

**14 Hours**

**Reference Books:**

1. Quantitative Aptitude for Competitive Examinations, R.S. Aggarwal, Revised Edition, S. Chand and Co. Ltd, New Delhi, 2018.
2. Quantitative Aptitude and Reasoning, R V Praveen, PHI publishers.
3. Quantitative Aptitude : Numerical Ability (Fully Solved) Objective Questions, Kiran Prakashan Pratogitaprakasan, Kic X, Kiran Prakashan publishers.
4. Quantitative Aptitude for Competitive Examination, Abhijit Guha, Tata Mc Graw hill publications.

## Open Elective

(For Students of all Streams)

<b>Business Mathematics-I</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSA850</b>

**Course Learning Outcomes:** This course will enable the students to

- Translate the real word problems through appropriate mathematical modelling.
- Explain the concepts and use equations, formulae and mathematical expression and relationship in a variety of context.
- Finding the extreme values of functions.
- Analyze and demonstrate the mathematical skill require in mathematically intensive areas in economics and business.

**Unit-I:** Algebra – Set theory and simple applications of Venn Diagram, relations, functions, indices, logarithms, permutations and combinations. Examples on commercial mathematics. **14 Hours**

**Unit - II:** Matrices: Definition of a matrix; types of matrices; algebra of matrices. Properties of determinants; calculations of values of determinants up to third order; Adjoint of a matrix, elementary row and column operations; solution of a system of linear equations having unique solution and involving not more than three variables. Examples on commercial mathematics.

**14 Hours**

**Unit - III:** Differential Calculus: Constant and variables, functions, Limits & continuity. Differentiability and Differentiation, partial differentiation, rates as a measure, maxima, minima, Partial Derivatives up to second order; Homogeneity of functions and Euler's Theorem; Total Differentials; Differentiation of implicit function with the help of total differentials, Maxima and Minima; cases of one variable involving second or higher order derivatives; Cases of two variables involving not more than one constraint.

**14 Hours**

### Reference Books:

1. Basic Mathematics, Allel R.G.A, Macmillan, New Delhi.
2. Mathematics for Economics, Dowling, E.T. , Schaum's Series, McGraw Hill London.
3. Quantitative Techniques in Management, Vohra, N.D., Tata McGraw Hill, New Delhi.
4. Business Mathematics, Soni R.S., Pitamber Publishing House, Delhi.

## Open Elective Course

(For students of Science stream who have not chosen Mathematics as one of Core subjects)

Optional Mathematics – I	
Teaching Hours : 3 Hours/Week	Credits: 3
Total Teaching Hours: 42 Hours	Max. Marks: 100 (S.A.-60 + I.A. – 40)
Course Code	FSA860

**Course Learning Outcomes:** This course will enable the students to

- Learn to solve system of linear equations.
- Solve the system of homogeneous and non homogeneous m linear equations by using the concept of rank of matrix.
- Students will be familiar with the techniques of differentiation of function with real variables.
- Identify and apply the intermediate value theorems and L'Hospital rule.
- Learn to apply Reduction formulae.

**Unit-I: Matrices:** Recapitulation of Symmetric and Skew Symmetric matrices, Algebra of Matrices; Row and column reduction, Echelon form. Rank of a matrix; Inverse of a matrix by elementary operations; Solution of system of linear equations; Criteria for existence of non-trivial solutions of homogeneous system of linear equations. Solution of non-homogeneous system of linear equations. Cayley- Hamilton theorem, inverse of matrices by Cayley-Hamilton theorem (Without Proof). **14 Hours**

**Unit-II: Theory of equations:** Euclid's algorithm, Polynomials with integral coefficients, Remainder theorem, Factor theorem, Fundamental theorem of algebra(statement only), Irrational and complex roots occurring in conjugate pairs, Relation between roots and coefficients of a polynomial equation, Symmetric functions, Transformation, Reciprocal equations, Descartes' rule of signs, Multiple roots, Solving cubic equations by Cardon's method, Solving quartic equations by Descarte's Method. **14 Hours**

**Unit-III: Polar Co-ordinates:** Polar coordinates, angle between the radius vector and tangent. Angle of intersection of two curves (polar forms), length of perpendicular from pole to the tangent, pedal equations. Derivative of an arc in Cartesian, parametric and polar forms, curvature of plane curve-radius of curvature formula in Cartesian, parametric and polar and pedal forms- centre of curvature, circle of curvature. **14 Hours**

**Reference Books:**

1. University Algebra - N.S. Gopala Krishnan, New Age International (P) Limited.
2. Algebra – Natarajan, Manicavasagam Pillay and Ganapathy.
3. Theory of Matrices - B S Vatsa, New Age International Publishers.
4. Matrices – A. R. Vasista, Krishna Prakashana Mandir.
5. Applications of Calculus, Debasish Sengupta, Books and Allied (P) Ltd., 2019.
6. Differential Calculus - Shanti Narayan, S. Chand & Company, New Delhi.
7. Calculus – Lipman Bers, Holt, Rinehart & Winston of Canada Ltd.
8. Calculus – S. Narayanan & T. K. Manicavachogam Pillay, S. Viswanathan Pvt. Ltd., vol.I & II
9. Schaum's Outline of Calculus - Frank Ayres and Elliott Mendelson, 5th ed. USA: Mc. Graw.
10. Integral Calculus, Shanthinarayan, New Delhi: S. Chand and Co. Pvt. Ltd.
11. Integral Calculus, Shanthinarayan and P K Mittal, , Reprint. New Delhi: S. Chand and Co. Pvt. Ltd., 2013.

## SEMESTER – II

<b>Algebra – II {Number Theory} and Calculus – II</b>	
<b>Teaching Hours : 4 Hours/Week</b>	<b>Credits: 4</b>
<b>Total Teaching Hours: 56 Hours</b>	<b>Max. Marks: 100 (S.A.-60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSB43032 / FSB43034</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn the concept of Divisibility.
- Learn about prime and composite numbers.
- Learn the concept of congruences and its applications.
- Identify and apply the intermediate value theorems and L'Hospital rule.
- Understand the concept of differentiation and fundamental theorems in differentiation and various rules.
- Find the extreme values of functions of two variables.
- Students learn to find areas and volumes using integration.

**Unit-I: Number Theory:** Division Algorithm, Divisibility, Prime and composite numbers, Euclidean algorithm, Fundamental theorem of Arithmetic, The greatest common divisor and least common multiple. Congruences, Linear congruences, Simultaneous congruences, Euler's Phi-function, Wilson's, Euler's and Fermat's Theorems and their applications. **14 Hours**

**Unit-II: Differential Calculus-I:** Limits, Continuity, Differentiability and properties. Properties of continuous functions. Intermediate value theorem, Rolle's Theorem, Lagrange's Mean Value theorem, Cauchy's Mean value theorem and examples. Taylor's theorem, Maclaurin's series, Indeterminate forms and evaluation of limits using L'Hospital rule. **14 Hours**

**Unit-III: Partial Derivatives:** Functions of two or more variables-explicit and implicit functions, partial derivatives. Homogeneous functions- Euler's theorem and extension of Euler's theorem, total derivatives, differentiation of implicit and composite functions, Jacobians and standard properties and illustrative examples. Taylor's and Maclaurin's series for functions of two variables, Maxima-Minima of functions of two variables. **14 Hours**

**Unit-IV: Integral Calculus-II:** Line integral: Definition of line integral and basic properties, examples on evaluation of line integrals. Double integrals: Definition of Double integrals and its conversion to iterated integrals. Evaluation of double integrals by changing the order of integration and change of variables. Computation of plane surface areas using double integrals. Triple integrals: Definition of triple integrals and evaluation- change of variables, volume as triple integral.

**14 Hours**

**Reference Books:**

1. Differential Calculus, Shantinarayan, S. Chand & Company, New Delhi.
2. Applications of Calculus, Debasish Sengupta, Books and Allied (P) Ltd., 2019.
3. Calculus – Lipman Bers, Holt, Rinehart & Winston.
4. Calculus - Shanthinarayanan & T. K. Manicavachogam Pillay, S. Viswanathan Pvt. Ltd., vol. I & II.
5. Schaum's Outline of Calculus - Frank Ayres and Elliott Mendelson, 5th ed. USA:Mc. Graw Hill, 2008.
6. Integral Calculus, Shanthinarayan, New Delhi: S. Chand and Co. Pvt. Ltd.
7. Integral Calculus, Shantinarayan and P K Mittal, S. Chand and Co. Pvt. Ltd.
8. Text Book of B.Sc. Mathematics, G K Ranganath, S Chand & Company.
9. Elementary Number Theory, David M Burton, , 6th edition, McCraw Hill, 2007.
10. Topics from the Theory of Numbers , Emil Grosswald, , Modern Birhauser, 1984.
11. An Introduction to the Theory of Numbers, Ivan Niven, Herbert S. Zuckerman and Hugh L. Montgomery, John Willey (New York), 1991

<b>Algebra – II (Number Theory) and Calculus – II practical</b>	
<b>Practical Hours : 4 Hours/Week</b>	<b>Credits: 2</b>
<b>Total Practical Hours: 56 Hours</b>	<b>Max. Marks: 50 (S.A.-25 + I.A. –25)</b>
<b>Course Code</b>	<b>FSB43332 / FSB43334</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn Free and Open Source Software (FOSS) tools for computer programming
- Solve problem on algebra and calculus by using FOSS software's.
- Acquire knowledge of applications of algebra and calculus through FOSS

**Practical/Lab Work to be performed in Computer Lab**

**Suggested Software's: wxMaxima / Scilab / Python / R.**

1. Programs related to Number Theory.
2. Program to verify Mean value theorems.
3. Program for finding the Taylor's and Maclaurin's expansions of the given functions.
4. Program to verify the Euler's theorem and its extension.
5. Programs to construct series using Maclaurin's expansion for functions of two variables.
6. Program to evaluate the line integrals with constant and variable limits.
7. Program to evaluate the Double integrals with constant and variable limits.
8. Program to evaluate the Triple integrals with constant and variable limits.

**Open Elective  
(For Students of all Streams)**

<b>Mathematical Aptitude-II</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100 (S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSB840</b>

**Course Learning Outcomes:** This course will enable the students to

- have a strong base in the fundamental mathematical concepts.
- grasp the approaches and strategies to solve problems with speed and accuracy
- gain appropriate skills to succeed in preliminary selection process for recruitment

**Unit-I:** Percentage, Average, Problems based on Ages, Ratio and Proportion, Partnership and share, Mixtures. **14 Hours**

**Unit-II:** Profit, Loss and Discount, Simple Interest, Compound Interest, Shares and Debentures. **14 Hours**

**Unit-III:** Permutations and Combinations, Probability, True discount and Banker's discount. **14 Hours**

**Reference Books:**

1. Quantitative Aptitude for Competitive Examinations, R.S. Aggarwal, Revised Edition, S. Chand and Co. Ltd, New Delhi, 2018.
2. Quantitative Aptitude and Reasoning, R V Praveen, PHI publishers.
3. Quantitative Aptitude : Numerical Ability (Fully Solved) Objective Questions, Kiran Prakashan, Pratogitaprakasan, Kic X, Kiran Prakashan publishers.
4. Quantitative Aptitude for Competitive Examination, Abhijit Guha, Tata Mc Graw hill publications.

**Open Elective**  
**(For Students of all streams)**

<b>Business Mathematics-II</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSB850</b>

**Course Learning Outcomes:** This course will enable the students to

- Integrate concept in international business concept with functioning of global trade.
- Evaluate the legal, social and economic environment of business.
- Apply decision-support tools to business decision making.
- Will be able to apply knowledge of business concepts and functions in an integrated manner.

**Unit - I:** Commercial Arithmetic: Interest: Concept of Present value and Future value, Simple interest, Compound interest, Nominal and Effective rate of interest, Examples and Problems  
Annuity: Ordinary Annuity, Sinking Fund, Annuity due, Present Value and Future Value of Annuity, Equated Monthly Instalments (EMI) by Interest of Reducing Balance and Flat Interest methods, Examples and Problems. **14 Hours**

**Unit - II:** Measures of central Tendency and Dispersion: Frequency distribution: Raw data, attributes and variables, Classification of data, frequency distribution, cumulative frequency distribution, Histogram and give curves. Requisites of ideal measures of central tendency, Arithmetic Mean, Median and Mode for ungrouped and grouped data. Combined mean, Merits and demerits of measures of central tendency, Geometric mean: definition, merits and demerits, Harmonic mean: definition, merits and demerits, Choice of A.M., G.M.and H.M. Concept of dispersion, Measures of dispersion: Range, Variance, Standard deviation (SD) for grouped and ungrouped data, combined SD, Measures of relative dispersion: Coefficient of range, coefficient of variation. Examples and problems. **14 Hours**

**Unit - III:** Correlation and regression: Concept and types of correlation, Scatter diagram, Interpretation with respect to magnitude and direction of relationship. Karl Pearson's coefficient of correlation for ungrouped data. Spearman's rank correlation coefficient. (with tie and without tie) Concept of regression, Lines of regression for ungrouped data, predictions using lines of regression. Regression coefficients and their properties (without proof). Examples and problems.

**14 Hours**

**Reference Books:**

9. Statistical Methods, Gupta S. P.: Sultan Chand and Sons, New Delhi.
10. Applied Statistics, Mukhopadhyaya Parimal New Central Book Agency Pvt. Ltd. Calcutta.
11. Fundamentals of Statistics, Goon A. M., Gupta, M. K. and Dasgupta, B. World Press Calcutta.
12. Fundamentals of Applied Statistics, Gupta S. C. and Kapoor V. K., Sultan Chand and Sons, New Delhi.

## Open Elective

<b>Optional Mathematics – II</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits:3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSB860</b>

**(For students of Science stream who have not chosen Mathematics as one of the Core subjects)**

**Course Learning Outcomes:** This course will enable the students to

- Learn the concept of Divisibility.
- Learn about prime and composite numbers.
- Learn the concept of congruence's and its applications.
- Understand the concept of differentiation and fundamental theorems in differentiation and various rules.
- Find the extreme values of functions of two variables.
- To understand the concepts of multiple integrals and their applications.

**Unit-I: Number Theory:** Division Algorithm, Divisibility, Prime and composite numbers, Euclidean algorithm, Fundamental theorem of Arithmetic, The greatest common divisor and least common multiple. Congruences, Linear congruences, Simultaneous congruences, Euler's Phi-function, Wilson's, Euler's and Fermat's Theorems and their applications.

**14 Hours**

**Unit-II: Partial Derivatives:** Functions of two or more variables-explicit and implicit functions, partial derivatives. Homogeneous functions- Euler's theorem and extension of Euler's theorem, total derivatives, differentiation of implicit and composite functions, Jacobians and standard properties and illustrative examples. Taylor's and Maclaurin's series for functions of two variables, Maxima-Minima of functions of two variables.

**14 Hours**

**Unit-III: Integral Calculus:** Line integral: Definition of line integral and basic properties, examples on evaluation of line integrals. Double integral: Definition of Double integrals and its conversion to iterated integrals. Evaluation of double integrals by changing the order of integration and change of variables. Computation of plane surface areas, Triple integral: Definition of triple integrals and evaluation-change of variables, volume as triple integral. **14 Hours**

**Reference Books:**

1. Differential Calculus, Shanti Narayan, S. Chand & Company, New Delhi.
2. Applications of Calculus, Debasish Sengupta, Books and Allied (P) Ltd., 2019.
3. Calculus – Lipman Bers, Holt, Rinehart & Winston.
4. Calculus - Shanthinarayanan & T. K. Manicavachogam Pillay, S. Viswanathan Pvt. Ltd., vol. I & II.
5. Schaum's Outline of Calculus - Frank Ayres and Elliott Mendelson, 5th ed. USA:Mc. Graw Hill, 2008.
6. Integral Calculus, Shanthinarayan, S. Chand and Co. Pvt. Ltd.
7. Integral Calculus, Shanthinarayan and P K Mittal, S. Chand and Co. Pvt. Ltd.
8. Text Book of B.Sc. Mathematics, G K Ranganath, S Chand & Company.
9. David M Burton, Elementary Number Theory, 6th edition, McCraw Hill, 2007.
10. Emil Grosswald, Topics from the Theory of Numbers, Modern Birhauser, 1984.
11. An Introduction to the Theory of Numbers, Ivan Niven, Herbert S. Zuckerman and Hugh L. Montgomery, John Willey (New York), 1991.

## SEMESTER – III

<b>Algebra - III and Differential Equations – I</b>	
<b>Teaching Hours : 4 Hours/Week</b>	<b>Credits: 4</b>
<b>Total Teaching Hours: 56 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.-60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSC43032 / FSC43034</b>

**Course Learning Outcomes:** This course will enable the students to

- enhance learning in Algebra and Differential Equations.
- apply the concepts of algebra in practical problems.
- solve various differential equations of practical interest.

### **UNIT I: Group Theory – I**

Definition and examples of groups – Some general properties of Groups, Subgroups, Group of permutations – Cyclic permutations – Even and odd permutations. Order of an element of a group – Cyclic groups problems and theorems. **14 Hours**

### **UNIT II: Group Theory – II**

Cosets, Index of a group, Lagrange's theorem, consequences, Normal Subgroups, Quotient groups – Homomorphism. – Kernel of homomorphism – Isomorphism – Automorphism – Fundamental theorem of homomorphism, Cayley's theorem. **14 Hours**

### **UNIT III: Differential Equations – I**

Recapitulation of Definition, examples of differential equations, Formation of differential equations by elimination of arbitrary constants, Differential equations of first order – Separation of variables, Reducible to separation of variables, Homogeneous differential equations, Reducible to homogeneous, Exact differential equations, Reducible to exact, Integrating factors found by inspection and the determination of integrating factors, Linear differential equations, Bernoulli's differential equations. **14 Hours**

## UNIT IV: Differential Equations – II

Equations of First order and higher degree – Solvable for  $p$ , Solvable for  $x$ , Solvable  $y$ , Clairaut's equations – Singular and General solutions. Ordinary Linear differential equations with constant coefficients – Complementary function – particular integral – Inverse differential operators. Simultaneous differential equations (two variables with constant coefficients)

**14 Hours**

### Books for References:

4. Contemporary Abstract Algebra, Joseph Gallian, Narosa Publishing House, New Delhi,  
Fourth Edition.
5. A brief Survey of Modern Algebra, G. D. Birkhoff and S Maclane.
6. A first course in Abstract Algebra, J B Fraleigh.
7. Algebra, Michael Artin, 2nd ed. New Delhi, India: PHI Learning Pvt. Ltd., 2011.
8. A First Course in Modern Algebra, Vashista, 11th ed.: Krishna Prakasan Mandir, 1980.
9. A Textbook of Modern Algebra, R Balakrishan and N.Ramabadran, 1st ed. New Delhi,  
India: Vikas publishing house pvt. Ltd., 1991.
10. Advanced Differential Equations, M D Raisinghania, S Chand and Co. Pvt. Ltd., 2013.
11. Schaum's outline of theory and problems of Differential Equations, F Ayres, 1st ed. USA  
McGraw-Hill, 2010.
12. Differential Equations, S Narayanan and T K Manicavachogam Pillay, S V Publishers  
Private Ltd., 1981.
13. Advanced Engineering Mathematics, E Kreyszig, Wiley India Pvt. Ltd.
14. Differential equation with Applications and historical notes, G F Simmons, 2nd ed.:  
McGraw- Hill Publishing Company, Oct 1991.

<b>Algebra - III and Differential Equations – I Practical</b>	
<b>Practical Hours : 4 Hours/Week</b>	<b>Credits: 2</b>
<b>Total Practical Hours: 56 Hours</b>	<b>Max. Marks: 50 (S.A.-25 + I.A. – 25)</b>
<b>Course Code</b>	<b>FSC43332 / FSC43334</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn Free and Open Source Software (FOSS) tools for computer programming
- Solve problem on algebra and differential equations studied in FSC43032/FSC43034 by using FOSS software's.
- Acquire knowledge of applications of algebra and differential equations through FOSS

**Practical/Lab Work to be performed in Computer Lab (FOSS) Suggested Software's:**  
**wxMaxima/Scilab /Python/R.**

**Introduction to the software and commands related to the topic.**

1. Generate Cayley's table.
2. Verifying whether given operator is binary or not.
3. Finding identity and inverse elements of a group.
4. Finding left and right cosets of a group.
5. Solving Differential equation using Maxima and plotting the solution.

**Open Elective  
(For Students of all Streams)**

<b>Mathematical Aptitude-III</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100 (S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSC840</b>

**Course Learning Outcomes:** This course will enable the students to

- have a strong base in the fundamental mathematical concepts.
- grasp the approaches and strategies to solve problems with speed and accuracy
- gain appropriate skills to succeed in preliminary selection process for recruitment

**Unit I:** Algebraic Expressions, Polynomials, Fundamental operations on Algebraic expressions, Factorisation, Linear equations and problems based on Ages, Quadratic equations. **14 Hours**

**Unit II:** Mensuration, Area, Volume and Surface area (Cylinder, Cone, Sphere). **14 Hours**

**Unit III:** Verbal Reasoning Direction Test, Relation Test, Venn Diagram Analysis Test, Seating puzzles. **14 Hours**

**Reference Books:**

1. R.S. Aggarwal, “Quantitative Aptitude for Competitive Examinations”, Revised Edition, S. Chand and Co. Ltd, New Delhi, 2018.
2. Quantitative Aptitude and Reasoning by R V Praveen, PHI publishers.
3. Quantitative Aptitude : Numerical Ability (Fully Solved) Objective Questions, Kiran Prakashan, Pratogita prakasan, Kic X, Kiran Prakasan publishers.
4. Quantitative Aptitude for Competitive Examination by Abhijit Guha, Tata Mc Graw hill Publications

**Open Elective Course  
(For Students of all Streams)**

<b>Discrete Mathematics</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100 (S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSC850</b>

**Course Learning Outcomes:** This course will enable the students to

- know the concept of set theory.
- know graph theory which helps in decision making in various capacities in organization.
- Enhance the knowledge towards Electronics and computer science.

**Unit I: Basics of Set Theory**

Sets-Subsets – Notation -Inclusion and Equality of sets-The power set, Operation on sets - Venn diagram - Set identities - Ordered pairs and Cartesian products.

Relations and ordering – Properties of binary relation in a set, Relation matrix and Graph of a relation - Equivalence relations - Compatibility relations - composition of Binary relation.

**14 Hours**

**Unit II: Graph Theory**

Basic definitions - Paths and Connectedness - Matrix representation of Graphs - Trees.

**14 Hours**

**Unit III: Mathematical Logic**

Statements and Notation – Connectives – Negation – Conjunction – Disjunction - Statement formulas and Truth tables - Conditional and Bi-conditional – Tautologies - Equivalence of formulas –Tautological Implications.

**14 Hours**

**References:**

- 1) Discrete Mathematical Structures with Application to computer science, J. P. Tremblay, R. Manohar 3rd Edition – Tata McGraw Hill.
- 2) Discrete Mathematical Structures, B. Kolman, R. C. Busby and S. Rose, 3rd edition.

- 4) Discrete Mathematics, S. A. Witala, McGraw Hill, 1987.

## SEMESTER – IV

<b>Real Analysis – I and Differential Equations – II</b>	
<b>Teaching Hours : 4 Hours/Week</b>	<b>Credits: 4</b>
<b>Total Teaching Hours: 56 Hours</b>	<b>Max. Marks: 100 (S.A.-60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSD43032 / FSD43034</b>

**Course Learning Outcomes:** This course will enable the students to

- enhance learning in Analysis and Differential Equations.
- apply the concepts of analysis in practical problems.
- solve various differential equations of practical interest.

### UNIT I: Sequences

Sequence of real numbers – Bounded and unbounded sequences – Infimum and supremum of a sequence – Limit of a sequence – Sum, product and quotient of limits – Standard theorems on limits – Convergent, divergent and oscillatory sequences – Discuss the convergence of  $\{x^n\}, \{n^{1/n}\}$  or  $\{\sqrt[n]{n}\}, \left\{1 + \frac{1}{n}\right\}^n$  and standard problems – Monotonic sequences and their properties – Cauchy's general principle of convergence. **14 Hours**

### UNIT II: Infinite Series

Infinite series of real numbers – Convergence and Divergence - Oscillation of series – Properties of convergence – Series of positive terms – Geometric series – p – series – Comparison tests – D'Alembert's ratio test – Raabe's test – Cauchy's root test – Leibnitz's test for alternating series. **14 Hours**

### UNIT III: Linear differential equations

Cauchy – Euler differential equations, Solution of ordinary second order linear differential equations with variable coefficients by various methods such as:

- (i) When a part of complementary function is given.
- (ii) Changing the independent variable.
- (iii) Changing the dependent variable.
- (iv) By method of variation of parameters.
- (v) Exact method.

Total differential equations - Necessary and sufficient condition for the equation  $Pdx + Qdy + Rdz = 0$  to be exact (proof only for the necessary part) – Simultaneous equations of the form  $dx/P=dy/Q=dz/R$ . **14 Hours**

#### **UNIT IV: Partial differential equations**

Basic concepts – Formation of a partial differential equations by elimination of arbitrary constants and functions – Solution of partial differential equations – Solution by Direct integration, Lagrange's linear equations of the form  $Pp + Qq = R$ , Standard types of first order non-linear partial differential equations – Charpit's method – Homogenous linear equations with constant coefficient – Rules for finding the complementary function – Rules for finding the particular integral, Method of separation of variables (product method).

**14 Hours**

#### **Books for References:**

1. An introduction to Partial Differential Equations, G. Stephenson
2. Higher Engineering Mathematics B. S. Grewal
3. Advanced Engineering Mathematics, E Kreyszig- Wiley India Pvt. Ltd.
4. A Short Course in Differential Equations, E D Reinvile and P E Bedient –
5. Introductory Course in Differential Equations, D A Murray
6. Differential Equations, G P Simmons
7. Differential Equations (Schaum Series), F. Ayres
8. Application of Differential Equations, Martin Brown
9. Advanced Differential Equations, M D Raisinghanian, S Chand and Co. Pvt. Ltd., 2013.
10. Real Analysis, S C Malik, New Age International Private Limited
11. Text book of mathematical analysis, Leadership project, Bombay university
12. Real analysis, N P Bali, New Age International Private Limited
13. Methods of Real Analysis, Richard R Goldberg, Indian ed.

<b>Number Theory and Calculus – II Practical</b>	
<b>Practical Hours : 4 Hours/Week</b>	<b>Credits: 2</b>
<b>Total Practical Hours: 56 Hours</b>	<b>Max. Marks: 50 (S.A.-25 + I.A. – 25)</b>
<b>Course Code</b>	<b>FSD43332 / FSD43334</b>

**Course Learning Outcomes:** This course will enable the students to

- Learn Free and Open Source Software (FOSS) tools for computer programming
- Solve problem on real analysis and differential equations by using FOSS software's.
- Acquire knowledge of applications of real analysis and differential equations through FOSS

**Practical/Lab Work to be performed in Computer Lab Suggested Software's:**  
**wxMaxima/Scilab//Python/R.**

1. Test for convergence, divergence and oscillation sequences.
2. Test for convergence, divergence and oscillation series.
3. Test the convergence of the series using D'Alembert's ratio test and Raabe's test.
4. Programs on Linear differential equations with variable coefficients.
5. Programs on Partial differential equations.

**Open Elective**  
**(For Students of all Streams)**

<b>Mathematical Aptitude – IV</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSD840</b>

**Course Learning Outcomes:** This course will enable the students to

- have a strong base in the fundamental mathematical concepts.
- grasp the approaches and strategies to solve problems with speed and accuracy
- gain appropriate skills to succeed in preliminary selection process for recruitment

**Unit I:** Data interpretation, Data sufficiency. **14 Hours**

**Unit II:** Surds & Indices, Logarithm and its properties. **14 Hours**

**Unit III:** Non-verbal Reasoning Series Test, Analogy, Classification, Cube and Dice, Analytical Reasoning. **14 Hours**

**Reference Books:**

1. R.S. Aggarwal, “Quantitative Aptitude for Competitive Examinations”, Revised Edition, S. Chand and Co. Ltd, New Delhi, 2018.

4. Quantitative Aptitude for Competitive Examination by Abhijit Guha, Tata Mc Graw hill publications.

## Open Elective

(For Students of all Streams)

<b>Basics of Number Theory</b>	
<b>Teaching Hours : 3 Hours/Week</b>	<b>Credits: 3</b>
<b>Total Teaching Hours: 42 Hours</b>	<b>Max. Marks: 100</b> <b>(S.A.- 60 + I.A. – 40)</b>
<b>Course Code</b>	<b>FSD850</b>

**Course Learning Outcomes:** This course will enable the students to

- Know the expansion of sum of two numbers with positive integral powers.
- General method of proving the statement.
- Learn the concept of Divisibility.
- Learn about prime and composite numbers.
- Learn the concept of congruences and its applications.

### Unit I:

Binomial Theorem, Mathematical Induction.

**14 Hours**

### Unit II: Number System

Test for Divisibility, Number of divisors and Sum of divisors of a number, Greatest Common Divisor (GCD), Least Common Multiplie (LCM), Relation between GCD and LCM, Representation of a GCD as a linear combination of given two numbers.

**14 Hours**

### Unit III: Congruence

Basic properties of congruence, Binary and Decimal representations of integers, Linear Congruences and the Chinese Remainder Theorem.

**14 Hours**

### References:

1. An Introduction to the Theory of Numbers, Ivan Niven, Herbert S. Zuckerman, Hugh L. Montgomery.
2. Elementary Number Theory, David M. Burton, McGraw Hill

## SEMESTER V

**Course code: DME27001/DME27002/DME27003/DME27004**

**Credits: L:T:P=4:0:0**

**Teaching hours:4 hrs per week**

### **DSE I : Linear Algebra**

#### **Course outcome:**

After successful completion of the course, the student is able to

CO1. Understand the concept of vector space.

CO2. Understand Euclidian geometry with the help of real inner products.

CO3. Understand the orthogonal projection.

CO4. Distinguish between linear and non- linear transformations.

CO5.Understand the importance of Matrices in the study of linear transformations.

**Unit I:** Vector spaces, subspaces, algebra of subspaces, quotient spaces, linear combination of vectors, linear span, linear independence, basis and dimension, dimension of subspaces, Direct sum of two subspaces.

**Unit II:** Inner Product, Inner Product of any two vectors in  $V(\mathbb{R})$ , Euclidean Vectorspace, Orthogonal Vectors, Ortho normal Basis, Orthogonal Projection, Orthogonal Compliment.

**Unit III:** Linear transformations, algebra of linear transformations , matrix representation of a linear transformation, null space, range, rank and nullity of a linear transformation,

**Unit IV:** Eigen values and Eigen vectors, Characteristic Polynomial. Isomorphism, Auto morphism, theorems, invertibility of non singular linear transformation, change of coordinate matrix.

#### References:

7. S.C Mallik –Real Analysis.
8. B.S Grewal – Higher engineering mathematics.

## Practical components –V

Course code: DME27101/DME27102/DME27103/DME27104

Credits: L:T:P=0:0:2

Time : 4 Hour per week

1. Vector space, subspace – illustrative examples.
2. Expressing a vector as a linear combination of given set of vectors.
3. Examples on linear dependence and independence of vectors.
4. Basis and Dimension – illustrative examples.
5. Verifying whether a given transformation is linear.
6. Finding matrix of a linear transformation.
7. Problems on rank and nullity.
8. Find characteristics polynomials.
9. To find Eigen values and their multiplicity.
10. Calculation of Eigen vector.
11. Change of basis.
12. Linear transformations to matrices and vice versa.
13. Matrix with respect to change of basis.
14. Orthogonal and orthonormal sets.
15. Gram- Schmidt orthogonalisation of the columns.

## SEMESTER V

**Course code: DME27201/DME27202/DME27203/DME27204**

**Credits: L: T: P = 4:0:0**

**Teaching hours: 4 hours per week**

### **DSE II: Matrices**

#### **Course outcome:**

After successful completion of the course, the student is able to

CO1. Understand the concept of matrices.

CO2. Understand Euclidian geometry with the help of real inner products.

CO3. Understand the rank of matrices

CO4. Distinguish between linear and non- linear transformations.

CO5. Understand the importance of Matrices in the study of linear transformations.

**Unit I:** Types of matrices. Rank of a matrix. Invariance of rank under elementary transformations.

Reduction to normal form, Solutions of linear homogeneous and non-homogeneous equations with number of equations and unknowns upto four.

**Unit II:** Matrices in diagonal form. Reduction to diagonal form upto matrices of order 3.

Computation of matrix inverses using elementary row operations. Rank of matrix. Solutions of a system of linear equations using matrices. Illustrative examples of above concepts from Geometry, Physics, Chemistry, Combinatorics and Statistics.

**Unit III:**  $R_1$ ,  $R_2$ ,  $R_3$  as vector spaces over  $R$ . Standard basis for each of them. Concept of Linear Independence and examples of different bases. Subspaces of  $R_2$ ,  $R_3$ .

**Unit IV:** Translation, Dilation, Rotation, Reflection in a point, line and plane. Matrix form of basic geometric transformations. Interpretation of eigen values and eigen vectors for such transformations and eigen spaces as invariant subspaces.

4. E. Kreyszig – Advanced Engineering Mathematics, Wiley India Pvt. Ltd

## **PRACTICAL COMPONENTS-V**

**Course code: DME27301/DME27302/DME27303/DME27304**

**Credits: L:T:P = 0:0:2**

1. Introduction to matrices and commands connected to the matrices.
2. Addition and subtraction of matrices.
3. Multiplication and transpose of matrices.
4. Power of a matrix.
5. Row reduced echelon form.
6. Rank of a matrix.
7. Adjoint of a matrix.
8. Inverse of a non-singular matrix.
9. Systems of linear equations.

## SEMESTER VI

**Course code: DMF27001/DMF27002/DMF27003/DMF27004**

**Credits: L: T: P = 4:0:0**

**Teaching hours: 4 hours per week**

### **DSE II: Complex Analysis**

#### **Course outcome:**

After successful completion of the course, the student is able to

CO1. Understand the importance of complex numbers and their geometrical representation.

CO2. Find the equations of geometrical figures in complex form.

CO3. Distinguish between differentiability and analyticity of a function.

CO4. Study the properties of various transformations.

CO5. Understand the importance of conformal mappings.

**Unit I:** Complex numbers, Polar and exponential form of complex numbers, Triangular inequality, Geometry of complex numbers, Equations of lines and circles in complex form, Functions of complex variables, Limits, Limits involving the point at infinity, continuity. Properties of complex numbers, regions in the complex plane, Derivatives, differentiation formulas, Cauchy-Riemann equations, sufficient conditions for differentiability.

**Unit II:** Analytic functions, examples of analytic functions, exponential function, Logarithmic function, trigonometric function, Harmonic functions, Construction of Analytic functions.

**Unit III:** Definite integrals of functions. Contours, Contour integrals and its examples, upper bounds for moduli of contour integrals. Cauchy-Goursat theorem, Cauchy integral formula, Cauchy's inequality, Liouville's theorem and the fundamental theorem of algebra. Convergence of sequences and series.

**Unit IV:** Linear and Bilinear Transformations, Cross ratio of four points, Conformal mapping, Transformations of the form  $z^2$ ,  $\frac{1}{z}$ ,  $\sin z$ ,  $\cos z$ ,  $e^z$ ,  $\sinh z$ ,  $\cosh z$  etc, Laurent series and its examples, Poles and residues.

5. S. Ponnuswamy – Foundations of Complex Analysis
6. R. P. Boas – Invitation to Complex Analysis.

7. R V Churchill & J W Brown, Complex Variables and Applications, 5th ed.: McGraw Hill Companies., 1989.
8. A R Vashista, Complex Analysis, Krishna Prakashana Mandir, 2012.

### Practical components –VI

**Course code: DMF27101/DMF27102/DMF27103/DMF273F104**

**Credits: L:T:P = 0:0:2**

1. Declaring a complex number and graphical representation.
2. Complex numbers and their representations, operations like addition, multiplication, division, modulus, graphical representations of polar form.
3. To plot the complex functions and analyze the graph  
(i)  $f(z) = z$ , (ii)  $f(z) = z^3$ , (iii)  $f(z) = (z^4 - 1)^{1/4}$
4. Some problems on Cauchy – Riemann equations (polar forms).
5. Implementation of Milne – Thomson method of constructing analytic functions (simple examples).
6. Illustrating orthogonality of the surfaces obtained from the real and imaginary parts of an analytic function.
7. Verifying real and imaginary parts of an analytic function being harmonic (in polar coordinates)
8. Examples connected with Cauchy's integral theorem.
9. To compute the poles and corresponding residues of complex functions.
10. Illustrating the angle preserving property in a transformation.
11. Illustrating the circles are transformed to circles by a bilinear transformation.
12. To perform conformal mapping and bilinear transformations.

## SEMESTER VI

Course code: DMF27201/DMF27202/DMF27203/DMF27204

Credits: L: T: P-4:0:0

Teaching hours: 4 hours per week

### DSE III: Numerical Methods

#### COURSE OUTCOME:

After successful completion of the course, the student is able to

CO1. Understand the importance numerical methods.

CO2. To determines the numerical solutions of algebraic and transcendental equations

CO3.To finds the numerical solutions of first order linear differential equations

CO4. To evaluate integrals of rational, radical and other functions over an interval to any desired degree of accuracy

CO5. To determine the values of unknown functions from the given data by using interpolation ormulae.

**Unit I:** Algorithms, Convergence, Bisection method, False position method, Fixed point iteration method, Newton's method, Secant method, LU decomposition, Gauss-Jacobi, Gauss-Siedel and SOF iterative methods.

**Unit II:** Lagrange and Newton interpolation: linear and higher order, finite difference operators. Numerical differentiation: forward difference, backward difference and central Difference.

**Unit III :** Numerical Integration: general quadrature formula, trapezoidal rule, Simpson's rule (1/3 and 3/8 th ), weddle's rule.

**Unit IV:** Numerical solutions of first order linear differential equations-Euler-Cauchy method Euler's modified method Runge-kutta fourth order method

#### Reference Books:

4. B.S Grewal Higher engineering mathematics
5. E.Kreyszig-Advanced Engineering Mathematics, Wiely India Pvt. Ltd

## **RACTICAL COMPONENTS-VI**

**Course code: DMF27301/ DMF27302/DMF27303/DMF27304**

**Credits: L:T:P:0:0:2**

1. Newton Gregory forward interpolation.
2. Lagrange interpolation.
3. Simpson's one-third method.
4. Simpson's three-eighth method.
5. Bisection method.
6. Regula-Falsi method.
7. Newton-Raphson method.
8. Modified Euler's metod.
9. Runge Kutta second order method.
10. Runge Kutta fourth order method.

## **Vector Calculus**

**Course code: DMF27401/DMF27402/DMF27403/DMF27404**

**Credits: L: T: P = 2:0:0**

**Teaching hours: 2 hours per week**

### **Skill Enhancement Course (SEC - II)**

Unit I: Differentiation and partial differentiation of a vector function. Derivative of sum, dot product and cross product of two vectors.

Unit II: Gradient, divergence and curl, Standard derivations and Exercise ,

References:

# Question Paper Pattern(CBCS )

## Mathematics

Time: 3 Hours

Max. Marks: 70

### Section – A

**I. Answer any five questions.**

**5 x 2 = 10**

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.

### Section – B

**II. Answer any three questions.**

**3 x 5 = 15**

- 1.
- 2.
- 3.
- 4.
- 5.

**III. Answer any three questions.**

**3 x 5 = 15**

- 1.
- 2.
- 3.
- 4.
- 5.

**IV. Answer any three questions.**

**3 x 5 = 15**

- 1.
- 2.
- 3.
- 4.
- 5.

**V. Answer any three questions.**

**3 x 5 = 15**

- 1.
- 2.
- 3.
- 4.
- 5.

**DEPARTMENT OF MICROBIOLOGY**  
**PROGRAMME: BSc MBt (NEP)**  
**PROGRAMME OUTCOMES: B.Sc., Mb-Bt & Mb-Bc**

**Program Outcomes:**

Competencies need to be acquired by the candidate securing B.Sc (Basic) or B.Sc (Hons)

**By the end of the program the students will be able to:**

<b>PO1</b>	Knowledge and understanding of concepts of microbiology and its application in pharma, food, agriculture, beverages, nutraceutical industries.
<b>PO2</b>	Understand the distribution, morphology and physiology of microorganisms and demonstrate the skills in aseptic handling of microbes including isolation, identification and maintenance.
<b>PO3</b>	Competent to apply the knowledge gained for conserving the environment and resolving the environmental related issues.
<b>PO4</b>	Learning and practicing professional skills in handling microbes and contaminants in laboratories and production sectors.
<b>PO5</b>	Exploring the microbial world and analyzing the specific benefits and challenges.
<b>PO6</b>	Applying the knowledge acquired to undertake studies and identify specific remedial measures for the challenges in health, agriculture, and food sectors.
<b>PO7</b>	Thorough knowledge and application of good laboratory and good manufacturing practices in microbial quality control.
<b>PO8</b>	Understanding biochemical and physiological aspects of microbes and developing broader perspective to identify innovative solutions for present and future challenges posed by microbes
<b>PO9</b>	Understanding and application of microbial principles in forensic and working knowledge about clinical microbiology.
<b>PO10</b>	Demonstrate the ability to identify ethical issues related to recombinant DNA technology, GMOs, intellectual property rights, biosafety and biohazards.
<b>PO11</b>	Demonstrate the ability to identify key questions in microbiological research, optimize research methods, and analyze outcomes by adopting scientific methods, thereby improving the employability.
<b>PO12</b>	Enhance and demonstrate analytical skills and apply basic computational and statistical techniques in the field of microbiology.

**PROGRAMME SPECIFIC OUTCOME**

**After completing the graduation in the Bachelor of Science the students are able to:**

<b>PSO 1</b>	Demonstrate effectively the applications of biochemical and biological sciences
<b>PSO2</b>	Inculcating proficiency in all experimental techniques and methods of analysis
<b>PSO3</b>	Acquire, articulate, retain and demonstrate laboratory safety skills applicable to microbiological research or clinical methods, including accurately reporting observations and analysis
<b>PSO4</b>	Communicate scientific information effectively, especially relating to microbes and their role in ecosystem and health related issues
<b>PSO5</b>	Be knowledgeable in proper procedures and regulations in handling and disposal of chemicals
<b>PSO6</b>	Gain and understanding of biochemical and molecular processes that occur in and between cells to expand understanding of biology

**Assessment:****Weight age for assessments (in percentage)**

Type of Course	Formative Assessment / IA	Summative Assessment
Theory	40%	60%
Practical	50%	50%
Projects	40%	60%
Experiential Learning (Internships/MOO C/ Swayam etc.)	40%	60%

Formative Assessment : 40%	
Assessment Occasion/ type	Weightage in Marks
C1 = IA -1 + Assignments / Visits	10% + 10% = 20% : 20 Marks
C2 = IA -2 + Seminars / Group Discussion	10% + 10 = 20% : 20 Marks
<b>Total</b>	40% : 40 Marks

**Total Marks for each course = 100%**  
**Formative Assesment (C1+C2) = 40%**  
**Semester end examination (C3) = 60%**

## **PREAMBLE**

The role of education is paramount in nation building. One of the major objectives of UGC is maintenance of standards of higher education. Over the past decades the higher education system of our country has undergone substantial structural and functional changes resulting in both quantitative and qualitative development of the beneficiaries. Such changes have gained momentum with the introduction of Choice Based Credit System (CBCS) which further expects Learning Outcome-Based curriculum to maximize the benefits of the newly designed curriculum. The Learning Outcome- Based Curriculum in Microbiology will help the teachers of the discipline to visualize the curriculum more specifically in terms of the learning outcomes expected from the students at the end of the instructional process. The commission strives to promote the link of students with the society/industry such that majority of the students engage in socially productive activities during their period of study in the institutions and at least half of the graduate students will secure access to employment/self-employment or engage themselves in pursuit of higher education. The model curriculum envisages to cater to the developmental trends in higher education, incorporating multi- disciplinary skills, professional and soft skills such as teamwork, communication skills, leadership skills, time management skills and inculcate human values, professional ethics, and the spirit of Innovation /entrepreneurship and critical thinking among students and promote avenues for display of these talents, linking general studies with professional courses. Besides imparting disciplinary knowledge to the learners, curriculum should aim to equip the students with competencies like problem solving, analytical reasoning and moral and ethical awareness. Introduction of internship and appropriate fieldwork/case studies are embedded in the curriculum for providing wider exposure to the students and enhancing their employability.

Learning outcomes specify what exactly the graduates are expected to know after completing a Programme of study. The expected learning outcomes are used as reference points to help formulate graduate attributes, qualification descriptors, Programme learning outcomes and course learning outcomes. Keeping the above objectives of higher education in mind the Learning Outcome-Based Curriculum Framework (LOCF) for the discipline of Microbiology has been prepared and presented here.

**BSc Microbiology (Basic / Hons.)  
Semester 1**

<b>Course Title: DSC-1T, General Microbiology</b>	
<b>Course code: FSA500</b>	
Total Contact Hours: <b>56</b>	Course Credits: <b>4+2</b>
Formative Assessment Marks: <b>40%</b>	Duration of ESA/Exam: <b>3 Hrs</b>
Model Syllabus Authors: <b>Curriculum Committee</b>	Summative Assessment Marks: <b>60%</b>

**Course Outcomes (COs):**

At the end of the course the student should be able to:

- 1. Thorough knowledge and understanding of concepts of microbiology.**
- 2. Learning and practicing professional skills in handling microbes.**
- 3. Thorough knowledge and application of good laboratory and good manufacturing practices in microbial quality control.**

**Course Articulation Matrix:** Mapping of Course Outcomes (COs) with Program Outcomes (POs 1-12)

Course Outcomes (COs) / Program Outcomes (POs)	1	2	3	4	5	6	7	8	9	10	11	12
1. Thorough knowledge and understanding of concepts of microbiology	✓	✓		✓								
2. Learning and practicing professional skills in handling microbes		✓		✓			✓					
3. Thorough knowledge and application of good laboratory and good manufacturing practices in microbial quality control.		✓		✓			✓					

Course Articulation Matrix relates course outcomes of course with the corresponding program outcomes whose attainment is attempted in this course. Mark 'X' in the intersection cell if a course outcome addresses a particular program outcome.

## BSc Microbiology (Basic / Hons.)

### Semester 1

**Title of the Courses:**

**Course 1 : DSC-1T: General Microbiology**

**Course 2 : OE 1T: Microbial Technology for Human Welfare**

**Course 3 : SEC 1T: Microbiological Methods and Analytical Techniques**

Course 1 : DSC-1T General Microbiology		Course 2 : OE 1T Microbial Technology for Human Welfare		Course 3 : SEC 1T Microbiological Methods and Analytical Techniques	
Number of Theory Credits	Number of lecture hours/semester	Number of Theory Credits	Number of lecture hours/semester	Number of Theory Credits	Number of lecture hours/semester
<b>4</b>	<b>56</b>	<b>3</b>	<b>42</b>	<b>1</b>	<b>14</b>

<b>Content of Course 1: Theory: DSC-1T, MBL 101, General Microbiology</b>	<b>56 Hrs</b>
<b>Unit – 1: Historical development, major contributions, origin of microorganisms and microscopy</b>	<b>14Hrs</b>
<p><b>Historical development of microbiology</b> -Theory of spontaneous generation, Biogenesis and Abiogenesis. Contributions of Anton Von Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister and Edward Jenner, Alexander Fleming, Martinus Beijerinck, Sergei Winogradsky, Elie Metchnikoff. Contributions of Indian scientists in the field of Microbiology. Fossil evidences of microorganisms. Origin of life, primitive cells and evolution of microorganisms. Microcopy- working principle, construction and operation of simple and compound microscopes.</p>	
<b>Unit – 2: Staining, sterilization and preservation of microorganisms</b>	<b>14Hrs</b>
<p><b>Staining:</b> Nature of strains, principles, mechanism, methods and types of staining- Simple, Differential-Gram staining, Acid fast staining, staining of capsule, cell wall, endospore, inclusion bodies.  <b>Sterilization:</b> Principles, types and techniques, Physical and chemical methods.            Culture media – Types, Cultivation of aerobic and anaerobic bacteria. Pure culture techniques and Cultural characteristics.            Preservation of microorganisms: Methods of preservation of microorganisms; slant culture, stab culture, soil culture, mineral oil overlaying, glycerol preservation.</p>	
<b>Unit – 3: Types, structure, organisation and reproduction of prokaryotic microorganism</b>	<b>14Hrs</b>
<p><b>Overview of Prokaryotic Cell Structure:</b> Size, shape, arrangement. Diagram of Prokaryotic cell organisation, cell wall structure of Gram positive and negative bacteria, cell membrane; Bacterial and Archaeal, Cytoplasmic matrix- Cytoskeleton, ribosome, inclusion granules: Composition and function. Nuclear Materials – Bacterial chromosomes structure (its differences with the Eukaryotic chromosome); Extra Chromosomal materials. Components external to cell wall- capsule, slime, s- layer, pili, fimbriae, flagella; structure, motility, chemotaxis. Bacterial Endospore - Examples of spore forming organisms, habitats, function, formation and germination.Reproduction in bacteria and bacterial cell cycle.</p>	

<b>Unit – 4: Types, structure, organisation and reproduction of eukaryotic microorganisms</b>	<b>14Hrs</b>
<p>Over view of eukaryotic cell structure: General structure and types of cells; External cell coverings and cell membrane. Structure and function of Cytoplasmic matrix- cytoskeleton: Structure and function; single Membrane organelles- Endoplasmic reticulum, Golgi complex, Lysosomes, Vesicles and Ribosomes; Double Membrane organelles- Nucleus, Mitochondrion and Chloroplast: Structure and Functions; Peroxisomes; Organelles of motility- Structure and movement of flagella and cilia.</p>	

### **Course 1: Practical: DSC-1P : General Microbiology**

1. Microbiological laboratory standards and safety protocols
2. Standard aseptic conditions of Microbiological laboratory.
3. Operation and working principles of Light/ Compound microscope.
4. A. Working principles and operations of basic equipments of microbiological laboratory (Autoclave, Oven, Incubator, pH meter, Spectrophotometer, Colorimeter, Vortex, Magnetic stirrer).
5. Applications of basic microbiological tools (Pipettes, Micropipette, Bunsen burner, Inoculation loop, Spreader).
6. Demonstration and observations of microorganisms from natural sources under light microscope (Algae, Yeast and Protozoa).
7. Demonstration of bacterial motility by hanging drop method.
8. Simple staining & Negative staining
9. Differential staining - Gram staining
10. Acid fast staining
11. Structural staining - Flagella and Capsule
12. Bacterial endospore staining
13. Staining of fungi by Lactophenol cotton blue.
14. Staining of reserved food materials.
15. A. Preparation of Physiological saline and Serial dilution  
B. Method of obtaining pure cultures of Microorganisms

## Course 2 : Theory: OE 1T: Microbial Technology for Human Welfare

<b>Course 2 : OE 1T: Microbial Technology for Human Welfare</b>	<b>42Hrs</b>
Unit – 1: Food and Fermentation Microbial Technology	14Hrs
Fermented Foods – Types, Nutritional Values, Advantages and Health Benefits Prebiotics, Probiotics, Synbiotics and Nutraceutical Foods Fermented Products – Alcoholic and nonalcoholic beverages, fermented dairy products, Fruit fermented drinks,	
Unit – 2: Agricultural Microbial Technology	14Hrs
Microbial Fertilizers, Microbial Pesticides, Mushroom Cultivation, Biogas Production	
Unit – 3: Pharmaceutical Microbial Technology	14Hrs
Microbial Drugs – Types and Development of Drug resistance Antibiotics – Types, Functions and Antibiotic Therapy Vaccines – Types, Properties, Functions and Schedules	

## Course 3 : Theory: SEC 1T

### Title: Microbiological Methods and Analytical Techniques

#### LEARNING OUTCOMES

- Demonstrate skills as per National Occupational Standards (NOS) of “Lab Technician/ Assistant” Qualification Pack issued by Life Sciences Sector Skill Development Council - LFS/Q0509, Level 3.
  - Perform microbiology and analytical techniques. Knowledge about environment, health, and safety (EHS), good laboratory practices (GLP), good manufacturing practices (GMP) and standard operating procedures (SOP)
  - Demonstrate professional skills at work, such as decision making, planning, and organizing, Problem solving, analytical thinking, critical thinking, and documentation.
1. Principles which underlies sterilization of culture media, glassware and plastic ware to be used for microbiological work.
  2. Principles of a number of analytical instruments which the students have to use during the study and also later as microbiologists for performing various laboratory manipulations.
  3. Handling and use of microscopes for the study of microorganisms which are among the basic skills expected from a practicing microbiologist. They also get introduced a variety of modifications in the microscopes for specialized viewing.
  4. Several separation techniques which may be required to be handled later as microbiologists.

### Course 3 :Theory: SEC 1T

<b>SEC 1T : Microbiological Methods and Analytical Techniques</b>	<b>14Hrs</b>
<b>DIGITAL SKILLS:</b> <b>The components of digital skills provided by KSHEC, will be followed accordingly.</b> <b>Microbiological Skills</b> Microbiological culture media: Types, Composition, Preparation, Application and storage; Ingredients of media, natural and synthetic media, chemically defined media, complex media, selective, differential, indicator, enriched and enrichment media. Isolation and cultivation of microorganisms: Collection of samples, processing of samples, serial dilution, technique, inoculation of samples, incubation and observations of microbial colonies. Morphological characterization of microorganisms - Colony characteristics, Microscopic characters, biochemical/physiological tests or properties and identification. Subculturing of microorganisms and pure culture techniques. Preservation of microorganisms. Advanced Microscopic Skills: Different types of microscopes - Phase contrast, Bright Field, Dark Field, Fluorescent, Confocal, Scanning and Transmission Electron Microscopy. <b>Analytical Skills</b> Centrifugation, Chromatography and Spectroscopy: Principles, Types, Instrumentation, Operation and applications.	

### Course 3 : Practicals: SEC 1P: Microbiological Methods and Analytical Techniques

1. Preparation of different microbiological culture media
2. Isolation and cultivation of bacteria, actinobacteria, fungi and algae
3. Characterization and identification of bacteria, actinobacteria, fungi and algae – colony characters and microscopic characters
4. Biochemical and physiological tests for identification of bacteria
5. Methods and practices in microbiology lab: MSDS (Material Safety Data Sheet), Good clinical Practices (GCP), Standard Operating Procedure (SOP), Good Laboratory Practices (GLP), Good Manufacturing Practices.
6. Usage and maintenance of basic equipment of microbiology lab: Principles, calibrations, and SOPs of balances (Types), pH meter (Types), Autoclaves (Types), Laminar flows and biosafety cabinets, basic Microscopes, homogenizers, stirrers.
7. Procedures for documentation, lab maintenance, repair reporting
8. Separation of mixtures of biomolecules by paper / thin layer chromatography.
9. Demonstration of column packing in column chromatography.

**Pedagogy :**

The general pedagogy to be followed for theory and practicals are as under. Lecturing, Tutorials, Group/Individual Discussions, Seminars, Assignments, Counseling, Remedial Coaching. Field/Institution/Industrial visits, Hands on training, Case observations, Models/charts preparations, Problem solving mechanism, Demonstrations, Project presentations, Experiential documentation and Innovative methods.

Active learning as per LSSSDC (NSDC) LFS/Q0509 guidelines, at skill training Level 3. Case studies about application of microbial biomolecules in various industries. Seminar on topics of microbial biochemistry

<b>Formative Assessment : 40%</b>	
<b>Assessment Occasion/ type</b>	<b>Weightage in Marks</b>
C1 = IA -1 + Assignments / Visits	10% + 10% = 20% : 20 Marks
C2 = IA -2 + Seminars / Group Discussion	10% + 10 = 20% : 20 Marks
<b>Total</b>	40% : 40 Marks

**BSc Microbiology (Basic / Hons.)**  
**Semester II**

**Title of the Courses:**

**Course 1: DSC-2T: Microbial Biochemistry and Physiology Course**

**2 : OE- 2T: Environmental and Sanitary Microbiology**

**Course code:FSB500**

<b>Course 1: DSC-2T, MBL 102, Microbial Biochemistry and Physiology</b>		<b>Course 2: OE- 2T, MBL 302, Environmental and Sanitary Microbiology</b>	
Number of Theory Credits	Number of lecture hours/semester	Number of Theory Credits	Number of lecture hours/semester
<b>4</b>	<b>56</b>	<b>3</b>	<b>42</b>

<b>Content of Course: DSC-2T: Microbial Biochemistry and Physiology</b>	<b>56 Hrs</b>
<b>Unit – 1 Biochemical Concepts</b>	<b>14Hrs</b>
<p>Basic Biochemical Concepts: Major elements of life and their primary characteristics, atomic bonds and molecules – bonding properties of carbon, chemical bonds- covalent and non covalent, Hydrogen bonds and Vander Waal Forces.</p> <p>Biological Solvents: Structure and properties of water molecule, Water as an universal solvent, polarity, hydrophilic and hydrophobic interactions, properties of water, Acids, bases, electrolytes, hydrogen ion concentration, pH, buffers and physiological buffer system, Handerson – Hasselbatch equation.</p>	
<b>Unit – 2 Macromolecules – Types, Structure and Properties</b>	<b>14Hrs</b>
<p>Carbohydrates: Definition, classification, structure and properties.</p> <p>Amino acids and proteins: Definition, structure, classification and properties of amino acids, Structure and classification of proteins.</p> <p>Lipids and Fats: Definition, classification, structure, properties and importance of lipids. Porphyrins and Vitamins: Definition, structure, properties and importance of chlorophyll, cytochrome and hemoglobin.</p>	
<b>Unit – 3 Microbial Physiology</b>	<b>14Hrs</b>
<p><b>Microbial Growth:</b> Definition of growth, Mathematical expression, Growth curve, phases of growth, calculation of generation time and specific growth rate. Synchronous growth, Continuous growth (chemostat and turbidostat), Diauxic growth. Measurement of Growth: Direct Microscopic count – Haemocytometer; Viable count, Membrane filtration; Electronic Counting; Measurement of cell mass; Turbidity measurements-Nephelometer and spectrophotometer techniques;Measurements of cell constituents. Growth Yield (definition of terms). Influence of environmental factors on growth. Microbial growth in natural environments. Viable non-culturable organisms. Quorum sensing.</p> <p><b>Microbial Nutrition:</b> Microbial nutrients, Classification of organisms based on carbon source, energy source and electron source, Macro and micronutrients.</p> <p><b>Membrane Transport:</b> Structure and organization of biological membranes, Types of Cellular transport, Passive, Facilitated, Active, Group Translocation, Membrane bound and binding protein transport system, Carrier models, Liposomes, Ion transduction Na K<sup>+</sup>, ATPase.</p>	
<b>Unit – 4: Microbial Physiology- Bioenergetics, Microbial Respiration, Microbial Photosynthesis</b>	<b>14Hrs</b>

<p>Bioenergetics: Free energy, Enthalpy, Entropy, Classification of high energy compounds, Oxidation reduction reactions, equilibrium constant, Redox potential, Law of thermodynamics.</p> <p>Microbial Respiration: Respiratory electron transport chain in bacteria, oxidation – reduction reactions, protein translocation, oxidative and substrate level phosphorylation – inhibitors and mechanism, chemiosmotic coupling. Fermentation reactions ( homo and hetero)</p> <p>Microbial Photosynthesis: Light reaction: Light harvesting pigments Photophosphorylation, CO<sub>2</sub> fixation pathways: Calvin cycle, CODH pathway, Reductive TCA pathway.</p>	
--	--

### **Course 1: Practicals: DSC-2P: Microbial Biochemistry and Physiology**

1. Preparation of Solution: Normal and Molar solutions
2. Calibration of pH meter and determination of pH of natural samples
3. Preparation of Buffer Solutions
4. Qualitative determination and identification of Carbohydrates
5. Qualitative determination and identification of Proteins & Amino Acids
6. Qualitative determination and identification of Fatty Acids
7. Quantitative estimation of Reducing Sugar by DNS method
8. Quantitative estimation of Proteins by Biuret and Lowry's method
9. Determination of lipid saponification values of fats and iodine number of fatty acids
10. Determination of bacterial growth by spectrophotometric method & calculation of generation time
11. Measurement of cell number by Haemocytometer
12. Effect of pH on bacterial growth
13. Effect of Salt concentration on bacterial growth
14. Effect of Temperature on bacterial growth
15. Demonstration of aerobic and anaerobic respiration in microbes

## Course 2 :Theory: OE- 2T: Environmental and Sanitary Microbiology

<b>Course 2 :Theory: OE- 2T:Environmental and Sanitary Microbiology</b>	<b>42 Hrs</b>
<b>Unit – 1: Soil and Air Microbiology</b>	<b>14 Hrs</b>
Soil and Air as a major component of environment. Types, properties and uses of soil and air. Distribution of microorganisms in soil and air. Major types of beneficial microorganisms in soil. Major types of harmful microorganisms in soil	
<b>Unit – 2: Water Microbiology</b>	<b>14 Hrs</b>
Water as a major component of environment. Types, properties and uses of water. Microorganisms of different water bodies. Standard qualities of drinking water	
<b>Unit – 3: Sanitary Microbiology</b>	<b>14 Hrs</b>
Public health hygiene and communicable diseases. Survey and surveillance of microbial infections. Airborne microbial infections, waterborne microbial infections, Food borne microbial infections. Epidemiology of microbial infections, their detection and control.

<b>Total</b>	40% : 40 Marks

## BSc Microbiology (Basic / Hons.)

### Semester III

#### Title of the Courses:

**Course 1 : DSC-1T: Microbial Diversity**

**Course 2 : OE 1T: Microbial Entrepreneurship**

Program Name	<b>B. Sc Microbiology</b>		Semester	<b>Third Semester</b>
Course Title	<b>Microbial Diversity</b>			
Course code	<b>FSC500</b>			
Course No.	<b>MBL-103</b>	<b>DCS -3T</b>	No. of Theory Credits	<b>4</b>
Contact hours	<b>56hrs</b>		Duration of ESA/Exam	<b>Hours</b>
Formative Assessment Marks			Summative Assessment Marks	

#### Course Pre-requisite (s):

**Course Outcomes (COs):** At the end of the course the student should be able to:

1. Knowledge about microbes and their diversity
2. Study, characters, classification and economic importance of Pro-eukaryotic and Eukaryotic microbes.
3. Knowledge about viruses and their diversity

Content	56Hrs
<b>Unit-I</b>	<b>14 Hrs</b>
<p><b>Biodiversity and Microbial Diversity</b>                      Concept, definition, and levels of biodiversity; Biosystematics – Major classification systems- Numerical and Chemotaxonomy. Study and measures of microbial diversity; Conservation and Economic values of microbial diversity.</p>	
<b>Unit -II</b>	<b>14 Hrs</b>
<p><b>Diversity of Prokaryotic Microorganisms</b>                      General characters; Classification; Economic importance; Distribution and factors regulating distribution.  <b>Bacteria and Archaea-</b> An overview of Bergey's Manual of Systematic Bacteriology.  <b>Bacteria-</b> <i>Escherichia coli</i>, <i>Bacillus subtilis</i>, <i>Staphylococcus aureus</i>  <b>Cyanobacteria-</b> <i>Nostoc</i>, <i>Microcystis</i>, <i>Spirulina</i>  <b>Archea-</b> <i>Thermus aquaticus</i>, Methanogens  <b>Actinomycetes:</b> <i>Streptomyces</i>, <i>Nocardia</i>, <i>Frankia</i>  <b>Rickettsiae-</b> <i>Rickettsia rickettsi</i>  <b>Chlamydiae</b> – <i>Chlamydia trachomatis</i>  <b>Spirochaetes-</b> <i>Trepanema pallidum</i></p>	
<b>Unit -III</b>	<b>14 Hrs</b>

<p><b>Diversity of Eukaryotic Microorganisms</b></p> <p><b>Diversity of Eukaryotic Microorganisms:</b> General characters; Classification- Economic importance</p> <p><b>Fungi:</b> Ainsworth classification- detailed study up to the level of classes, Salient features and Reproduction -Type study: <i>Rhizopus, Aspergillus, Agaricus, Fusarium, Saccharomyces</i>.</p>	
<p><b>Algae:</b> Occurrence, distribution, and symbiotic association- Lichen; thallus organization and types. Type study: <i>Chlorella, Cosmarium, Diatoms, Gracilaria</i>,</p> <p><b>Protozoa:</b> Classification up to the level of classes. Type study: <i>Amoeba, Euglena, Trichomonas, Paramoecium, Trypanosoma</i></p>	
<p><b>Unit -IV</b></p>	<p><b>14 Hrs</b></p>
<p><b>Diversity of Virus</b></p> <p>General properties and structure, Isolation and purification and assay of virus. Principles of Viral Taxonomy- Baltimore and ICTV and the recent trends.</p> <p>Capsid symmetry- Icosahedral, helical, complex</p> <p>Structure, Replication and Significance of the following:</p> <p><b>Human &amp; Animal viruses:</b> HIV, Corona, Ortho and paramyxovirus, Oncogenic virus, H1N1</p> <p><b>Plants viruses:</b> TMV, Ring spot virus</p> <p><b>Microbial viruses:</b> T4/T7/lambda/cyano/mycophages.</p> <p>Sub viral particles, Viroids, Virusoids, satellite virus and Prions.</p>	

**Course Articulation Matrix: Mapping of Course Outcomes (COs) with Program Outcomes (POs 1-12)**

## BSc Microbiology (Basic / Hons.) Semester IV

### Title of the Courses:

**Course 1: DSC-2T: Microbial Enzymology and Metabolism**  
**2 : OE- 2T: Human Microbiome**

Program Name	<b>B. Sc Microbiology</b>		Semester	<b>Fourth Semester</b>
Course Title	<b>Microbial Enzymology and Metabolism</b>			
Course code	<b>FSD500</b>			
Course No.	<b>MBL:104</b>	<b>DCS -4T</b>	No. of Theory Credits	<b>4</b>
Contact hours	<b>56 hrs</b>		Duration of ESA/Exam	<b>2 ½ Hours</b>
Formative Assessment Marks	<b>40</b>	Summative Assessment Marks		<b>60</b>

### Course Pre-requisite (s):

**Course Outcomes (COs):** At the end of the course the student should be able to:

1. Differentiating concepts of chemo heterotrophic metabolism and chemo lithotrophic metabolism.
2. Describing the enzyme kinetics, enzyme activity and regulation.
3. Differentiating concepts of aerobic and anaerobic respiration and how these are manifested in the form of different metabolic pathways in microorganisms

### Content

**56 Hrs**

### Unit-I

**14 Hrs**

### Basics of Enzymes

**Definitions of terms** – enzyme unit, specific activity and turnover number, *exo/* endoenzymes, constitutive/ induced enzymes, isozymes. Monomeric, Oligomeric and Multimeric enzymes.

Multienzyme complex: pyruvate dehydrogenase; isozyme: lactate dehydrogenase. Ribozymes, abzymes

**Structure of enzyme:** Apoenzyme and cofactors, prosthetic group-TPP, coenzyme, NAD, metalcofactors.

Classification of enzymes, Mechanism of action of enzymes: active site, transition state complex and activation energy. Lock and key hypothesis and Induced Fit hypothesis. Multi substrate reactions.

**Enzyme catalysis:** Types & examples, catalytic mechanisms and testing Lysozyme

<b>Unit -II</b>	<b>14 Hrs</b>
<p><b>Enzyme Kinetics and Regulation</b></p> <p>Enzyme Kinetics: Kinetics of one substrate reactions. i. Equilibrium assumptions ii. Steady state assumptions iii. Lineweaver-Burk plot, Kinetics of enzyme inhibition. Competitive, non-competitive and uncompetitive inhibition. Effect of changes in pH and temperature on enzyme catalyzed reaction. Kinetics of two substrate reactions. Kinetics of immobilized enzymes</p> <p>Enzyme regulation: Allosteric enzyme - general properties, Hill equation, Koshland-Nemethy-Filmer model Covalent modification by various mechanisms. Regulation of multi- enzyme complex- Pyruvate dehydrogenase. Feedback inhibition. HIV enzyme inhibitors and drug design.</p> <p><b>Microbial Enzymes: sources-</b> Bacterial, Fungal, Yeast and their applications.</p>	
<b>Unit -III</b>	<b>14 Hrs</b>
<p><b>Metabolism of Carbohydrates</b></p> <p>Chemoheterotrophic Metabolism- Sugar degradation pathways i.e. EMP, ED, Pentose phosphate pathway, Phosphoketolase pathway. TCA cycle.</p> <p>Utilization of Lactose, Maltose, Galactose, Cellulose and Pectin.</p> <p>Fermentation – Fermentation balance, concept of linear and branched fermentation pathways. Alcohol fermentation and Pasteur effect; Butyric acid and Butanol- Acetone Fermentation, Mixed acid and 2,3-butanediol fermentation, Propionic acid Fermentation (Succinate pathway and Acrylate pathway), acetate Fermentation</p> <p>Chemolithotrophic Metabolism: Chemolithotrophy – Hydrogen oxidation, Sulphur oxidation, Iron oxidation, Nitrogen oxidation.</p> <p>Anaerobic respiration with special reference to assimilatory nitrate reduction and sulphate reduction.</p>	
<b>Unit –IV</b>	<b>14 Hrs</b>
<p><b>Metabolism of amino acids, nucleotides and lipids</b></p> <p><b>1.Nitrogen Metabolism</b></p> <p>Introduction to biological nitrogen fixation Ammonia assimilation. Assimilatory nitrate reduction, dissimilatory nitrate reduction, denitrification</p> <p><b>2. Biosynthesis of ribonucleotides and deoxyribonucleotides</b></p> <p>The de novo pathway. Regulation by feedback mechanisms. Recycling via the salvage pathway</p>	

<p><b>Metabolism of aminoacids, nucleotides and lipids</b></p> <p><b>3.Nitrogen Metabolism</b> Introduction to biological nitrogen fixation Ammonia assimilation. Assimilatory nitrate reduction, dissimilatory nitrate reduction, denitrification</p> <p><b>4. Biosynthesis of ribonucleotides and deoxyribonucleotides</b> The de novo pathway. Regulation by feedback mechanisms. Recycling via the salvage pathway</p> <p><b>5. Amino acid degradation and biosynthesis</b></p> <p><b>6. Lipid degradation and biosynthesis</b></p> <p><b>7.Metabolism of one carbon compounds:</b> Methylotrophs: i. Oxidation of methane, methanol, methylamines; ii. Carbon assimilation in methylotrophic bacteria and yeasts Methanogens: i. Methanogenesis from H<sub>2</sub>, CO<sub>2</sub>, CHOH, HCOOH, methylamines; ii. Energy coupling and biosynthesis in methanogenicbacteria,Acetogens - Autotrophic pathway of acetate synthesis.</p> <p><b>Metabolism of two-carbon compounds: Acetate-</b> Glyoxylate cycle. <b>Acetic acid bacteria:</b> Ethanol oxidation, sugar alcohol oxidation. <b>Glyoxylate and glycolate metabolism</b> – i. Dicarboxylic acid cycle, ii. Glycerate pathway iii. Beta hydroxyaspartate pathway, <b>Oxalate</b> as carbon and energy source</p>

Course No.	<b>MBL:104</b>	<b>DSC-4P</b>	Contact hours
<b>Content</b>			
<ol style="list-style-type: none"> <li>1. Identification of fatty acids and other lipids by TLC</li> <li>2. Chemotaxis of <i>Pseudomonas</i></li> <li>3. Effect of variables on enzyme activity (amylase): a. Temperature b. pH c. substrate concentration d. Enzyme concentration</li> <li>4. Sugar fermentation tests for bacteria</li> <li>5. Separation of amino acids by paper chromatography</li> <li>6. Screening of fungi for cellulose and pectin degradation</li> <li>7. Screening of fungi for invertase</li> <li>8. Enzyme immobilization by Alginate method</li> <li>9. Gelatin hydrolysis</li> <li>10. Microscopic examination of root nodules</li> <li>11. Demonstration of Ammonification</li> <li>12. Demonstration of Nitrification – Nitrite and Nitrate</li> <li>13. Demonstration of Denitrification</li> <li>14. Demonstration of lipolytic activity</li> <li>15. Demonstration of citric acid production</li> <li>16. Effect of variables on enzyme activity (amylase): A. temperature B. pH C. substrate concentration D. enzyme concentration</li> <li>17. Study of photographs/models: Chemolithotrophy- Hydrogen oxidation, Sulphur oxidation, Iron oxidation, Nitrogen oxidation, biological Nitrogen fixation, ammonia assimilation, ribozymes, abzymes, lock and key hypothesis, enzyme inhibition – competitive, non competitive and un competitive. Enzyme regulation- allosteric enzymes. Feedback inhibition.</li> </ol>			

## Practical assessment

<b>Assessment</b>

**Course 2 : Theory: OE 1T: Human Microbiome**

Program Name	<b>B. Sc Microbiology</b>		Semester	<b>Fourth Semester</b>
Course Title	<b>Human Microbiome</b>			
Course Code		<b>OE-4T</b>	No. of Theory Credits	<b>3</b>
Contact hours	<b>Lecture</b>		Duration of ESA/Exam	<b>Hours</b>
	<b>Practical</b>			
Formative Assessment Marks	<b>40</b>		Summative Assessment Marks	<b>60</b>

**Course Pre-requisite(s):**

**Course Outcomes (COs):** At the end of the course the student should be able to:

1. Articulate a deeper understanding on biological complexities of human microbiome.
2. Understand broader goals of biological anthropology.
3. Compare and contrast the microbiome of different human body sites and impact human health promotion

**Content****42 Hrs****Unit-I****14 Hrs****INTRODUCTION TO MICROBIOME**

Evolution of microbial life on Earth, Symbiosis host-bacteria. Microbial association with plants and animals, Symbiotic and parasitic, Normal human microbiota and their role in health. Microbiomes other than digestive system.

**Unit -II****14 Hrs****MICROBIOMES AND HUMAN HEALTH**

Microbiome in early life, Nutritional modulation of the gut microbiome for metabolic health- role of gut microbiomes in human obesity, human type 2 diabetes and longevity.

Probiotics- Criteria for probiotics, Development of Probiotics for animal and human use; Pre and synbiotics. Functional foods-health claims and benefits, Development of functional foods.

<b>Unit -III</b>	<b>14 Hrs</b>
<b>CULTURING OF MICROBES FROM MICROBIOMES</b>	
Culturing organisms of interest from the microbiome: bacterial, archaeal, fungal, and yeast, viral. Extracting whole genomes from the microbiome to study microbiome diversity	
<b>Microbiomes and diseases:</b> Microbiome and disease risks: The gut microbiome and host immunity, bacteriocins and other antibacterials. Human microbiome research in nutrition	

### Pedagogy

<b>Summative assessment = 40 marks theory paper, End semester Exam duration of exam 2 hours</b>	
<b>Formative Assessment Occasion / type</b>	<b>Weightage in Marks</b>
Assignment	10
Seminar	10
Case studies	10
Test	10
<b>Total</b>	<b>40 marks</b>

**GENERAL PATTERN OF THEORY EXAMINATION**

**B.Sc MICROBIOLOGY( I –IV Semester)**

**Duration:2 Hours**

**Maximum: 60 Marks**

*Note: All questions are compulsory*

*Draw neat labeled diagrams wherever necessary*

**QNo. I Answer any EIGHT of the following:**

**2X8=16**

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
- 8.
- 9.
- 10.

**QNo. II Answer any SIX of the following:**

**4X6=24**

- 11.
- 12.
- 13.
- 14.
- 15.
- 16.
- 17.
- 18.

**QNo. III Answer any TWO of the following :**

**10X2=20**

- 19.
- 20.
- 21.
- 22.

## **PATTERN OF PRACTICAL EXAMINATION**

### **Practical examination – B. Sc MICROBIOLOGY**

**Duration: 3 hours**

**Max. Marks: 25**

Q. 1	Major question	08 Marks
Q. 2	Minor question	05 Marks
Q. 3	Identify and comment	2X4 = 08Marks
Q. 4	Viva-voce	04 Marks

### **PATTERN OF FORMATIVE ASSESMENT - PRACTICALS**

**Max. Marks: 25**

1	IA 1(Assesment)	10 Marks
2	IA 2(Test +Record)	15 Marks

## SCHEME OF THEORY EXAMINATION

I B.Sc., I SEMESTER

DSC-I: GENERAL MICROBIOLOGY

Times: 2hrs

Max Marks: 60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1: Historical development, major contributions, origin of microorganisms and microscopy</b>	2	2	1	22
<b>Unit – 2: Staining, sterilization and preservation of microorganisms</b>	2	2	1	22
<b>Unit – 3: Types, structure, organisation and reproduction of prokaryotic microorganism</b>	3	2	1	24
<b>Unit – 4: Types, structure, organisation and reproduction of eukaryotic microorganisms</b>	3	2	1	24

**I Main: 2x10=20Marks**

**II Main: 4x8= 32Marks**

**III Main: 4x10=40Marks**

---

## SCHEME OF PRACTICAL EXAMINATION

I B.Sc., I SEMESTER

PRACTICAL-I: GENERAL MICROBIOLOGY

Time: 3hours

Max marks: 25

- I.** Perform/ Stain the given material **A** by.....method. Write the principle, procedure and leave the preparation for evaluation  
(Simple staining/Negative staining/Gram-staining/Cell wall/ Endospore/Pure culture techniques/Serial dilution)  
(Preparation-4 marks; Principle-2 ,Procedure-1& result-1 marks) 08
- II.** Prepare a temporary slide **B** by ..... method. Write the principle, procedure and leave the preparation for evaluation  
(Wet mounting of Fungi/Hanging drop/Microbes from natural sources)  
(Preparation-2 marks; Principle-1 ,Procedure- 1& result-1 marks) 05
- III.** Identify the materials **C, D, E** and **F** with labelled diagrams and reasons 2X4=08  
(Microscopes/ Basic equipments / Basic Microbiological tools as per syllabus)  
(Identification -1mark; diagram and reasons-1mark)
- IV.** Viva-voce 05

**SCHEME OF THEORY EXAMINATION**  
**I B.Sc., II SEMESTER**  
**DSC-I: MICROBIAL BIOCHEMISTRY AND PHYSIOLOGY**

Times:3hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1 : Biochemical concepts</b>	2	2	1	22
<b>Unit – 2: Macromolecules-Types,Structurand properties</b>	2	2	1	22
<b>Unit – 3: Microbial physiology</b>	3	2	1	24
<b>Unit – 4: Microbial physiology- Bioenergetics, Microbialrespiration Microbial photosynthesis</b>	3	2	1	24

**I Main: 2x10=20Marks**

**II Main: 4x8= 32Marks**

**III Main: 4x10=40Marks**

**SCHEME OF PRACTICAL EXAMINATION**  
**I B.Sc., I SEMESTER**  
**PRACTICAL-I: GENERAL MICROBIOLOGY**

Time: 3hours

Max marks: 25

- I. Demonstrate the experiment **A**, giving principle and procedure. Record the results.  
 (Effect of temperature on growth of microorganisms/Effect of pH on the growth of microorganisms /Effect of salt concentration on growth of microorganism)  
 (Demonstration-4marks; principle -2mark; procedure -1marks; result-1mark) 08
  
- II. Perform/conduct the experiment **B**, giving principle and procedure. Record the results. 05  
 (Demonstration-2marks; principle -1mark; procedure -1marks; result-1mark)
  
- III. Identify the materials **C, D, E** and **F** with labelled diagrams and reasons 2X4=08  
 (Normal /Molar solutions,pH meter,Spectrophotometer/Demonstration of aerobic and anaerobic Respiration, Effect of temperature on growth of microorganisms/Effect of pH on the growth of microorganisms /Effect of salt concentration on growth of microorganism)  
 (Identification -1mark; diagram and reasons-1mark)
  
- IV. Viva-voce 05

**SCHEME OF THEORY EXAMINATION**  
**I B.Sc., II SEMESTER**  
**OE-I: MICROBIAL TECHNOLOGY FOR HUMAN WELFARE**

Times:3hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1 : Food and Fermentation Microbial technology</b>	3	2	2	34
<b>Unit – 2: Agricultural Microbial technology</b>	3	3	1	28
<b>Unit – 3: Pharmaceutical Microbial Technology</b>	4	3	1	30

I Main: 2x10=20Marks

II Main: 4x8= 32Marks

III Main: 4x10=40Marks

**SCHEME OF THEORY EXAMINATION**  
**I B.Sc., II SEMESTER**  
**OE-II: ENVIRONMENTAL AND SANITARY MICROBIOLOGY**

Times: 3hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1 : Soil and Air Microbiology</b>	3	2	2	34
<b>Unit – 2: Water Microbiology</b>	3	3	1	28
<b>Unit – 3: Sanitary Microbiology</b>	4	3	1	30

I Main: 2x10=20Marks

II Main: 4x8= 32Marks

III Main: 4x10=40Marks

## SCHEME OF THEORY EXAMINATION

II B.Sc., III SEMESTER  
DSC-III: Microbial diversity

Times:2hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1: Biodiversity and microbial diversity</b>	2	2	1	22
<b>Unit – 2: Diversity of prokaryotic microorganism</b>	2	2	1	22
<b>Unit – 3: Diversity of Eukaryotic microorganism</b>	3	2	1	24
<b>Unit – 4: Diversity of virus</b>	3	2	1	24

**I Main: 2x10=20Marks**

**II Main: 4x8= 32Marks**

**III Main: 4x10=40Marks**

---

## SCHEME OF PRACTICAL EXAMINATION III SEM (NEP) PRACTICAL III: Microbial Diversity (DSC IIIP)

Max. Marks: 25

Time: 3 hrs

1. Demonstrate the experiment A by giving principle and procedure. Record the result 08marks.  
(Isolation of bacteria from air by exposure plate method/Isolation of bacteria from soil or water by serial dilution method/Isolation of fungi from air by exposure plate method/Isolation of fungi from soil or water by serial dilution method/Micrometry) Demonstration – 2M, Principle – 2M, Procedure – 2M, Result – 2M
2. Prepare a temporary mount of the given material B and identify the organism with labeled diagram and significance. (Leave the preparation for evaluation) 05 marks  
(Staining of fungi/ algae/ cyanobacteria)  
Preparation – 1 M, Identification – 1M, Diagram & significance – 3M
3. Write critical notes on C, D, E and F 2x4 = 08 marks  
(Permanent slides or photographs of *Amoeba*, *Paramecium*, *Euglena*, TMV, Corona, T4 phage, Paramyxovirus, Oncogenic virus, Actinomycetes, *Aspergillus*, *Rhizopus*, *Sachharomyces*, *Agaricus*, *Chlorella*, *Diatoms*, *Gracilaria*, *Nostoc*, *Microcystis*, *Spirulina*)
4. Viva-voce 04 marks

## SCHEME OF THEORY EXAMINATION

II B.Sc., IV SEMESTER

DSC-IV: Microbial Enzymology and Metabolism

Times: 2hrs

Max Marks: 60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
Unit – 1: Basics of enzymes	2	2	1	22
Unit – 2: Enzyme kinetics and regulation	2	2	1	22
Unit – 3: Metabolism of carbohydrates	3	2	1	24
Unit – 4: Metabolism of amino acids, nucleotides and lipids	3	2	1	24

I Main: 2x10=20Marks

II Main: 4x8= 32Marks

III Main: 4x10=40Marks

---

### SCHEME FOR PRACTICAL EXAMINATION IV SEM (NEP)

#### PRACTICAL IV: Microbial Enzymology and Metabolism (DSC 4P)

Time: 3 hrs.

Max. Marks: 25

1. Demonstrate the experiment A giving principle and procedure. Record the result. 08 marks  
(Separation of amino acids by paper chromatography / Screening of fungi for invertase / Enzyme immobilization by Alginate method / Screening of fungi for cellulose and pectin degradation / Microscopic examination of root nodules / Identification of fatty acids and other lipids by TLC)  
(Demonstration – 2M, Principle – 2M, Procedure – 2M, Result – 2M)
2. Conduct the given biochemical test B giving principle and procedure. Write the significance. 05 marks  
(Gelatin hydrolysis / Sugar fermentation tests/ Demonstration of Ammonification / Nitrification / Denitrification / Lipolytic activity / Demonstration of citric acid production)  
(Demonstration – 2M, Principle and Procedure – 2M, Significance – 1M)
3. Write critical notes on C, D, E and F 2x4 = 08 marks  
(Study of photographs/models: Chemolithotrophy-hydrogen oxidation, sulphur oxidation, iron oxidation, nitrogen oxidation, biological nitrogen fixation, ammonia assimilation, ribozymes, abzymes, lock and key hypothesis, enzyme inhibition- competitive, non- competitive and un competitive. Enzyme regulation-allosteric enzymes. Feedback inhibition, Chemotaxis of *Pseudomonas*)
4. Viva-voce 05 marks

**SCHEME OF THEORY EXAMINATION**  
**II B.Sc., III SEMESTER**  
**OE-III: MICROBIAL ENTREPRENEURSHIP**

Times:3hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1 : General entrepreneurship</b>	3	2	2	34
<b>Unit – 2: Industrial entrepreneurship</b>	3	3	1	28
<b>Unit – 3: Healthcare entrepreneurship</b>	4	3	1	30

I Main: 2x10=20Marks

II Main: 4x8= 32Marks

III Main: 4x10=40Marks

**SCHEME OF THEORY EXAMINATION**  
**II B.Sc., IV SEMESTER**  
**OE-IV: Human Microbiome**

Times: 3hrs

Max Marks:60

Question Paper to be set for total of 92 marks including choices

UNITS	2 mark questions	4mark questions	10 mark questions	Total Marks
<b>Unit – 1 : Introduction to microbiome</b>	3	2	2	34
<b>Unit – 2: Microbiomes and human health</b>	3	3	1	28
<b>Unit – 3: culturing of microbes from microbiomes</b>	4	3	1	30

I Main: 2x10=20Marks

II Main: 4x8= 32Marks

III Main: 4x10=40Marks

**Annexure-2**  
**Approved list of Paper setters and Valuers**

SI No.	Name	College address
1	Dr..M .Seema	Chairperson, Dept. of Microbiology JSS College, Ooty road, Mysore
2	H.P.Spoorthy	Assistant prof. Dept. of Microbiology JSS College, Ooty road, Mysore
3	Dr.S.Mahadevamurthy	Associate Prof & HOD Dept. of Microbiology Yuvaraja's college Mysore.
4	Dr.Syeda Kauser Fathima	Associate Prof. of Microbiology Maharani's Science College for women JLB road Mysore.
5	Dr. H.S. Jayanth.	Asso.Prof.of Microbiology Dept. of Microbiology Yuvaraja's college Mysore.
6	Dr.Uma Maheshwari	Assistant prof. JSS University, JSSAHER, Mysuru
7	Sri. M. Girish	Assistant prof. Dept. of Microbiology JSS College for Women Saraswathipuram,Mysore
8	Dr. P.K.Maheshwar	Assistant Prof. Dept. of Microbiology Yuvaraja's college,Mysore.
9	Smt. M.S.Shobha	Assistant Prof, Dept. of Microbiology Maharani's Science College Mysore
10	Sri. R.A. Manjunath	Assistant Prof. Dept. of Microbiology Saradavilas College,Mysore
11	Dr.M.P. Ragavendra	Assistant Prof. Dept. of Microbiology Maharani's Science College,Mysore
12	Dr.K.Girish	Assistant Prof. Dept. of Microbiology Maharani's Science College, Mysore
13	Sri. G.S. Siddegowda	Assistant Prof. Dept. of Microbiology Maharani's Science College

		Mysore
14	Dr.N.S.Devaki	Assistant Prof. Dept. of Molecular Biology Yuvaraja's College , Mysore
15	Syeda Farahna Parveen	Assistant Prof. Dept. of Microbiology St.Philomina's College, Mysore
16	Smt. Vanitha	Assistant Prof. Dept. of Microbiology Maharani's Science College,Mysore
17	Smt. Revanamba	Assistant Prof. Dept. of Microbiology Maharani's Science College,Mysore
18	Mahadevaprasad	Assistant prof. Dept. of Microbiology JSS College for Women Saraswathipuram,Mysore
19	Dr.Nagalambika	Assistant prof. JSS University, JSSAHER, Mysuru
20	RajaRajeshwari.R	Assistant prof. Dept. of Microbiology SDM College JLB Road,Mysuru
21	Uzma Bathool	Assistant Prof. Dept. of Microbiology St.Philomina's College, Mysore
22	Shruthi Prakash	Assistant Prof. Dept. of Microbiology Mahajana's Science College,Mysuru
23	Athiya sultan	Assistant prof. Dept. of Microbiology SDM College JLB Road,Mysuru
24	C.Poornima Devi	Assistant Prof. Dept. of Microbiology Yuvaraja's college,Mysore
25	Dr.Rakshith	Assistant Prof. Dept. of Microbiology Yuvaraja's college,Mysore
26	Vasundara Devi R	Assistant Prof. Dept. of Microbiology Maharani's Science College,Mysore
27	Niveditha Prakash	Assistant prof. Dept. of Microbiology JSS College for Women Saraswathipuram,Mysore
28	Dr.K.Sumana	Assistant prof. JSS University, JSSAHER ,Mysuru

29	Samjna.S.R	Assistant Prof. Dept. of Microbiology Maharani's Science College,Mysore

**DEPARTMENT OF MICROBIOLOGY**

**PROGRAMME: BSc BMBT**

**PROGRAMME CODE: BSC06**

**PROGRAMME OUTCOMES: B.Sc., BMBT**

After completing the graduation in the Bachelor of Science the students are able to:

- PO1. Demonstrate the ability to justify and explain their thinking and/or approach, both written and oral. Demonstrate the ability to present clear, logical and succinct arguments, including prose and mathematical language. Write and speak using professional norms, and demonstrate an ability to collaborate effectively.
- PO2. Develop state-of-the-art laboratory skills and professional communication skills.
- PO3. Apply the scientific method to design, execute, and analyze an experiment and also to explain their scientific procedures as well as their experimental observations.
- PO4. Demonstrate an understanding of fundamental biochemical principles, structure and biological function of biomolecules, metabolic pathways and their regulation.
- PO5. Work as a laboratory technician, biochemists or medical scientist.
- PO6. Possess knowledge of ethical practices in science.
- PO7. Describe/ explain the processes used by microorganisms for their replication, survival, and interaction with their environment and host populations.
- PO8. Explain the theoretical basis of the tools, technologies and methods common to microbiology.
- PO9. Apply the scientific method as a demonstration that they understand its application furthering our knowledge of the microbial world.
- PO10. Design and develop solution to Biotechnology problems by applying appropriate tools while keeping in mind safety factor for environmental & society.
- PO11. Create, select, and apply appropriate techniques, resources, and modern tools including prediction and modelling to different activities with an understanding of the limitations.
- PO12. Support biotechnology research activity with strong technical background knowledge.

**PROGRAMME: BSc BBM**

**PROGRAMME CODE: BSC07**

**PROGRAMME OUTCOMES: B.Sc., BBM**

After completing the graduation in the Bachelor of Science the students are able to:

- PO1. Identify the taxonomic position of plants using principles and methods of nomenclature and classification in Botany.
- PO2. Understand the impact of the plant diversity in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO3. Use interdisciplinary approaches with quantitative skills to work on biological problems.
- PO4. Demonstrate the ability to justify and explain their thinking and/or approach, both written and oral. Demonstrate the ability to present clear, logical and succinct arguments, including prose and mathematical language. Write and speak using professional norms, and demonstrate an ability to collaborate effectively.
- PO5. Develop state-of-the-art laboratory skills and professional communication skills.
- PO6. Apply the scientific method to design, execute, and analyze an experiment and also to explain their scientific procedures as well as their experimental observations.
- PO7. Demonstrate an understanding of fundamental biochemical principles, structure and biological function of biomolecules, metabolic pathways and their regulation.
- PO8. Work as a laboratory technician, biochemists or medical scientist.
- PO9. Possess knowledge of ethical practices in science.
- PO10. Describe/ explain the processes used by microorganisms for their replication, survival, and interaction with their environment, hosts, and host populations.
- PO11. Explain the theoretical basis of the tools, technologies and methods common to microbiology.
- PO12. Apply the scientific method as a demonstration that they understand its application furthering our knowledge of the microbial world.

**DEPARTMENT OF MICROBIOLOGY**  
**PROGRAMME: BSc BMBt**  
**PROGRAMME CODE: BSC06**  
**PROGRAMME SPECIFIC OUTCOME: B.Sc., BMBt**

After completing the graduation in the Bachelor of Science the students are able to;

**PSO 1:** Gain and understanding of biochemical and molecular processes that occur in and between cells to expand understanding of biology

**PSO2:** Be knowledgeable in proper procedures and regulations in handling and disposal of chemicals.

**PSO3:** Communicate scientific information effectively, especially relating to microbes and their role in ecosystem and health related issues.

**PSO4:** Acquire, articulate, retain and demonstrate laboratory safety skills applicable to microbiological research or clinical methods, including accurately reporting observations and analysis.

**PSO5:** Demonstrate effectively the applications of biochemical and biological sciences

**PSO6:** Decide and apply appropriate tools and techniques in biotechnological manipulation.

**POS7:** Justify societal, health, safety and legal issues and understand his or her responsibilities in biotechnological practices.

**PROGRAMME: BSc BBM**

**PROGRAMME CODE: BSC07**

**PROGRAMME SPECIFIC OUTCOME: B.Sc., BBM**

After completing the graduation in the Bachelor of Science the students are able to;

**PSO 1:** Demonstrate effectively the applications of biochemical and biological sciences.

**PSO2:** Inculcating proficiency in all experimental techniques and methods of analysis.

**PSO3:** Acquire, articulate, retain and demonstrate laboratory safety skills applicable to microbiological research or clinical methods, including accurately reporting observations and analysis.

**PSO4:** Communicate scientific information effectively, especially relating to microbes and their role in ecosystem and health related issues.

**PSO5:** Be knowledgeable in proper procedures and regulations in handling and disposal of chemicals.

**PSO6:** Gain and understanding of biochemical and molecular processes that occur in and between cells to expand understanding of biology

**DEPARTMENT OF MICROBIOLOGY**

**DSE- A**

**V SEMESTER**

**TITLE: ENVIRONMENTAL MICROBIOLOGY  
(THEORY)**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 4**

**COURSE CODE-DME28006 / DME28007**

**Course outcome**

Enable the students to have sound knowledge about:

- CO1.** The role of microorganisms in soil, air, water, waste water and bioremediation.
- CO2.** Know about the diversity of microorganism and microbial communities inhabiting a wide range of ecological habitats.
- CO3.** Learn the occurrence, abundance and distribution of microorganisms in the environment and their role in the environment
- CO4.** Understand various biogeochemical cycles – Carbon, Nitrogen, Phosphorus cycles etc. and microbes involved in these cycles.
- CO5.** Understand various plant microbes interactions especially rhizosphere, phyllosphere and mycorrhizae and their applications especially the biofertilizers and their mass production.
- CO6.** Understand the basic principles of bioremediation.
- CO7.** The various methods to determine the Sanitary quality of water and sewage Treatment methods employed in waste water treatment

**UNIT 1**

**No. of Hours: 15**

**SOIL MICROBIOLOGY**

- A.** Introduction: Definition, Soil types, Soil profile and Physical characteristics of soil- Mineral particles, Organic residues, Water and Gases. Soil fertility. Role of microorganisms in soil formation (in brief).
- B.** Microbial flora of Soil: A brief account of Bacteria, Fungi, Algae, Actinomycetes, Protozoa and Viruses.
- C.** Biogeochemical cycles: Carbon cycle: Microbes involved in carbon cycle  
Nitrogen cycle: Nitrogen fixation, ammonification, nitrification, denitrification and nitrate reduction  
Phosphorus cycle: Phosphate immobilization and solubilisation.  
Sulphur cycle: Microbes involved in sulphur cycle
- D.** Associated soil microorganisms with plants- the Rhizosphere and Rhizoplane microflora, Actinorrhizae, and Mycorrhizae (AM), Tripartite and Tetra partite association.
- E.** Interaction among soil microorganisms – Neutralism, Mutualism, Commensalism, Antagonism and Parasitism. (In brief).  
Microbe-Plant interaction: Symbiotic and non symbiotic interactions  
Microbe-animal interaction: Microbes in ruminants, nematophagus fungi and symbiotic luminescent bacteria

## UNIT: II

No. of Hours: 15

### AEROBIOLOGY

- A. Introduction: Definition, history and development, aim and scope of aerobiology.
- B. Microbes and atmosphere: Atmospheric layers, sources of microorganisms, Air spora of indoor and outdoor environment. Factors affecting air spora. Significance of air borne microbes. Management of air-borne microbes. Human air borne diseases (Tuberculosis, Rhinitis and Aspergillosis).
- C. Techniques of trapping air-borne microorganisms: Impactors- The slit sampler, Hirst spore trap, Andersen sampler, Rotorod sampler, Vertical cylinder spore trap, Burkard spore traps. Impingers and Filtration. Advantages and disadvantages of the techniques.

## UNIT-III

No. of Hours: 15

### AQUATIC MICROBIOLOGY

- A. Introduction: Natural waters- atmospheric water, surface water and ground water. Distribution of microorganisms in aquatic environment-Neuston, plankton (Phytoplankton, Zooplankton). Aquatic microorganisms-lakes, ponds, streams, rivers estuaries, and marine plankton. Lotic and benthic population.
- B. Water pollution: Sources, water borne diseases- Viral (jaundice), Bacterial (cholera) and Protozoan (amoebic dysentery). Biological indicator of water pollution.
- C. Determination of sanitary quality of water: SPC, Tests for coliforms, MPN, IMViC reactions and membrane filter.
- D. Water purification in Municipal water supply, Parameters of potable water (According to WHO).

### SEWAGE MICROBIOLOGY

- A. Introduction: Sources of waste water- Domestic, Agricultural and Industrial. Physical, chemical and microbiological characteristics of waste water
- B. Waste water treatment: Single dwelling unit-Septic tank. Municipal waste treatment – Primary (screening, coagulation and sedimentation), Secondary (trickling filter, activated sludge process, oxidation pond), Tertiary (reverse osmosis, ion exchange method and electro-dialysis in brief).
- C. Solid waste recycling- Anaerobic digestion process, Biogas and Composting.

### MICROBIAL BIOREMEDIATION

*In situ* –Intrinsic, engineered and *Ex situ* bioremediation- Solid phase system (composting, composting process), Slurry phase system (aerated lagoons, low shear air lift reactor). Bioremediation of hydrocarbons- use of genetically engineered bacterial strains. Bioremediation of xenobiotics, Microbial leaching.

**UNIT: IV**

**No. of Hours: 15**

**AGRICULTURAL MICROBIOLOGY**

- A.** Introduction – Classification of plant diseases on the basis of spread and severity of infection
- B.** Microbes and Plant diseases - Entry of pathogens into host-prepenetration, penetration, post penetration.
- C.** Microbes in Agriculture: Biofertilizers: Definition and Types. Mass production of Bacterial inoculants (*Rhizobium*, *Azospirillum* & *Cyanobacteria*). Biopesticides: Definition, Types – Bacterial, Viral, Fungal and Protozoan, Mode of action, Microbial herbicides.
- D.** Plant diseases: Study of Symptoms, Etiology, Epidemiology, Management of the following diseases – Bean Mosaic, Sandal spike, Citrus canker, Downy mildew of Bajra, Powdery mildew of mulberry, Rust of sorghum, Blast of paddy, Red rot of sugarcane, Tikka disease of groundnut.

**DSE(A)**  
**V SEMESTER**  
**TITLE: ENVIRONMENTAL MICROBIOLOGY**  
**PRATICALS**

**TOTAL HOURS: 45hrs (3hrs/week)**

**CREDITS: 1**

1. a. Isolation and identification of fungi from soil by serial dilution method.  
b. Isolation and enumeration of bacteria from soil by serial dilution method.
2. Study of AM fungi
3. Isolation of Nitrogen fixing bacteria- *Rhizobium*
4. Study of antagonism between microorganisms
- 5a. Gram's staining of citrus canker specimen  
b. Observation of specimens - Bean mosaic, Sandal spike, Citrus canker, Downy mildew of Bajra, Powdery mildew of mulberry, Rust of sorghum, Blast of paddy, Red rot of Sugarcane, Tikka disease of groundnut.
6. Isolation of airborne microorganisms (Bacteria and Fungi) by Petriplate exposure method.
7. Demonstration of air samplers: equipments / photographs of vertical cylindrical spore trap, Rotorod sampler, Hirst's spore trap, Andersen's sampler, Liquid impingement method (bead bubbler device) and Membrane filter.
8. Microscopic observation of different water samples for biological indicators of water pollution.
9. a. Standard analysis of water sample  
b. Determination of MPN.
10. IMViC reactions.
11. Water quality test by Hydrogen sulphide strip test.
12. Display of photographs of water purification process (Baffles, Flocculator, Clarifier, Sand filter, Back wash, Chlorinometer and Chloroscope).
13. Determination of biological oxygen demand (BOD) of water.
14. a. Estimation of total solids in sewage.  
b. Display of photographs - Septic tank, Trickling filter, Activated sludge process, Oxidation ponds, Sedimentation tank, and anaerobic digester.
15. a. Demonstration of composting  
b. Display of photographs: composting, composting process, aerated lagoons, low shear air lift reactor and microbial leaching.

**NOTE:** Visit to water treatment plant/ sewage treatment plant/ industrial effluent treatment plant/Agricultural research institute. Each student shall submit an independent report on the visit along with the practical record for the internal assessment.

**DME28006/DME28007**

**V SEMESTER**

**DSE-B: AGRICULTURAL MICROBIOLOGY**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 4**

**COURSE OUTCOME:**

After successful completion of the course students are able to:

**CO1.** Know microorganisms in agriculture, plant pathology and control of plant diseases and their significance

**CO2.** Understand the land mark in the field of Agricultural microbiology

**CO3.** Gain knowledge about biofertilizers and biopesticide in agriculture

**CO4.** Know the stages in disease development, epidemiology and host pathogen interaction

**CO5.** Know about principles and practices involved in the management of plant diseases

**UNIT I**

**No. of Hours: 15**

**INTRODUCTION AND HISTORY OF PLANT PATHOLOGY**

**A.** Concept of plant disease- definitions of disease, disease cycle & pathogenicity, symptoms associated with microbial plant diseases, types of plant pathogens, Koch's postulates, economic losses and social impact of plant diseases.

**B.** Significant landmarks in the field of plant pathology- Contributions of Anton DeBary, Millardet, T J Burrill, E. Smith, Adolph Mayer, Dmitri Ivanowski, Diener, Stakman, H.H. Flor, Van Der Plank. Contributions of eminent Indian plant pathologists- E J Butler, B B Mundkar, K V Subbarao and M J Thirumalachar.

**MICROORGANISMS IN AGRICULTURE**

**A.** Biofertilizers: Definition, Types- Nitrogen fixing, Phosphate solubilizing and cellulolytic microbes. Mass production of Bacterial inoculants (*Rhizobium*, *Azospirillum*, *Azotobacter*, *Cyanobacteria*). Mode of application, Advantages and limitations.

**B.** Biopesticides: Definition, Types – Bacterial, Viral, Fungal and Protozoan, Mode of action, Microbial herbicides.

**UNIT:II**

**No. of Hours: 15**

**PHYTOPATHOLOGY**

**A. Stages in development of a disease :** Introduction – Classification of plant diseases on the basis of spread and severity of infection.

Microbes and Plant diseases: Entry of pathogens into host- prepenetration (Infection) penetration, post penetration (invasion, colonization, dissemination of pathogens and perennation).

**B. Plant disease epidemiology:** Concepts of monocyclic, polycyclic and polyetic diseases, disease triangle & disease pyramid, forecasting of plant diseases.

**C. Host Pathogen Interaction**

**a.** Microbial Pathogenicity

Virulence factors of pathogen: Role of Enzymes-pectic enzymes, Toxins: Host specific

(Tabtoxin) and host non-specific (Victorin and T toxin) and growth regulating substance in disease development- Auxins and Gibberellins.

**b. Defense Mechanisms in Plants**

Defence mechanism in plants: Preexisting (fungitoxic exudates and phenolic compounds) Structural (formation of cork layers, abscission layer and tyloses) and Biochemical defense mechanism (simple phenolic compounds), Hypersensitivity (in brief).

**UNIT: III**

**No. of Hours: 15**

**CONTROL OF PLANT DISEASES**

- A.** Principles & practices involved in the management of plant diseases by different methods, viz. regulatory - quarantine, crop certification, avoidance of pathogen, use of pathogen free propagative material : a. Cultural-Host eradication, crop rotation, sanitization, polythene traps and mulches(in brief).
- B.** Chemical- Inorganic chemicals: Copper compounds-Bordeaux mixture and Bordeaux paste, Organic chemicals- Organic sulfur compounds (Dithiocarbamates), Systemic fungicide, Heterocyclic compounds (Benomyl), antibiotics (Agrimycin).
- C.** Physical method-Soil sterilization by heat, soil solarization, hot water treatment of propagative organs and hot air treatment of storage organs (in brief)
- D.** Biological methods- suppressive soils, antagonism, antagonistic plants and trap plants (in brief).
- E.** IDM-Perennial Crop and annual crop (in brief).

**UNIT:IV**

**No. of Hours: 15**

**SPECIFIC PLANT DISEASES**

**Study of some important plant diseases giving emphasis on its etiological agent, symptoms, epidemiology and control**

- A.** Important diseases caused by fungi
  - Late blight of potato - *Phytophthora infestans*
  - Powdery mildew of wheat - *Erysiphe graminis*
  - Ergot of rye - *Claviceps purpurea*
  - Loose smut of wheat - *Ustilago nuda*
  - Wilt of tomato - *Fusarium oxysporum* f.sp. *lycopersici*
  - Red rot of sugarcane - *Colletotrichum falcatum*
  - Blast of rice-*Magnaporthe grisea*
- B.** Important diseases caused by phytopathogenic bacteria: Bacterial leaf blight of rice, Bacterial cankers of citrus
- C.** Important diseases caused by phytoplasmas: Sandal spike
- D.** Important diseases caused by viruses: Papaya ring spot, Bunchy top of banana, Bean mosaic.
- E.** Important diseases caused by viroids: Potato spindle tuber.

**Total marks100: 70(Theory) +30(C1+C2)**

**DME28106/DME28107**

**V SEMESTER**

**DSE-B: AGRICULTURAL MICROBIOLOGY  
PRACTICAL**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 02**

1. Demonstration of Koch's postulates in fungal disease.
- 2-5. Study of important diseases of crop plants by cutting sections of infected plant material -  
Late blight of potato, Powdery mildew of wheat, Ergot of rye, Loose smut of wheat, Wilt of tomato, Red rot of sugarcane, Blast of rice
6. Gram's staining of citrus canker specimen
- 7-8. Mounting of fungal pathogen- *Phytophthora infestans*, *Fusarium*, *Colletotrichum* and *Magnaporthe grisea*.
9. Observation of specimens-Bean mosaic and sandal spike
10. Observation of root nodule formation in plants ( *Trigonella/Crotolaria*)
11. Demonstration of Indole acetic acid (IAA) production by soil fungi
12. Plant disease control by fungicides
13. Chemical determination of IAA produced by soil fungi *in vitro*
14. Isolation of fungal pathogens from soil
15. Isolation of fungal pathogens from diseased parts of plant

**NOTE:** Visit to Agricultural research station. Each student shall submit an independent report on the visit along with the practical record for the internal assessment.

**DMF28006/DMF28007**

**VI SEMESTER**

**DSE-A: INDUSTRIAL, FOOD AND MEDICAL MICROBIOLOGY**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 4**

**COURSE OUTCOME:**

After successful completion of the course students are able to:

- CO1.** Understand food related microorganisms, their contamination, spoilage and preservation
- CO2.** Understand the beneficial role of microorganisms in fermented dairy products
- CO3.** Understand how microbiology is applied in manufacture of industrial products
- CO4.** The underlying principles in downstream processing
- CO5.** Know the human immune response towards microbes, Know the relationship between microorganism and human disease, pathogenicity, Laboratory diagnosis, treatment and prophylaxis
- CO6.** Demonstrate an understanding of key concepts in immunology

**UNIT: I**

**No of Hours: 15**

**INDUSTRIAL MICROBIOLOGY**

- A.** Introduction, Definition and scope
- B.** Microorganisms of industrial importance; Isolation, Screening and Preservation of Industrially important microbes.
- C.** Strain improvement of Microorganisms for industrial purposes.
- D.** A brief account of production medium, inoculum medium, raw materials-Molasses, corn steep liquor, sulphite waste liquor, yeast extract and whey. Buffers, Precursors, Inhibitors and Antifoam agents.
- E.** Fermenters and fermentation process: Design, types and basic function of fermenters, sterilization, devices for aeration and agitation (in brief). Fermentation process – Surface, Submerged and Solid state fermentation. Types- Batch and Continuous fermentation. Downstream processing: Steps in recovery and purification of products – Precipitation, Filtration, Centrifugation, Distillation, Cell disruption, Solvent recovery, Chromatography, Drying and Crystallization (in brief).

**INDUSTRIAL PRODUCTION**

- A. a.** Organic acids – Citric acid.
- b.** Antibiotics – Penicillin.

- c. Enzymes –Pectinase
  - d. Alcohol – Ethanol.
  - e. Amino acid –Glutamic acid.
- B.** Mushroom cultivation – Oyster mushroom (bag method). Nutritional value.
- C.** Role of microorganisms in the production and recovery of minerals and petroleum.
- D.** Single cell protein: *Spirulina*.

## UNIT: II

**No of Hours: 15**

### FOOD MICROBIOLOGY

- A.** Introduction to Food Microbiology: Definition, Concept and Scope. Food as a substrate for microorganisms, Factors influencing microbial growth in foods (intrinsic and extrinsic factors).
- B.** Sources of contamination, Microbial spoilage of foods – fruits, vegetables, meat, poultry, canned foods, cereals and cereal products.
- C.** Methods of food preservation: Physical method – high temperature, low temperature, canning. Drying – solar drying, drum drying, spray drying and Radiation. Chemical methods – chemical preservatives – (propionates, benzoate, sorbates, nitrates and nitrites, sugar and salt)
- D.** Food borne intoxication and infection:  
 Bacterial intoxication - Staphylococcal intoxication and Botulism.  
 Bacterial infection - Salmonellosis.  
 Mycotoxin –Types and importance of toxins with special reference to Aflatoxins.
- E.** Food safety and quality control. –A brief account on HACCP, FSSAI and Food safety and standard act 2006

### DAIRY MICROBIOLOGY

- A.** Introduction to Dairy Microbiology: Source of milk contamination. Types of microorganisms in milk.
- B.** Methods to detect microbial spoilage by SPC, Reductase test.
- C.** Biochemical changes of milk - Souring, Gassy fermentation, Proteolysis, Lipolysis, and Ropiness.
- D.** Fermented dairy products (a brief account of characteristic and therapeutic value). Acidophilus milk, Yoghurt, Butter milk, Srikhand. Types of cheese. Probiotics and their benefits.
- E.** Preservation of milk and milk products – Pasteurization and Sterilization.

## UNIT:III

**No of Hours: 15**

### MEDICAL MICROBIOLOGY

- A.** Introduction – History and development of medical microbiology. Normal microflora of the human body: normal microflora of skin, throat, gastrointestinal tract, urogenital tract
- B.** Infection and disease transmission – Signs, symptoms, syndrome. Types of Infection: opportunistic infection and Nosocomial infection, mode of transmission.

- C. Host pathogen interaction –Pathogenicity, microbial virulence, microbial toxins, Opportunistic and true pathogens.
- D. Antimicrobial chemotherapy – General characteristics and types of antibiotics. Mode of action of -Penicillin, Aminoglycosides, Erythromycin and Chloramphenicol, Antifungal drugs- Griseofulvin and Nystatin. Antiviral drugs-Acyclovir. Multiple Drug Resistance (in brief).

### **HUMAN DISEASES**

- A. Pathogen –Morphology, Cultural and Biochemical characteristics,clinical symptoms, laboratory diagnosis, prophylaxis and treatment of the following diseases:
  - a. Air borne: Influenza, Diphtheria, Blastomycosis
  - b. Direct contact: Warts, Syphilis, Sporotrichosis
  - c. Vector borne: Dengue, Malaria
  - d. Water borne: Typhoid, Amoebic dysentery

### **UNIT IV**

**No. of Hours: 15**

#### **IMMUNOLOGY: IMMUNE CELLS AND ORGANS**

- A. Historical account and introduction to immune system – Blood and Plasma system.
- B. Types of immunity – Innate (non specific) and Adaptive immunity (specific). Humoral and cell mediated immunity.
- C. Structure, Functions and Properties of: Immune Cells –T cell, B cell, Macrophage, Neutrophil, Eosinophil, Basophil, Mast cell, Dendritic cell, Phagocytes and NK cells. Cells and tissues of immune systems-Structure and role of primary lymphoid organs (bone marrow,thymus),secondary lymphoid organs (spleen, lymph nodes and tonsils).

#### **IMMUNOLOGY: ANTIGENS AND ANTIBODIES**

- A. Antigens –Nature and types
- B. Antibodies – Basic structure of immunoglobulin (Ig G). Biological properties of Immunoglobulin classes, monoclonal antibodies, antigen antibody reactions – salient features. Precipitation reaction, neutralization test, opsonisation, agglutination reaction, compliment fixation. Immunotechniques – RIA, ELISA and ELISPOT.
- C. Hypersensitivity (Type I to V - in brief).
- D. Immunoprophylaxis – Vaccine – Types – killed, Live and Attenuated (Bacterial and Viral) and Toxoid with an example each. National Immunization program (Tabular form).

**Total marks100: 70(Theory) +30(C1+C2)**

**DMF28106/DMF28107**

**VI SEMESTER**

**DSE-A: INDUSTRIAL, FOOD AND MEDICAL MICROBIOLOGY  
PRACTICAL**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 02**

**COURSE CODE: DMF28106/28107**

- 1a. Isolation and enumeration of bacteria from utensils
- b. Isolation and identification of fungi from food utensils
- 2a. Isolation and enumeration of bacteria from spoiled vegetables
- b. Isolation and identification fungi from spoiled vegetables.
- 3a. Isolation and enumeration of bacteria from spoiled fruits.
- b. Isolation and identification of fungi from spoiled fruits.
4. Isolation and identification of *Aspergillus* on groundnut by standard blotters Method (ISTA,1982).
5. Estimation of lactic acid in milk.
- 6a. Turbidity test to detect boiled and unboiled milk.
- b. Methylene blue reductase test to determine the quality of milk.
- 7a. Preparation of wine from grapes.
- b. Preparation of alcohol using jaggery or molasses.
- 8a. Estimation of percentage alcohol in a given sample by specific gravity method
- b. Production of citric acid using *Aspergillus niger*
9. Determination of blood group and Rh factor.
- 10a. Enumerate RBC in given blood sample
- b. Enumerate WBC in given blood sample
11. Demonstration of precipitation reaction-Double diffusion in two dimensions (Ouchterlony procedure).
12. Antibiotic sensitivity test.
- 13a. Determination of susceptibility to dental caries-Snydal test
- b. Identification of dermatophytes from human skin.
- 14a. Detection of typhoid by Widal test
- b. Rapid plasma reagin (RPR) card test for syphilis
15. Material/ microscopic observation/ display of photographs of human pathogens as per theory syllabus: Influenza virus, *Corynebacterium diphtheriae*, *Blastomyces dermatitidis*, Human papilloma virus, *Trypanosoma pallidum*, *Sporothrix schenckii*,

*Plasmodium*, Dengue viruses (DENV), *Salmonella typhi* and *Entamoeba histolytica*

**NOTE:** Visit to food industries or food research laboratories, dairy industries, distilleries, pharmaceuticals and pathological laboratories. Each student shall submit an independent report on the visit along with the practical record for the internal assessment.

**DMF28006/DMF28007**

**VI SEMESTER**

**DSE-B: MICROBIAL BIOTECHNOLOGY AND BIOINFORMATICS**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 4**

**COURSE OUTCOME:**

After successful completion of the course students are able to:

**CO1.** Understand microbial biotechnology and its applications

**CO2.** Understand the microbial products and their recovery

**CO3.** Know about the applications of bioinformatics

**CO4.** The underlying principles of bioinformatics and biological databases

**UNIT I**

**MICROBIAL BIOTECHNOLOGY AND ITS APPLICATIONS**

**15 hrs**

**Microbial biotechnology:** Scope and its applications in human therapeutics, agriculture (Biofertilizers, PGPR, Mycorrhizae), environmental, and food technology. Use of prokaryotic and eukaryotic microorganisms in biotechnological applications. Genetically engineered microbes for industrial application: Bacteria and yeast.

**Recombinant microbial production processes in pharmaceutical industries** - Streptokinase, recombinant vaccines (Hepatitis B vaccine). Microbial polysaccharides and polyesters, Microbial production of bio-pesticides, bioplastics Microbial biosensors.

**UNIT II**

**MICROBIAL PRODUCTS AND THEIR RECOVERY**

**15hrs**

**Microbial product purification:** filtration, ion exchange & affinity chromatography techniques Immobilization methods and their application: Whole cell immobilization.

**Microbes for Bio-energy and Environment:** Bio-ethanol and bio-diesel production: commercial production from lignocellulosic waste and algal biomass, Biogas production: Methane and hydrogen production using microbial culture. Microorganisms in bioremediation: Degradation of xenobiotics, mineral recovery, removal of heavy metals from aqueous effluents.

**UNIT III**

**INTRODUCTION TO BIOINFORMATICS**

**15hrs**

**Introduction to Computer Fundamentals:** RDBMS - Definition of relational database Mode of data transfer (FTP, SFTP, SCP), advantage of encrypted data transfer.

**Introduction to Bioinformatics and Biological Databases:** Biological databases - nucleic acid, genome, protein sequence and structure, gene expression databases, Database of

metabolic pathways, Mode of data storage - File formats - FASTA, Genbank and Uniprot, Data submission & retrieval from NCBI, EMBL, DDBJ, Uniprot, PDB.

#### **UNIT IV**

#### **APPLICATIONS OF BIOINFORMATICS**

**15 hrs**

**Sequence Alignments, Phylogeny and Phylogenetic trees:** Local and Global Sequence alignment, pairwise and multiple sequence alignment. Types of phylogenetic trees, Different approaches of phylogenetic tree construction - UPGMA, Neighbour joining, Maximum Parsimony, Maximum likelihood. Genome organization and analysis. Diversity of Genomes: prokaryotic & eukaryotic genomes Genome, transcriptome and proteome.

**Protein Structure Predictions:** Hierarchy of protein structure - primary, secondary and tertiary structures, modeling Structural Classes, Motifs, Folds and Domains. Protein structure prediction in presence and absence of structure template.

**Total marks 100: 70(Theory) +30(C1+C2)**

**DMF28106/DMF28107**

**SEMESTER-VI**

#### **MICROBIAL BIOTECHNOLOGY AND BIOINFORMATICS**

**TOTAL HOURS: 60hrs (4hrs/week)**

**CREDITS: 02**

1. Study yeast cell immobilization in calcium alginate gels
2. Study enzyme immobilization by sodium alginate method
3. Pigment production from fungi (Trichoderma / Aspergillus / Penicillium)
4. Isolation of xylanase or lipase producing bacteria
5. Study of algal Single Cell Proteins
6. Introduction to different operating systems - UNIX, LINUX and Windows
7. Introduction to bioinformatics databases (any three): NCBI/PDB/DDBJ, Uniprot, PDB
8. Sequence retrieval using BLAST
9. Sequence alignment & phylogenetic analysis using clustalW & phylip
10. Picking out a given gene from genomes using Genscan or other softwares (promoter region identification, repeat in genome, ORF prediction). Gene finding tools (Glimmer, GENSCAN), Primer designing, Genscan/Genetool
11. Protein structure prediction: primary structure analysis, secondary structure prediction using psipred, homology modeling using Swissmodel. Molecular visualization using jmol, Protein structure model evaluation (PROCHECK)
12. Prediction of different features of a functional gene

**DMF28206/DMF28207**

**SEMESTER – VI**

**SEC-A: MICROBIAL DIAGNOSIS IN HEALTH CLINICS**

**TOTAL HOURS: 30hrs (2hrs/week)**

**CREDITS: 2**

**COURSE OUTCOME**

After successful completion of the course students are able to:

**CO1.** Gain experience in health clinics such as examination, collection of clinical samples and diagnosis

**CO2.** Demonstrate scientific quantitative skills, the ability to evaluate experimental design, read graphs

**CO3.** Understand and use information from scientific papers/Journals

**UNIT: I**

**No of Hours: 5**

**IMPORTANCE OF DIAGNOSIS OF DISEASES**

Bacterial, viral, fungal and protozoan diseases of various human body systems. Disease associated clinical samples for diagnosis.

**UNIT: II**

**No of Hours: 5**

**COLLECTION OF CLINICAL SAMPLES**

Collection of clinical samples (oral cavity/sputum, throat, skin, blood, CSF, urine and faeces) and handling clinical specimens. Method of transport of clinical samples to laboratory and storage.

**UNIT: III**

**No of Hours: 15**

**DIRECT MICROSCOPIC EXAMINATION AND CULTURE**

Examination of sample by staining - Gram stain, Ziehl-Neelson staining for tuberculosis, Giemsa stained, Thin blood film for malaria, Preparation and use of culture media – Blood agar, Chocolate agar, Lowenstein-Jensen medium, MacConkey agar, Distinct colony properties of various bacterial pathogens.

**Serological and Molecular Methods**

Serological Methods – Agglutination, Precipitation, ELISA and PCR.

Test for Typhoid, Dengue, HIV and Swine flu

Laboratory exposure to students: demonstration of staining.

**UNIT: IV**

**No of Hours: 5**

**TESTING FOR ANTIBIOTIC SENSITIVITY IN BACTERIA**

Importance, Determination of resistance/sensitivity of bacteria using disc diffusion method, Determination of minimal inhibitory concentration (MIC) of an antibiotic by serial dilution method

**Total marks 50: 35(Theory) +15(C1+C2)**

**DMF28206/28207**

**SEMESTER – VI**

**SEC-II: MICROBIOLOGICAL ANALYSIS OF AIR AND WATER**

**TOTAL HOURS: 30hrs (2hrs/week)**

**CREDITS: 2**

**COURSE OUTCOME:**

After successful completion of the course students are able to:

**CO1.** Know about bioaerosols, airsamle collection and analysis

**CO2.**Control measures of air microbes

**CO3.** Know about the water borne diseases and their management

**CO4.**To identify water borne pathogens

**UNIT: I**

**No of Hours: 10**

**AIR MICROBIOLOGY**

Bioaerosols, Air borne microorganisms (bacteria, Viruses, fungi) and their impact on human health and environment, significance in food and pharma industries and operation theatres, allergens

**Air Sample Collection and Analysis**

Bioaerosol sampling, air samplers, methods of analysis, CFU, culture media for bacteria and fungi.

**Control Measures**

Fate of bioaerosols, inactivation mechanisms – UV light, HEPA filters, desiccation and Incineration

**UNIT: II**

**No of Hours: 5**

**WATER MICROBIOLOGY**

Water borne diseases and their management: Cholera, Typhoid, Gastroenteritis and Traveller's diarrhoea.

**UNIT: III**

**No of Hours: 5**

**MICROBIOLOGICAL ANALYSIS OF WATER**

Sample Collection, Treatment and safety of drinking (potable) water, methods to detect potability of water samples: (a) standard qualitative procedure: presumptive/MPN tests, confirmed and completed tests for faecal coliforms (b) Membrane filter technique.

**UNIT: IV**

**No of Hours: 5**

**LABORATORY SAFETY MEASURES**

Precipitation, chemical disinfection, filtration, high temperature, UV light

Laboratory exposure to students: demonstration of air borne and water borne microbes.

**Total marks 50: 35(Theory) +15(C1+C2)**

**PATTERN OF QUESTION PAPER (CBCS)**  
**SUBJECT: MICROBIOLOGY**  
**[THEORY: V SEMESTER (DSE (A/B)) TO VI SEMESTER (DSE(A/B))]**

Time: 3hours

Max marks: 70

I. Answer the following

1X5=05Marks

- 1
- 2
- 3
- 4
- 5

II Answer any five of the following:

3X5=15 Marks

(Seven questions to be given and five to be answered)-short answer type

- 6
- 7
- 8
- 9
- 10
- 11
- 12

III Answer any four of the following:

5X4=20Marks

(Six questions to be given and four to be answered)-short answer type

- 13
- 14
- 15
- 16
- 17
- 18

III Answer any three of the following

10X3=30Marks

(Five questions to be given and three to be answered- essay type questions)

- 19
- 20

21  
22  
23

C1+C2=30(15+15) Continuous assessment

**PATTERN OF QUESTION PAPER (CBCS)**  
**SUBJECT: MICROBIOLOGY (SEI-SEII)**  
**SEC (A) – SEC (B)**  
**(THEORY: VI SEMESTER)**

Time: 2 hours

Max marks: 35

I. Answer the following

1X3=03

1  
2  
3

II Answer any four of the following:

3X4=12

(Six questions to be given and four to be answered)-short answer type

6  
7  
8  
9  
10  
11

III Answer any two of the following:

10X2=20

(Four questions to be given and two to be answered)-short answer type

12  
13  
14  
15

C1+C2=15 Continuous assessment

**DSE-A**  
**III B.Sc.-VSEMESTER**  
**SCHEME OF PRACTICAL EXAMINATION**  
**PRACTICAL V: ENVIRONMENTAL MICROBIOLOGY**

**Time: 3hours**

**Max. marks :35**

- I.** Demonstrate /perform the experiment **A**, giving principle and procedure. Record and interpret the result. 08  
(Demonstration-4marks; principle-2marks; procedure-1marks; results-1marks)  
(Petriplate exposure method/standard analysis of water/ determination of MPN/ Isolation of Bacteria /Fungi from soil by serial dilution method/Antagonism between microorganisms).
- II.** Demonstrate /perform the experiment **B**, giving principle and procedure. Record and interpret the result. (Demonstration-2marks; principle-1mark; procedure & results-2marks) 05  
(Demonstration of BOD of sewage/Estimation of total solids in sewage/IMViC/Hydrogen sulphide strip test).
- III.** Record the source and importance of microorganisms in the material **C** with Identification and label the diagrams. 06  
(Source of the microorganisms and identification-3marks; labelled diagram- 1marks; importance- 2marks).  
(Pond water, agar plates exposed to air, biological indicators of water pollution/*Anabena* in *Azolla* ).
- IV.** Write critical notes on **D, E** and **F** 2x3=06  
(Identification -1mark; critical comments-4marks)  
(Air samplers, Results of standard analysis of water, MPN, IMViC reactions, Hydrogen sulphide strip test, photographs of baffles, flocculator, clarifier, sand filter, back wash, chlorinometer, chloroscope, septic tank, Trickling filter, activated sludge process, oxidation pond, sedimentation tank, anaerobic digester, biogas plant, composting, composting process, aerated lagoons, low shear air lift reactor and microbial leaching/ *Azolla*/ VAM/Rhizosphere microflora/Plant diseases as per theory syllabus).
- VI.** Record+Report  
05+05=10
- 

**DSE-B**  
**III B.Sc.-V SEMESTER**  
**SCHEME OF PRACTICAL EXAMINATION**  
**PRACTICAL V: AGRICULTURAL MICROBIOLOGY**

**Time:3hours**

**Max. marks :35**

- I.** Demonstrate /perform the experiment **A**, giving principle and procedure. Record and Interpret the result. 10  
(Demonstration-5marks; principle-2marks; procedure-2marks; results-1marks). (Isolation of Fungi from soil by serial dilution method/ from diseased parts of plants, chemical determination of IAA/plant disease control by fungicide).
- II.** Prepare a temporary stained slide of **B**. Identify with labeled sketch and reasons. Leave the preparation for evaluation. 09  
(Identification -2mark; preparation-3marks; labeled diagram-2 and reasons-2marks).  
( Plant diseases as per theory syllabus)
- III.** Identify the slides/materials **C, D, E** and **F** with labelled diagrams and reasons 2X3=06

(Identification-1mark; reasons & labeled sketch-1mark).

( Plant diseases as per theory syllabus/ Koch postulates)

IV. Record +Report

05+05=10

### Programme Educational Objectives:

1. Graduates will demonstrate competence in respective domain as they apply skills to conduct scientific research and contribute to quality education.
2. Graduates will be recognized as experts in educational and research institutes as well as industries in identifying and solving global challenges.
3. Graduates will become leading researchers and professors who create and disseminate new knowledge in scientific and allied fields.

### Graduate Attributes and Programme Outcomes:

Exit with:	Credits Required
<b>Certificate</b> upon the Successful Completion of the First Year (Two Semesters) of the multidisciplinary Four-year Undergraduate Programme/Five-year Integrated Master's Degree Programme	44 - 48

1. **Discipline Knowledge:** Knowledge of science and ability to apply to relevant areas.
2. **Problem solving:** Execute a solution process using first principles of science to solve problems related to respective discipline.
3. **Modern tool usage:** Use a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.
4. **Ethics:** Apply the professional ethics and norms in respective discipline.
5. **Individual and teamwork:** Work effectively as an individual as a team member in a multidisciplinary team.
6. **Communication:** Communicate effectively with the stake holders, and give and receive clear instructions.

Exit with:	Credits Required
<b>A Diploma</b> upon the Successful Completion of the Second Year (Four Semesters) of the multidisciplinary Four-year Undergraduate Programme/Five-year Integrated Master's Degree Programme	88 - 96

**Discipline Knowledge:** Knowledge of science and ability to apply to relevant areas.

1. **Conduct investigations:** Conduct investigations of technical issues as per their level of understanding and knowledge.
2. **Problem solving:** Formulate and implement a solution process using first principles of science to solve problems related to respective discipline.
3. **Modern tool usage:** Apply a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.
4. **Ethics:** Apply and commit to the professional ethics and norms in respective profession.
5. **Individual and teamwork:** Work effectively as an individual in a multidisciplinary team.
6. **Communication:** Communicate effectively with the stake holders, and give and receive clear instructions.

Exit with:	Credits Required
<b>Basic Bachelor Degree</b> at the Successful Completion of the Third Year (Six Semesters) of the multidisciplinary Four- year Undergraduate Programme/Five-year Integrated Master's Degree Programme	132 - 144

1. **Discipline Knowledge:** Knowledge of basics of science and ability to apply the understanding of fundamentals of major discipline in solving complex problems.
2. **Conduct investigations:** Conduct investigations of issues in their respective disciplines and arrive at valid conclusions.
3. **Problem solving:** Implement a solution process using first principles of science to solve problems related to respective discipline.
4. **Modern tool usage:** Select and use a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.
5. **Environment and Society:** Evaluate the impact of scientific solutions on society and environment and the need for sustainable solutions.
6. **Ethics:** Demonstrate professional ethics, responsibilities and norms in respective profession.
7. **Individual and teamwork:** Work effectively as an individual as a team member and as a leader in a multidisciplinary team.
8. **Communication:** Communicate effectively with the stake holders, write and comprehend project reports and documentation, deliver effective presentations, and give and receive clear instructions.
9. **Project Management and Finance:** Apply the knowledge of scientific and technological principles to one's own work to manage projects in multidisciplinary settings.
10. **Lifelong Learning:** Engage in lifelong learning in the context of changing trends in respective discipline.

Exit with:	Credits Required
<b>Bachelor Degree with Honours</b> in a Discipline at the Successful Completion of the Fourth Years (Eight Semesters) of the multidisciplinary Four-year Undergraduate Programme/Five-year Integrated Master's Degree Programme	176 - 192

1. **Discipline Knowledge:** Knowledge of basics of science and research, and ability to apply the understanding of fundamentals of specialized discipline in solving complex scientific problems.
2. **Conduct investigations:** Conduct investigations of issues using research methods and research-based discipline knowledge including design of experiments, data collection, interpretation and analysis to arrive at valid conclusions.
3. **Problem analysis:** Identify, formulate and analyse complex scientific problems using first principles of respective discipline.
4. **Design and Development of solutions:** Design solutions for complex scientific problems and execute them by considering the environmental, societal and public safety aspects appropriately.

5. **Modern tool usage:** Identify, select and use a modern scientific, engineering and IT tool or technique for modelling, prediction, data analysis and solving problems in the areas of their discipline.
6. **Environment and Society:** Evaluate the impact of scientific solutions on society and environment and design sustainable solutions.
7. **Ethics:** Demonstrate professional ethics, responsibilities and norms in respective profession.
8. **Individual and teamwork:** Work effectively as an individual as a team member and as a leader in a multidisciplinary team.
9. **Communication:** Communicate effectively with the stakeholders with emphasis on communicating with scientific community, comprehend scientific reports, write research papers and projects proposals and reports, deliver effective presentations, and give and receive clear instructions.
10. **Project Management and Finance:** Apply the knowledge of scientific and technological principles to one's own work to manage projects in multidisciplinary settings.
11. **Lifelong Learning:** Identify knowledge gaps and engage in lifelong learning in the context of changing trends in respective discipline.

## Options for Study

- The programmes are flexible enough to allow liberty to students in designing them according to their requirements. Students may choose a single Major, one Major with a Minor, and one Major with two Minors. Teacher Education or Vocational courses may be chosen in place of Minor/s. Below listed are the various options students may choose from.
- One Major subject/discipline, Two Languages, Generic Electives, Ability Enhancement, Skill Development and Vocational courses including Extracurricular Activities.
- One Major and one Minor subject/discipline along with Languages, Generic Electives, Ability Enhancement, Skill Development and Vocational courses including Extracurricular Activities
- Two Major subject/disciplines along with Languages, Generic Electives, Ability Enhancement, Skill Development and Vocational courses, including Extracurricular Activities (subject to fulfilling the requirements as stated in 3.i and 3.ii)
- One Major subject/discipline and one Vocational course along with Languages, Generic Electives, Ability Enhancement and Skill Development and courses including Extracurricular Activities.
- One Major Discipline and One Education Discipline along with Languages, Generic Electives, Ability Enhancement and Skill Development Courses including Extracurricular Activities.

**Proposed Curriculum Framework for Multidisciplinary Four- year  
Undergraduate Programme**

Year	Objective	Nature of Courses	Outcome	No. of courses
<b>1<sup>st</sup> year – (1 &amp; 2 Semesters)</b>	Understanding and Exploration	1. Major Core Courses	Understanding of Disciplines	1+1
		2. Minor/Related Discipline	Language Competency	1+1
		3. Languages,	Gaining perspective of context/Generic skills	2+2
		4. Ability Enhancement Compulsory Courses	Basic skills sets to pursue any vocation	1+1
		5. Skill Enhancement/ Development Courses		1+1
<b>Exit option with Certification</b>				
<b>2<sup>nd</sup> Year - (3 &amp; 4 Semesters)</b>	Focus and Immersion	1. Major Core Courses	Understanding of disciplines	2+2
		2. Minor/ Related Discipline	Gaining perspective of context	1+1
		3. Ability Enhancement	Skill sets to pursue vocation	1+1
		4. Skill based Vocational	Development of various Domains of mind & Personality	1+1
		5. Extra-Curricular Activities		1+1
<b>Exit Option with Diploma</b>				
<b>3<sup>rd</sup> Year - (5 &amp; 6 Semesters )</b>	Real time Learning	1. Major Discipline Core and Elective Courses	In depth learning of major and minor disciplines, Skill sets for employability.	2+2
		2. Minor Discipline/ Generic or Vocational Electives /Field based Learning/ Res. Project	Exposure to discipline beyond the chosen Subject	1+1
			Experiential learning/ Res.	1+1
<b>Exit option with Bachelor Degree</b>				
<b>4<sup>th</sup> Year - (7 &amp; 8 Semesters)</b>	Deeper Concentration	Major Discipline Core and Elective courses	Deeper and Advanced Learning of Major Discipline Foundation to pursue Doctoral Studies & Developing Research competencies	4+4
		Research/Project Work with Dissertation		
<b>Bachelor Degree with Honours</b>				
5 <sup>th</sup> Year - (9 <sup>th</sup> & 10 <sup>th</sup> Semesters)	Master of the subject	Major Discipline Core and Elective courses/Research/Project Work with Dissertation	Deeper and Advanced Learning of the Major Discipline towards gaining proficiency over the subject	4+4/6+6
Master's Degree				

## MODEL FOUND APPROPRIATE AND ADOPTED

### IIA. Model Program Structures for the Under-Graduate Programs

Bachelor of Science (Basic/Hons.) in subjects with practical, with one major and one minor Sem.		Discipline Core (DSC) (Credits) (L+T+P)	Discipline Elective(DSE) / Open Elective (OE) (Credits) (L+T+P)	Ability Enhancement Compulsory Courses (AECC), Languages (Credits) (L+T+P)	Skill Enhancement Courses (SEC)		Total Credits
<b>Skill based (Credits) (L+T+P)</b>				<b>Value based (Credits) (L+T+P)</b>			
I	Discipline A1(4+2) Discipline B1(4+2)	OE-1 (3)	L1-1(3), L2-1(3) (4 hrs each)	SEC-1: Digital Fluency (2) (1+0+2)	Physical Education for fitness(1)(0+0+2)	Health & Wellness (1) (0+0+2)	25
II	Discipline A2(4+2) Discipline B2(4+2)	OE-2 (3)	L1-2(3), L2-2(3) (4 hrs each)	Environmental Studies (2)	Physical Education - Yoga(1) (0+0+2)	NCC/NSS/R&R(S&G)/Cultural (1) (0+0+2)	25
<b>Exit option with Certificate (50 credits)</b>							
III	Discipline A3(4+2) Discipline B3(4+2)	OE-3 (3)	L1-3(3), L2-3(3) (4 hrs each)	SEC-2: Artificial Intelligence (2)(1+0+2)	Physical Education- Sports skills(1)(0+0+2)	NCC/NSS/R&R(S&G)/Cultural (1) (0+0+2)	25
IV	Discipline A4(4+2) Discipline B4(4+2)	OE-4 (3)	L1-4(3), L2-4(3) (4 hrs each)	Constitution of India (2)	Physical Education -Games (1) (0+0+2)	NCC/NSS/R&R(S&G)/Cultural (1) (0+0+2)	25
<b>Exit option with Diploma (100 credits) OR Choose any one of the core subjects as Major and the other as Minor</b>							
V	Discipline A5(3+2) Discipline A6(3+2) Discipline B5(3+2)		Vocational-1 (3)		SEC-3: SEC such as Cyber Security (2) (1+0+2)		20
VI	Discipline A7(3+2) Discipline A8(3+2) Discipline B6(3+2)		Vocational-2 (3) Internship (2)		SEC-4: Professional Communication (2)		22
<b>Exit option with Bachelor of Arts, B.A./ Bachelor of Science, B.Sc. Basic Degree (142 credits) or continue studies with the Major</b>							
VII	Discipline A9(3+2) Discipline A10(3+2) Discipline A11(3)	Discipline A, E-1 (3) Discipline A, E-2 (3) Res.Methodology (3)					22
VIII	Discipline A12(3+2) Discipline A13(3) Discipline A14(3)	Discipline A, E-3(3) Research Project (6)*					20
<b>Award of Bachelor of Arts Honours, B.A. (Hons.)/ Bachelor of Science Honours, B.Sc. (Hons) degree in a discipline (184 credits)</b>							

## Curriculum Structure-Physics(Core and Electives)

### Semesters- I to X

SEM	DSC	Core Papers
<b>Sem-1 :</b>	A1	Mechanics & Properties of Matter
<b>Sem -2 :</b>	A2	Electricity and Magnetism
<b>Sem-3 :</b>	A3	Wave motion and optics
<b>Sem-4:</b>	A4	Thermal Physics & Electronics
<b>Sem-5 :</b>	A5 A6	1. Classical Mechanics and Quantum Mechanics- I 2. Elements of Atomic, Molecular Physics
<b>Sem -6 :</b>	A7 A8	1. Elements of Nuclear Physics and Nuclear Instruments 2. Elements of Condensed Matter Physics
<b>Sem-7</b>	A9 A10 A11	1. Mathematical Methods of Physics – I 2. Classical Electrodynamics. 3. Experimental methods of Physics 4. Research Methodology <i>(Select Two DSE subjects from the Pool B-I shown below)</i>
<b>Sem-8</b>	A12 A13 A14	1. Classical Mechanics and Quantum Mechanics-II 2. Statistical Mechanics 3. Astrophysics & Astronomy 4. Research Project* <i>(Select Two DSE subjects from the Pool B-II shown below)</i> *In lieu of the research Project, two additional elective papers/ Internship may be offered.
<b>Sem-9</b>	A15	1. Mathematical Methods of Physics – II <i>(Select One DSE subjects from the Pool B-III shown below)</i> 2. Research Project
<b>Sem-10</b>	A17	1. Quantum Mechanics – III <i>(Select One DSE subjects from the Pool B-IV shown below)</i> 2. Research Project

\* The Topics of 5<sup>th</sup> Sem and above need to be revisited

### Open Electives for 1<sup>st</sup> to 4<sup>th</sup> Semesters

Sl.No.	1 to 4 Semester
1.	Energy Sources
2.	Climate Science
3.	Astronomy
4.	Medical Physics
5.	Optical Instruments
6.	Sports Science
7.	Nanotechnology
8.	Electrical Instruments
9.	Electronic Instruments
10.	Physics for all
11.	Space Missions

### Discipline Specific Electives for 7<sup>th</sup> to 10<sup>th</sup> Semesters

7 <sup>th</sup> Sem Electives Pool B-I (Select any two)		8 <sup>th</sup> Sem Electives Pool B-II (Select any two)	
A.	Condensed Matter Physics-1	A.	Atomic & Molecular Physics-1
B.	Nuclear and Particle Physics	B.	Materials Physics & Nano materials
C.	Theoretical and Computational Physics-I	C.	Lasers and non-linear optics
D.	Biophysics	D.	Plasma Physics
E.	Astronomy and Astrophysics	E.	Physics of Semiconductor devices

9 <sup>th</sup> Sem Electives (Specialization papers) Pool B-III		10 <sup>th</sup> Sem Electives (Specialization papers) Pool B-IV	
A.	Condensed Matter Physics-2	A.	Condensed Matter Physics-3
B.	Nuclear and Particle Physics-2	B.	Nuclear and Particle Physics-3
C.	Atomic & Molecular spectroscopy-1	C.	Atomic & Molecular spectroscopy-2
D.	Materials Physics & Nanophysics –1	D.	Materials Physics & Nanophysics -2
E.	Theoretical and Computational Physics-I	E.	Theoretical and Computational Physics-2
F.	Astronomy and Astrophysics-1	F.	Astronomy and Astrophysics-2

## Detailed Syllabus for Semesters I & II B.Sc., Physics

### Detailed Syllabus for Semesters I & II

Semester	SEM I (2024)		SEM II (2024)	
	1001	1002	1003	1004
<b>Prerequisites</b>	<ul style="list-style-type: none"> <li>1. Introductory Physics (1001)</li> <li>2. Introductory Chemistry (1002)</li> <li>3. Introductory Mathematics (1003)</li> </ul>			
<b>Course Objectives</b>	<ul style="list-style-type: none"> <li>1. Understand the fundamental concepts of physics and their applications.</li> <li>2. Develop problem-solving skills in physics.</li> <li>3. Gain a deep understanding of the physical world and its laws.</li> </ul>			
<b>Course Content</b>	<ul style="list-style-type: none"> <li>1. Kinematics: Displacement, Velocity, Acceleration, Equations of Motion.</li> <li>2. Dynamics: Newton's Laws of Motion, Free Body Diagrams, Friction, Work, Energy, Power.</li> <li>3. Rotational Motion: Angular Displacement, Angular Velocity, Angular Acceleration, Torque, Angular Momentum.</li> <li>4. Gravitation: Universal Gravitation, Gravitational Field, Gravitational Potential, Escape Velocity, Satellites.</li> <li>5. Oscillations: Simple Harmonic Motion, Pendulum, Spring-Mass System, Damped Oscillations, Resonance.</li> <li>6. Waves: Transverse and Longitudinal Waves, Wave Equation, Interference, Diffraction, Polarization.</li> <li>7. Optics: Ray Optics, Reflection, Refraction, Total Internal Reflection, Dispersion, Lenses, Mirrors, Optical Instruments.</li> <li>8. Modern Physics: Photoelectric Effect, Compton Effect, Matter Waves, De Broglie Wavelength, Bohr's Model of the Atom, Atomic Spectra, Radioactivity, Nuclear Energy.</li> </ul>			
<b>Assessment</b>	<ul style="list-style-type: none"> <li>1. Mid-Semester Examinations (20%)</li> <li>2. End-Semester Examination (80%)</li> </ul>			

# I Semester

## Detailed Syllabus of I Semester Physics

### Mechanics and Properties of Matter

Course Title: Mechanics and Properties of Matter	Course Credits:4
Total Contact Hours: 52	Duration of ESA: 3 hours
Formative Assessment Marks: 40	Summative Assessment Marks: 60
Model Syllabus Authors: Physics Expert Committee	

### Programme Outcomes (POs)

**PO-1:** Discipline Knowledge: Knowledge of science and ability to apply to relevant areas.

**PO-2:** Problem solving: Execute a solution process using first principles of science to solve problems related to respective discipline.

**PO-3:** Modern tool usage: Use a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.

**PO-4:** Ethics: Apply the professional ethics and norms in respective discipline.

**PO-5:** Individual and teamwork: Work effectively as an individual as a team member in a multidisciplinary team.

**PO-6:** Communication: Communicate effectively with the stake holders, and give and receive clear instructions.

### Course Articulation Matrix:

#### Mapping of Course Outcomes (COs) with Program Outcomes (POs)

#### Program Outcomes (POs)

Course Outcomes (COs) (UGC guidelines)	1	2	3	4	5	6
CO-1: Will learn fixing units, tabulation of observations, analysis of data (graphical/analytical)	x	x				x
CO-2: Will learn about accuracy of measurement and sources of errors, importance of significant figures.	x	x				
CO-3: Will know how g can be determined experimentally and derive satisfaction.	x					

CO-4: Will see the difference between simple and torsional pendulum and their use in the determination of various physical parameters.	X			X	X	X
CO-5: Will come to know how various elastic moduli can be determined.	X				X	X
CO-6: Will measure surface tension and viscosity and appreciate the methods adopted.	X	X				
CO-7: Will get hands on experience of different equipment.	X	X	X		X	X

Course Articulation Matrix relates course outcomes of course with the corresponding program outcomes whose attainment is attempted in this course are Marked 'X' in the intersection cell if a course outcome addresses a particular program outcome.

<b>Mechanics &amp; Properties of Matter</b>		Hrs
<b>Credit : 4+2</b>		<b>Unit – 1</b>
<b>Theory : 4 hours /Week</b>		
<b>Chapter No. 1</b>	<b>Topics</b> to be covered/taught/learnt: <b>Units and measurements:</b> System of units (CGS and SI), measurement of length, mass and time, dimensions of physical quantities, dimensional formulae. Minimum deviation, errors.	(13)
<b>Chapter No. 2</b>	<b>Momentum and Energy:</b> Work and energy, Conservation of momentum (linear). Conservation of energy with examples. Motion of rockets.	
<b>Chapter No. 3</b>	<b>Special Theory of Relativity:</b> Constancy of speed of light. Postulates of Special Theory of Relativity. Length contraction. Time dilation. Relativistic addition of velocities.	
<b>Topics for self study( If any)</b>	<b>Self Study</b> Chapter.4 Laws of Motion: Newton’s Laws of motion. Dynamics of single and a system of particles. Centre of mass. Ref: 1-4,9,10	
<b>Suggested Activities</b>		
<b>Activity No. 1</b>	1. i). Students can measure diameters of small balls of different size and estimate their volumes. 2. ii). Students can measure lengths of nails of different size. iii). Students can measure volume of a liquid iv). Students can measure distances and put the result both in CGS and SI units in 2, 3 and 4 significant figures. Ask them to mention the precession of the measurement. v). students can estimate standard deviations wherever possible.	
<b>Activity No. 2</b>	Students can try and understand conservation of energy in every day examples. For example: i) What happens in solar conservation panels ii) Pushing an object on the table it moves iii) Moving car hits a parked car causes parked car to move. In these cases, energy is conserved. How? Understand and verify if possible.	
<b>Unit – 2</b>		
<b>Chapter No. 4.</b>	<b>Laws of Motion:</b> Newton’s Laws of motion. Dynamics of single and a system of particles. Centre of mass.	(13)
<b>Chapter No. 5.</b>	<b>Dynamics of Rigid bodies:</b> Rotational motion about an axis, Relation between torque and angular momentum, Rotational energy. moment of inertia: M I of a rectangular Lamina and solid cylinders. Flywheel, Theory of compound pendulum and determination of g.	
<b>Chapter No. 6.</b>	<b>Gravitation:</b> Law of Gravitation. Motion of a particle in a central force field (motion is in a plane, angular momentum is conserved, areal velocity is constant). Kepler’s laws (statements). Satellite in a circular orbit.	

<b>Topics for self study( If any)</b>	<b>Chapter 7:</b> Geosynchronous orbits. Basic idea of global positioning system (GPS). Ref: 1-4,9,10	
	<b>Suggested Activities</b>	
<b>Activity No. 3</b>	<p>Activity: Moment of inertia is an abstract concept. It simply gives a measure of rotational inertia of a rigid body and it is proportional to the product of the square of radius, r of the body and its mass, m. Students by referring to websites, can construct and perform simple experiments to verify that <math>MI \propto mr^2</math>.</p> <p>Reference : <a href="http://www.khanacademy.org">www.khanacademy.org</a>, <a href="http://www.pinterest.com">www.pinterest.com</a>, <a href="http://www.serc.cerleton.edu">www.serc.cerleton.edu</a></p>	
<b>Activity No. 4</b>	<p>Activity: Prepare suitable charts and give seminar talks in the class.</p>	

### Unit - 3

<b>Chapter No. 8</b>	<p><b>Elasticity:</b> Hooke's law - Stress-strain diagram, elastic moduli-relation between elastic constants, Poisson's Ratio-expression for Poisson's ratio in terms of elastic constants. Work done in stretching and work done in twisting a wire-Twisting couple on a cylinder. Torsional pendulum-Determination of rigidity modulus and moment of inertia - <math>q</math>, <math>\eta</math> and <math>\sigma</math> by Searle's method</p>	(13)
	<b>Suggested Activities</b>	
<b>Activity No. 5</b>	<p><b>Activity:</b> Arrange a steel spring with its top fixed with a rigid support on a wall and a meter scale along side. Add 100 g load at a time on the bottom of the hanger in steps. This means that while putting each 100g load, we are increasing the stretching force by 1N. Measure the extension for loads up to 500g. Plot a graph of extension versus load. Shape of the graph should be a straight line indicating that the ratio of load to extension is constant. Go for higher loads and find out elastic limit of the material.</p>	
<b>Activity No.6</b>	<p><b>Activity:</b> Repeat the above experiment with rubber and other materials and find out what happens after exceeding elastic limit. Plot and interpret.</p>	

<b>Unit - 4</b>		
<b>Chapter No. 9</b>	<b>Surface tension:</b> Definition of surface tension. Surface energy, relation between surface tension and surface energy, pressure difference across curved surface example, excess pressure inside spherical liquid drop, angle of contact.	(13)
<b>Chapter No. 11</b>	<b>Viscosity:</b> Streamline flow, turbulent flow, equation of continuity, determination of coefficient of viscosity by Poissulle’s method, Stoke’s method. Problems.	
<b>Topics for self study( If any)</b>	Capillarity determination of surface tension by drop weight method. Ref: 6,7,9,10	
<b>Suggested Activities</b>		
<b>Activity No.7</b>	<p>1. Measure surface tension of water and other common liquids and compare and learn</p> <p>i) Why water has high ST? think of reasons.</p> <p>ii) Check whether ST is a function of temperature? You can do it by heating the water to different temperatures and measure ST.</p> <p>iii) Plot ST versus T and learn how it behaves.</p> <p>Mix some quantity of kerosene or any oil to water and measure ST. Check whether ST for the mixture is more or less than pure water. List the reasons.</p>	
<b>Activity No. 8</b>	<p>Activity:</p> <p>2. Collect a set of different liquids and measure their viscosity.</p> <p>i) Find out whether sticky or non-sticky liquids are most viscous. List the reasons.</p> <p>ii) Mix non sticky liquid to the sticky liquid in defined quantities and measure viscosity. Find out viscosity is increasing or decreasing with increase of non-sticky liquid concentration.</p> <p>iii) Do the above experiment by mixing sticky liquid to the non sticky liquid. Find out change in viscosity with increase of concentration of sticky liquid.</p> <p>List the applications where concept of Viscosity plays a dominant role</p>	

#### Text Books:

Sl No	Title of the Book	Authors Name	Publisher	Year of Publication
1	Mechanics by, New Eition	D. S. Mathur	S.Chand & Co.	2000
2	Mechancis and Relativity by 3 <sup>rd</sup> Edition,	Vidwan Singh Soni,	PHI Learning Pvt. Ltd.	
3	Mechanics Berkeley Physics Course, Vol.1:	Charles Kittel, <i>et.al.</i>	Tata McGraw-Hill	2007
4	Properties of Matter	Brijlal & Subramanyam.		

## References Books

1	Physics. 9 <sup>th</sup> Edn,	Resnick, Halliday & Walter,	Wiley	2010
2	Physics Vol-I	Halliday and Resnick,		

### List of Experiments to be performed in the Laboratory:

1.	Determination of g using bar pendulum (L versus T and L versus $LT^2$ graphs).
2.	Determination of moment of inertia of a Fly Wheel.
3.	Determination of rigidity modulus using torsional pendulum.
4.	Modulus of rigidity of a rod – Static torsion method.
5.	Determination of elastic constants of a wire by Searle's method.
6.	Young's modulus by Koenig's method.
7.	Viscosity by Stoke's method.
8.	Verification of Hook's law.
9.	Determination of surface tension of a liquid and the interfacial tension between two liquids using drop weight method.
10.	Study of motion of a spring and to calculate Spring constant, g and unknown mass.
11.	Determination of Young's modulus of a bar by the single cantilever method.
12.	Determination of Young's modulus of a bar by uniform bending method.
13.	Radius of capillary tube by mercury pellet method.
14	Verification of parallel and perpendicular axis theorems.

(Minimum EIGHT experiments have to be carried out)

# Detailed Syllabus of II Semester Physics

## Electricity & Magnetism

Course Title: Electricity and Magnetism	Course Credits: 4
Total Contact Hours: 52	Duration of ESA: 3 hours
Formative Assessment Marks: 40	Summative Assessment Marks: 60
Model Syllabus Authors:	Physics Expert Committee

### Programme Outcomes

1. Discipline Knowledge: Knowledge of science and ability to apply to relevant areas.
2. Problem solving: Execute a solution process using first principles of science to solve problems related to respective discipline.
3. Modern tool usage: Use a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.
4. Ethics: Apply the professional ethics and norms in respective discipline.
5. Individual and teamwork: Work effectively as an individual as a team member in a multidisciplinary team.
6. Communication: Communicate effectively with the stake holders, and give and receive clear instructions.

### Course Articulation Matrix: Mapping of Course Outcomes (COs) with Program Outcomes (POs)

#### Program Outcomes (POs)

Course Outcomes (COs)	1	2	3	4	5	6
i. Demonstrate Gauss law, Coulomb's law for the electric field, and apply it to systems of point charges as well as line, surface, and volume distributions of charges.	x	x				
ii. Explain and differentiate the vector (electric fields, Coulomb's law) and scalar (electric potential, electric potential energy) formalisms of electrostatics.	x					
iii. Apply Gauss's law of electrostatics to solve a variety of problems.	x	x			x	
iv. Describe the magnetic field produced by magnetic dipoles and electric currents.	x					

v. Explain Faraday-Lenz and Maxwell laws to articulate the relationship between electric and magnetic fields.	x					
vi. Describe how magnetism is produced and list examples where its effects are observed.	x				x	x
vii. Apply Kirchhoff's rules to analyze AC circuits consisting of parallel and/or series combinations of voltage sources and resistors and to describe the graphical relationship of resistance, capacitor and inductor.	x	x			x	x
viii. Apply various network theorems such as Superposition, Thevenin, Norton, Reciprocity, • Maximum Power Transfer, etc. and their applications in electronics, electrical circuit analysis, and electrical machines.	x	x			x	x

Course Articulation Matrix relates course outcomes of course with the corresponding program outcomes whose attainment is attempted in this course. Mark 'X' in the intersection cell if a course outcome addresses a particular program outcome.

<b>Electricity &amp; Magnetism</b>		<b>Hrs</b>
<b>Unit – 1</b>		
<b>Chapter No. 1</b>	<b>Topics to be covered/taught/learnt:</b> Electric charge and field Coulomb's law, electric field strength, electric field lines, point charge in an electric field and electric dipole, work done by a charge (derivation of the expression for potential energy)	3
<b>Chapter No. 2</b>	<b>Topics to be Covered</b> Gauss's law and its applications (electric fields of a (i) spherical charge distribution, (ii) line charge and (iii) an infinite flat sheet of charge).	3
<b>Chapter No. 3</b>	<b>Topics to be Covered</b> Electric potential, line integral, gradient of a scalar function, relation between field and potential. Potential due to point charge and distribution of charges (Examples: potential associated with a spherical charge distribution, infinite line charge distribution, infinite plane sheet of charges). Constant potential surfaces, Potential due to a dipole and electric quadrupole.	7
<b>Topics for self study( If any)</b>	<i>Constant potential surfaces - for self learning</i> <i>Work out problems listed in the reference</i>	
<b>Suggested Activities</b>		

<b>Activity No. 1</b>	<ol style="list-style-type: none"> <li>Learn the difference between and DC and AC electricity and their characteristics. Voltage and line frequency standards in different countries.</li> <li>A small project report on production of electricity as a source of energy: Different methods</li> </ol>	
<b>Activity No. 2</b>	<ol style="list-style-type: none"> <li>Learn to use a multimeter (analog and digital) to measure voltage, current and resistance. Continuity testing of a wire.</li> <li>Learn about household electrical connection terminals: Live, neutral and ground and voltage between the terminals. Role of earthing and safety measures</li> </ol>	
<b>Unit – 2</b>		
<b>Chapter No. 4.</b>	<b>Topics to be covered</b> Conductors in electrostatic field Conductors and insulators, conductors in electric field. Capacitance and capacitors, calculating capacitance in a parallel plate capacitor, parallel plate capacitor with dielectric, dielectrics: an atomic view. Energy stored in a capacitor, Dielectric and Gauss's law.	6
<b>Chapter No. 5.</b>	<b>Topics to be covered</b> Electric currents and current density. Electrical conductivity and Ohm's law. Physics of electrical conduction, conduction in metals and semiconductors, circuits and circuit elements: Variable currents in capacitor circuits, Resistor, inductor and capacitor and their combination. force on a moving charge.	7
<b>Topics for self study( If any)</b>	<i>Currents and voltage in combination of R, L and C circuits</i>	
<b>Suggested Activities</b>		
<b>Activity No. 3</b>	<ol style="list-style-type: none"> <li>Learn about electrical appliances which work with AC and DC electricity</li> <li>Learn about types of resistors and their colour codes and types of capacitors(electrolytic and non-electrolytic)</li> </ol>	
<b>Activity No. 4</b>	<ol style="list-style-type: none"> <li>Learn about power transmission: 3-phase electricity, voltage and phase</li> <li>Visit a nearby electrical power station. Interact with line men, Electrical engineers and managers. Discuss about power loss in transmission. How to reduce it?</li> <li>Prepare a small project report on street lighting and types of electrical bulbs.</li> </ol>	

### Unit – 3

<b>Chapter No.6</b>	<b>Topics to be covered</b> Magnetism Definition of magnetic field, Ampere’s law and Biot-Savart law (magnetic force and magnetic flux), Magnetic force on a current carrying conductor, Hall effect. Electromagnetic induction, conducting rod moving in a magnetic field, law of induction and mutual inductance, self inductance and energy stored in a magnetic field.	7
<b>Chapter No. 7</b>	<b>Topics to be covered</b> Alternating current circuits: Resonant circuit, alternating current, quality factor, RL, RC, LC, LCR circuits, admittance and impedance, power and energy in AC circuits.	6
<b>Topics for self study( If any)</b>	Hall Effect	
<b>Suggested Activities</b>		
<b>Activity No. 5</b>	<b>Activity:</b> 1. Prepare a small project report on street lighting and types of electrical bulbs. 2. Learn the measurement of electric current using tangent galvanometer.	
<b>Activity No.6</b>	<b>Activity:</b> Build a small coil with insulated copper wire. Connect an ammeter micro/milli ammeter. Verify magnetic induction using a powerful bar magnet.	
<b>Unit - 4</b>		
<b>Chapter No. 8</b>	Electromagnetic waves: Equation of continuity, Maxwell’s equations, displacement current, electromagnetic wave, energy transported by electromagnetic waves. Electromagnetic waves in different frames of reference, Field of a current loop, magnetic moment, Electric current in atoms, electron spin and magnetic moment, magnetization and magnetic susceptibility.	8
<b>Chapter No. 9</b>	<b>Topics to be covered:</b> Types of magnetic materials: diamagnetic, paramagnetic and ferromagnetic materials. B-H hysteresis curves.	5
<b>Topics for self study( If any)</b>	<i>B-H curves and its characteristics</i> <i>Ferrites</i>	

	<b>Suggested Activities</b>	
<b>Activity No.7</b>	<b>Activity:</b> <ol style="list-style-type: none"> <li>1. Prepare a small project report on production of magnetic field: Permanent magnets, electromagnets and superconducting magnets.</li> <li>2. Learn the principle of working of a Gauss meter to measure magnetic field</li> </ol>	
<b>Activity No. 8</b>	<b>Activity:</b> <ol style="list-style-type: none"> <li>1. Model the earth's magnetic field with a diagram. Explain the effect of tilt of the earth's axis and reasons for the change in the tilt of the earth's axis over thousands of years.</li> </ol>

1	Physics-Part-II,	David Halliday and Robert Resnick	Wiley Eastern Limited	2001
2	Berkeley Physics Course, Vol-2, Electricity and Magnetism, Special Edition	Edward M Purcell	Tata Mc Graw-Hill Publishing Company Ltd, New Delhi	2008

### List of Experiments to be performed in the Laboratory

1.	Experiments on tracing of electric and magnetic flux lines for standard configuration.
2.	Determination of components of earth's magnetic field using a Ballistic galvanometer.
3.	Determination of capacitance of a condenser using B.G.
4.	Determination of high resistance by leakage using B.G.
5.	Determination of mutual inductance using BG.
6.	Charging and discharging of a capacitor (energy dissipated during charging and time constant measurements).
7.	Series and parallel resonance circuits (LCR circuits).
8.	Impedance of series RC circuits- determination of frequency of AC.
9.	Study the characteristics of a series RC and RL Circuit.
10.	Determination of self-inductance of a coil.
11.	Verification of laws of combination of capacitances and determination of unknown capacitance using de - Sauty bridge.
12.	Determination of $B_H$ using Helmholtz double coil galvanometer and potentiometer.

(Minimum EIGHT experiments have to be carried out)

## Semester – III

# Detailed Syllabus of III Semester Physics

<b>Program Outcomes:</b>	
1.	Disciplinary knowledge
2.	Communication Skills
3.	Critical thinking, Reflective thinking, Analytical reasoning, Scientific reasoning
4.	Problem-solving
5.	Research-related skills
6.	Cooperation/ Teamwork/ Leadership readiness/Qualities
7.	Information/ Digital literacy/Modern Tool Usage
8.	Environment and Sustainability
9.	Multicultural competence
10.	Multi-Disciplinary
11.	Moral and ethical awareness/Reasoning
12.	Lifelong learning / Self Directed Learning

<b>Course Content Semester -III</b> <b>Wave Motion and Optics</b>	
Course Title: Wave Motion and Optics	Course Credits:4
Total Contact Hours: 52	Duration of ESA: 3 hours
Formative Assessment Marks: 40	Summative Assessment Marks: 60
Model Syllabus Authors: Physics Expert Committee	

<b>Prerequisites</b>	
<b>i.</b>	Fundamentals of waves

## Course Learning Outcomes

**At the end of the course students will be able to:**

<b>i.</b>	Identify different types of waves by looking into their characteristics.
<b>ii.</b>	Formulate a wave equation and obtain the expression for different parameters associated with waves.
<b>iii.</b>	Explain and give a mathematical treatment of the superposition of waves under different conditions, such as, when they overlap linearly and perpendicularly with equal or different frequencies and equal or different phases.
<b>iv.</b>	Describe the formation of standing waves and how the energy is transferred along the standing wave in different applications, and mathematically model in the case of stretched string and vibration of a rod.
<b>v.</b>	Give an analytical treatment of resonance in the case of open and closed pipes in general and Helmholtz resonators in particular.
<b>vi.</b>	Describe the different parameters that affect the acoustics in a building, measure it and control it.
<b>vii.</b>	Give the different models of light propagation and phenomenon associated and measure the parameters like the wavelength of light using experiments like Michelson interferometer, interference and thin films.
<b>viii.</b>	Explain diffraction due to different objects like singles slit, two slits, diffraction of grating, oblique incidence, circular aperture and give the theory and experimental setup for the same.
<b>ix.</b>	Explain the polarization of light and obtain how the polarization occurs due to quarter wave plates, half wave plates, and through the optical activity of a medium.

## Wave Motion and Optics

### Unit – 1 - Waves and Superposition of Harmonic Waves

#### The Portion to be Covered

**Waves:** Plane and Spherical Waves. Longitudinal and Transverse Waves. Characteristics of wave motion, Plane Progressive (Travelling) Wave and its equation, Wave Equation – Differential form (derivation). Particle and Wave Velocities: Relation between them, Energy Transport – Expression for intensity of progressive wave, Newton’s Formula for Velocity of Sound. Laplace’s Correction (Derivation). Brief account of Ripple and Gravity Waves. **(Text Book : 1-4) (5 Hours)**

**Superposition of Harmonic Waves :** Linearity and Superposition Principle. Superposition of two collinear oscillations having (1) equal frequencies and (2) different frequencies (Beats) – Analytical treatment. Superposition of two perpendicular Harmonic Oscillations: Lissajous Figures with equal and unequal frequency- Analytical treatment. Uses of Lissajous’ figures. **(Text Book : 1-4) (6 Hours)**

#### Topic Learning Outcomes

At the end of the topic, students should be able to:

SL No	TLO's	B L	CO	PO
i.	Explain the difference between plane and spherical waves, longitudinal and transverse waves and give their characteristics.	L2	1	1-6, 11-12
ii.	Write down an equation for the progressive wave in its differential form.	L2	1	1-6, 11-12
iii.	Obtain the relation between particle and wave velocity.	L2	1	1-6, 11-12
iv.	Obtain an expression for intensity of progressive waves.	L2	1	1-6, 11-12
v.	Obtain Newton's formula for the velocity of sound and discuss the factors for which sound velocity is dependent.	L2	2	1-6, 11-12
vi.	Apply the Laplace’s correction to the equation of motion of a progressive wave.	L2	2	1-6, 11-12
vii.	With examples explain ripple and gravity waves.	L1	2	1-6, 11-12
viii.	Give the theory of superposition of two linear waves having equal frequencies and different frequencies.	L2	3	1-6, 11-12
ix.	Discuss the formation of different Lissajous figures under different conditions of amplitude and frequency when they superimpose perpendicularly.	L2	3	1-6, 11-12
x.	Give some applications of an Lissajous figures.	L1	3	1-6, 11-12
xi.	Higher order problems.	L3	1,2,3	1-6, 11-12

#### Teaching and Learning Methodology

Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.

### Assessment Techniques

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc

### Suggested Activities (2 Hours)

<b>Activity No. 1</b>	<p>We know that sound is produced because of vibration. Look into at least 10 musical instruments and identify the regions of vibrations that produces the sound and those parts which enhances the sound because of reverberation.</p> <ol style="list-style-type: none"> <li>1. Identify one common element in all of these.</li> <li>2. Identify equipment which creates beats and try to explain the underlying basic principles. Demonstrate the examples of beats using two tuning forks.</li> <li>3. Identify what will happen when you drop a stone in a standing water, and when your drop two stones side by side.</li> <li>4. Make your observations sketch them and comment on it in a report.</li> </ol>
<b>Activity No. 2</b>	<p>Draw two sine waves (Amplitude vs time) one shifted with other in phase. Identity where the resonance occurs for each phase shift. Plot phase vs time taken for resonance.</p>
<b>Activity No. 3</b>	<p>Take smooth sand, place a pointed edged pen vertically on the sand. To the mid of the pen, connect two perpendicular threads. Pull these perpendicular threads by varying the forces and timings. Note down the different shapes produced on the sand. Try to interpret the shapes. Make a report of it</p>
<b>Activity No. 4</b>	<p>Hang a pot with sand, which has a hole in the bottom. Gently pull the pot on one side and observe the pattern formed by the sand on the floor. Report the observations.</p>
<b>Activity No. 5</b>	<p>Design a coupled pendulum. Study the impact of the motion of one pendulum over the other pendulum by varying the length, direction of the motion of one pendulum and mass of pendulum and observe the resultant changes. Trace the path of the bobs and make a report.</p>
<b>Activity No. 6</b>	<p><b>Note for the teachers for the activity:</b> Make 3 groups among students and assign each group the activity of drawing one of the 3 graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation,</p>

	<p>teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ol style="list-style-type: none"> <li>1. The first slide will explain the process of doing the experiment.</li> <li>2. In the second slide. Students will show the graph of measurement.</li> <li>3. In the third slide, they will list three observations from that study.</li> </ol> <p><b>Activity:</b> Take a stretched spring. Stretch it across two edges. Put a weight on the string, pluck it and measure the amplitude of the vibration. All group will measure the total damping time of oscillating spring. (Using mobile or scale) And plot a graph of the-</p> <ol style="list-style-type: none"> <li>1. Varying load on the spring and amplitude at the centre.</li> <li>2. Take another weight and put that in another place and measure the amplitude of vibration at the centre.</li> <li>3. Vary the load in the centre of the spring and measure the amplitude at the centre.</li> </ol>
--	--

<b>Wave Motion and Optics</b>				
<b>Unit – 2 - Standing Waves and Acoustics</b>				
<b>The Portion to be Covered</b>				
<p><b>Standing Waves :</b> Velocity of transverse waves along a stretched string (derivation), Standing (Stationary) Waves in a String - Fixed and Free Ends (qualitative). Theory of Normal modes of vibration in a stretched string, Energy density and energy transport of a transverse wave along a stretched string. Vibrations in rods – longitudinal and transverse modes (qualitative). Velocity of Longitudinal Waves in gases (derivation). Normal Modes of vibrations in Open and Closed Pipes – Analytical treatment. Concept of Resonance, Theory of Helmholtz resonator. <b>(Text Book : 1-4) (8 Hours)</b></p> <p><b>Acoustics:</b> Absorption coefficient, Reverberation and Reverberation time, Sabine’s Reverberation formula (derivation), Factors affecting acoustics in buildings, Requisites for good acoustics. Acoustic measurements – intensity and pressure levels. <b>(Text Book : 1-4) (3 Hours)</b></p>				
<b>Topic Learning Outcomes</b>				
<b>At the end of the topic, students should be able to:</b>				
SL No	TLO's	B L	CO	PO
i.	Discuss the Transverse waves produced in stretched string and obtain the expression for the same.	L2	3	1-6, 11-12

ii.	Give a qualitative treatment of vibration of a string when it's both ends are fixed and free.	L2	3	1-6, 11-12
iii.	Explain normal modes of a stretched string. Obtain an expression for the energy density and discuss how this energy is transported along a stretched string.	L2	3	1-6, 11-12
iv.	Quantitatively bring about the mode of vibrations created in a rod.	L2	4	1-6, 11-12
v.	Explain types of waves that are produced in gas. Obtain an expression for the same.	L2	4	1-6, 11-12
vi.	With an analytical treatment explain the concept of resonance using the normal modes of vibrations of open and closed pipes.	L2	5	1-6, 11-12
vii.	Give the theory of Helmholtz resonator and explain how it is used to calculate some parameters of the way the standing waves are set in there.	L2	5	1-6, 11-12
viii.	Define Reverberation, Reverberation time and absorption coefficient of a material.	L1	5	1-6, 11-12
ix.	Obtain Sabine's Reverberation formula and discuss what are the factors on which the Reverberation time depends on?	L2	5	1-6, 11-12
x.	List out which are different parameters within a building which effects the acoustics.	L1	6	1-6, 11-12
xi.	Explain what good acoustics of a building are and how acoustics is measured in terms of intensity and pressure inside a building.	L2	6	1-6, 11-12
xii.	Higher order problems.	L3	4,5,6	1-6, 11-12

### **Teaching and Learning Methodology**

Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.

### **Formative Assessment Techniques**

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc.

**Suggested Activities (2 Hours)**

<b>Activity No. 7</b>	List different phenomenon where standing waves are found in nature. Identify the phenomena and reason for standing waves. Also identify the standing waves in musical instruments. Make a report.
<b>Activity No. 8</b>	<ol style="list-style-type: none"> <li>1. Go to 5 different newly constructed houses when they are not occupied and when they are occupied. Make your observations on sound profile on each room. Give the reasons. Make a report.</li> <li>2. Visit three very good auditoriums, list out different ways in which the acoustic arrangements have been done (as decoration and Civil works). Look for the reasons in Google and identify which is acoustically the best auditorium among the three you visited. Make a report.</li> </ol>
<b>Activity No. 9</b>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. On the specific day, each group has to make a ppt presentation of the following three slides. On the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ol style="list-style-type: none"> <li>1. The first slide will explain the process of doing the experiment.</li> <li>2. In the second slide. Students will show the graph of measurement.</li> <li>3. In the third slide, they will list three observations from that study.</li> </ol> <p><b>Activity:</b> Take a bowl of different liquids (water, milk, kerosene, salt water, Potassium Permanganate (KMNO<sub>4</sub>) solution. Place a small non oily floating material (ex: thin plastic) on the surface of the liquid. Drop a marble on the liquid at the centre of the bowl. Repeat the experiment by dropping the marble from the different heights. Plot a graph of-</p> <ol style="list-style-type: none"> <li>1. Height v/s time of oscillation</li> <li>2. Weight of the marble v/s time of oscillation</li> </ol>

<b>Activity No. 10</b>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. On the specific day, each group has to make a ppt presentation of the following three slides. On the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ol style="list-style-type: none"> <li>1. The first slide will explain the process of doing the experiment.</li> <li>2. In the second slide. Students will show the graph of measurement.</li> <li>3. In the third slide, they will list three observations from that study.</li> </ol>
	<p><b>Activity:</b> Take two marbles of same weight. Drop both the marbles on the surface of the liquid from some height. With the help of the mobile take the picture and measure the position of interface of two wave fronts formed in the liquid. Plot graphs for different activities by doing the following activities.</p> <ol style="list-style-type: none"> <li>1. By dropping two marbles of same weight from different heights.</li> <li>2. By dropping two marbles of different weight from the same height</li> </ol>

## Wave Motion and Optics

### Unit – 3 - Nature of light and Interference

#### The Portion to be Covered

**Nature of light :** To Determine wavelength of light, distances and shapes using Michelson interferometer. The corpuscular model of light-The wave model - Maxwells electromagnetic waves-Wave Particle Duality (**Text Book No 5; Sections 2.1 to 2.4 and 2.8) (2 Hours)**

**Interference of light by division of wave front:** Huygen’s theory-Concept of wave-front-Interference pattern produced on the surface of water-Coherence-Interference of light waves by division of wave- front- Young’s double slit experiment- derivation of expression for fringe width-Fresnel Biprism- Interference with white light (Text Book No 5; Sections 12.1 to 12.2, 14.1 to 14.5, 14.7 to 14.9) (**4 Hours)**

**Interference of light by division of amplitude:** Interference by division of amplitude-Interference by a plane parallel film illuminated by a plane wave-Interference by a film with two non-parallel reflecting surfaces- color of thin films—Newton’s rings-(Reflected light)-Michelson Interferometer- Determination of wavelength of light\* (Text Book No 5; Sections 15.1 to 15.2, 15.8 to 15.11) (**5 Hours)**

#### Topic Learning Outcomes

At the end of the topic, students should be able to:

SL No	TLO	BL	CO	PO
-------	-----	----	----	----

	's			
<b>i.</b>	Explain using Michelson interferometer how to determine the wavelength of light.	L2	7	1-6, 11-12
<b>ii.</b>	Give an account of the different possible shapes that are obtained in Michelson interferometer experiment and their relevance.	L2	7	1-6, 11-12
<b>iii.</b>	Discuss the wave model and the Corpuscular model of light.	L2	7	1-6, 11-12
<b>iv.</b>	Explain Maxwells electromagnetic waves.	L2	7	1-6, 11-12
<b>v.</b>	Give an account of the phenomenon of wave-particle duality.	L1	7	1-6, 11-12
<b>vi.</b>	Give the Huygen theory of wave-front.	L1	7	1-6, 11-12
<b>vii.</b>	Define Interference. Give some examples of Interference.	L1	7	1-6, 11-12
<b>viii.</b>	Give the theory of interference due to two coherent sources of light and obtain an expression for the wavelength of monochromatic source of light (Young's double slit experiment)	L 2	7	1-6, 11-12
<b>ix.</b>	Explain how using personal biprism, a monochromatic coherent source of light are obtained. Using this experimental setup explain how the wavelength of monochromatic sources of light is determined.	L 2	7	1-6, 11-12
<b>x.</b>	Give the theory of interference due to division of amplitude by parallel and non-parallel plates.	L 1	7	1-6, 11-12
<b>xi.</b>	Explain how Newton's rings are obtained and discuss how the wavelength of light is determined using this experiment.	L 2	7	1-6, 11-12
<b>xii.</b>	Higher order problems.	L 3	7	1-6, 11-12

### **Teaching and Learning Methodology**

Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.

### **Formative Assessment Techniques**

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc

<b>Suggested Activities (2 Hours)</b>	
<b>Activity No. 11</b>	In the table given below explore which phenomenon can be explained by what and Make a report.
<b>Activity No. 12</b>	Why colour strips are seen in paddles on roads in rainy seasons try to simulate the same. Give the reasons. Make a report.
<b>Activity No. 13</b>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ol style="list-style-type: none"> <li>1. The first slide will explain the process of doing the experiment.</li> <li>2. In the second slide. Students will show the graph of measurement.</li> <li>3. In the third slide, they will list three observations from that study.</li> </ol> <p><b>Activity:</b> Take a bowl of different liquids (water, milk, kerosene, salt water, Potassium Permanganate (KMNO<sub>4</sub>) solution. Place a small non oily floating material (ex: thin plastic) on the surface of the liquid. Drop two marbles of same weight (mass) from the same height on to the surface of the water but at the different time intervals. Plot graph for the different observations.</p> <p><b>For teachers:</b> Demonstrate the formation of Lissajous Figure using a CRO. Give different shapes of Lissajous Figure with varying frequency and amplitude. Ask the students to comment on the observations.</p>

## Wave Motion and Optics

### Unit – 4 - Diffraction and Polarisation

#### The Portion to be Covered

**Fraunhofer diffraction** : Introduction- Fraunhofer diffraction- Single slit diffraction pattern-position of Maxima and Minima (Qualitative arguments)- Two slit diffraction pattern-position of Maxima and minima- Theory of plane diffraction Grating-Grating spectrum- normal and oblique incidence-Resolving power and dispersive power of a grating Single slit; Double Slit. Multiple slits & Diffraction grating. (Text Book No 5; Sections 18.1 to 18.2, 18.6,18.8 to 18.9) **(4 Hours)**

**Fresnel Diffraction**- Fresnel half period zones-Diffraction by a circular aperture-diffraction by an opaque disc-The zone plate -comparison between zone plate and convex lens. (Text Book No 5; Sections 20.1 to 20.3) **(3 Hours)**

**Polarisation**: Introduction-Production of polarized light- The wire Grid polarizer and Polaroid-Superposition of two disturbances-Phenomenon of double refraction-Quarter wave plates and half wave plates- Analysis of polarized light-optical activity. (Text Book No 5; Sections 22.1, 22.3,22.4,22.6 to 22.8) **(4 Hours)**

**Topic Learning Outcomes**

**At the end of the topic, students should be able to:**

SL No	TLO 's	BL	CO	PO
i.	Define Fraunhofer diffraction.	L2	8	1-6, 11-12
ii.	Give a qualitative treatment of single slit/diffraction double slit diffraction.	L2	8	1-6, 11-12
iii.	Explain the theory of diffraction due to grating and the normal and oblique incidence.	L2	8	1-6, 11-12
iv.	Explain how the resolving power of a grating depends of the number of slits used.	L2	8	1-6, 11-12
v.	Give the theory of Fersnel half period zones.	L2	8	1-6, 11-12
vi.	Discuss zone plates with respect to convex lenses.	L2	8	1-6, 11-12
vii.	Explain optical polarization and polaroids.	L2	9	1-6, 11-12
viii.	Give different types of polaroids.	L2	9	1-6, 11-12
ix.	Give the theory of phenomenon of double refraction and explain what are ordinary and extraordinary rays.	L2	9	1-6, 11-12
x.	Give the theory of quarter wave plates and half wave plates.	L2	9	1-6, 11-12
xi.	Explain optical activity with theory. Give an experimental method to measure the optical activity of a material.	L2	9	1-6, 11-12
xii.	Higher order problems.	L3	8,9	1-6, 11-12

**Teaching and Learning  
Methodology**

Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.

### Assessment Techniques

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc

### Suggested Activities (2 Hours)

<b>Activity No. 14</b>	<p>Explain polarization of light through a chart. List out the surfaces that reflect polarized light. Learn how polarization of light can be done by both transmission and reflection. Perform an experiment and make a report.</p> <p>USING CDs AND DVDs AS DIFFRACTION Gratings Ref:<a href="https://www.nmin.org/sites/default/files/files/Karen_Rama_USING_CDs_AND_DVDs_AS_DIFFRACTION GRATINGS_0.pdf">https://www.nmin.org/sites/default/files/files/Karen_Rama_USING_CDs_AND_DVDs_AS_DIFFRACTION GRATINGS_0.pdf</a></p> <p>Obtain the diffraction spectra using a CD and design an experiment to find the distance between the tracks on it)</p> <p>(Ref: <a href="https://www.brighthubeducation.com/science-lessons-grades-9-12/39347-diffraction-experiment-measuring-groove-spacing-on-cds/">https://www.brighthubeducation.com/science-lessons-grades-9-12/39347-diffraction-experiment-measuring-groove-spacing-on-cds/</a>, <a href="https://silo.tips/download/diffraction-from-a-compact-disk">https://silo.tips/download/diffraction-from-a-compact-disk</a>)</p>
<b>Activity No. 15</b>	<p>What is the physics behind making 3D movies? Group Discussion (<a href="https://www.slideserve.com/rae/physics-behind-3d-movies-powerpoint-ppt-presentation">https://www.slideserve.com/rae/physics-behind-3d-movies-powerpoint-ppt-presentation</a>) Make a report.</p>
<b>Activity No. 16</b>	<p>List out different types of zone plates and look for their applications in day to day life. Make a report.</p>
<b>Activity No. 17</b>	<p>Collect information and study how optically polarizing lenses are made. Visit a nearby lens making facility. Learn the principle behind sunglasses. Make a report.</p>
<b>Activity No. 18</b>	<p><b>Note for the teachers for the activity:</b> Make 3 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <p>1. The first slide will explain the process of doing the experiment.</p>

	<p>2. In the second slide. Students will show the graph of measurement.</p> <p>3. In the third slide, they will list three observations from that study.</p> <p><b>Activity:</b> Identify any 3 sharp edges of varying thickness and assign them to 3 groups. Shine a laser light pointing towards the edge of the needle. Observe the patterns formed on the wall or screen and measure the distance between the bands. Correlate the distance between the bands formed with the thickness of the edge and the distance from the edge to the screen. By this, calculate the wavelength of the laser light used.</p>

<b>Total</b>	<b>40</b>

<b>List of Experiments to be performed in the Laboratory</b> (Minimum 8 experiments are to be conducted)	
1.	Velocity of sound through a wire using Sonometer.
2.	Frequency of AC using Sonometer.
3.	Study of Lissajous' Figures
4.	To verify the laws of transverse vibration using Melde's apparatus.
5.	Helmholtz resonator using tuning fork.
6.	Helmholtz resonator using electrical signal generator.
7.	To determine refractive index of the Material of a prism using sodium source.
8.	To determine the dispersive power and Cauchy constants of the material of a prism using mercury source.
9.	To determine the wavelength of sodium source using Michelson's interferometer.
10.	To determine wavelength of sodium light using Fresnel Biprism.
11.	To determine wavelength of sodium light using Newton's Rings
12.	To determine the thickness of a thin paper by measuring the width of the interference fringes produced by a wedge-shaped Film.
13.	To determine wavelength of (1) Na source and (2) spectral lines of Hg source using plane diffraction grating.
14.	To determine dispersive power and resolving power of a plane diffraction grating.

**Open Elective : OPTICAL INSTRUMENTS (III SEM)**

**Time: 3 hrs./week**

**Max Marks: 60**

Unit 1.	<p><b>Basics of Optics</b> Scope of optics, optical path, laws of reflection and refraction as per Fermat's principle, magnifying glass, Lenses (thick and thin), convex and concave lenses, Lens makers formulae for double concave and convex lenses, lens equation.</p> <p>Focal and nodal points, focal length, image formation, combination of lenses,</p>	13
	<p>dispersion of light: Newton's experiment, angular dispersion and dispersion power. Dispersion without deviation.</p> <p>(Expressions need not be derived, but have to be discussed qualitatively).</p>	
Unit 2.	<p><b>Camera and microscopes</b></p> <p>Human eye (constitution and working), Photographic camera (principle, construction and working), construction, working and utilities of Simple microscopes, Compound microscope, Electron microscopes, Binocular microscopes</p> <p><b>Self study</b></p> <p>Experimental determination of magnifying power of a microscope. (Construction part can be discussed through block diagrams)</p>	14
Unit 3.	<p><b>Telescopes and Spectrometer</b></p> <p>Construction, working and utilities of Astronomical telescopes Terrestrial telescopes Reflecting telescopes, Construction, working and utilities of Eyepieces or Oculars (Huygen, Ramsden's, Gauss)</p> <p>Spectrometer - Construction, working and utilities, measurement of refractive index.</p> <p><b>Self study</b></p> <p>Telescopes used at different observatories in and outside India.</p>	13
	<p><b>Activities:</b> Find position and size of the image in a magnifying glass and magnification. Observe rain bows and understand optics. Create a rainbow. Find out what makes a camera to be of good quality. Observe the dispersion of light through prism. Make a simple telescope using magnifying glass and lenses. Learn principle of refraction using prisms. Check bending of light in different substances and find out what matters here. Learn about different telescopes used to see galaxies and their ranges. Many more activities can be tried to learn optics by going through you tubes and webistes such as <a href="https://spark.iop.org">https://spark.iop.org</a>, <a href="http://www.yenka.com">http://www.yenka.com</a>, <a href="https://publiclab.org">https://publiclab.org</a> etc.</p>	

## Open Elective: Sports Science (III Sem)

Time: 3 hrs./week

Max Marks: 60

Content (Use maths of 10 <sup>th</sup> Std only – Only qualitative discussion)		Hrs
<b>Unit - 1</b>		
<b>Chapter No. 1</b>	<b>Measurement:</b> Physical quantities. Standards and Units. International system of Units. Standards of time, length and mass. Precision and significant figures.	04
<b>Chapter No. 2</b>	<b>Newton's laws of motion:</b> Newton's first law. Force, mass. Newton's second law. Newton's third law. Mass and weight. Applications of Newton's laws.	03
<b>Chapter No. 3</b>	<b>Projectile motion:</b> Shooting a falling target. Physics behind Shooting, Javelin throw and Discus throw.	03
<b>Topics for self study ( If any)</b>	<a href="https://www.real-world-physics-problems.com/physics-of-sports.html">https://www.real-world-physics-problems.com/physics-of-sports.html</a>	
<b>Unit - 2</b>		
<b>Chapter No. 4.</b>	<b>Conservation laws:</b> Conservation of linear momentum, collisions – elastic and inelastic. Angular momentum. (Physics behind Carom, Billiards, Racing)	04
<b>Chapter No. 5.</b>	<b>Centre of mass:</b> Physics behind Cycling, rock climbing, Skating,	02
<b>Chapter No. 6.</b>	<b>Gravitation:</b> Origin, Newton's law of gravitation. Archimedes's principle, Buoyancy (Physics behind swimming)	04
<b>Topics for self study ( If any)</b>	<a href="#">Archimedes' Principle: Made EASY   Physics</a> in You tube	
<b>Unit - 3</b>		
<b>Chapter No.7</b>	<b>Food and Nutrition:</b> Proteins, Vitamins, Fat, Blood pressure. Problems due to the deficiency of vitamins.	04
<b>Chapter No. 8</b>	<b>Energy:</b> Different forms of Energy, Conservation of mass-energy.	03
<b>Chapter No . 9</b>	<b>Physical exercises:</b> Walking, Jogging and Running, Weight management.	03
<b>Topics for self study ( If any)</b>	<a href="#">10 Best Exercises for Everyone – Healthline</a>	
<b>Suggested Activities</b>		
<b>Activity No. 1</b>	Identify the methods of measurement of time, length and mass from ancient time and build models for them.	02
	Reference : <a href="https://en.wikipedia.org/wiki/History_of_measurement">History of measurement - Wikipedia</a> <i>https://en.wikipedia.org › wiki › History_of_measurem</i>	

<b>Activity No. 2</b>	Identify Physics principles behind various Sports activities.	01
-----------------------	---	----

	<a href="https://www.real-world-physics-problems.com/physics-of-sports.html">https://www.real-world-physics-problems.com/physics-of-sports.html</a>	
<b>Activity No. 3</b>	List the difficulties experienced in Gymnastics, Cycling and weight lifting.	02
<b>Activity No. 4</b>	List the difficulties experienced in swimming.	01
<b>Activity No. 3</b>	List the difficulties experienced in Gymnastics, Cycling and weight lifting.	02
<b>Activity No. 4</b>	List the difficulties experienced in swimming.	01
<b>Activity No. 5</b>	Learn breathing exercises.	02
	Reference : 1) <a href="#">Simple Breathing Exercise for Beginners   Swami Ramdev</a> 2) <a href="https://www.yogajournal.com">https://www.yogajournal.com</a>	
<b>Activity No.6</b>	Write an essay on Physical health v/s Mental health or conduct a debate on Physical health v/s Mental health.	01

## Semester – IV

# Detailed Syllabus of IV Semester Physics

<b>Program Outcomes:</b>	
1.	Disciplinary knowledge
2.	Communication Skills
3.	Critical thinking, Reflective thinking, Analytical reasoning, Scientific reasoning
4.	Problem-solving
5.	Research-related skills
6.	Cooperation/ Teamwork/ Leadership readiness/Qualities
7.	Information/ Digital literacy/Modern Tool Usage
8.	Environment and Sustainability
9.	Multicultural competence
10.	Multi-Disciplinary
11.	Moral and ethical awareness/Reasoning
12.	Lifelong learning / Self Directed Learning

<b>Course Content Semester – IV Thermal Physics and Electronics</b>	
Course Title: Thermal Physics and Electronics	Course Credits:4
Total Contact Hours: 52	Duration of ESA: 3 hours
Formative Assessment Marks: 40	Summative Assessment Marks: 60
Model Syllabus Authors: Physics Expert Committee	

<b>Prerequisites</b>	
<b>i.</b>	Study of Pre-University

## Course Learning Outcomes

**At the end of the course students will be able to:**

<b>i.</b>	Apply the laws of thermodynamics and analyze the thermal system.
<b>ii.</b>	Apply the laws of kinetic theory and radiation laws to the ideal and practical thermodynamics systems through derived thermodynamic relations.
<b>iii.</b>	Use the concepts of semiconductors to describe different Semiconductor devices such as diode transistors, BJT, FET etc and explain their functioning.
<b>iv.</b>	Explain the functioning of OP-AMPS and use them as the building blocks of logic gates.
<b>v.</b>	Give the use of logic gates using different theorems of Boolean Algebra followed by logic circuits.

## Course Articulation Matrix

### Mapping of Course Outcomes (CO) Program Outcomes

Course Outcomes / Program Outcomes	1	2	3	4	5	6	7	8	9	10	11	12
<b>i.</b> Apply the laws of thermodynamics and analyze the thermal system.	X	X	X	X	X	X					X	X
<b>ii.</b> Apply the laws of kinetic theory and radiation laws to the ideal and practical thermodynamics systems through derived thermodynamic relations.	X	X	X	X	X	X					X	X
<b>iii.</b> Use the concepts of semiconductors to describe different Semiconductor devices like diode transistors, BJT, FET etc and explain their functioning.	X	X	X	X	X	X					X	X
<b>iv.</b> Explain the functioning of OP-AMPS and them as the building blocks of logic gates.	X	X	X	X	X	X					X	X
<b>v.</b> Give the use of logic gates using different theorems of Boolean Algebra followed by logic circuits.	X	X	X	X	X	X					X	X

# Thermal Physics and Electronics

## Unit – 1

### The Portion to be Covered

**Laws of Thermodynamics:**

Review of the concepts of Heat and Temperature. (1 Hour)

**First Law of Thermodynamics:** Differential form, Internal Energy. Equation of state for an adiabatic process, Work Done during Isothermal and Adiabatic Processes. (3 Hours)

**Second Law of Thermodynamics:** Kelvin-Planck and Clausius Statements and their Equivalence. Reversible and Irreversible processes with examples. Heat Engines: Carnot engine & efficiency (no derivation). Refrigeration & coefficient of performance, Applications of Carnot engine in locomotion, Thermodynamic Scale of Temperature and its Equivalence to Perfect Gas Scale. Concept of Entropy, Second Law of Thermodynamics in terms of Entropy (5 Hours)

**Third Law of Thermodynamics:** Statement, Significance and Unattainability of Absolute Zero. (2 Hours)

**Topic Learning Outcomes**

**At the end of the topic, students should be able to:**

SL No	TLO's	B L	C O	P O
i.	Explain the first law of thermodynamics.	L1	1	1-6,11-12
ii.	Give the differential form of the first law of thermodynamics and define what the internal energy is.	L2	1	1-6,11-12
iii.	Obtain an expression for work done in isothermal and adiabatic processes.	L2	1	1-6,11-12
iv.	Give two systems of units of temperature measurement and give their equivalence.	L2	1	1-6,11-12
v.	Describe and Discuss heat engine based on Carnot cycle.	L2	1	1-6,11-12
vi.	Explain how the efficiency of refrigeration is measured?	L2	1	1-6,11-12
vii.	Detail out the application of the Carnot engine to a locomotion system.	L1	1	1-6,11-12
viii.	Define entropy and write an expression for entropy using the second law of thermodynamics.	L2	1	1-6,11-12
ix.	State the third law of thermodynamics and give its significance using the third law of thermodynamics describing why absolute zero temperature is not unattainable.	L2	1	1-6,11-12

x.	High Order Problems.	L3	1	1-6,11-12
<b>Teaching and Learning Methodology</b>				
Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.				
<b>Assessment Techniques</b>				
One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc				
<b>Suggested Activities (2 Hours)</b>				
<b>Activity No. 1</b>	<p>I feel cold because coldness enter my body. Discuss the statement in day-to-day life. Approximately give examples of</p> <ul style="list-style-type: none"> <li>(i) open system</li> <li>(ii) closed system and</li> <li>(iii) isolated system</li> </ul> <p>Discuss when the temperature of the body is locked until what time you hold the thermometer in contact with a body. Discuss it in contact with laws of thermodynamics.</p> <p>Discuss why when a person works or does exercise, he sweats. Reason it with the laws of thermodynamics.</p>			

<p><b>Activity No. 2</b></p>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ul style="list-style-type: none"> <li>(i) The first slide will explain the process of doing the experiment.</li> <li>(ii) In the second slide. Students will show the graph of measurement.</li> <li>(iii) In the third slide, they will list three observations from that study.</li> </ul> <p><b>Activity:</b> Take four different sizes of same metal, preferable of same shape and give one piece to each group. Heat it uniformly on a hot plate. Keep a beaker of water with a thermometer immersed in it. Drop one hot metal into the water and record the temperature with time. Repeat the experiment for the other heated metal pieces of different sizes.</p> <ul style="list-style-type: none"> <li>(i) Plot a graph for the volume of the metal piece used v/s respective temperature change observed.</li> <li>(ii) Determine the heat capacity and specific heat of the metal used.</li> </ul>
	<p>All groups shall also do the following activity:</p>
<p><b>Activity No. 3</b></p>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ul style="list-style-type: none"> <li>(i) The first slide will explain the process of doing the experiment.</li> <li>(ii) In the second slide. Students will show the graph of measurement.</li> <li>(iii) In the third slide, they will list three observations from that study.</li> </ul> <p><b>Activity:</b> Take ice cubes of different size and immerse in water and measure the temperature change with time and repeat the experiment. Graph the observations.</p>

# Thermal Physics and Electronics

## Unit – 2

### The Portion to be Covered

**Thermodynamic Potentials:** Internal Energy, Enthalpy, Helmholtz Free Energy, Gibb's Free Energy. Properties and Applications. **(1 Hour)**

**Maxwell's Thermodynamic Relations:** Derivations and applications of Maxwell's Relations (1) First order Phase Transitions with examples, Clausius - Clapeyron Equation (2) Values of  $C_p - C_v$  (3) Joule- Thomson Effect and Joule-Thomson coefficient and Derive an equation for Vander Walls gas. Attainment of low temperature by liquefaction of gases and adiabatic demagnetization. **(3 Hours)**

**Kinetic Theory of Gases:** Distribution of Velocities: Maxwell-Boltzmann Law of Distribution of Velocities in an Ideal Gas: Mean, RMS and Most Probable Speeds. Degrees of Freedom, Law of Equipartition of Energy. Specific heats of Gases. **(3 Hours)**

**Radiation:** Blackbody radiation, spectral distribution, the concept of energy density and pressure of radiation, Wien's law, Wien's displacement law, Stefan-Boltzmann law, Rayleigh-Jeans law, Ultraviolet Radiation catastrophe and Planck's law of radiation. **(3 Hours)**

#### Topic Learning Outcomes

**At the end of the topic, students should be able to:**

SL No	TLO's	B L	CO	PO
i.	State Maxwell relations.	L1	2	1-6, 11-12
ii.	Give examples where Maxwells relations are used.	L1	2	1-6, 11-12
iii.	Explain the phase transition. Which is called as first order phase transition? Give Examples	L2	2	1-6, 11-12
iv.	State Clausius - Clapeyron Equation.	L1	2	1-6, 11-12
v.	Obtain an equation for difference in $C_p - C_v$ .	L2	2	1-6, 11-12
vi.	State Joule-Thomson effect and Joule-Thomson coefficient.	L1	2	1-6, 11-12
vii.	Obtain an expression, giving the relation between pressure, volume and temperature for a real gas (Vander Waals gas).	L2	2	1-6, 11-12
viii.	Explain adiabatic demagnetization and how it is used to obtain low temperature by the liquidation of gases?	L2	2	1-6, 11-12

<b>ix.</b>	State Maxwell-Boltzmann Law of Distribution of Velocities in Ideal gases.	<b>L1</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>x.</b>	Explain the mean RMS and most probable speeds in ideal gases.	<b>L1</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xi.</b>	Explain degrees of freedom associated with particles in an ideal gas?	<b>L2</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xii.</b>	Define the specific heat of a gas.	<b>L1</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xiii.</b>	Explain black body radiation and its spectral distribution.	<b>L1</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xiv.</b>	Explain the different laws used to describe different parts of the curves of a spectral distribution of black body radiation.	<b>L2</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xv.</b>	Define ultraviolet radiation catastrophe? Discuss its importance in the explanation of black body radiation.	<b>L2</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xvi.</b>	Define Planck's law of radiation and discuss how it could describe the whole black body radiation curve.	<b>L2</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>xvii.</b>	High Order Problems.	<b>L3</b>	<b>2</b>	<b>1-6, 11-12</b>
<b>Teaching and Learning Methodology</b>				
Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.				
<b>Assessment Techniques</b>				
One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc				
<b>Suggested Activities (2 Hours)</b>				

<p><b>Activity No. 4</b></p>	<p><b>(i) Measuring the Solar Constant</b>  Materials: Simple flat sided Jar and Thermometer.  Activity: Bottle containing water is exposed to solar radiation. The rise in temperature and time taken are noted. Calculate the heat absorbed by water and relate it to the output of the Sun.</p> <p><b>(ii) Thermo emf</b>  Materials: Suitable two dissimilar metal wires, voltage measuring device.  Activity: In this experiment student will assemble the thermocouple and study the three effects namely, Seebeck, Peltier, and Thompson.</p> <p><b>(iii) Inverse square law of radiation</b>  Materials: A cardboard with a grid, cardboard with a hole, supporting clips, a ruler, candle.</p> <p><b>(iv) Activity:</b> Students set the device. They count the lighted squares on the cardboard with the grid by varying the distance. And make necessary measurements and calculations to arrive at the inverse square law of radiation.</p> <p>Ref: Activity Based Physics Thinking Problems in Thermodynamics: Kinetic Theory  <a href="http://www.physics.umd.edu/perg/abp/think/thermo/kt.htm">http://www.physics.umd.edu/perg/abp/think/thermo/kt.htm</a></p>
<p><b>Activity No. 5</b></p>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <p><b>(i)</b> The first slide will explain the process of doing the experiment.  <b>(ii)</b> In the second slide. Students will show the graph of measurement.  <b>(iii)</b> In the third slide, they will list three observations from that study.</p> <p><b>Activity:</b> Take two dissimilar metal wires. Spot weld them forming two junctions. Dip one junction in ice and heat the other junction with a burner. Plot a graph of time of heating v/s Thermo EFM generated in the voltmeter.</p>
<p><b>Activity No. 6</b></p>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <p><b>(i)</b> The first slide will explain the process of doing the experiment.  <b>(ii)</b> In the second slide. Students will show the graph of measurement.  <b>(iii)</b> In the third slide, they will list three observations from that study.</p>

	<p><b>Activity:</b> Make 4 groups and give different-sized balloons to each group. Fit different-sized nozzles into the mouth of the large balloons. Measure the temperature or the EMF generated using a thermocouple placed at the mouth of the nozzle as the pressurised gas is released. Plot a graph of time v/s temperature. Vary the volume of the balloon and repeat the experiment. Plot the graph of volume v/s temperature difference created.</p>
--	---

## Thermal Physics and Electronics

### Unit – 3

#### The Portion to be Covered

**Semiconductor devices:** Review of Intrinsic and Extrinsic semiconductors, p-n junction and its Characteristics and Parameters, Diode approximations, Half-wave rectifier, Full-wave rectifier, Zener diode voltage regulators: Regulator circuit with no load, Loaded Regulator. **(5 hours)**

**Junction Transistors:** Basics of Bipolar Junction Transistors (BJT), BJT operation, Common Base, Common Emitter and Common Collector Characteristics. Field Effect Transistor (FET) and its characteristics. Transistor as an Amplifier and Oscillator. **(6 hours)**

#### Topic Learning Outcomes

**At the end of the topic, students should be able to:**

SL No	TLO's	B L	CO	PO
i.	Define Semiconductors and Band Gap. Explain on what basis they are classified as intrinsic and extrinsic.	L2	3	1-6, 11-12
ii.	Define PN junction. Explain it's functioning in forward and reverse bias.	L1	3	1-6, 11-12
iii.	Explain the approximation used in a real diode with respect to an ideal PN Junction?	L2	3	1-6, 11-12
iv.	With a schematic diagram, explain half wave and full wave rectifiers.	L1	3	1-6, 11-12
v.	Define a Zener diode and explain how it is different from an ordinary diode using V-I curves?	L2	3	1-6, 11-12
vi.	With the schematic diagram, explain the working of voltage regulators of different types using a Zener diode.	L1	3	1-6, 11-12
vii.	Give the basic concepts used in the instruction of bipolar junction transistor and its operation.	L1	3	1-6, 11-12

viii.	Compare the V-I curve of common base common emitter and common collector BJT curves while explaining their working principles.	L2	3	1-6, 11-12
ix.	Define FET? Give its characteristics.	L1	3	1-6, 11-12
x.	Explain how a transistor can be used as an amplifier and an oscillator using a circuit diagram.	L2	3	1-6, 11-12
xi.	High Order Problems.	L3	3	1-6, 11-12

### Teaching and Learning Methodology

Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.

### Assessment Techniques

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc

### Suggested Activities (2 Hours)

<b>Activity No. 7</b>	<p>Wire a regulated DC power supply on a bread board or groove board to give a regulated output voltage of + 5 V; +15 V; Dual power output : <math>\pm 5</math> V; Dual power output : <math>\pm 15</math> V. Use: 3-pin voltage regulators.</p> <p>Components required:</p> <p>1. Step down transformer- 1 No. (5 V tapping, 100 – 500 mA current rating), BY 127 semiconductor diodes – 4 Nos, Inductor -1, Capacitor - 1, 3 pin 5V regulator-1</p> <p>Search for circuit diagram in books/net.</p> <p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <p>(i) The first slide will explain the process of doing the experiment.  (ii) In the second slide. Students will show the graph of measurement.  (iii) In the third slide, they will list three observations from that study.</p>
-----------------------	--

	<b>Activity:</b> Form 3 groups and tell them to make a DC supply of low current of different voltages like 5V, 10V, and 15V on a breadboard
<b>Activity No. 8</b>	<ul style="list-style-type: none"> <li>(i) Learn to identify the terminals of different types (packages) of BJTs.</li> <li>(ii) In the case of power transistors, learn how to fix a heat sink for the transistor.</li> <li>(iii) Learn the difference between BJT and FET in its operational characteristics.</li> </ul>
<b>Activity No. 9</b>	<p><b>Note for the teachers for the activity:</b> Make 3-4 groups among students and assign each group the activity of drawing one of the graphs given below. Provide a few days to complete the activity. One the specific day, each group has to make a ppt presentation of the following three slides. One the day of the presentation select a member from each group randomly to make the presentation. Based on the work and presentation, teacher shall assign marks to each group, wherein all members of the group will get equal marks.</p> <ul style="list-style-type: none"> <li>(i) The first slide will explain the process of doing the experiment.</li> <li>(ii) In the second slide. Students will show the graph of measurement.</li> <li>(iii) In the third slide, they will list three observations from that study.</li> </ul> <p><b>Activity:</b> Take any 3 diode and assign one to each group. Measure its resistance when dipped in ice and heating the ice till it boils. Using this data, plot calibration curve of temperature v/s resistance and also the cooling curve of temperature V/s time for the diode by each group.</p>

<b>Thermal Physics and Electronics</b>
<b>Unit – 4</b>
<b>The Portion to be Covered</b>
<p><b>Electronics:</b> Integrated Circuits (Analog and Digital), Operational Amplifier, Ideal characteristics of Op-Amp, Inverting and Non-Inverting Configurations. Applications- Voltage Follower, Addition and Subtraction. <b>(4 hours)</b></p> <p><b>Digital:</b> Switching and Logic Levels, Digital Waveform. Number Systems: Decimal Number System, Binary Number System, Converting Decimal to Binary, Hexadecimal Number System: Converting Binary to Hexadecimal, Hexadecimal to Binary. <b>(3 hours)</b></p> <p><b>Boolean Algebra Theorems:</b> De Morgan’s theorem. Digital Circuits: Logic gates, NOT Gate, AND Gate, OR Gate, NAND Gate, NOR Gate, Algebraic Simplification, Implementation of NAND and NOR functions. <b>(4 hours)</b></p>

<b>Topic Learning Outcomes</b>				
<b>At the end of the topic, students should be able to:</b>				
<b>SL No</b>	<b>TLO's</b>	<b>BL</b>	<b>CO</b>	<b>PO</b>
<b>i.</b>	Define op-amps and give the characteristics of an ideal op-amp.	L 1	4	1-6, 11-12
<b>ii.</b>	Explains an inverting and non-inverting configuration of typical op-amps, with a schematic diagram.	L 2	4	1-6, 11-12
<b>iii.</b>	Explain how op-amps can be used as a voltage follower, with a schematic diagram and with relevant expressions.	L 2	4	1-6, 11-12
<b>iv.</b>	Explain how op-amps can be used as a voltage follower, adder and subtractor, with a schematic diagram and with relevant expressions.	L 2	4	1-6, 11-12
<b>v.</b>	Give different digital wave forms and explain how one can visualize the switching and logic levels.	L 1	5	1-6, 11-12
<b>vi.</b>	Write any four-digit numbers other than zero in the decimal number system and convert that into binary and hexadecimal.	L 2	5	1-6, 11-12
<b>vii.</b>	Write any number in a Binary System of 8 digits other than zero and convert it into decimal and hexadecimal.	L 2	5	1-6, 11-12
<b>viii.</b>	Write any number in the hexadecimal system of 4 digits other than zero and converted it into a binary and decimal number.	L 2	5	1-6, 11-12
<b>ix.</b>	Give simplified diagram for a given Boolean circuit diagram of logic gates, and verify using the De-Morgans theorem.	L 2	5	1-6, 11-12
<b>x.</b>	Why are X-NOR gates called Universal Gates?	L 2	5	1-6, 11-12
<b>xi.</b>	High Order Problems.	L 3	4, 5	1-6, 11-12
<b>Teaching and Learning Methodology</b>				
Lecture/ PPT/ Videos/ Animations/ Role Plays/ Think-Pair-Share/ Predict-Observe-Explain/ Demonstration/ Concept mapping/ Case Studies examples/ Tutorial/ Activity/ Flipped Classroom/ Jigsaw/ Field based Learning/ Project Based Learning/ Mini Projects/ Hobby Projects/ Forum Theatre/ Dance/ Problem Based Learning/ Game Based Learning/ Group Discussion/ Collaborative Learning/ Experiential Learning / Self Directed Learning etc.				
<b>Assessment Techniques</b>				

One minute paper/ Predict-Observe-Explain/ Think-Pair-Share/ Class Test/ Quiz/ Crosswords/ Group Assessment/ Assignment/ Peer-to-Peer Evaluation/Seminar etc

### Suggested Activities (2 Hours)

<b>Activity No. 10</b>	Learn how to implement logic functions (AND, OR, NOT) using just diodes and resistors.
	With a circuit diagram show how different types of gates can be built by X-NOR gates.
<b>Activity No. 11</b>	<p><b>Operational Amplifiers</b></p> <p>(i) Understand the concept of virtual ground of an OP-AMP.</p> <p>(ii) Learn the different types of op-amps used for different applications.</p> <p>(iii) What is a buffer? Prepare a report on buffers and its application in instrumentation electronics.</p>
<b>Activity No. 12</b>	<p>(i) A man has to take a wolf, a goat, and some cabbage across a river. His rowboat has enough room for the man plus either the wolf or the goat or the cabbage. If he takes the cabbage with him, the wolf will eat the goat. If he takes the wolf, the goat will eat the cabbage. Only when the man is present are the goat and the cabbage safe from their enemies. All the same, the man carries wolf, goat, and cabbage across the river. How? Write the truth table for the above story and implement using gates.</p> <p>(ii) A locker has been rented in the bank. Express the process of opening the locker in terms of digital operation.</p> <p>(iii) A bulb in a staircase has two switches, one switch being at the ground floor and the other one at the first floor. The bulb can be turned ON and also can be turned OFF by and one of the switches irrespective of the state of the other switch. The logic of switching of the bulb resembles.</p>

### Textbooks

Sl No	Title of the Book
1.	Electronic Devices and Circuits, David A. Bell, 2004, PHI, New Delhi
2.	Integrated Electronics, Jacob Millman and CC Halkias
3.	Digital Fundamentals, Floyd, 2001, PHI, New Delhi

### References Books

Sl No	Title of the Book
1.	Heat and Thermodynamics, M.W. Zemansky, Richard Dittman, 1981, McGraw-Hill.
2.	Thermal Physics, S. Garg, R. Bansal and Ghosh, 2nd Edition, 1993, Tata McGraw-Hill
3.	A Treatise on Heat, Meghnad Saha, and B.N.Srivastava, 1958, Indian Press

4.	Modern Thermodynamics with Statistical Mechanics, Carl S. Helrich, 2009, Springer.
5.	Thermodynamics, Kinetic Theory & Statistical Thermodynamics, Sears & Salinger. 1988, Narosa.
6.	An Introduction to Thermal Physics, Daniel V Schroeder, 2020, Oxford University Press

<b>Formative Assessment</b>	
<b>Assessment</b>	<b>Marks</b>
Internal Assessment	10
Activity	10
REU based Group Activity (Conduction, Report, Presentation)	10
Science Communication (Seminar/Poster etc)	10
<b>Total</b>	<b>40</b>

<b>List of Experiments to be performed in the Laboratory</b>	
1.	Mechanical Equivalent of Heat by Callender and Barne's method
2.	Coefficient of thermal conductivity of Copper by Searle's apparatus
3.	Coefficient of thermal conductivity of a bad conductor by Lee and Charlton's disc method
4.	Determination of Stefan's constant/ Verification of Stefan's law
5.	Variation of thermo-emf across two junctions of a thermocouple with temperature
6.	Verification of Clausius –Clapeyron equation and determination of specific enthalpy
7.	V-I Characteristics of Silicon & Germanium PN Junction diodes (FB & RB) OR V-I Characteristics of Zener Diode and voltage regulator
8.	Characteristics of BJT in Common Emitter Configuration OR Frequency response of CE Amplifier
9.	Half Wave and Full Wave Rectifier with and without Filter
10.	Non-inverting and Inverting op-amp circuits OR Voltage follower, Adder and Subtractor circuits
11.	Truth table verification of logic gates using TTL 74 series ICs. OR Logic Gates; Combinational Circuits; Sequential Circuits

**Minimum 8 experiments are to be conducted**

<b>Reference Book for Laboratory Experiments</b>	
Sl No	Title of the Book
1.	Basic Electronics Lab (P242) Manual 2015-16, National Institute of Science Education and Research, Bhubaneswar, 2015.
2.	<b>Suggested Readings:</b> 1. B.L. Worsnop, H.T. Flint, "Advanced Practical Physics for Students", Methuen & Co., Ltd., London, 1962, 9e. 2. S. Panigrahi, B. Mallick, "Engineering Practical Physics", Cengage Learning India Pvt. Ltd., 2015, 1e.

# **SYLLABUS FOR OPEN ELECTIVES**

**(SEM I to IV)**

**3 Credits: 3 Lectures + 1 Tutorial**

## SYLLABUS FOR OPEN ELECTIVE ENERGY SOURCES

Time: 2 hrs./week + 01 Hr tutorial

Max Marks:

		No. of lectures
<b>Unit-I</b>	<b>Non-Renewable energy sources</b>	
	<b>Chapter-1: Introduction</b>	
	Energy concept-sources in general, its significance & necessity. Classification of energy sources: Primary and Secondary energy, Commercial and Non-commercial energy, Renewable and Non-renewable energy, Conventional and Non-conventional energy, Based on Origin-Examples and limitations. Importance of Non-commercial energy resources.	<b>04</b>
	<b>Chapter-2: Conventional energy sources</b>	
	Fossil fuels & Nuclear energy- production & extraction, usage rate and limitations. Impact on environment and their issues& challenges. Overview of Indian & world energy scenario with latest statistics- consumption & necessity. Need of eco-friendly & green energy & their related technology.	<b>09</b>
	<b>Total</b>	<b>13</b>
<b>Unit-II</b>	<b>Renewable energy sources</b>	
	<b>Chapter-1: Introduction:</b>	
	Need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, Ocean Thermal Energy Conversion, solar energy, biomass, biochemical conversion, biogas generation, geothermal energy tidal energy, Hydroelectricity.	<b>05</b>
	<b>Chapter 2 : Solar energy:</b>	
	Solar Energy-Key features, its importance, Merits & demerits of solar energy, Applications of solar energy. Solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell -brief discussion of each. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems.	<b>08</b>
	<b>Total</b>	<b>13</b>
<b>Unit-III</b>	<b>Chapter-3: Wind and Tidal Energy harvesting:</b>	
	Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies. Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices. Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy.	<b>08</b>
	<b>Chapter-4 : Geothermal and hydro energy</b>	
	Geothermal Resources, Geothermal Technologies.	<b>02</b>
	Hydropower resources, hydropower technologies, environmental impact of hydro power sources.	<b>03</b>
	Carbon captured technologies, cell, batteries, power consumption	<b>01</b>
	<b>Total</b>	<b>13</b>

	<p><b>Activity for tutorial classes 01 lectures/week</b></p> <ol style="list-style-type: none"> <li>1. Demonstration of on Solar energy, wind energy, etc, using training modules at Labs.</li> <li>2. Conversion of vibration to voltage using piezoelectric materials.</li> <li>3. Conversion of thermal energy into voltage using thermoelectric (using thermocouples or heat sensors) modules.</li> <li>4. Project report on Solar energy scenario in India</li> <li>5. Project report on Hydro energy scenario in India</li> <li>6. Project report on wind energy scenario in India</li> <li>7. Field trip to nearby Hydroelectric stations.</li> <li>8. Field trip to wind energy stations like Chitradurga, Hospet, Gadag, etc.</li> <li>9. Field trip to solar energy parks like Yeramaras near Raichur.</li> <li>10. Videos on solar energy, hydro energy and wind energy.</li> </ol>

# Climate Science

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

Module 1:	<p><b>Atmosphere</b>            Atmospheric Science (Meteorology) as a multidisciplinary science. Physical and dynamic meteorology, Some terminology, difference between weather and climate, weather and climate variables, composition of the present atmosphere: fixed and variable gases, volume mixing ratio (VMR), sources and sinks of gases in the atmosphere. Green house gases. Structure (layers) of the atmosphere. Temperature variation in the atmosphere, temperature lapse rate, mass, pressure and density variation in the atmosphere. Distribution of winds.</p>	(13 hours)
Module 2:	<p><b>Climate Science</b>            Overview of meteorological observations, measurement of : temperature, humidity, wind speed and direction and pressure. Surface weather stations, upper air observational network, satellite observation. Overview of clouds and precipitation, aerosol size and concentration, nucleation, droplet growth and condensation (qualitative description). Cloud seeding, lightning and discharge. Formation of trade winds, cyclones.            Modelling of the atmosphere: General principles, Overview of General Circulation Models (GCM) for weather forecasting and prediction. Limitations of the models.            R and D institutions in India and abroad dedicated to climate Science, NARL, IITM, CSIR Centre for Mathematical Modeling and Computer Simulation, and many more</p>	(13 hours)
Module 3:	<p><b>Global Climate Change</b>            Green house effect and global warming, Enhancement in concentration of carbon dioxide and other green house gases in the atmosphere, Conventional and non-conventional energy sources and their usage. EL Nino/LA Nino Southern oscillations.            Causes for global warming: Deforestation, fossil fuel burning, industrialization. Manifestations of global warming: Sea level rise, melting of glaciers, variation in monsoon patterns, increase in frequency and intensity of cyclones, hurricanes, tornadoes.            Geo-engineering as a tool to mitigate global warming? Schemes of geo-engineering.</p>	(13 hours)

	<p><b>Activities to be carried out on Climate Science:</b></p> <ol style="list-style-type: none"> <li>1. Try to find answer to the following questions:             <ol style="list-style-type: none"> <li>(a) Imagine you are going in a aircraft at an altitude greater than 100 km. The air temperature at that altitude will be greater than 200°C. If you put your hands out of the window of the aircraft, you will not feel hot.</li> <li>(b) What would have happened if ozone is not present in the stratosphere.</li> </ol> </li> <li>2. Visit a nearby weather Station and learn about their activities.</li> <li>3. Design your own rain gauge for rainfall measurement at your place.</li> </ol>	
	<ol style="list-style-type: none"> <li>4. Learn to determine atmospheric humidity using wet bulb and dry bulb thermometers.</li> <li>5. Visit the website of Indian Institute of Tropical Meteorology (IITM), and keep track of occurrence and land fall of cyclone prediction.</li> <li>6. Learn about ozone layer and its depletion and ozone hole.</li> <li>7. Keep track of melting of glaciers in the Arctic and Atlantic region through data base available over several decades.</li> <li>8. Watch documentary films on global warming and related issues (produced by amateur film makers and promoted by British Council and BBC).</li> </ol>	
	<p><b>References:</b></p> <ol style="list-style-type: none"> <li>1. Basics of Atmospheric Science – A Chndrashekar, PHI Learning Private Ltd. New Delhi, 2010.</li> <li>2. Fundamentals of Atmospheric Modelling- Mark Z Jacobson, Cambridge University Press, 2000.</li> </ol>	

# Astronomy

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

Content		Hrs
<b>Unit – 1 -History and Introduction</b>		
Chapter 1	Ancient Astronomy Greek Observations, Sumerian Observations,Mayan Observations, Arabic Observations ,Chinese Observations	2
Chapter 2	Indian Astronomy Vedic Astronomy, Ancient Astronomy – Aryabhata, Varahamihira, Bhaskara Astronomy in Indian Scriptures, Precession of the Equinox,Celebrations of Equinox	2
Chapter 3	Medieval & Modern Astronomy Invention of Telescopes, Models of the Solar System & Universe, Observations by Tycho Brahe, Kepler, Galileo, Herschel and Other,Modern Astronomy	2
Chapter 4	Optical tools for Astronomy Pin Hole, Binoculars, Telescopes & Imaging.	1
Chapter 5	Mathematical Methods of Observations Angular Measurement, Trigonometric functions, Stellar Parallax	1
Chapter 6	Observational Terminologies Cardinal Directions, Azimuth, Altitude, Measurements using Compass and Hand. Equatorial Co-ordinates, Light years, Magnitude, Colors etc.	2
<b>Unit – 2: Unit 2: Observations of the Solar System</b>		
<b>Chapter 7.</b>	The Sun Ecliptic and the Orientation of the Earth, Seasons - Solstices and Equinox, Observations of the Sun from Earth during seasons. Eclipses, Zero-shadow day, Sunspots	1
Chapter 8	The Moon Earth-Moon system – Phases, Lunar Eclipses, Ecliptic and Lunar Orbital Plane – Nodes, Lunar Month, Full Moon Names	1
Chapter 9.	Inner Planets: Mercury & Venus Observational History, Observational Windows, Appearance, Apparitions, Elongations, Superior Conjunctions, Inferior Conjunctions, Transits.	2
Chapter 10	<b>Outer Planets</b> <b>Outer Planets: Mars, Jupiter &amp; Saturn</b> Observational History.Observational Windows, Appearance, Frequency of Oppositions Oppositions, Conjunctions, Moons Eclipses.Galilean Moons, Saturn’s Rings	2

<b>Unit III Major Astronomy Observations</b>		
<b>Chapter 11</b>	March to June Prominent Stars and Constellations Visible during this period, Methods of Spotting.	2
<b>Chapter 12</b>	June to September Prominent Stars and Constellations Visible during this period, Methods of Spotting.	2
<b>Chapter 13</b>	September to December Prominent Stars and Constellations Visible during this period, Methods of Spotting.	2
<b>Chapter 14</b>	December to March Prominent Stars and Constellations Visible during this period, Methods of Spotting.	2
<p><b>Reference Books:</b></p> <ol style="list-style-type: none"> <li>1. The Stargazer's Guide - How to Read Our Night Sky by Emily Winterburn</li> <li>2. A guide to the Night Sky – Beginner's handbook by P.N. Shankar</li> <li>3. SHANKAR A GUIDE TO THE NIGHT SKY <a href="https://www.arvindguptatoys.com/arvindgupta/nightsskyshankar.pdf">https://www.arvindguptatoys.com/arvindgupta/nightsskyshankar.pdf</a></li> <li>2. BimanBasu , Joy of Star Watching , National Book Trust of India 2013</li> </ol> <p><b>References Books</b></p> <p>Christopher De Pree :The Complete Idiot's Guide to Astronomy, Penguin USA, 2008</p> <p>Emily Winterburn ,The Stargazer's Guide: How to Read Our Night Sky, Constable and Robinson, 2008</p>		

## Activities

Sl No	Experiment
1	Measuring Seasons using Sun's Position.
2	Measuring Distance using Parallax
3	Estimation of the Stellar Diameter using Pin Hole
4	Measuring Height of an Object Using Clinometer.
5	Star spotting using constellation maps
6	Constellation spotting using Skymaps
7	Estimation of 'Suitable Periods' to observe deep sky objects using Planisphere.
8	Estimation of the Size of the Solar System in using Light Years.
9	Identification of Lunar Phases across a year.
10	Measuring Constellation of the Sun using Night Skymaps or Planispheres.

# Medical Physics

Time: 2 hrs./week + 01 Hr tutorial

Max Marks:

<b>Unit I:</b>	<b>Human Anatomy and Physiology</b>  Overview of human anatomy - cells, cell structure, type of cells and their functions, tissues, organs, and their functions. Different systems in the human body, their structure and function, physiological properties of the circulatory system, digestive system, respiratory system, reproductive system, excretory system, endocrine system and nervous system	(13 hours)
<b>Unit II:</b>	<b>Physics of Medical Diagnostics</b>  Principle of production of X-rays. Use of X-rays in medical diagnosis, X-ray imaging systems. Computed Tomography (CT): principle and generation of CT. Magnetic Resonance Imaging (MRI): basic principle and image characteristics. Ultrasound Imaging: Interaction of sound waves with body tissues, production of ultrasound, transducers, acoustic coupling, image formation, modes of image display and color Doppler.	(13 hours)
<b>Unit III:</b>	<b>Physics of Radiotherapy</b>  Clinical aspects of radiation therapy: Biological basis of radiotherapy, radiation sources, radiation dose, time dose fractionation. External beam radiation therapy, radiation therapy modalities, production of radioisotopes, use of radioisotopes in therapy, particle and ion beam radiotherapy. Brachytherapy - principle of brachytherapy and classification of brachytherapy techniques.	(13 hours)

**Class Room Activities**

Unit I: Students can demonstrate the shape, size, positions and functions of different organs in the body with the help of models.

Unit II: The use of X-rays in the diagnosis of the fractured bone can be demonstrated with the help of a gamma source and a gamma ray survey meter. As the density of materials between the source and the detector changes the reading on the meter (or intensity of the beeping sound) changes.

Unit III: (i) Students can be asked to list out different type of cancers and possible causative factors. They can be asked to list out the healthy practices to reduce the risk of cancers.

(ii) As there will be students from different disciplines in the OE course, group discussion can be arranged to discuss about their programme and outcome. This will be an opportunity for the students to know about other disciplines.

**Other related activities/projects:**

1. Visit to nearby hospitals/diagnostic centers to study the working of X-ray machines.
2. Visit to ultrasound diagnostic centers to study the principle and use of ultrasound in diagnosis.
3. Project on principle and use of X-ray films in imaging.
4. Visit to radiotherapy centers to study the modalities of radiotherapy.

## OPTICAL INSTRUMENTS

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

Unit 1.	<p><b>Basics of Optics</b> Scope of optics, optical path, laws of reflection and refraction as per Fermat's principle, magnifying glass, Lenses (thick and thin), convex and concave lenses, Lens makers formulae for double concave and convex lenses, lens equation. Focal and nodal points, focal length, image formation, combination of lenses, dispersion of light: Newton's experiment, angular dispersion and dispersion power. Dispersion without deviation. (Expressions need not be derived, but have to be discussed qualitatively).</p>	13
Unit 2.	<p><b>Camera and microscopes</b> Human eye (constitution and working), Photographic camera (principle, construction and working), construction, working and utilities of Simple microscopes, Compound microscope, Electron microscopes, Binocular microscopes <b>Self study</b> Experimental determination of magnifying power of a microscope. (Construction part can be discussed through block diagrams)</p>	14
Unit 3.	<p><b>Telescopes and Spectrometer</b> Construction, working and utilities of Astronomical telescopes Terrestrial telescopes Reflecting telescopes, Construction, working and utilities of Eyepieces or Oculars (Huygen, Ramsden's, Gauss) Spectrometer - Construction, working and utilities, measurement of refractive index. <b>Self study</b> Telescopes used at different observatories in and outside India.</p>	13
	<p><b>Activities:</b> Find position and size of the image in a magnifying glass and magnification. Observe rain bows and understand optics. Create a rainbow. Find out what makes a camera to be of good quality. Observe the dispersion of light through prism. Make a simple telescope using magnifying glass and lenses. Learn principle of refraction using prisms. Check bending of light in different substances and find out what matters here. Learn about different telescopes used to see galaxies and their ranges. Many more activities can be tried to learn optics by going through you tubes and webistes such as <a href="https://spark.iop.org">https://spark.iop.org</a>, <a href="http://www.yenka.com">http://www.yenka.com</a>, <a href="https://publiclab.org">https://publiclab.org</a> etc.</p>	

# Sports Science

Time: 2 hrs./week + 01 Hr tutorial

Max Marks:

Content (Use maths of 10 <sup>th</sup> Std only – Only qualitative discussion)		Hrs
<b>Unit - 1</b>		
<b>Chapter No. 1</b>	<b>Measurement:</b> Physical quantities. Standards and Units. International system of Units. Standards of time, length and mass. Precision and significant figures.	04
<b>Chapter No. 2</b>	<b>Newton's laws of motion:</b> Newton's first law. Force, mass. Newton's second law. Newton's third law. Mass and weight. Applications of Newton's laws.	03
<b>Chapter No. 3</b>	<b>Projectile motion:</b> Shooting a falling target. Physics behind Shooting, Javelin throw and Discus throw.	03
<b>Topics for self study ( If any)</b>	<a href="https://www.real-world-physics-problems.com/physics-of-sports.html">https://www.real-world-physics-problems.com/physics-of-sports.html</a>

## NANOTECHNOLOGY

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

Unit 1:	<p>Introduction to nanomaterials</p> <p>Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nano dots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Quantum confinement: Applications of Schrodinger equation Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D nanostructures and its consequences.</p>	( 13hours)
Unit 2:	<p>Synthesis and Characterization of nanostructure materials</p> <p>Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, E-beam evaporation, Pulsed Laser deposition. Chemical vapor deposition (CVD). Sol-Gel. Electrodeposition. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots. X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy.</p>	(13 hours)
Unit 3:	<p>Properties and applications of nanomaterials</p> <p>Coulomb interaction in nanostructures. Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect bandgap semiconductor nanocrystals. Quantitative treatment of quasiparticles and excitons, charging effects. Radiative processes: General formalization-absorption, emission and luminescence. Optical properties of heterostructures and nanostructures. Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots - magnetic data storage.</p>	(13 hours)
<p><b>References Books:</b></p> <ul style="list-style-type: none"> <li>➤ C.P. Poole, Jr. Frank J. Owens, Introduction to Nanotechnology (Wiley India Pvt. Ltd.).</li> <li>➤ S.K. ### Student Activities:

1. Synthesis of metal nanoparticles by chemical route.
2. Synthesis of semiconductor nanoparticles.
3. XRD pattern of nanomaterials and estimation of particle size.
4. To study the effect of size on color of nanomaterials.
5. Growth of quantum dots by thermal evaporation.
6. Prepare a disc of ceramic of a compound using ball milling, pressing and sintering, and study its XRD.
7. Fabricate a thin film of nanoparticles by spin coating (or chemical route) and study transmittance spectra in UV-Visible region.
8. Prepare a thin film capacitor and measure capacitance as a function of temperature or frequency.
9. Visit to nearby research labs to study the working of XRD, SEM, UV-Visible Spectrophotometer instruments
10. Visit to nearby research labs for project work and interaction with scientists at IISc, JNCSC, Universities etc.

# ELECTRICAL INSTRUMENTS

Time: 2 hrs./week + 01 Hr tutorial

Max Marks:

Content		Hrs
<b>Unit - 1</b>		
<b>Chapter No. 1</b>	Voltage and current sources, Kirchoff's current and voltage laws, loop and nodal analysis of simple circuits with dc excitation. Ammeters,voltmeters: (DC/AC)	03
<b>Chapter No. 2</b>	Representation of sinusoidal waveforms, peak and rms values, power factor. Analysis of single-phase series and parallel R-L-C ac circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections. Wattmeters: Induction type, single phase and three phase wattmeter, Energy meters: AC. Induction type single phase and three phase energy meter	05
<b>Chapter No. 3</b>	Instrument Transformers: Potential and current transformers, ratio and phase angle errors, phasor diagram, methods of minimizing errors; testing and applications.	05
<b>Topics for self study ( If any)</b>	Types of switches and Circuits, Safety precautions and rules in handling electrical appliances, Electric shock, first aid for electrical shocks, Fuses, MCB, ELCB and Relays, Filament lamp, Tube light, CFL and LED	
<b>Suggested Activities</b>		
<b>Activity No. 1</b>	Identify variety of electrical switches and note down their applications/utility.	
	Reference: Weblink/Youtube/Book	
<b>Activity No. 2</b>	Identify the hazards involved in handling electrical circuits and instruments, make a list of safety precautions as well as first aid for electrical shocks.	
	Reference : Weblink/Youtube/Book	
<b>Unit - 2</b>		
<b>Chapter No. 4.</b>	Galvanometers: General principle and performance equations of D'ArsonvalGalvanometers, Vibration Galva nometer and Ballistic Galvanometer.	03
<b>Chapter No. 5.</b>	Potentiometers: DCPotentiometer, Crompton potentio meter, construction, standardization, application. AC Potentio meter, Drysdalepolar potentio meter; standardization, application.	03
<b>Chapter No. 6.</b>	DC/AC Bridges: General equations for bridge balance, measurement of self inductance by Maxwell's bridge (with variable inductance & variable capacitance), Hay's bridge, Owen's bridge, measurement of capacitance by Schearing bridge, errors, Wagner's earthing device, Kelvin's double bridge.	07
<b>Topics for self study ( If any)</b>	Importance of grounding and <u>Earthing</u> , Methods for <u>Earthing</u> ,	

<b>Suggested Activities</b>		
<b>Activity No. 3</b>	Make a study of importance of grounding in electrical circuits.	
	Reference : Weblink/Youtube/Book	
<b>Activity No. 4</b>	Prepare a detailed account of various methods of earthing and their utility/applications	
	Reference : Weblink/Youtube/Book	
<b>Unit - 3</b>		
<b>Chapter No.7</b>	Transducer: Strain Gauges, Thermistors, Thermocouples, Linear Variable Differential Transformer (LVDT), Capacitive Transducers, Peizo-Electric transducers, Optical Transducer, Hall Effect Transducer	06
<b>Chapter No. 8</b>	CRO: Block diagram, Sweep generation, vertical amplifiers, use of CRO in measurement of frequency, phase, Amplitude and rise time of a pulse. Digital Multi-meter: Block diagram, principle of operation	03
<b>Chapter No. 9</b>	Basics of lead acid batteries, Lithium Ion Battery , Battery storage capacity, Coulomb efficiency, Numerical of high and low charging rates, Battery sizing.	04
<b>Topics for self study ( If any)</b>	Fuses, MCB, ELCB and Relays, Filament lamp, Tube light, CFL and LED	
<b>Suggested Activities</b>		
<b>Activity No. 5</b>	Prepare a document on evolution of incandescent bulbs to the present day LED lights	
	Reference : Weblink/Youtube/Book	
<b>Activity No.6</b>	Make a comparative study of Fuses, MCB, ELCB and Relays highlighting their use and applications	
	Reference : Weblink/Youtube/Book

## PHYSICS FOR ALL

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

<b>Unit I</b>	<b>Energy and Power</b> Explosions and energy; Energy, heat and its units; Energy table and discussions; Discussion of cost of energy; Measuring energy; Power; Different power sources; Kinetic energy.	(13 Hours)
<b>Unit II</b>	<b>Gravity, Force and Space</b> The force of Gravity; Newton’s third law; Weightlessness; Low earth orbit; Geosynchronous satellites; Spy satellites; Medium Earth Orbit satellite; Circular Acceleration; momentum; Rockets; Airplanes, helicopters and fans; Hot air and helium balloons; angular momentum and torque.	(13 Hours)
<b>Unit III</b>	<b>Nuclei and radioactivity</b> Radioactivity; Elements and isotopes; Radiation and rays; Seeing radiation; The REM – The radiation poisoning; Radiation and cancer; The linear hypothesis; Different types of radiation; The half-life rule; Smoke detectors; measuring age from radioactivity; Environmental radioactivity; Glow of radioactivity; Nuclear fusion.	(13 Hours)
<b>Unit IV</b>	<b>Climate change</b> Global warming; IPCC; A brief history of climate; carbon dioxide; The greenhouse effect; Enhancement of Greenhouse effect; Hurricane and tornadoes; Antarctica; Fluctuations; Paleoclimate; Global warming vs Human caused global warming; Can we stop global warming?, Fossil Fuel Resources; Energy security; Energy efficiency and conservation; Bio-fuels; Nuclear, Wind and Solar power.	(13 Hours)
	<b>References</b> This course is extracted from the book titled “Physics and Technology for Future Presidents: An Introduction to the Essential Physics Every World Leader Needs to Know” by Richard A Muller, WW Norton and Company, 2007. (Unit-1 to 4 are from chapters 1, 3, 4 and 10, respectively).	

## SPACE MISSIONS

**Time: 2 hrs./week + 01 Hr tutorial**

**Max Marks:**

<b>Unit 1:</b>	<b>Introduction to Space Missions :</b>	<b>13 Hours</b>
	Rockets, types and their applications, Different types of orbits, Artificial satellites – basic idea and their applications, Introduction to Space Missions, Beginning of Space Missions - World and India, Applications of Space Research, Space crafts, Launching Vehicles.	
<b>Unit 2:</b>	<b>National Aeronautics and Space Administration (NASA)</b>	<b>13 Hours</b>
	About NASA and its Goals, History of Creation. Foundational human spaceflight: X-15 program (1954–1968), Project Mercury (1958–1963), Project Gemini (1961–1966), Project Apollo (1960–1972), Skylab (1965–1979), Apollo-Soyuz (1972–1975).  Modern human spaceflight programs: Space Shuttle program (1972–2011), International Space Station (1993–present), Constellation program (2005–2010), Commercial Crew Program (2011–present), Journey to Mars (2010–2017), Artemis program (2017–present).	
<b>Unit 3:</b>	<b>Indian Space Research Organisation (ISRO)</b>	<b>13 Hours</b>
	About ISRO and its Goals, History of Creation. General Satellite Programmes: The IRS series, The INSAT series. Gagan Satellite Navigation System, Navigation with Indian Constellation (NavIC), Other satellites.  Launch vehicles: Satellite Launch Vehicle (SLV), Augmented Satellite Launch Vehicle (ASLV), Polar Satellite Launch Vehicle (PSLV), Geosynchronous Satellite Launch Vehicle (GSLV). Experimental Satellites: Details and applications (Any Five) Earth Observation Satellites: Details and applications (Any Five) Communication satellites: Details and applications (Any Five)	
	<b>Self Study:</b>  Major Space Centres in the World (at least 10) – brief idea about their location, establishment, capabilities and achievements. People behind space programs – at least 2 from India. Successful Missions (Any Five).  <b>Activities*:</b>  <ul style="list-style-type: none"> <li>• Design of working model of Rocket launching.</li> <li>• Preparation of report and presentation on application of satellites in agriculture, communication, weather forecasting, exploration of natural resources and Global positioning system (GPS).</li> </ul> <p style="text-align: center;">* Faculty may suggest any other relevant activity as well.</p> Preparation of report and presentation on Apollo 11: A Success story	

**Activities:**

- Preparation of report and presentation on the recent space missions of NASA.
- Preparation of report on any one proposed space programme of NASA.

\* Faculty may suggest any other relevant activity as well.

Chandrayaan 1: Details and applications. Mars Orbiter Mission: Details and applications.

**Activities:**

- Preparation of report and presentation on the recent space missions of ISRO.
- Preparation of report and presentation on any one proposed space programme of ISRO.
- Preparation of report and presentation on the contributions of Scientists from Karnataka to Indian Space Program and use of space technology in the local district.

\* Faculty may suggest any other relevant activity as well.

# Activity Based Pedagogy:

## (Design, Activity and Assessment)

Conducting activity based teaching-learning experience for students empower students with several graduate attributes by addressing several Outcomes at different levels of the Cognitive Blooms Taxonomy of Learning: like Clarity of Concept, ability to apply knowledge, evaluate and analyse the results, while they are also learn through the Affective and Psycho-motor domains of Learning through self-learning, group dynamics and team work, communication and presentation skills, ethics, life-long learning, etc. These experiments must be ones that do not involve sophisticated instrumentation and should be able to be performed outside laboratories.

### Example 1: Elastic Properties of Solids:

The most important concept of studying elastic properties of solids is the Hooke's Law, which defines the stress-strain relationship.

**Class 1:** Defining problems, forming groups and giving instructions:

- The students should be made into forced groups of 6 to 8 members, depending on the class strength, consisting of diverse kinds of students in cognition, cultural, sex, behaviour, etc.
- Different materials of varying elastic properties should be given to each group, and should be asked to plot a graph of stress-strain of these materials in 8-10 days.
- Give clear instructions and clarify doubts, but not giving the procedure for the experiments. Students should discuss among themselves and consult books and internet to identify the procedure to obtain the Stress-strain graph. They should use only house-hold items or other commonly available tools to perform all the experiments.

**Class 2:** Presentation and discussion by students (max 8-10 mins each)

- Each group will be asked to make a presentation of 2 power point slides, where the first one explains the process they went through to arrive at the results and the second one shows their measured graph and an ideal text book plots. This slide should also contain two or three explanations of why both the plots differ.
- The student who will make the presentation on behalf of the group will be randomly selected just before the presentations. This will ensure that all group members will be mutually train each other for the presentation.
- The teacher should give equal marks to each member of a group depending on the methods adopted and clarity of concepts and results obtained and ability to analyse.

The following Program Outcomes will be attained by the students in such an activity based learning:

P.O. 1 : Discipline Knowledge: Knowledge of science and ability to apply to relevant areas.

P.O. 3 : Modern tool usage: Use a modern scientific, engineering and IT tool or technique for solving problems in the areas of their discipline.

P.O. 5 : Individual and teamwork: Work effectively as an individual as a team member in a multidisciplinary team.

P.O. 6 : Communication: Communicate effectively with the stake holders, and give and receive clear instructions.

## **Example 2: Periodic and Non-Periodic Motions**

Most important aspect of understanding this topic is to distinguish them with the amplitude versus distance and amplitude versus time plots.

### **Class 1: Defining problems and giving instructions**

- Each student will be asked to list as many observations as possible, under the two types of motion as they observe in the external world (home, market, college, etc) in 8-10 days.
- The student will be asked to identify any one motion in each of the lists and plot graphs of amplitude versus distance and amplitude versus time for each of them in the 8-10 days.

### **Class 2: Peer evaluation by students and defending self**

- Each student is asked to submit the lists of periodic and non-periodic motions observed in everyday life.
- Each student is also asked to submit the amplitude versus distance and amplitude versus time of one periodic motion and one non-periodic motion of his/her choice among his/her list.
- The submissions are randomly distributed among other students. Teacher now discusses the two types of motions in the lists of students and shows how the graphs will ideally look like.
- Now students are asked to evaluate and mark the submissions of other students they have with them and then the marked papers are returned to the respective students.
- Each student should be given an opportunity to question the marks he has got and each student who has given the marks should be able to defend his choice or marks.
- While observing the lists, marks obtained and the plots made, the teacher can assign marks to each student.

The following Program Outcomes will be attained by the students in such an activity based learning:

P.O. 1. Discipline Knowledge: Knowledge of science and ability to apply to relevant areas.

P.O. 4. Ethics: Apply the professional ethics and norms in respective discipline.

P.O. 6. Communication: Communicate effectively with the stake holders, and give and receive clear instructions.

### Continuous Formative Evaluation/ Internal Assessment:

Total marks for each course shall be based on continuous assessments and semester end examinations. The pattern of 40 : 60 for IA and Semester End theory examinations respectively and 50 : 50 for IA and Semester End practical examinations respectively.

Total Marks for each Course	= 100 marks
Continuous assessment (C1)	= 20 marks
Continuous assessment (C2)	= 20 marks
Semester End Examination (C3)	= 60 marks

### Evaluation process of IA marks shall be as follows:

- The first component (C1) of assessment is for 20% marks. This shall be based on test, assignment, seminar, case study, field work, project work etc. This assessment and score process should be completed after completing 50% of syllabus of the course/s and within 45 working days of semester program
- The second component (C2) of assessment is for 20% marks. This shall be based on test, assignment, seminar, case study, field work, internship / industrial practicum / project work etc. This assessment and score process should be based on completion of remaining 50 percent of syllabus of the courses of the semester.
- During the 17th – 19th week of the semester, a semester end examination shall be conducted by the University for each Course. This forms the third and final component of assessment (C3) and the maximum marks for the final component will be 60%.
- In case of a student who has failed to attend the C1 or C2 on a scheduled date, it shall be deemed that the student has dropped the test. However, in case of a student who could not take the test on scheduled date due to genuine reasons, such a candidate may appeal to the Program Coordinator / Principal. The Program Coordinator / Principal in consultation with the concerned teacher shall decide about the genuineness of the case and decide to conduct special test to such candidate on the date fixed by the concerned teacher but before commencement of the concerned semester end examinations.
- For assignments, tests, case study analysis etc., of C1 and C2, the students should bring their own answer scripts (A4 size), graph sheets etc., required for such tests/assignments and these be stamped by the concerned department using their department seal at the time of conducting tests / assignment / work etc.
- The outline for continuous assessment activities for Component-I (C1) and Component-II (C2) of a course shall be as under.
- 

Activities	C1	C2	Total Marks
Session Test	10 marks	10 marks	20
Seminars/Presentations/Activity	10 marks		10
Case study /Assignment / Field work / Project work etc.		10 marks	10
Total	20 marks	20 marks	40

## UG-Physics- Syllabus

- For practical course of full credits, Seminar shall not be compulsory. In its place, marks shall be awarded for Practical Record Maintenance.(the ratio is 50 (25 + 25) : 50)
  - Conduct of Seminar, Case study / Assignment, etc. can be either in C1 or in C2 component at the convenience of the concerned teacher.
  - The teachers concerned shall conduct test / seminar / case study, etc. The students should be informed about the modalities well in advance. The evaluated courses / 29 assignments during component I (C1) and component II (C2) of assessment are immediately provided to the candidates after obtaining acknowledgement in the register by the concerned teachers(s) and maintained by the Chairman in the case of a University Post-Graduate Department and the Principal / Director in the case of affiliated institutions. Before commencement of the semester end examination, the evaluated test, assignment etc. of C1 and C2 shall be obtained back to maintain them till the announcement of the results of the examination of the concerned semester.
- h) The marks of the internal assessment shall be published on the notice board of the department / college for information of the students.
  - i) The Internal assessment marks shall be communicated to the Registrar (Evaluation) at least 10 days before the commencement of the University examinations and the Registrar (E) shall have access to the records of such periodical assessments.
  - j) There shall be no minimum in respect of internal assessment marks.
  - k) Internal assessment marks may be recorded separately. A candidate who has failed or rejected the result, shall retain the internal assessment marks.

### **Scheme of Valuation for Practical's**

C1 and C2 are internal tests to be conducted during 8th and 16th weeks respectively of the semester. C3 is the semester-end examination conducted for 3 hours. The student will be evaluated on the basis of skill, comprehension and recording the results. The student has to compulsorily submit the practical record for evaluation during C1 and C2. For C3, the record has to be certified by the Head of the Department.

- The student is evaluated for 25 marks in C1 and C2 as per the following scheme: Experiment: 20, Record: 05 for C1 (25 marks)

## UG-Physics- Syllabus

Experiment: 20, Record: 05 for C2 (25 marks)

- The student is evaluated for 50 marks in C3 as per the following scheme: Experiment: 35, Viva: 15 for C3 (50 marks)

The experimental portion of evaluation (C3) is carried out as per the following scheme:

Formula with proper units and explanation	08
Setting up the apparatus / circuit connections	07
Taking readings and tabulating	10
Calculations and Graph	10
Viva	15
Total	50

### QUESTION PAPER PATTERN

#### DSC Courses and similar courses

Max Marks:

Time: 3 hours

#### Unit 1

Long answer questions; Answer 1 out of 2  $1 \times 10 = 10$

#### Unit 2

Long answer questions; Answer 1 out of 2  $1 \times 10 = 10$

#### Unit 3

Long answer questions; Answer 1 out of 2  $1 \times 10 = 10$

#### Unit 4

Long answer questions; Answer 1 out of 2  $1 \times 10 = 10$

**Numerical problems:** Six numerical problems (one each from unit); 4 to be answered  $4 \times 5 = 20$

**JSS COLLEGE OF ARTS, COMMERCE AND  
SCIENCE**

**(Autonomous)**

**OOTY ROAD, MYSURU- 570 025**

**DEPARTMENT OF PHYSICS**

**Syllabus**

**CHOICE BASED CREDIT SYSTEM**

**For B.Sc programmes**

- **Physics, Mathematics and Chemistry**
- **Physics, Mathematics and Computer Science**
- **Physics, Mathematics and Electronics**
- **Physics, Mathematics and Computer Maintenance**

**wef**

**2019-20**

## **Programme Outcome for Bachelor of Science in Physics, Chemistry and Mathematics:**

After completing the graduation in the Bachelor of Science the students are able to:

PO1.Demonstrate proficiency in Mathematics and the Mathematical concepts needed for a proper understanding of Physics.

PO2.Demonstrate the ability to justify and explain their thinking and/or approach

PO3.Develop state-of-the-art laboratory and professional communication skills

PO4.Apply the scientific method to design, execute, and analyze an experiment

PO5.Explain scientific procedures and experimental observations

PO6.Appreciate the role of chemistry in the society

PO7.Use this as a basis for ethical behaviour in issues facing chemists /drugs

PO8.Understand chemistry as an integral part for addressing social, economic, and environmental problems

PO9.Understand the value of Mathematical proof

PO10.Demonstrate proficiency in writing and understanding proofs

PO11.Apply mathematical problems and solution in aspects of science and technology

PO12.Gain experience to investigate the real world problems

PO13.Apply mathematical ideas and models to those problems

## **Programme Specific Outcome**

### **Bachelor of Science in Physics, Chemistry and Mathematics**

After completing the graduation in Physics, Chemistry and Mathematics the students are able to:

PSO1.Find career opportunities

PSO2.Develop competence to write competitive examinations

PSO3.Develop proficiency in the analysis of complex physical problems

PSO4.Use of mathematical or other appropriate techniques to solve problems

PSO5.Apply appropriate techniques for the qualitative and quantitative analysis of chemicals in laboratories and in industries

PSO6.Create a hypothesis and appreciate how it relates to broader theories

PSO7.Demonstrate skills in the use of computers

## **Programme Outcome for Bachelor of Science in Physics, Mathematics and Computer Science:**

After completing the graduation in the Bachelor of Science the students are able to:

PO1.Demonstrate proficiency in Mathematics and the Mathematical concepts needed for a proper understanding of Physics

PO2.Demonstrate the ability to justify and explain their thinking and/or approach

PO3.Develop state-of-the-art laboratory and professional communication skills

PO4.Apply the scientific method to design, execute, and analyze an experiment

PO5.Explain scientific procedure and experimental observations

PO6.Understand the value of Mathematical proof

PO7.Demonstrate proficiency in writing an understanding proofs

PO8. Apply mathematical problems and solutions in aspects of science and technology.

PO9.Gain experience to investigate the real world problems

PO10. Apply mathematical ideas and models to those problems.

PO11. Apply Mathematical principles for computing and logical design.

PO12.Design, implements, and evaluates a computational system to meet desired needs within realistic constraints

PO13. Use the System principles in the design and development of software for systems of varying complexity.

## **Programme Specific Outcome**

### **Bachelor of Science in Physics, Mathematics, Computer Science**

After completing the graduation in the Bachelor of Science the students are able to:

PSO1.Find career opportunities

PSO2. Develop competence to write competitive examinations.

PSO3.Develop proficiency in the analysis of complex physical problems

PSO4.Use of mathematical or other appropriate techniques to solve problems

PSO5.Create a hypothesis and appreciate how it relates to broader theories.

PSO6.Demonstrate skills in the use of Computers

PSO7.Join as Entry level Technical job role for an IT Industry

PSO8. Build small database ERP software/ web applications.

**Programme Outcome for Bachelor of Science in Physics, Mathematics and Computer Maintenance:**

After completing the graduation in the Bachelor of Science the students are able to:

- PO1.Demonstrate proficiency in Mathematics and the Mathematical concepts needed for a proper understanding of Physics
- PO2.Demonstrate the ability to justify and explain their thinking and/or approach
- PO3.Develop state-of-the-art laboratory and professional communication skills
- PO4.Apply the scientific method to design, execute, and analyze an experiment
- PO5.Explain scientific procedure and experimental observations
- PO6.Understand the value of Mathematical proof
- PO7.Demonstrate proficiency in writing and understanding proofs
- PO8.Apply mathematical problems and solutions in aspects of science and technology.
- PO9.Gain experience to investigate the real world problems
- PO10.Apply mathematical ideas and models to those problems
- PO11.Design, implement and evaluate a computational system to meet desired needs within realistic constraints
- PO12.Apply system design and development principals in the construction of software systems of varying complexity
- PO13.Apply the knowledge techniques , skills and modern tools in computer maintenance
- PO14.Understand networking applications to include basic electronics, programming, operation and computer network

## **Programme Specific Outcome**

### **Bachelor of Science in Physics, Mathematics, Computer Maintenance**

After completing the graduation in the Bachelor of Science the students are able to:

PSO1.Find career opportunities

PSO2.Develop competence to write competitive examinations

PSO3.Develop proficiency in the analysis of complex physical problems

PSO4.Use of mathematical or other appropriate techniques to solve them

PSO5.Create a hypothesis and appreciate how it relates to broader theories.

PSO6.Demonstrate skills in the use of Computers

PSO7. Start small enterprise in PC Maintenance/ Networking field.

PSO8.Join organizations related to Computer Hardware and Networking Maintenance.

## **Programme Outcome for Bachelor of Science in Physics, Mathematics and Electronics:**

After completing the graduation in the Bachelor of Science the students are able to:

PO1.Demonstrate proficiency in mathematics and the mathematical concepts needed for a proper understanding of physics.

PO2.Demonstrate the ability to justify and explain their thinking and/or approach

PO3. Develop state-of-the-art laboratory skills and professional communication skills.

PO4.Apply the scientific method to design, execute, and analyze an experiment

PO5.Understand the value of Mathematical proof

PO6.Gain experience to investigate the real world problems

PO7.Explain scientific procedures and their experimental observations

PO8. Demonstrate proficiency in writing and understanding proofs.

PO9.Apply mathematical problems and solutions in aspects of science and technology

PO10. Apply mathematical ideas and models to problems.

PO11.Apply appropriate troubleshooting techniques to electronic circuits / systems and perform test procedures

PO12.Assist, Assemble, modify and test electronic circuits in accordance with job requirements.

PO13.Communicate effectively in technical and non-technical environments

## **Programme Specific Outcome**

### **Bachelor of Science in Physics, Mathematics, Electronics**

After completing the graduation in the Bachelor of Science the students are able to:

PSO1.Find career opportunities

PSO2.Develop competence to write competitive examinations.

PSO3.Develop proficiency in the analysis of complex physical problems.

PSO4.Use mathematical or other appropriate techniques to solve complex physical problems.

PSO5.Create a hypothesis and appreciate how it relates to broader theories.

PSO6.Demonstrate skills in the use of Computers for control, data acquisition, and data analysis in experimental investigations

PSO7.Apply knowledge of Physics, Mathematics and Electronics fundamentals to the solve problems in electronic circuits & communication systems

PSO8.Apply appropriate troubleshooting techniques to Electronic circuits / systems and perform test procedures

**Discipline Specific Elective papers: Choose 1**

**SEMESTER V**

**Course code: DME29001/ DME29002/ DME29003/ DME29004**

**Credits: Theory – 04, Practical – 02**

**Theory: 60 Lectures**

**COURSE OUTCOME:**

After the completion of the course, Students will be able to

CO1.Deliberate in detail with examples Digital Circuits

CO2.Specify the details of Operational amplifier

CO3.Learn the characteristics of sinusoidal oscillator

CO4.Identify in detail with application Instrumentation

CO5.Deliberate the classification and characteristics of gates

CO6.Identify in detail with application of semiconductor devices

**DIGITAL AND ANALOG CIRCUITS AND INSTRUMENTATION:**

**DSE 1A**

**Unit-1**

**Digital Circuits**

Difference between Analog and Digital Circuits. Binary Numbers. Decimal to Binary and Binary to Decimal Conversion, AND, OR and NOT Gates (Realization using Diodes and Transistor). NAND and NOR Gates as Universal Gates. XOR and XNOR Gates. **(04 Lectures)**

De Morgan's Theorems. Boolean Laws. Simplification of Logic Circuit using Boolean algebra. Fundamental Products.Minterms and Maxterms.Conversion of a Truth Table into an Equivalent Logic Circuit by (1) Sum of Products Method and (2) Karnaugh Map. **(05 Lectures)**

## UG-Physics- Syllabus

Binary Addition.Binary Subtraction using 2's Complement Method).Half Adders and Full Adders and Subtractors, 4-bit binary Adder-Subtractor. **(04 Lectures)**

### **Semiconductor Devices and Amplifiers:**

**Semiconductor Diodes:** p and n type semiconductors. Barrier Formation in PN Junction Diode. Qualitative Idea of Current Flow Mechanism in Forward and Reverse Biased Diode. PN junction and its characteristics.Static and Dynamic Resistance.Principle and structure of (1) LEDs (2) Photodiode (3) Solar Cell. **(05 Lectures)**

**Bipolar Junction transistors:** n-p-n and p-n-p Transistors. Characteristics of CB, CE and CC Configurations.Active, Cutoff, and Saturation Regions.Current gains  $\alpha$  and  $\beta$ . Relations between  $\alpha$  and  $\beta$ . Load Line analysis of Transistors.DC Load line and Q-point.Voltage Divider Bias Circuit for CE Amplifier.h-parameter Equivalent Circuit. Analysis of a single-stage CE amplifier using Hybrid Model. Input and Output Impedance. Current, Voltage and Power Gains. Class A, B, and C Amplifiers. Two stage RC coupled amplifier. **(12 Lectures)**

## **Unit-2**

### **Operational Amplifiers (Black Box approach):**

Characteristics of an Ideal and Practical Op-Amp (IC 741), Open-loop& Closed-loop Gain.CMRR, concept of Virtual ground. Applications of Op-Amps: (1) Inverting and Non-inverting Amplifiers (2) Adder (3) Subtractor (4) Differentiator (5) Integrator (6) Zero Crossing Detector

**(13 Lectures)**

**Sinusoidal Oscillators:** Barkhausen's Criterion for Self-sustained Oscillations. Determination of Frequency of RC Oscillator **(05Lectures)**

### **Instrumentations:**

Introduction to CRO: Construction and Working of CRO Applications of CRO: (1) Study of Waveform, (2) Measurement of Voltage, Current, Frequency, and Phase Difference. **(03 Lectures)**

Power Supply: Half-wave Rectifiers. Centre-tapped and Bridge Full-wave Rectifiers Calculation of Ripple Factor and Rectification Efficiency, Basic idea about capacitor filter, Zener Diode and Voltage Regulation. **(06 Lectures)**

## UG-Physics- Syllabus

Timer IC: IC 555 Pin diagram and its application as Astable & Monostable Multivibrator.

**(03 Lectures)**

### Reference Books:

- Integrated Electronics, J. Millman and C.C. Halkias, 1991, Tata Mc-Graw Hill.
- Electronic devices and circuits, S. Salivahanan and N. Suresh Kumar, 2012, Tata Mc-Graw Hill.
- Microelectronic Circuits, M.H. Rashid, 2<sup>nd</sup>Edn. 2011, Cengage Learning.
- Modern Electronic Instrumentation & Measurement Tech., Helfrick&Cooper,1990, PHI Learning
- Digital Principles & Applications, A.P. Malvino, D.P. Leach &Saha, 7<sup>th</sup> Ed.,2011, Tata McGraw Hill
- Microelectronic circuits, A.S. Sedra, K.C. Smith, A.N. Chandorkar, 2014, 6<sup>th</sup>Edn., Oxford University Press.
- Fundamentals of Digital Circuits, A. Anand Kumar, 2<sup>nd</sup> Edition, 2009, PHI Learning Pvt. Ltd.
- OP-AMP and Linear Digital Circuits, R.A. Gayakwad, 2000, PHI Learning Pvt. Ltd.

## PRACTICALS - DSE LAB: DIGITAL AND ANALOG CIRCUITS AND INSTRUMENTS

**Course code: DME29101/ DME29102/ DME29103/ DME29104**

### (Minimum of eight is to be conducted)

1. To verify and design AND, OR, NOT and XOR gates using IC 7400
2. To verify and design AND, OR, NOT and XOR gates using IC 7402
3. Half adder and Full adder
4. FET-characteristics
5. To study the characteristics of a Transistor in CE configuration.
6. To study the characteristics of a Transistor in CB configuration.
7. Phase shift oscillator
8. Op-amp has inverting and non-inverting amplifier
9. Wien Bridge Oscillator

## UG-Physics- Syllabus

10. CE-amplifier
11. To minimize a given logic circuit.
12. To design an astable multivibrator of given specifications using 555 Timer.
13. To design a monostable multivibrator of given specifications using 555 Timer
14. UJT Characteristics
15. Op Amp has Adder and Subtractor.

### Reference Books:

- Basic Electronics: A text lab manual, P.B. Zbar, A.P. Malvino, M.A. Miller, 1994, Mc-Graw Hill.
- Electronics: Fundamentals and Applications, J.D. Ryder, 2004, Prentice Hall.
- OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4<sup>th</sup> edition, 2000, Prentice Hall.
- Electronic Principle, Albert Malvino, 2008, Tata Mc-Graw Hill

## SEMESTER V

**Course code:** DME29201/ DME29202/ DME29203/ DME29204

**Credits:** Theory – 04, Practical – 02

**Theories:** 60 Lectures

### **COURSE OUTCOME:**

After the completion of the course, Students will be able to

CO1. Write down in detail with application of crystal structure

CO2. Write down the details of Elementary lattice dynamics

CO3. Deliberate in detail with examples Magnetic properties of matter

CO4. Identify the characteristics of elementary band theory

CO5. Learn the classification and characteristics of superconductivity

CO6. Understand the elastic properties of solids and lattice vibrations

## **SOLID STATE PHYSICS: DSE 1B**

### **Unit-1**

**Crystal Structure:** Solids: Amorphous and Crystalline Materials. Lattice

Translation Vectors. Lattice with a Basis – Central and Non-Central Elements. Unit Cell. Miller Indices. Reciprocal Lattice. Types of Lattices. Brillouin Zones. Diffraction of X-rays by Crystals. Bragg's Law. Bragg spectrometer. Continuous x-ray spectra, Duane and Hunt limit. Characteristic x-ray spectra. Mosley law and its significance. **(10 Lectures)**

**Elementary Lattice Dynamics:** Lattice Vibrations and Phonons: Linear Monatomic and Diatomic Chains. Acoustical and Optical Phonons. Qualitative Description of the Phonon Spectrum in Solids. Dulong and Petit's Law, Einstein and Debye theories of specific heat of solids. **(09 Lectures)**

**Magnetic Properties of Matter:** Dia, Para, Ferri and Ferromagnetic Materials. Classical Langevin Theory of dia – and Paramagnetic Domains. Quantum Mechanical Treatment of Paramagnetism. Curie's law, Weiss's Theory of Ferromagnetism and Ferromagnetic Domains. Discussion of B-H Curve. Hysteresis and Energy Loss. **(11 Lectures)**

## Unit-2

**Electrical Properties of metals:** Free electron theory, Quantum theory, Conductivity of metals on the basis of free electron theory- Ohm's law. **(04 Lectures)**

**Dielectric Properties of Materials:** Polarization. Local Electric Field at an Atom. Depolarization Field. Electric Susceptibility.Polarizability.Clausius Mosotti Equation. Classical Theory of Electric Polarizability.Normal and Anomalous Dispersion.Cauchy and Sellmeir relations. Langevin-Debye equation. Complex Dielectric Constant. Optical Phenomena. Application: Plasma Oscillations, Plasma Frequency, Plasmon's. **(10 Lectures)**

**Elementary band theory:** Kronig Penny model. Band Gaps.Conductors, Semiconductors and insulators. P and N type Semiconductors, carrier concentration in intrinsic semiconductor, Fermi energy, effect of temperature and concentration on Fermi energy, Conductivity of Semiconductors, mobility, Hall Effect, Hall coefficient. **(10 Lectures)**

**Superconductivity:** Experimental Results. Critical Temperature. Critical magnetic field. Meissner effect. Type I and type II Superconductors, London's Equation and Penetration Depth. Isotope effect.BCS theory, application of Superconductors. **(06 Lectures)**

### **Reference Books:**

- Introduction to Solid State Physics, Charles Kittel, 8<sup>th</sup> Ed., 2004, Wiley India Pvt. Ltd.
- Elements of Solid State Physics, J.P. Srivastava, 2<sup>nd</sup> Ed., 2006, Prentice-Hall of India
- Introduction to Solids, Leonid V. Azaroff, 2004, Tata Mc-Graw Hill
- Solid State Physics, Neil W. Ashcroft and N. David Mermin, 1976, Cengage Learning
- Solid State Physics, Rita John, 2014, McGraw Hill
- Solid-state Physics, H. Ibach and H Luth, 2009, Springer
- Elementary Solid State Physics, 1/e M. Ali Omar, 1999, Pearson India
- Solid State Physics, M.A. Wahab, 2011, Narosa Publications

**PRACTICALS-DSE LAB: SOLID STATE PHYSICS**

**Course code: DME29301/ DME29302/ DME29303/ DME29304**

**(Minimum of eight is to be conducted)**

1. Determination of energy gap of a semiconductor using Meter Bridge.
2. Determination Fermi energy of metal (copper).
3. To measure the Dielectric Constant of a given solid Materials
4. Study of LDR characteristics.
5. Verification of Inverse square law for light Intensity using a Photo-diode.
6. Bridge rectifier with and without filters.
7. Clipping and clamping circuits using diodes.
8. Zener diode as a voltage regulator.
9. Study of powder X-ray photograph-the determination of inter planar distances.
10. To determine value of Planck's constant using LEDs of at least 4 different colors.
11. To determine value of Boltzmann constant using V-I characteristic of PN diode.
12. Study of Hall Effect.
13. To determine the refractive index of a dielectric layer using SPR
14. To study the PE Hysteresis loop of a Ferroelectric Crystal.
15. To measure the resistivity of a semiconductor (Ge) crystal with temperature by four-probe method (from room temperature to 150 °C) and to determine its band gap
16. To draw the BH curve of iron using a Solenoid and determine the energy loss from Hysteresis.
17. To determine the complex dielectric constant and plasma frequency of metal using Surface Plasmon resonance (SPR)
18. Measurement of Magnetic susceptibility of solids.

**Reference Books**

- Advanced level Physics Practicals, Michael Nelson and Jon M. Ogborn, 4<sup>th</sup> Edition, reprinted 1985, Heinemann Educational Publishers
- A Text Book of Practical Physics, InduPrakash and Ramakrishna, 11<sup>th</sup> Ed., 2011, KitabMahal, New Delhi
- Elements of Solid State Physics, J.P. Srivastava, 2<sup>nd</sup> Ed., 2006, Prentice-Hall of India

## SEMESTER V

**Course code:** DME29401/ DME29402/ DME29403/ DME29404

**Credits:** Theory – 04, Practical – 02

**Theories:** 60 Lectures

### COURSE OUTCOME:

After successful completion of the course, the student is able to:

CO1.Learn in detail with examples calculus of functions of more than one variable

CO2.Specify the details of Fourier series.

CO3.Specify in depth integrals.

CO4.Deliberate in detail with application of partial differential equations

CO5.Understand in depth complex analysis

CO6.Deliberate in detail with examples of beta and gamma function

## MATHEMATICAL PHYSICS: DSE 1D

### Unit-1

**Calculus of functions of more than one variable:** Partial derivatives, exact and inexact differentials. Integrating factor, with simple illustration. Constrained Maximization using Lagrange Multipliers. **(06 Lectures)**

**Fourier series:** Periodic functions. Orthogonality of sine and cosine functions, Dirichlet Conditions (Statement only).Expansion of periodic functions in a series of sine and cosine functions and determination of Fourier coefficients. Complex representation of Fourier series. Expansion of functions with arbitrary period. Expansion of non-periodic functions over an interval. Even and odd functions and their Fourier expansions.Application.Summing of Infinite Series. **(10 Lectures)**

**Frobenius Method and Special Functions:** Singular Points of Second Order Linear Differential Equations and their importance. Frobenius method and its applications to differential equations.Legendre, Bessel, Hermite and Laguerre Differential Equations. Properties of Legendre Polynomials: Rodrigues Formula, Orthogonality. Simple recurrence relations. **(14 Lectures)**

**Unit-2**

**Some Special Integrals:** Beta and Gamma Functions and Relation between them. Expression of Integrals in terms of Gamma Functions. Error Function (Probability Integral). **(06 Lectures)**

**Partial Differential Equations:** Solutions to partial differential equations, using separation of variables: Laplace's Equation in problems of rectangular, cylindrical and spherical symmetry. **(10 Lectures)**

**Complex Analysis:** Brief Revision of Complex Numbers and their Graphical Representation. Euler's formula, De Moivre's theorem, Roots of Complex Numbers. Functions of Complex Variables. Analyticity and Cauchy-Riemann Conditions. Examples of analytic functions. Singular functions: poles and branch points, order of singularity, branch cuts. Integration of a function of a complex variable. Cauchy's Inequality. Cauchy's Integral formula.

**(14 Lectures)**

**PRACTICALS -DSE LAB: MATHEMATICAL PHYSICS**

**Course code: DME29501/ DME29502/ DME29503/ DME29504**

The aim of this course is not just to teach computer programming and numerical Analysis but to emphasize its role in solving problems in Physics.

- Highlights the use of computational methods to solve physical problems
- Use of computer language as a tool in solving physics problems (applications)
- The course will consist of lectures (both theory and practical) in the Computer Lab
- Evaluation done not on the programming but on the basis of formulating the problem
- Aim at teaching students to construct the computational problem to be solved
- Students can use anyone operating system Linux or Microsoft Windows

<b>Topics Description with Applications</b>	Introduction and Overview
Introduction and Overview	Computer architecture and organization, memory and Input/output devices
Basics of scientific computing	Binary and decimal arithmetic, Floating point numbers, algorithms, Sequence, Selection and Repetition, single and double precision arithmetic, underflow & overflow-emphasize the importance of making equations in terms of dimensionless variables, Iterative methods
Errors and error Analysis	Truncation and round off errors, Absolute and relative errors, Floating point computations.
Review of C & C++ Programming fundamentals	Introduction to Programming, constants, variables and data types, operators and Expressions, I/O statements, scanf and printf, c in and c out, Manipulators for data formatting, Control statements (decision making and looping statements) ( <i>If-statement. If-else Statement. Nested if Structure. Else-if Statement. Ternary Operator. Goto Statement. Switch Statement. Unconditional and Conditional Looping. While-Loop. Do-While Loop. FOR Loop. Break and Continue Statements. Nested Loops</i> ), Arrays ( <i>1D&amp;2D</i> ) and strings, user defined functions, Structures and Unions, Idea of classes and objects
Programs: using C/C++ language	Sum & average of a list of numbers, largest of a given list of numbers and its location in the list, sorting of numbers in ascending-descending order, Binary search

**UG-Physics- Syllabus**

Random number generation	Area of circle, area of square, volume of sphere, value of pi ( $\pi$ )
Solution of Algebraic and Transcendental equations by Bisection, Newton Raphson and Secant methods	Solution of linear and quadratic equation, solving $\alpha = \tan \alpha; I = I_0 \left( \frac{\sin \alpha}{\alpha} \right)^2$ in optics
Interpolation by Newton Gregory Forward and Backward difference formula, Error estimation of linear interpolation	Evaluation of trigonometric functions e.g. $\sin \theta$ , $\cos \theta$ , $\tan \theta$ , etc.
Numerical differentiation (Forward and Backward difference formula) and Integration (Trapezoidal and Simpson rules), Monte Carlo method	Given Position with equidistant time data to calculate velocity and acceleration and vice-versa. Find the area of B-H Hysteresis loop
Solution of Ordinary Differential Equations (ODE) First order Differential equation Euler, modified Euler and Runge-Kutta (RK) second and fourth order methods	<p>First order differential equation</p> <ul style="list-style-type: none"> <li>• Radioactive decay</li> <li>• Current in RC, LC circuits with DC source</li> <li>• Newton's law of cooling</li> <li>• Classical equations of motion</li> </ul> <p>Attempt following problems using RK 4 order method:</p> <ul style="list-style-type: none"> <li>• Solve the coupled differential equations</li> </ul> $\frac{dx}{dt} = y + x - \frac{x^3}{3}; \frac{dy}{dx} = -x$ <p>for four initial conditions <math>x(0) = 0, y(0) = -1, -2, -3, -4</math>. Plot <math>x</math> vs <math>y</math> for each of the four initial conditions on the same screen for <math>0 \leq t \leq 15</math></p> <p>The differential equation describing the motion of a Pendulum is <math>\frac{d^2 \theta}{dt^2} = -\sin(\theta)</math>. The pendulum is released from rest at an angular displacement <math>\alpha</math>, i.e. <math>\theta(0) = \alpha</math>, and <math>\theta^1(0) = 0</math>. Solve the equation for <math>\alpha = 0.1, 0.5</math> and <math>1.0</math> and plot <math>\theta</math> as a function of time in the range <math>0 \leq t \leq 8\pi</math>. Also plot the analytic solution valid for small <math>\theta \sin(\theta) = \theta</math></p>

**Discipline Specific Elective papers: Choose 1**

**SEMESTER VI**

**Course code:** DMF29001/ DMF29002/ DMF29003/ DMF29004

**Credits: Theory – 04, Practical – 02**

**Theories: 60 Lectures**

**COURSE OUTCOME:**

After successful completion of the course, the student is able to:

CO1.Understand in detail with examples planks quantum

CO2.Identify the classification and characteristics of Planck's quantum

CO3.Learn the classification and characteristics of fission and fusion reaction

CO4.Write down the characteristics of matter waves

CO5.Understand the classification and characteristics of radioactivity

CO6.Specify in depth Eigen values

**ELEMENTS OF MODERN PHYSICS: DSE 1A**

**Unit-1**

Planck's quantum, Planck's constant and light as a collection of photons; Photo-electric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment.

**(08 Lectures)**

Problems with Rutherford model- instability of atoms and observation of discrete atomic spectra; Bohr's quantization rule and atomic stability; calculation of energy levels for hydrogen like atoms and their spectra. **(04 Lectures)**

Position measurement-gamma ray microscope thought experiment; wave-particle duality, Heisenberg uncertainty principle-impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle **(04 lectures)**

## UG-Physics- Syllabus

Two slit interference experiment with photons, atoms and particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of wave function, probabilities and normalization; Probability and probability current densities in one dimension. **(10 Lectures)**

Fission and fusion - mass deficit, relativity and generation of energy; Fission - nature of fragments and emission of neutrons. Nuclear reactor: slow neutrons interacting with Uranium 235; Fusion and thermonuclear reactions. **(04 Lectures)**

### **Unit-2**

One dimensional infinitely rigid box- energy eigenvalues and Eigen functions, normalization; Quantum dot as an example; Quantum mechanical scattering and tunnelling in one dimension - across a step potential and across a rectangular potential barrier. **(12 Lectures)**

Size and structure of atomic nucleus and its relation with atomic weight; Impossibility of an electron being in the nucleus as a consequence of the uncertainty principle. Nature of nuclear force, NZ graph, semi-empirical mass formula and binding energy. **(07 Lectures)**

Radioactivity: stability of nucleus; Law of radioactive decay; Mean life & half-life; Alpha decay; Beta decay - energy released, spectrum and Pauli's prediction of neutrino; gamma-ray emission. **(11 Lectures)**

### **Reference Books:**

- Concepts of Modern Physics, Arthur Beiser, 2009, McGraw-Hill
- Modern Physics, John R. Taylor, Chris D. Zafiratos, Michael A. Dubson, 2009, PHI Learning
- Six Ideas that Shaped Physics: Particle Behave like Waves, Thomas A. Moore, 2003, McGraw Hill

## UG-Physics- Syllabus

- Quantum Physics, Berkeley Physics Course Vol.4. E.H. Wichman, 2008, Tata McGraw-Hill Co.
- Modern Physics, R.A. Serway, C.J. Moses, and C.A.Moyer, 2005, Cengage Learning
- Modern Physics, G. Kaur and G.R. Pickrell, 2014, McGraw Hill

### **PRACTICALS –DSE LAB: ELEMENTS OF MODERN PHYSICS**

**Course code:** DMF29101/ DMF29102/ DMF29103/ DMF29104

#### **(Minimum of eight is to be conducted)**

1. To study the Divergence of laser.
2. Characteristics of LED – To measure efficiency and output power.
3. The logic gates AND, OR, NOT gates using Transistors.
4. Phase measurement in LCR circuit using CRO.
5. Negative feedback amplifier.
6. Hartley Oscillator.
7. Determine Rydberg constant using Charging Hydrogen discharge tube.
8. Two stages RC coupled Amplifier
9. Triode characteristics.
10. Energy dissipation during charging of capacitors
11. To determine the ionization potential of mercury.
12. To study photoelectric effect.
13. Determination of dielectric constant of a material used in capacitor.
14. To determine work function of material of filament of directly heated vacuum diode.
15. To determine the absorption lines in the rotational spectrum of Iodine vapor. To study the diffraction patterns of single and double slits using laser source and measure its intensity variation using Photo sensor and compare with incoherent source – Na light.
16. Photo-electric effect: photo current versus intensity and wavelength of light; maximum energy of photo-electrons versus frequency of light
17. To setup the Millikan oil drop apparatus and determine the charge of an electron.
18. To study the diffraction patterns of single and double slits using laser source and measure its intensity variation using Photo sensor and compare with incoherent source – Na light.
19. To determine work function of material of filament of directly heated vacuum diode.

## UG-Physics- Syllabus

20. Spectral response of solar cell.

## SEMESTER VI

**Course code:** DMF29201/ DMF29202/ DMF29203/ DMF29204

**Credits:** Theory – 04, Practical – 02

**Theories: 60 Lectures**

### COURSE OUTCOME:

After the completion of the course, Students will be able to

CO1. Write down in detail with application and properties of nuclei

CO2. Learn in detail with application and nuclear models

CO3. Understand in detail with examples radioactivity

CO4. Identify the details of particle physics

CO5. Write down the details of particle accelerators

CO6. Write down the details of detector for nuclear radiator

## Nuclear & Particle Physics: DSE 1B

### Unit-1

**General Properties of Nuclei:** Constituents of nucleus and their Intrinsic properties, quantitative facts about size, mass, charge density (matter energy), binding energy, average binding energy and its variation with mass number, main features of binding energy versus mass number curve, N/A plot, angular momentum, parity, magnetic moment, electric moments, nuclear excited states.

**(10 Lectures)**

**Nuclear Models:** Liquid drop model approach, semi empirical mass formula and binding energy, significance of various terms, condition of nuclear stability. Concept of Nuclear force.

**(06 Lectures)**

**Nuclear Reactions:** Types of Reactions, Conservation Laws, kinematics of reactions, Q-value, Rutherford alpha scattering.

**(04 Lectures)**

**Radioactivity decay :** (a) Alpha decay: basics of  $\alpha$ -decay processes, Geiger Nuttall law,  $\alpha$ -decay spectroscopy. (b) beta-decay: energy kinematics for beta-decay, positron emission, electron capture, neutrino hypothesis. (c) Gamma decay

**(06 Lectures)**

## UG-Physics- Syllabus

**Nuclear fission and fusion:** Estimation of the fission energy on the basis of liquid drop model, controlled and uncontrolled chain reaction, four factor formula, types of reactor

**(04 Lectures)**

### Unit-2

**Interaction of Nuclear Radiation with matter:** Gamma ray interaction through matter, photoelectric effect, Compton scattering, pair production, neutron interaction with matter.

**(06 Lectures)**

**Detector for Nuclear Radiations:** GM Counter. Basic principle of Scintillation. Detectors and construction of photo-multiplier tube (PMT). Semiconductor Detectors (Si & Ge) for charge particle and photon detection (concept of charge carrier and mobility)

**(06 Lectures)**

**Particle Accelerators:** Linear accelerator, Cyclotron, Betatron.

**(04 Lectures)**

**Particle physics:** Particle interactions; basic features, types of particles and its families. Symmetries and Conservation Laws: energy and momentum, angular momentum, parity, baryon number, Lepton number, Isospin, Strangeness and charm, concept of quark model, color quantum number and gluons.

**(14 Lectures)**

## **PRACTICALS –DSE LAB: NUCLEAR AND PARTICLE PHYSICS**

**Course code:** DMF29301/ DMF29302/ DMF29303/ DMF29304

**(Minimum of eight is to be conducted)**

1. Study of Characteristics of GM tube and determination of operating voltage, plateau length.
2. Verification of inverse square law of gamma rays.
3. Study of Absorption coefficient of gamma particle.
4. Verification of inverse square law of beta rays.
5. Half-life of K-40
6. Determine the ionization potential of Xenon.
7. Cockcroft Walton voltage multiplier.
8. Solar cell characteristics – To determine efficiency and fill factor.
9. Determine wavelength of laser light.
10. To determine the value of  $e/m$  by magnetic focusing.
11. Determination of range of electron in aluminum using GM counter

## UG-Physics- Syllabus

12. Study of Absorption coefficient of beta particle
13. To determine the wavelength of H-alpha emission line of Hydrogen atom.
14. Study of counting statistics using background radiation using GM counter
15. Study of radiation in various materials (e.g. K<sub>2</sub>SO<sub>4</sub> etc.). Investigation of possible radiation in different routine materials by operating GM at operating voltage.

## SEMESTER VI

**Course code: DMF29401/DMF29402/DMF29403/DMF29404**

**Credits: Theory – 04, Practical – 02**

**Theories: 60 Lectures**

### **COURSE OUTCOME:**

After successful completion of the course, the student is able to:

CO1.Understand the classification and characteristics of time dependent Schrodinger equation

CO2.Understand in depth time independent Schrodinger equation

CO3.Understand the classification and characteristics of quantum theory of hydrogen like atoms

CO4.Specify the details of atoms in external magnetic field

CO5.Write down the characteristics of many electron atoms

## **QUANTUM MECHANICS: DSE 1C**

### **Unit-1**

**Time dependent Schrodinger equation:** Time dependent Schrodinger equation and dynamical evolution of a quantum state; Properties of Wave Function. Interpretation of Wave Function Probability and probability current densities in three dimensions; Conditions for Physical Acceptability of Wave Functions. Normalization. Linearity and Superposition Principles. Eigenvalues and Eigenfunctions. Position, momentum & Energy operators; commutator of position and momentum operators; Expectation values of position and momentum. Wave Function of a Free Particle. **(08 Lectures)**

**Time independent Schrodinger equation-**Hamiltonian, stationary states and energy eigenvalues; expansion of an arbitrary wavefunction as a linear combination of energy eigenfunctions; General solution of the time dependent Schrodinger equation in terms of linear combinations of stationary states; Application to the spread of Gaussian wavepacket for a free particle in one dimension; wave packets, Fourier transforms and momentum space wavefunction; Position-momentum uncertainty principle. **(10 Lectures)**

## UG-Physics- Syllabus

**General discussion of bound states in an arbitrary potential-** continuity of wave function, boundary condition and emergence of discrete energy levels; application to one-dimensional problem- square well potential; Quantum mechanics of simple harmonic oscillator-energy levels and energy eigenfunctions using Frobenius method. **(12 Lectures)**

### Unit-2

**Quantum theory of hydrogen-like atoms:** time independent Schrodinger equation in spherical polar coordinates; separation of variables for the second order partial differential equation; angular momentum operator and quantum numbers; Radial wave functions from Frobenius method; Orbital angular momentum quantum numbers  $l$  and  $m$ ; s, p, d,.. Shells (idea only) **(10 Lectures)**

**Atoms in Electric and Magnetic Fields:-** Electron Angular Momentum. Space Quantization. Electron Spin and Spin Angular Momentum. Larmor's Theorem. Spin Magnetic Moment. Stern-Gerlach Experiment. Zeeman Effect: Electron Magnetic Moment and Magnetic Energy, Gyromagnetic Ratio and Bohr Magneton. **(08 Lectures)**

**Atoms in External Magnetic Fields:-** Normal and Anomalous Zeeman Effect. **(02 Lectures)**

**Many electron atoms:-** Pauli's Exclusion Principle. Symmetric and Antisymmetric Wave Functions. Periodic table.Fine structure. Spin orbit coupling. Spectral Notations for Atomic States. Total Angular Momentum. Vector Model. Spin-orbit coupling in atoms-L-S and J-J couplings. **(10 Lectures)**

## PRACTICAL-DSE LAB: QUANTUM MECHANICS

Course code: DMF29501/DMF29502/DMF29503/DMF29504

Use C/C++/Scilab for solving the following problems based on Quantum Mechanics Like

1. Solve the s-wave Schrodinger equation for the ground state and the first excited state of the hydrogen atom:

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E] \text{ where } V(r) = \frac{-e^2}{r}$$

Here, m is the reduced mass of the electron. Obtain the energy Eigen values and plot the corresponding wave functions. Remember that the ground state energy of the hydrogen atom is  $\approx -13.6$  eV. Take  $e = 3.795$  (eVÅ)<sup>1/2</sup>,  $\hbar c = 1973$  (eVÅ) and  $m = 0.511 \times 10^6$  eV/c<sup>2</sup>

2. Solve the s-wave radial Schrodinger equation for an atom

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

Where m is the reduced mass of the system (which can be chosen to be the mass of an electron), for the screened coulomb potential

$$V(r) = \frac{-e^2}{r} e^{-\frac{r}{a}}$$

Find the energy (in eV) of the ground state of the atom to an accuracy of three Significant digits. Also, plot the corresponding wave function. Take  $e = 3.795$  (eVÅ)<sup>1/2</sup>,  $m = 0.511 \times 10^6$  eV/c<sup>2</sup>, and  $a = 3$  Å,  $5$  Å,  $7$  Å. In these units  $\hbar c = 1973$  (eVÅ). The ground state energy is expected to be above -12 eV in all three cases.

3. Solve the s-wave radial Schrodinger equation for a particle of mass m:

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2m}{\hbar^2} [V(r) - E]$$

For the anharmonic oscillator potential

$$V(r) = \frac{1}{2}kr^2 + \frac{1}{3}br^3 \quad - \quad -$$

for the ground state energy (in MeV) of the particle to an accuracy of three significant digits. Also, plot the corresponding wave function. Choose  $m = 940 \text{ MeV}/c^2$ ,  $k = 100 \text{ MeV fm}^{-2}$ ,  $b = 0, 10, 30 \text{ MeV fm}^{-3}$ . In these units,  $\hbar c = 197.3 \text{ MeV fm}$ . The ground state energy I expected to lie between 90 and 110 MeV for all three cases.

4. Solve the s-wave radial Schrodinger equation for the vibrations of hydrogen molecule:

$$\frac{d^2 y}{dr^2} = A(r)u(r), A(r) = \frac{2\mu}{\hbar^2} [V(r) - E]$$

where  $\mu$  is the reduced mass of the two-atom system for the Morse potential

$$V(r) = D \left( e^{-2\alpha r} - e^{-\alpha r} \right)^2, r^1 = \frac{r - r_0}{r}$$

Find the lowest vibrational energy (in MeV) of the molecule to an accuracy of three significant digits. Also plot the corresponding wave function. Take:  $m = 940 \times 10^6 \text{ eV}/c^2$ ,  $D = 0.755501 \text{ eV}$ ,  $\alpha = 1.44$ ,  $r_0 = 0.131349 \text{ \AA}$

**Laboratory based experiments:**

5. Study of Electron spin resonance- determine magnetic field as a function of the resonance frequency
6. Study of Zeeman effect: with external magnetic field; Hyperfine splitting
7. To study the quantum tunnelling effect with solid state device, e.g. tunnelling current in backward diode or tunnel diode.

**Skill Enhancement Course (SEC) (Credit: 02 each)**

**SEMESTER V**

**Course code:** DME29601/ DME29602/ DME29603/ DME29604

**Credits: Theory – 02**

**Theories: 30 Lectures**

**COURSE OUTCOME:**

After the completion of the course, Students will be able to

CO1.Understand the characteristics of fossil fuel

CO2.Learn in detail with application of wind energy

CO3.Specify in detail with application of ocean energy and hydro energy

CO4.Identify the characteristics of geothermal energy

CO5.Deliberate the characteristics of electromagnetic energy

CO6.Deliberate the characteristics of piezoelectric energy harvesting

**RENEWABLE ENERGY AND ENERGY HARVESTING: SEC 1A**

**Fossil fuels and Alternate Sources of energy:** Fossil fuels and Nuclear Energy, their limitation, need of renewable energy, non-conventional energy sources. An overview of developments in Offshore Wind Energy, Tidal Energy, Wave energy systems, Ocean Thermal Energy Conversion, solar energy, biomass, biochemical conversion, biogas generation, geothermal energy tidal energy, Hydroelectricity. **(03 Lectures)**

**Solar energy:** Solar energy, its importance, storage of solar energy, solar pond, non convective solar pond, applications of solar pond and solar energy, solar water heater, flat plate collector, solar distillation, solar cooker, solar green houses, solar cell, absorption air conditioning. Need and characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, and sun tracking systems. **(06 Lectures)**

## UG-Physics- Syllabus

**Wind Energy harvesting:** Fundamentals of Wind energy, Wind Turbines and different electrical machines in wind turbines, Power electronic interfaces, and grid interconnection topologies. **(03 Lectures)**

**Ocean Energy:** Ocean Energy Potential against Wind and Solar, Wave Characteristics and Statistics, Wave Energy Devices. **(03 Lectures)**

Tide characteristics and Statistics, Tide Energy Technologies, Ocean Thermal Energy, Osmotic Power, Ocean Bio-mass. **(02 Lectures)**

**Geothermal Energy:** Geothermal Resources, Geothermal Technologies. **(02 Lectures)**

**Hydro Energy:** Hydropower resources, hydropower technologies, environmental impact of hydro power sources. **(02 Lectures)**

**Piezoelectric Energy harvesting:** Introduction, Physics and characteristics of piezoelectric effect, materials and mathematical description of piezoelectricity, Piezoelectric parameters and modeling piezoelectric generators, Piezoelectric energy harvesting applications, Human power **(04 Lectures)**

**Electromagnetic Energy Harvesting:** Linear generators, physics mathematical models, recent applications **(02 Lectures)**

Carbon captured technologies, cell, batteries, power consumption **(02 Lectures)**

Environmental issues and Renewable sources of energy, sustainability. **(01 Lecture)**

### **Demonstrations and Experiments**

1. Demonstration of Training modules on solar energy, wind energy, etc.
2. Conversion of vibration to voltage using piezoelectric materials
3. Conversion of thermal energy into voltage using thermoelectric modules.

## SEMESTER V

**Course code:** DME29801/ DME29802/ DME29803/ DME29804

**Credits: Theory – 02**

**Theories: 30 Lectures**

### COURSE OUTCOME:

After the completion of the course, Students will be able to

CO1.Deliberate the details of photons

CO2.Understand the classification and characteristics of Atomic and nuclear physics

CO3.Write down the classification and characteristics of nuclear techniques

CO4.Write down the characteristics of radiation safety management

CO5.Identify in detail with application of radiation detection

### RADIATION SAFETY: SEC 1B

**Basics of Atomic and Nuclear Physics:** Basic concept of atomic structure; X rays characteristic and production; concept of bremsstrahlung and auger electron, The composition of nucleus and its properties, mass number, isotopes of element, spin, binding energy, stable and unstable isotopes, law of radioactive decay, Mean life and half life, basic concept of alpha, beta and gamma decay, concept of cross section and kinematics of nuclear reactions, types of nuclear reaction, Fusion, fission. **(06 Lectures)**

**Interaction of Radiation with matter: Types of Radiation:** Alpha, Beta, Gamma and Neutron and their sources, sealed and unsealed sources, **Interaction of Photons** – Photoelectric effect, Compton Scattering, Pair Production, Linear and Mass Attenuation Coefficients, **Interaction of Charged Particles:** Heavy charged particles - Beth-Bloch Formula, Scaling laws, Mass Stopping Power, Range, Straggling, Channeling and Cherenkov radiation. Beta Particles- Collision and Radiation loss (Bremsstrahlung), **Interaction of Neutrons-** Collision, slowing down and Moderation. **(07 Lectures)**

**Radiation detection and monitoring devices: Radiation Quantities and Units:** Basic idea of different units of activity, KERMA, exposure, absorbed dose, equivalent dose, effective dose, collective equivalent dose, Annual Limit of Intake (ALI) and derived Air Concentration (DAC).

## UG-Physics- Syllabus

**Radiation detection:** Basic concept and working principle of gas detectors (Ionization Chambers, Proportional Counter, Multi-Wire Proportional Counters (MWPC) and Gieger Muller Counter), Scintillation Detectors (Inorganic and Organic Scintillators), Solid States Detectors and Neutron Detectors, Thermo luminescent Dosimetry. **(07 Lectures)**

**Radiation safety management:** Biological effects of ionizing radiation, Operational limits and basics of radiation hazards evaluation and control: radiation protection standards, International Commission on Radiological Protection (ICRP) principles, justification, optimization, limitation, introduction of safety and risk management of radiation. Nuclear waste and disposal management. Brief idea about Accelerator driven Sub-critical system (ADS) for waste management. **(05 Lectures)**

**Application of nuclear techniques:** Application in medical science (e.g., MRI, PET, Projection Imaging Gamma Camera, radiation therapy), Archaeology, Art, Crime detection, Mining and oil. *Industrial Uses:* Tracing, Gauging, Material Modification, Sterization, Food preservation. **(05 Lectures)**

### Experiments:

1. Study the background radiation levels using Radiation meter

#### Characteristics of Geiger Muller (GM) Counter:

- 2) Study of characteristics of GM tube and determination of operating voltage and plateau length using background radiation as source (without commercial source).
- 3) Study of counting statistics using background radiation using GM counter.
- 4) Study of radiation in various materials (e.g. KSO<sub>4</sub> etc.). Investigation of possible radiation in different routine materials by operating GM at operating voltage.
- 5) Study of absorption of beta particles in Aluminum using GM counter.
- 6) Detection of  $\alpha$  particles using reference source & determining its half life using spark counter
- 7) Gamma spectrum of Gas Light mantle (Source of Thorium)

## SEMESTER V

**Course code:** DME30001/ DME30002/ DME30003/ DME30004

**Credits: Theory – 02**

**Theories: 30 Lectures**

### COURSE OUTCOME:

After completion of the course the student is able to

CO1.Deliberate in details with examples basic of measurement

CO2.Specify in depth electronic voltmeter

CO3.Understand in depth Cathode ray oscilloscope

CO4.Specify the characteristics of Impedance Bridge

CO5.Specify the classification and characteristics of digital multimeter

CO6.Identify the characteristics of signal generator

### BASIC INSTRUMENTATION SKILLS: SEC 1C

**Basic of Measurement:** Instruments accuracy, precision, sensitivity, resolution range etc. Errors in measurements and loading effects. **Multimeter:** Principles of measurement of dc voltage and dc current, ac voltage, ac current and resistance. Specifications of a multimeter and their significance.

**(04 Lectures)**

**Electronic Voltmeter:** Advantage over conventional multimeter for voltage measurement with respect to input impedance and sensitivity. Principles of voltage, measurement (block diagram only). Specifications of an electronic Voltmeter/Multimeter and their significance.**AC**

**millivoltmeter:** Type of AC millivoltmeters: Amplifier- rectifier, and rectifier- amplifier. Block diagram ac millivoltmeter, specifications and their significance. **(04 Lectures)**

**Cathode Ray Oscilloscope:** Block diagram of basic CRO. Construction of CRT, Electron gun, electrostatic focusing and acceleration (Explanation only– nonmathematical treatment), brief discussion on screen phosphor, visual persistence & chemical composition. Time base operation, synchronization. Front panel controls. Specifications of a CRO and their significance.

## UG-Physics- Syllabus

### (06 Lectures)

Use of CRO for the measurement of voltage (dc and ac frequency, time period. Special features of dual trace, introduction to digital oscilloscope, probes. Digital storage Oscilloscope: Block diagram and principle of working. **(03 Lectures)**

**Signal Generators and Analysis Instruments:** Block diagram, explanation and specifications of low frequency signal generators. pulse generator, and function generator. Brief idea for testing, specifications. Distortion factor meter, wave analysis. **(04 Lectures)**

**Impedance Bridges & Q-Meters:** Block diagram of bridge. working principles of basic (balancing type) RLC bridge. Specifications of RLC bridge. Block diagram & working principles of a Q-Meter. Digital LCR bridges. **(03 Lectures)**

**Digital Instruments:** Principle and working of digital meters. Comparison of analog & digital instruments. Characteristics of a digital meter. Working principles of digital voltmeter. **(03 Lectures)**

**Digital Multimeter:** Block diagram and working of a digital multimeter. Working principle of time interval, frequency and period measurement using universal counter/frequency counter, time- base stability, accuracy and resolution. **(03 Lectures)**

### **The test of lab skills will be of the following test items:**

1. Use of an oscilloscope.
2. CRO as a versatile measuring device.
3. Circuit tracing of Laboratory electronic equipment,
4. Use of Digital multimeter/VTVM for measuring voltages
5. Circuit tracing of Laboratory electronic equipment,
6. Winding a coil / transformer.
7. Study the layout of receiver circuit.
8. Trouble shooting a circuit
9. Balancing of bridges

## UG-Physics- Syllabus

### Laboratory Exercises:

1. To observe the loading effect of a multimeter while measuring voltage across a low resistance and high resistance.
2. To observe the limitations of a multimeter for measuring high frequency voltage and currents.
3. To measure Q of a coil and its dependence on frequency, using a Q- meter.
4. Measurement of voltage, frequency, time period and phase angle using CRO.
5. Measurement of time period, frequency, average period using universal counter/frequency counter.
6. Measurement of rise, fall and delay times using a CRO.
7. Measurement of distortion of a RF signal generator using distortion factor meter.
8. Measurement of R, L and C using a LCR bridge/ universal bridge.

### Open Ended Experiments:

1. Using a Dual Trace Oscilloscope
2. Converting the range of a given measuring instrument (voltmeter, ammeter)

### Reference Books:

- A text book in Electrical Technology - B L Theraja - S Chand and Co.
- Performance and design of AC machines - M G Say ELBS Edn.
- Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.
- Logic circuit design, Shimon P. Vingron, 2012, Springer.
- Digital Electronics, SubrataGhoshal, 2012, Cengage Learning.
- Electronic Devices and circuits, S. Salivahanan& N. S.Kumar, 3rd Ed., 2012, Tata Mc-Graw Hill
- Electronic circuits: Handbook of design and applications, U.Tietze, Ch.Schenk, 2008, SpringerElectronic Devices, 7/e Thomas L. Floyd, 2008, Pearson India

## SEMESTER V

**Course code:** DME30201/ DME30202/ DME30203/ DME30204

**Credits: Theory – 02**

**Theories: 30 Lectures**

### COURSE OUTCOME:

After the completion of the course, Students will be able to

CO1.Specify the details of sources and detector

CO2.Deliberate the classification and characteristics of experiments on lasers

CO3.Specify the details of experiments on semiconductor sources

CO4.Write down in details with examples Fourier optics

CO5.Specify the classification and characteristics of photonic and holography

CO6.Specify the characteristics of photonic

## APPLIED OPTICS: SEC 1I

### (i) Sources and Detectors

**(09 Lectures)**

Lasers, Spontaneous and stimulated emissions, Theory of laser action, Einstein's coefficients, Light amplification, Characterization of laser beam, He-Ne laser, Semiconductor lasers.

### Experiments on Lasers:

- Determination of the grating radial spacing of the Compact Disc (CD) by reflection using He-Ne or solid state laser.
- To find the width of the wire or width of the slit using diffraction pattern Obtained by a He-Ne or solid state laser.
- To find the polarization angle of laser light using polarizer and analyzer
- Thermal expansion of quartz using laser

### Experiments on Semiconductor Sources and Detectors:

- V-I characteristics of LED

## UG-Physics- Syllabus

- b. Study the characteristics of solid state laser
- c. Study the characteristics of LDR
- d. Photovoltaic Cell
- e. Characteristics of IR sensor

### (ii) Fourier Optics

(06 Lectures)

Concept of Spatial frequency filtering, Fourier transforming property of a thin lens

#### Experiments on Fourier Optics:

##### a. Fourier optic and image processing

- 1. Optical image addition/subtraction
- 2. Optical image differentiation
- 3. Fourier optical filtering
- 4. Construction of an optical 4f system

##### b. Fourier Transform Spectroscopy

Fourier Transform Spectroscopy (FTS) is a powerful method for measuring emission and absorption spectra, with wide application in atmospheric remote sensing, NMR spectrometry and forensic science.

#### Experiment:

To study the interference pattern from a Michelson interferometer as a function of mirror separation in the interferometer. The resulting interferogram is the Fourier transform of the power spectrum of the source. Analysis of experimental interferograms allows one to determine the transmission characteristics of several interference filters. Computer simulation can also be done.

### (iii) Holography

(06 Lectures)

Basic principle and theory: coherence, resolution, Types of holograms, white light reflection hologram, application of holography in microscopy, interferometry, and character recognition

#### Experiments on Holography and interferometry:

- 1. Recording and reconstructing holograms
- 2. Constructing a Michelson interferometer or a Fabry Perot interferometer

## UG-Physics- Syllabus

3. Measuring the refractive index of air
4. Constructing a Sagnac interferometer
5. Constructing a Mach-Zehnder interferometer
6. White light Hologram

### (iv) Photonics: Fibre Optics

(09 Lectures)

Optical fibers and their properties, Principal of light propagation through a fibre, The numerical aperture, Attenuation in optical fibre and attenuation limit, Single mode and multimode fibres, Fibre optic sensors: Fibre Bragg Grating

#### Experiments on Photonics: Fibre Optics

- a. To measure the numerical aperture of an optical fibre
- b. To study the variation of the bending loss in a multimode fibre
- c. To determine the mode field diameter (MFD) of fundamental mode in a Single-mode fibre by measurements of its far field Gaussian pattern
- d. To measure the near field intensity profile of a fibre and study its refractive Index profile
- e. To determine the power loss at a splice between two multimode fibre

#### Reference Books:

- Optical Physics, A.Lipson, S.G.Lipson, H.Lipson, 4th Edn., 1996, Cambridge Univ. Press

The marks distribution for the final practical examination is as follows:

Formula/Formulae with explanation of symbols	<b>04 marks</b>
Diagram/Circuit diagram and tabular column	<b>08 marks</b>
Experimental setup+ taking readings	<b>08 marks</b>
Graph and Calculations	<b>05 marks</b>
Final result and units	<b>05 marks</b>
Record	<b>05 marks</b>
Total for the practical examination	<b>35 marks</b>

**Question Paper Pattern for DSC and DSE theory papers of 04 credits**

**From the academic year 2017-2018 onwards**

**Time: 3 hours**

**Max. Marks: 70**

**Part A:**

- I. Answer all the questions ( Multiple choice questions)** **1 x 4 = 4 marks**  
(One question should be selected from 15 lectures)

**Part B:**

- II. Answer any seven questions.** **2 x 7 =14 marks**  
**Ten questions should be set**  
(At least two questions should be selected from 15 lectures)

**Part C:**

- III. Answer any four questions.** **4 x 10 = 40 marks**  
**Six questions should be set**  
(At least one question should be set out of fifteen lectures)

**Part D:**

- IV. Answer any three out of four questions** **4 x 3 = 12 marks**  
(One problem should be selected from 15 lecturers)

**Question Paper Pattern for SEC theory paper of 02 credits**

**Time: 2 hours**

**Max. Marks: 35**

**Part A:**

**I. Answer any Five Questions out of eight.**

**1 x 5 = 05 marks**

(Six questions from 15 lectures.)

**Part B:**

**II. Answer any Three Questions out of five.**

**10 x 03 = 30marks**

(Five questions from 30 lectures)

**JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE  
(Autonomous)  
B N ROAD, MYSURU- 570 025**

**NEP-UG Syllabus  
For B.A Programmes**

- **History, Political Science (HP)**
- **Journalism, Political science (JP)**

**2021-22**

**2022-23 onwards**

**DEPARTMENT OF POLITICAL SCIENCE**

## **Political Science Model Curriculum (III & IV Semester)**

**Name of the Degree Program: BA/BSc/BCom/BBA/BCA... Without Practical Course**

**Discipline Core: Political Science**

**Total Credits for the Program:**

**Starting year of implementation: 2021-22**

**Program Outcomes:**

**By the end of the program the students will be able to:**

- Not only upgrade the learning of Political Science as a contemporary discipline but also to inculcate the Indian political ethos and the moral standards of functioning of political institutions in India. These in fact, brought laurels to our acumen in politics and Kautilya's Arthashastra stands as a proof of this.
- Understand voluminously about the dimensions of Indian Government, its Parliamentary Procedures, the concerns of Gender in Politics, Gandhian Philosophy and an understanding of the citizens duties and responsibilities in the 3rd semester.
- Understand the papers such as Ancient Indian Political Ideas and Institutions throws light on the wisdom of Indian Political Thought bringing along its side the Modern Political Analysis which is skill based paper.
- Understand the papers which are hybridised like Political Journalism and focused papers like Good Governance and Understanding Dr.B.R.Ambedkar which will bring to the fore facts and normative ways of running governments.

Thus, these semesters represent both knowledge and skill components and making it contemporary in its content. Learning among the students will thus make it interesting and lively.

## BASIC CONCEPTS IN POLITICAL SCIENCE

### DSC-1

<b>Course Title: BASIC CONCEPTS IN POLITICAL SCIENCE</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>
No. of Teaching Hours/Week: <b>3+1=4(L+T)</b>	Duration of ESA/Exam: <b>3Hours</b>
Formative Assessment Marks: <b>40</b>	Summative Assessment Marks: <b>60+40=100</b>

#### **Course Objective:**

Develop an understanding about the nature and philosophy of Political Science and its interface with society. Enable the students to develop qualities of responsible and active citizens in a democracy.

#### **Learning Outcome:**

At the end of the course the students shall understand -

- Political Science, theoretically and will gain knowledge to explain and analyze politics at large.
- The dynamics of politics.
- To inculcate the democratic spirit

Unit	Contents of Course- 1	45 Hours
<b>Unit-I</b>	<p><b>Chapter -1</b> Meaning, Nature, Scope and Importance of Political Science, Approaches – Philosophical, Historical, Observational, Comparative and Experimental. Emergence of Political Science as a Discipline.</p> <p><b>Chapter- 2</b> Meaning and Elements of State, Difference between State and Government, State and Society, State and Association, Theories on Origin of State- Historical Theory, Divine Rights Theory, Social Contract Theory, Marxist and Gandhian Theory of State</p> <p><b>Chapter-3</b> Civil Society- Meaning and Importance.</p>	<b>15 Hours</b>
<b>Unit-II</b>	<p><b>Chapter-4</b> Meaning, Characteristics, and Kinds of Sovereignty.</p>	<b>15 Hours</b>
	<p><b>Chapter-5:</b> Austin’s Concept of Sovereignty and Pluralistic Critique, Pluralistic Theory of Sovereignty, Challenges to the State Sovereignty in the age of Globalization.</p> <p><b>Chapter-6,</b> Law meaning, Sources, Relations between Law and Liberty , law and Justice.</p>	

<b>Unit- III</b>	<b>Chapter-7</b> Liberty: Meaning and Kinds; Positive and Negative <b>Chapter-8</b> Equality: Meaning and Kinds (Social, Economic and Political) <b>Chapter-9</b> Power and Justice: Meaning and kinds, Political Obligation: Nature AND Importance, Grounds of Political Obligation.	<b>15 Hours</b>
------------------	---	-----------------

**Exercise:**

1. List out the modern elements of State
2. List out the countries and identify the issues related to equality
3. Identify an issue and discuss the role of civil society

**Suggested Readings:**

1. Political Theory: Ideas & Concepts, S. Ramswamy, Delhi, Macmillan, 2002.
2. Modern Political Theory, S. P. Verma, New Delhi, Vikas, 1983.
3. Principles of Modern, Political Science, J C Johri, Sterling Publishers Pvt. Ltd. 1995.
4. Principles of Political Science, AC Kapur, New Delhi, Sultan Chand and Sons, 2004.
5. Principles of Political Science, N.N Agarwal, Vidya Bhushan, Vishnoo Bhawan, R. Chand & Co, New Delhi, 1998.
6. Political Science Theory, S.C Pant, Prakashan Kendra, Lucknow, 1998.
7. Political Science Theory, S. N Dubey, Lakshmi Narain Agarwal, Agra, 2002.
8. Principle of Modern Political Science, J C Johari, Sterling Publications, New York, 2009.
9. Principles of Political Science, Anup Chand Kapur, S Chand & Co Ltd, 2010.

**Pedagogy:**

The course shall be taught through the Bridge Courses, Lecture, Tutorial, Interactive Sessions, Self-guided Learning Materials, Open Educational Resources (OER) as reference materials, Practical Exercises, Assignments, Seminars, Group Discussions and Week-end Counseling Classes.

<b>Formative Assessment</b>		
<b>Assessment Occasion/ type</b>		<b>Weightage in Marks</b>

# POLITICAL THEORY

## DSC-2

<b>Course Title: POLITICAL THEORY</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>

### Course Outcome:

This course aims to introduce certain key aspects of conceptual analysis in political theory and the skills required to engage in debates surrounding the application of the concepts.

### Learning Outcomes:

At the end of the course the students shall understand -

- The nature and relevance of Political Theory.
- The different concepts like Liberty, Equality, Justice and Rights.
- To reflect upon some of the important debates in Political Theory.

Unit	Contents of Course- 2	45 Hours
<b>Unit-I</b>	<b>Chapter-1</b> Meaning, Nature and Importance of Political Theory, <b>Chapter-2</b> Modern Approaches- Behavioral, Post-Behavioral, David Easton's Political System and Marxian Approach <b>Chapter-3</b> Relevance of Political Theory, Decline and Resurgence of Political Theory	<b>15 Hours</b>
<b>Unit-II</b>	<b>Chapter-4</b> Liberalism: J.S Mill <b>Chapter-5</b> Neo- Liberalism: John Rawls <b>Chapter-6</b> Libertarianism: Robert Nozick	<b>15 Hours</b>
<b>Unit- III</b>	<b>Chapter-7</b> Communitarianism and Multiculturalism: Indian perspective, Colonial Discourse and Post Colonialism, Post Colonial Response and its Limitations <b>Chapter-8</b> Proponents of Secularism – Nehru, Gandhi, Moulana Azad. <b>Chapter-9-</b> Dmocracy and Liberalism- Dr.B.R.Ambedker, Lohia, Jaya Prakash Narayan.	<b>15 Hours</b>

### Exercise:

- Write about the Myth and Reality on Communitarianism in India
- Compare the concept of Liberty, Equality and Justice to the Modern world
- Write the understanding of secularism in India

### Suggested Readings:

1. Ahmed. V, Theory: Classes, Nations Literatures.: Verso, London, 1992.
2. Arendt. H., On Revolution, Viking, New York, 1963
3. Ahmed. V, Theory: Classes, Nations Literatures.: Verso, London, 1992.

## HUMAN RIGHTS

### Open Elective OE-1

<b>Course Title: HUMAN RIGHTS</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>

#### Course Objective:

This course aims to introduce the students to basic concepts and practices of Human Rights in the global and local domain. This course also exposes them to certain recent issues confronting the Human Rights debates.

#### Learning Outcomes:

After completing this course students will be able to-

- Explain the basic concept of Human Rights and its various formulations.
- Have necessary knowledge and skills for analyzing, interpreting, and applying the Human Rights standards and sensitize them to the issues.
- Develop ability to critically analyse Human Rights situations around them.

Unit	Contents of Course- OE-1	45Hours
<b>Unit-I</b>	<b>Chapter-1</b> Meaning, nature, scope and Classification of Human Rights <b>Chapter-2</b> The Human Rights of First generation (Civil and Political Rights), Second generation (Economic, Social and Cultural Rights), Third generation (Collective Rights) and Fourth generation (Subjective Rights) <b>Chapter-3</b> Universal Declaration of Human Rights, RTI as Human Right.	<b>15Hours</b>
<b>Unit-II</b>	<b>Chapter-4</b> Human Rights and Fundamental Rights, Fundamental Rights and Fundamental Duties in India <b>Chapter- 5</b> National Human Rights Commission (NHRC) - Composition and its function <b>Chapter-6</b> Karnataka State Human Rights Commissions (KSHRCs) – Composition and its functions	<b>15Hours</b>
<b>Unit-III</b>	<b>Chapter -7</b> National Commission for SCs/STs, Minorities' Commission, Women' Commission <b>Chapter-8</b> Major issues and concerns of Human Rights- Discrimination and violence against women, children, Dalits and Minorities, Child Labour and Bonded Labour <b>Chapter-9</b> Challenges to Human Rights	<b>15Hours</b>

#### Suggested Readings:

1. Baxi Upendra (ed.), The Right to be Human, Lancer International, Crawford, New Delhi, 1987.
2. James(ed.), The Rights of People, Oxford, New York, 1988.
3. Craston, M. What are Human Rights, Bodely Head, London, 1973
4. Rhond L.Callaway&JulieHarrelson- Stephen,“InternationalHuman Rights

## ADMINISTRATION IN INDIA

### Open Elective OE-2

<b>Course Title: ADMINISTRATION IN INDIA</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>

#### Course Objective:

This course aims to introduce the students to basic aspects of Administration in India. This course also exposes them to the working of Administrative system in India.

#### Learning Outcomes:

## INDIA AND INDIAN CONSTITUTION

<b>Ability Enhancement Compulsory Courses (AECC)</b>	
<b>Course Title: INDIA AND INDIAN CONSTITUTION</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>
No. of Teaching Hours/Week: <b>3</b>	Duration of ESA/Exam: <b>2 Hours</b>
Formative Assessment Marks: <b>40</b>	Summative Assessment Marks: <b>60+40=100</b>

### Course Objective

The purpose of the course is to help students to learn and explain the journey of India as a republic. They will, through this paper, learn to contextualise the depth of India as a nation with its diverse socio-political culture, its philosophical traditions, values and Ideals. It will give them knowledge to expound the breadth of freedom struggle in various parts of India, its significance in nation building and the sacrifices made both by its leaders and followers. It will help them to demonstrate their knowledge regarding the efforts made at working towards a constitution as India's conscience cherishing the values of Justice, Liberty, Equality and Fraternity. Consequently, it will enable students to contextualise the powers and functions of various offices under the Constitution. It will help them determine the role and responsibilities of citizens as enshrined in the Constitution, offering insights into the contributions of personalities like Gandhiji, Dr B.R. Ambedkar and Jawahar Lal Nehru, Bal Gangadhar Tilak, the values tolerance, equality of treatment, scientific secularism and swarajya and the processes of policymaking keeping national wellbeing in the forefront. This paper will enable students to illustrate how vibrant our Constitution is, how farsighted were its makers and how efficient are the various institutions that are functioning under it.

### Learning outcomes

Upon completion of this course, students will be able to—

- Explain the philosophy and the structure of the Constitution.
- Measure the powers, functions and limitations of various offices under the Constitution.

- Demonstrate the values, ideals and the role of Constitution in a democratic India.

Unit	Contents of Course:	45 Hours
<b>Unit-I</b>	<p><b>Background to the study of Indian Constitution**</b></p> <p><b>Chapter 1: Philosophical and Political foundations of India:</b> Dharma and Danda, Buddhist, liberal (Raja Rammohun Roy) and Subaltern (Ranajit Guha)* Colonial impact on Indian society,** Nationalist perspective (Swamy Vivekananda and Sri Aurobindo).</p> <p><b>Chapter 2: Political values and Ideals during freedom struggle:</b> Non Violence, Tolerance, Satyagraha and Swadeshi (Gandhi), Swarajya (Tilak), Integral Humanism (Deen Dayal Upadhyay) and Voluntarism (Vinoba Bhave).</p> <p><b>Chapter 3: Political Contribution of Regional freedom struggle:</b> Kittur Rani Chennamma, Hardekar Manjappa, Madikeri Peasants, Halagali Bedas.</p>	<p><b>6 Hours</b></p> <p><b>5 Hours</b></p> <p><b>4 Hours</b></p>
<b>Unit-II</b>	<p><b>Constitutional Development and its Philosophy</b></p> <p><b>Chapter- 4: Historical background of Constitutional development in India</b> - Developments between 1857 to 1952 (only Acts during this period must be taught), Composition and debates of Constituent Assembly (in brief), working of committees.</p> <p><b>Chapter 5: Philosophy and features of Indian Constitution</b> - Preamble*, Salient features**, Constitutionalism, Dr B.R. Ambedkar and Nehru's contribution in the making of the Constitution.</p> <p><b>Chapter- 6: Working of the Constitution</b> - Fundamental Rights, Union-State and Inter-State Relations (Art. 263, Inter-State disputes and trade and commerce), important Amendments to the Constitution**, Parliamentary Committees* (Standing, Ad hoc and Departmental).</p>	<p><b>5 Hours</b></p> <p><b>5 Hours</b></p> <p><b>5 Hours</b></p>

Unit-III	<p><b>Constitutional Institutions and Citizen's role</b></p> <p><b>Chapter 7: Parliamentary and Constitutional Institutions:</b> Legislature* (Upper and Lower house), Executive (composition and powers), Judiciary (High Court and Supreme Court, its composition and jurisdiction), Comptroller and Auditor General, Inter-State Council, Election Commission.</p> <p><b>Chapter 8: Role and Responsibilities of Citizens under Indian Constitution:</b> Concept of Citizenship, Citizenship Amendment Act, Fundamental Duties, Right to Information Act, Civil Society.*</p> <p><b>Chapter 9: Goals and Policies of National Development enshrined in the Constitution:</b> Concept of National Development, Unity and Integrity of the nation, Goals of Educational Policies*, Role of teachers and students in Nation Building**.</p>	<p><b>6 Hours</b></p> <p><b>4 Hours</b></p> <p><b>5 Hours</b></p>
----------	---	---

(\*\*Note-This is a compulsory, foundational and value additional course to be taught to students at the graduate level under NEP 2020. The paper is expected to impart the structure and functional aspects of constitution while giving them the background of a diverse country like India and the nuances of its social fabric and the why of such an elaborate constitution. The introductory chapter therefore is designed to familiarise students about their country and culture before they understand their constitution).

(Please note: The question paper pattern is indicative of the way a teacher needs to teach this paper. The pedagogical choice of a teacher helps to make an impact of his/her teaching on the student. Activity based and experiential teaching methods help student centric learning process - these are tips to make this paper more meaningful- the ultimate choice is left to the teacher)

#### Exercise:

- Department can debate on the role of Constitution in the development of India.
- Students can empirically evidence the effectiveness of concepts like Freedom, Equality, Justice, Rights and Duties by conducting empirical studies.
- Can invite expert to deliver special lectures on various provisions and amendments of the Constitution like the functioning of Election Commission, Article 246, 356 etc.

#### Important Notes:

##### Chapter 1:

\* These are introductory courses. Teachers should give a brief introduction to these for a better understanding of the philosophical and political foundations of Indian society taking suggested thinkers as examples (Max 2hrs).

\*\* Here teachers should briefly teach about the contributions and impact of British and Arabs as invaders, Mughals as settlers (Max 2hrs).

**Chapter2:**

\*These are to be taught briefly as concepts against the backdrop of freedom struggle

**Chapter3:**

\*BOS can alter this chapter to bring in the personalities and movements in their region who have made an impact on freedom struggle.

**Chapter5:**

\*While teaching the preamble please cover secularism and its criticism keeping in mind the neutrality of state in matters of religion and bring in the discussion regarding the differences in the usage of the terms like Religion, Dharma, Pantha(□□□), Matha(□□), Caste, Jatyathithate and the meaning of scientific secularism as expounded by Nehru.

\*\* In the salient features the teachers must teach at least 10 features of the constitution like Written constitution, Parliamentary form of government, Quasi federalism, Directive Principles of State Policy, Amendment procedure, Universal adult franchise, Integrated citizenship, Independent judiciary, Judicial Review, Emergency provisions and Three tier system of governance etc. The BOS has the discretion in selecting the salient features.

**Chapter6:**

\*In the committee they should teach the nature of these committees, their types, categories and subcategories.

\*\* In this the teacher should teach the amendments like 42nd, 73<sup>rd</sup>, 74th, 101st, etc which have major impact on the working of the Constitution. The BOS has the discretion in selecting the amendments but must ensure that they have a bearing on the working of the constitution.

**Chapter7:**

\*Here teachers are expected to teach the institutions in general and contextualise them to state and central governments.

**Chapter8:**

\*In this the teacher should discuss issues like paying taxes, exercising vote, discouraging corruption, Knowledge of laws that govern them.

**Chapter9:**

\*Teachers can touch upon Kothari Commission, NEP(1986 and 2020 while teaching Educational Policies)

\*\*Teachers can touch upon the teacher taught relations (vedantic tradition), teacher as a role model, student as future citizen, the need for ethical and moral responsibility among them etc.,

## **Political Science Model Curriculum (III & IV Semester)**

**Name of the Degree Program: BA/BSc/BCom/BBA/BCA... Without Practical Course**

**Discipline Core: Political Science**

**Total Credits for the Program:**

**Starting year of implementation: 2021-22**

**Program Outcomes:**

**By the end of the program the students will be able to:**

- Not only upgrade the learning of Political Science as a contemporary discipline but also to inculcate the Indian political ethos and the moral standards of functioning of political institutions in India. These in fact, brought laurels to our acumen in politics and Kautilya's Arthashastra stands as a proof of this.
- Understand voluminously about the dimensions of Indian Government, its Parliamentary Procedures, the concerns of Gender in Politics, Gandhian Philosophy and an understanding of the citizens duties and responsibilities in the 3rd semester.
- Understand the papers such as Ancient Indian Political Ideas and Institutions throws light on the wisdom of Indian Political Thought bringing along its side the Modern Political Analysis which is skill based paper.
- Understand the papers which are hybridised like Political Journalism and focused papers like Good Governance and Understanding Dr.B.R.Ambedkar which will bring to the fore facts and normative ways of running governments.

Thus, these semesters represent both knowledge and skill components and making it contemporary in its content. Learning among the students will thus make it interesting and lively.

2. Merritt, Davis, Public Journalism And Public Life, Erlbaum Associates, London,2004.

## INDIA AND INDIAN CONSTITUTION

<b>Ability Enhancement Compulsory Courses (AECC)</b>	
<b>Course Title: INDIA AND INDIAN CONSTITUTION</b>	
Total Contact Hours: <b>45</b>	Course Credits: <b>3</b>
No. of Teaching Hours/Week: <b>3</b>	Duration of ESA/Exam: <b>2 Hours</b>
Formative Assessment Marks: <b>40</b>	Summative Assessment Marks: <b>60+40=100</b>

### Course Objective

The purpose of the course is to help students to learn and explain the journey of India as a republic. They will, through this paper, learn to contextualise the depth of India as a nation with its diverse socio-political culture, its philosophical traditions, values and Ideals. It will give them knowledge to expound the breadth of freedom struggle in various parts of India, its significance in nation building and the sacrifices made both by its leaders and followers. It will help them to demonstrate their knowledge regarding the efforts made at working towards a constitution as India's conscience cherishing the values of Justice, Liberty, Equality and Fraternity. Consequently, it will enable students to contextualise the powers and functions of various offices under the Constitution. It will help them determine the role and responsibilities of citizens as enshrined in the Constitution, offering insights into the contributions of personalities like Gandhiji, Dr B.R. Ambedkar and Jawahar Lal Nehru, Bal Gangadhar Tilak, the values tolerance, equality of treatment, scientific secularism and swarajya and the processes of policymaking keeping national wellbeing in the forefront. This paper will enable students to illustrate how vibrant our Constitution is, how farsighted were its makers and how efficient are the various institutions that are functioning under it.

### Learning outcomes

Upon completion of this course, students will be able to—

- Explain the philosophy and the structure of the Constitution.
- Measure the powers, functions and limitations of various offices under the Constitution.

- Demonstrate the values, ideals and the role of Constitution in a democratic India.

Unit	Contents of Course:	45 Hours
<b>Unit-I</b>	<p><b>Background to the study of Indian Constitution**</b></p> <p><b>Chapter 1: Philosophical and Political foundations of India:</b> Dharma and Danda, Buddhist, liberal (Raja Rammohun Roy) and Subaltern (Ranajit Guha)* Colonial impact on Indian society,** Nationalist perspective (Swamy Vivekananda and Sri Aurobindo).</p> <p><b>Chapter 2: Political values and Ideals during freedom struggle:</b> Non Violence, Tolerance, Satyagraha and Swadeshi (Gandhi), Swarajya (Tilak), Integral Humanism (Deen Dayal Upadhyay) and Voluntarism (Vinoba Bhave).</p> <p><b>Chapter 3: Political Contribution of Regional freedom struggle:</b> Kittur Rani Chennamma, Hardekar Manjappa, Madikeri Peasants, Halagali Bedas.</p>	<p><b>6 Hours</b></p> <p><b>5 Hours</b></p> <p><b>4 Hours</b></p>
<b>Unit-II</b>	<p><b>Constitutional Development and its Philosophy</b></p> <p><b>Chapter- 4: Historical background of Constitutional development in India</b> - Developments between 1857 to 1952 (only Acts during this period must be taught), Composition and debates of Constituent Assembly (in brief), working of committees.</p> <p><b>Chapter 5: Philosophy and features of Indian Constitution</b> - Preamble*, Salient features**, Constitutionalism, Dr B.R. Ambedkar and Nehru's contribution in the making of the Constitution.</p> <p><b>Chapter- 6: Working of the Constitution</b> - Fundamental Rights, Union-State and Inter-State Relations (Art. 263, Inter-State disputes and trade and commerce), important Amendments to the Constitution**, Parliamentary Committees* (Standing, Ad hoc and Departmental).</p>	<p><b>5 Hours</b></p> <p><b>5 Hours</b></p> <p><b>5 Hours</b></p>

<b>Unit-III</b>	<p><b>Constitutional Institutions and Citizen's role</b></p> <p><b>Chapter 7: Parliamentary and Constitutional Institutions:</b> Legislature* (Upper and Lower house), Executive (composition and powers), Judiciary (High Court and Supreme Court, its composition and jurisdiction), Comptroller and Auditor General, Inter-State Council, Election Commission.</p> <p><b>Chapter 8: Role and Responsibilities of Citizens under Indian Constitution:</b> Concept of Citizenship, Citizenship Amendment Act, Fundamental Duties, Right to Information Act, Civil Society.*</p> <p><b>Chapter 9: Goals and Policies of National Development enshrined in the Constitution:</b> Concept of National Development, Unity and Integrity of the nation, Goals of Educational Policies*, Role of teachers and students in Nation Building**.</p>	<p><b>6 Hours</b></p> <p><b>4 Hours</b></p> <p><b>5 Hours</b></p>
-----------------	---	---

(\*\*Note-This is a compulsory, foundational and value additional course to be taught to students at the graduate level under NEP 2020. The paper is expected to impart the structure and functional aspects of constitution while giving them the background of a diverse country like India and the nuances of its social fabric and the why of such an elaborate constitution. The introductory chapter therefore is designed to familiarise students about their country and culture before they understand their constitution).

(Please note: The question paper pattern is indicative of the way a teacher needs to teach this paper. The pedagogical choice of a teacher helps to make an impact of his/her teaching on the student. Activity based and experiential teaching methods help student centric learning process - these are tips to make this paper more meaningful- the ultimate choice is left to the teacher)

#### **Exercise:**

- Department can debate on the role of Constitution in the development of India.
- Students can empirically evidence the effectiveness of concepts like Freedom, Equality, Justice, Rights and Duties by conducting empirical studies.
- Can invite expert to deliver special lectures on various provisions and amendments of the Constitution like the functioning of Election Commission, Article 246, 356 etc.

#### **Important Notes:**

##### **Chapter 1:**

\* These are introductory courses. Teachers should give a brief introduction to these for a better understanding of the philosophical and political foundations of Indian society taking suggested thinkers as examples (Max 2hrs).

\*\* Here teachers should briefly teach about the contributions and impact of British and Arabs as invaders, Mughals as settlers (Max 2hrs).

**Chapter2:**

\*These are to be taught briefly as concepts against the backdrop of freedom struggle

**Chapter3:**

\*BOS can alter this chapter to bring in the personalities and movements in their region who have made an impact on freedom struggle.

**Chapter5:**

\*While teaching the preamble please cover secularism and its criticism keeping in mind the neutrality of state in matters of religion and bring in the discussion regarding the differences in the usage of the terms like Religion, Dharma, Pantha(□□□), Matha(□□), Caste, Jatyathithate and the meaning of scientific secularism as expounded by Nehru.

\*\* In the salient features the teachers must teach at least 10 features of the constitution like Written constitution, Parliamentary form of government, Quasi federalism, Directive Principles of State Policy, Amendment procedure, Universal adult franchise, Integrated citizenship, Independent judiciary, Judicial Review, Emergency provisions and Three tier system of governance etc. The BOS has the discretion in selecting the salient features.

**Chapter6:**

\*In the committee they should teach the nature of these committees, their types, categories and subcategories.

\*\* In this the teacher should teach the amendments like 42nd, 73<sup>rd</sup>, 74th, 101st, etc which have major impact on the working of the Constitution. The BOS has the discretion in selecting the amendments but must ensure that they have a bearing on the working of the constitution.

**Chapter7:**

\*Here teachers are expected to teach the institutions in general and contextualise them to state and central governments.

**Chapter8:**

\*In this the teacher should discuss issues like paying taxes, exercising vote, discouraging corruption, Knowledge of laws that govern them.

**Chapter9:**

\*Teachers can touch upon Kothari Commission, NEP(1986 and 2020 while teaching Educational Policies)

\*\*Teachers can touch upon the teacher taught relations (vedantic tradition), teacher as a role model, student as future citizen, the need for ethical and moral responsibility among them etc.,

## ➤ Journalisam,Politicalscience,English(JPE)

**2019-20****ELE26022/25/26**

**V Semester**  
**Discipline Specific Elective (DSE1A)**  
**Themes on Comparative Political Theory**

**Course Outcome:**

On completion of the Course, students will:

- CO1 Understand in details with application, if applicable, democracy and governance
- CO2 Understand in details with application, if applicable, Indian political thought
- CO3 Specify in depth Indian political thought
- CO4 Identify the classification and characteristics of western political thought
- CO5 Understand in details with examples western political thought
- CO6 Understand in depth local government
- CO7 Learn the details of regulatory institutions
- CO8 Identify the classification and characteristics of lobbying institutions

**Unit I**

- a. Distinctive features of Indian political thought
- b. Kautilya on State
- c. Tilak and Gandhi on Swaraj

**Unit II**

- a. Ambedkar and Lohia on Social Justice
- b. Nehru and Jayaprakash Narayan on Democracy
- c. John Locks on Rights

**Unit III**

- a. Distinctive features of western political thought
- b. Aristotle on citizenship
- c. plato –ideal state

**Unit IV**

- a. J.J. Rousseous on Inequality
- b. J.S. Mill on liberty and democracy

c. H.J.Laski- Rights,Liberty,Equality

**Reference:**

- Dallmayr F – Comparative Political Theory
- Sparks, Oh and Isaacs s – Political Theory its in context
- Zelliot E – Political Thought in Modern India

**ELE26222/25/26**

**V- SEMESTER**  
**Discipline Specific Elective (DSE1B)**  
**Legislative support**

**Course Outcome:**

On completion of the Course, students will:

- CO1 Understand in depth legislative support
- CO2 Write down the details of legislative process
- CO3 Write down the details of legislative committees
- CO4 Learn in details with examples legislative committees
- CO5 Identify in details with application, if applicable, budget process

**Unit I** a. Parliament, composition Power and functions,  
b.State legislature -composition Power and functions,  
.c.Rural and urban local self government from Zilla parishads / municipal corporation to panchayat

**Unit II** a. law making process in parliament  
b.Role of the Standing Committee in reviewing a Bill, Legislative Consultations, amendments to a Bill, the framing of Rules and Regulations.

**Unit III** a. meaning ,nature and scope financial administration  
b. Importance of financial administration  
c.Budget- preparation  
Enactment  
execution

**Unit IV.** a. Importance of Accounting Auditing

- b. The Comptroller and Auditor General of India - powers and functions
- c. Public Accounts Committee, Estimate Committee

### Essential Readings:

- Avasthi and Maheshwari - Public Administration
  - Madhavan, M R & N Wahi - Financing of Election Campaigns
  - Vanka, S - Primer on MPLADS - Centre for Policy Research
  - Karla, H - Public Engagement with the Legislative Process
  - Agerwal, P and T V Somanathan, "Public Policy Making in India: Issues"

ELF26022/25/26

## VI SEMESTER (DSE1A) MODERN GOVERNMENTS (U.K U.S.A. SWISS)

### Course Outcome:

On completion of the Course, students will:

CO1 Understanding the world politics

CO2 Enlightening the world governmental system

CO3 Develop comparative study on governmental systems

### Unit I UNITED KINGDOM

- a. Evolution, features of UK Constitution and role of conventions
- b. Parliament - Composition powers and functions
- c. Crown - prime minister - powers and functions

### Unit II

- a. Judiciary in UK - Composition and jurisdiction
- b. Role of political parties in UK

### Unit III : UNITED STATES OF AMERICA

- a. Features of USA Constitution
- b. Congress - Composition powers and functions
- c. President - Election, Role powers and functions

### Unit IV:

- a. Judiciary in USA - Composition and jurisdiction
- b. political parties in USA

### Unit IV: SWISS

- a. Features of Swiss Constitution

- b. Federal Assembly-Composition powers
- c. Federal Council-Composition powers
- d. Federal Tribunal-Composition powers
- e. Devices of Direct Democracy in Swiss

**Reference:**

- A.C Kapoor - Select constitution
- H.t.Ramakrishna - Adunikasarakaragalu
- U.Gurumurthy - Adunikasarakaragalu

ELF26222/25/26

**VI Semester**  
**Skill Enhancement Course (DSE1B):**  
**Public Administration Concepts & Theories**

**Course Outcome:**

On completion of the Course, students will:

- CO1 Learn in depth Administration and Public Policy
- CO2 Specify the details of administrative theories
- CO3 Learn the classification and characteristics of administrative theories
- CO4 Deliberate the details of public policy
- CO5 Deliberate in details with examples public policy in India
- CO6 Identify the characteristics of public policy in India

**Unit I Public Administration**

- a. Meaning, Scope and Significance
- b. Public & Private Administration
- c. Approaches to Public Administration

**Unit II Administrative Theories**

- a. Classical Theory & Human Relations Theory
- b. Scientific Theory
- c. Rational decision making theory

**Unit III. Management**

- a. Meaning, importance and principles
- b. Features and functions of management
- c. Chief executive –functions and its role

**Unit IV. contemporary issues in administration**

- a. Meaning and modes of corruption
- b. Good governance
- c. E-governance

**Reference:**

- Awasthi A and Maheshwari - Public Administration
- BasuRumki, Public Administration - Concepts and Theories
- Henry N - Public Administration and Public Affairs
- Mouzelis N P - The Ideal type of Bureaucracy
- Mooney - The Principles of Organization
- Esman M T - Politics & Development Administration

ELE26242/25/26

**Generic Elective: Interdisciplinary Reading Gandhi****Course Outcome:**

On completion of the Course, students will:

- CO1 Specify the details of reading Gandhi
- CO2 Deliberate in depth Gandhi and hind swaraj
- CO3 Learn the details of Gandhi's views on nationalism
- CO4 Understand the details of Gandhi's views on communal unity
- CO5 Understand in details with examples Gandhi's views on women

**Unit I: Introduction**

- a. Biography (a brief)
- b. Commentaries on hind swaraj
  - c. Truth –non-violence
- d. Satyagraha
  - e. Modernity

**Unit II:**

- a. State and religion
  - b. Nationalism
  - c. Communal Unity
- d. Women's Question
  - e. Untouchability
  - f. Capt of ramarajya
  - g. Economical idias

## Model Curriculum Structure for Degree Program

### B. Sc., Hons in Zoology

**Name of the Degree Program:** B. Sc., Hons

**Discipline Core:** Zoology Total Credits for the

**Program:** 50/100/142/184/268 Starting year of implementation: 2021-22

#### PROGRAM OBJECTIVES (POs)

**POs1-**The Programme offers both classical as well as modern concepts of Zoology in higher education.

**POs2-**It enables the students to study animal diversity in both local and global environments.

**POs3-**To make the study of animals more interesting and relevant to human studies more emphasis is given to branches like behavioural biology, evolutionary biology and economic zoology.

**POs4-**More of upcoming areas in cell biology, genetics, molecular biology, biochemistry, genetic engineering and bioinformatics have been also included.

**POs5-**Equal importance is given to practical learning and presentation skills of students.

**POs6-**The lab courses provide the students necessary skills required for their employability. **POs7-**Skill enhancement courses in classical and applied branches of Zoology enhance enterprising skills of students.

**POs8-**The global practices in terms of academic standards and evaluation strategies.

**POs9-** Provides opportunity for the mobility of the student both within and across the world.

**POs 10-**The uniform grading system will benefit the students to move across institutions within India to begin with and across countries.

**POs11-**It will also enable potential employers in assessing the performance of the candidates across the world.

**Semester I- Zoology Core Course I Content:**  
**Zoology: Paper-I: Cytology, Genetics & Infectious Diseases.**

<b>Course Title/Code:</b> Cytology, Genetics and Infectious Diseases	<b>Course Credits:</b> 4
<b>Course Code:</b> FSA470	<b>L-T-P per week:</b> 4-0-0
<b>Total Contact Hours:</b> 56	<b>Duration of ESA:</b> 3 Hours
<b>Formative Assessment Marks:</b> 40	<b>Summative Assessment Marks:</b> 60

**Course Outcomes (COs):**

At the end of the course the student should be able to understand:

- CO1. The structure and function of the cell organelles.
- CO2. The chromatin structure and its location.
- CO3. The basic principle of life, how a cell divides leading to the growth of an Organism and also reproduces to form a new organism.
- CO4. How a cell communicates with its neighboring cells.
- CO5. The principles of inheritance, Mendel's laws and the deviations.
- CO6. How environment plays an important role by interacting with genetic factors.
- CO7. Detect chromosomal aberrations in humans and study of pedigree analysis.

Content	Hours
<b>Unit -1</b>	14hrs
<p><b>Chapter 1:Structure and Function of Cell Organelles - I in Animal cell</b></p> <ul style="list-style-type: none"> <li>• Ultra structure of animal cell</li> <li>• <b>Plasma membrane:</b> Fluid mosaic model, Chemical structure – lipids, Proteins and their role in maintaining structural integrity. Functions of Plasma membrane - Cell permeability, diffusion, passive transport, active transport.</li> <li>• <b>Endomembrane system:</b> Protein targeting and sorting, transport, endocytosis and exocytosis.</li> </ul> <p><b>Chapter 2:Structure and Function of Cell Organelles - II in Animal cell.</b></p> <ul style="list-style-type: none"> <li>• <b>Endoplasmic reticulum-</b> Types, Structure and functions.</li> <li>• <b>Peroxisome &amp;Ribosome:</b> Types – (Prokaryotic &amp; Eukaryotic), Structure and functions.</li> <li>• <b>Golgi apparatus</b> - Structure and functions.</li> <li>• <b>Lysosomes</b> - Structure and functions.</li> <li>• <b>Mitochondria:</b> Structure and functions. Oxidative phosphorylation; electron transport system</li> <li>• <b>Cytoskeleton:</b> Structure and functions of - Microtubules, microfilament intermediate filaments.</li> </ul>	
<b>Unit -2</b>	14hrs
<p><b>Chapter 3:Nucleus and Chromatin Structure.</b></p> <ul style="list-style-type: none"> <li>• <b>Ultra structure of Nucleus and Functions</b> - Nuclear envelop, Nuclear pore complex, Nucleoplasm.</li> <li>• Ultrastructure of nucleolus and functions.</li> <li>• <b>Chemical structure</b> and base composition of DNA and RNA.</li> <li>• <b>Nucleosome model</b>, DNA super coiling, Chromatin organization, Structure of chromosomes (Fine structure). Types of DNA and RNA.</li> </ul> <p><b>Chapter 4: Cell cycle, Cell Division and Cell Signalling.</b></p> <ul style="list-style-type: none"> <li>• Introduction to Cell cycle and its regulation<b>Cell division:</b> Mitosis stages and its Significance and Meiosis Stages and its Significance, Apoptosis.</li> <li>• <b>Signal transduction:</b> Intracellular signalling and Cell surface receptors, via G-protein linked receptors.</li> <li>• <b>Cell-cell interaction:</b> Cell adhesion molecules, Cellular junctions.</li> </ul>	
<b>Unit -3</b>	14hrs
<p><b>Chapter 5: Mendelism and Sex Determination.</b></p> <ul style="list-style-type: none"> <li>• <b>Basic principles of heredity:</b> Mendel’s laws - Monohybrid cross and Dihybrid cross. Complete and Incomplete Dominance (Ex. <i>Mirabilis jalapa</i>). Penetrance and Expressivity.</li> <li>• <b>Genetic Sex Determining Systems</b> (XX- XY, XX – XO, ZZ – ZW), Environmental Sex Determination (<i>Bonelia viridis</i>), Sex Determination and Mechanism in <i>Drosophila melanogaster</i> (<i>Genic balance theory</i>).</li> <li>• <b>Dosage Compensation</b> - Barr body, Lyon’s hypothesis.</li> </ul>	

<p><b>Chapter 6: Extensions of Mendelism, Genes and Environment.</b></p> <ul style="list-style-type: none"> <li>• <b>Extensions of Mendelism:</b> Multiple Alleles (Inheritance of ABO blood group in Humans and Rh factor), Gene Interaction (Supplementary, Complementary and Epistasis).</li> <li>• <b>The Interaction between Sex and Heredity:</b> Sex-Influenced characteristics (Male pattern baldness in humans, horns in sheep) and Sex-Limited Characteristics (Plumage pattern, milk production and Moustache and Beard in Males)</li> <li>• <b>Cytoplasmic Inheritance</b> (Kappa particles in <i>Paramecium</i>), Genetic Maternal Effects (Shell coiling in <i>Limnaea</i>).</li> <li>• <b>Interaction between Genes and Environment</b> -Himalayan albino rabbit Environmental Effects on Gene Expression (Norm of reaction), Inheritance of Continuous Characteristics (Polygenic Inheritance - Skin colour in Man).</li> </ul>	
<b>Unit -4</b>	14hrs
<p><b>Chapter 7: Human Chromosomes and Patterns of Inheritance.</b></p> <ul style="list-style-type: none"> <li>• <b>Patterns of Inheritance:</b> Autosomal dominance (Huntington's chorea, PTC), Autosomal recessive (Sickle cell anemia, Albinism), X-linked recessive (Colour blindness, Hemophilia), X-linked dominant (Vitamin D resistance Ricketts, Coffin Lowry syndrome).</li> <li>• <b>Chromosomal Anomalies:</b> Structural (Deletion, Duplication, Inversion, Translocation with examples) and Numerical aberrations (Turner's syndrome, Klinefelter's syndrome). Autosomal anomalies - Down syndrome and Cri-du-chat syndrome.</li> <li>• <b>Human Karyotyping</b> and Pedigree analysis (Autosomal dominant, Autosomal recessive, X – linked dominant, X – linked recessive).</li> </ul> <p><b>Chapter 8: Infectious Diseases.</b></p> <ul style="list-style-type: none"> <li>• <b>Introduction to Pathogenic Organisms:</b> Viruses, Bacteria, Fungi, Protozoa and Worms. Structure, Life cycle, Pathogenicity, including diseases, causes, symptoms and control of common parasites: <i>Trypanosoma</i>, <i>Giardia</i> and <i>Wuchereria</i>.</li> </ul>

11. Economic Zoology by Shukla and Upadhyaya

**Semester I- Zoology Core Course I**  
**Content: Zoology: Paper-I: Cytology, Genetics & Infectious Diseases.**

**Semester I**

<b>Course Title:</b> Cytology, Genetics and Infectious Diseases	<b>Course Credits:</b> 2
<b>Course Code:</b> FSA470	<b>L-T-P per week:</b> 0-0-4
<b>Total Contact Hours:</b> 56	<b>Duration of ESA:</b> 3 Hours
<b>Formative Assessment Marks:</b> 25	<b>Summative Assessment Marks:</b> 25

**Course Outcomes (COs):**

At the end of the course the student should be able to:

1. To use simple and compound microscopes.
2. To prepare stained slides to observe the cell organelles.
3. To be familiar with the basic principle of life, how a cell divides leading to the growth of an organism and also reproduces to form new organisms.
4. The chromosomal aberrations by preparing karyotypes.
5. How chromosomal aberrations are inherited in humans by pedigree analysis in families. The antigen-antibody reaction.

## Lab Course Content

List of labs to be conducted	56hrs
1. Understanding of simple and compound microscopes.	
2. To study different cell types such as buccal epithelial cells, neurons, striated muscle cells using Methylene blue/any suitable stain (virtual/ slaughtered tissue).	
3. To study the different stages of Mitosis in root tip of <i>Allium cepa</i> .	
4. To study the different stages of Meiosis in grasshopper testis (virtual).	
5. To check the permeability of cells using salt solution of different concentrations.	
6. Study of parasites in humans (e.g. Protozoans, Helminthes in compliance with examples being studied in theory) permanent microslides.	
7. To learn the procedures of preparation of temporary (spicules) or permanent stained slides (Fish scales), with available mounting material.	
8. Study of wild <i>Drosophila melanogaster</i> (male & female) and Mutant Phenotypes of <i>Drosophila</i> sp, –White eye, bar eye, sepia eye, vestigial wing & yellow body. (From Cultures or Photographs).	
9. Study of Polytene chromosomes (Chironomus larva or <i>Drosophila</i> larva).	
10. Preparation of <i>Drosophila</i> and human Karyotype and study (identification) of the chromosomal structural (Chriduchat syndrome (Deletion), Fragile X syndrome (duplication) , walker-warburg syndrome (Inversion) and leukemia (translocation) and numerical aberrations (Turner's, Klinefelter's and Down's syndrome) from the pictures provided. (Virtual / Optional).	
11. To prepare family pedigrees.	
12. <a href="https://www.vlab.co.in">https://www.vlab.co.in</a>	
13. <a href="https://zoologysan.blogspot.com">https://zoologysan.blogspot.com</a>

## Open Elective Course Content

### Semester: I

<b>Course Title:</b> Economic Zoology <b>Course Code:</b> FSA920	<b>Course Credits:</b> 3
<b>Total Contact Hours:</b> 42	<b>Duration of ESA:</b> 3 Hours
<b>Formative AssessmentMarks:</b> 40	<b>Summative AssessmentMarks:</b> 60

### Course Outcomes (COs):

At the end of the course the student will be able to:

**COs1-** Gain knowledge about silkworms rearing and their products.

**COs2-** Gain knowledge in Bee keeping equipment and apiary management.

**COs3-** Acquaint knowledge on dairy animal management, the breeds and diseases of cattle and learn the testing of egg and milk quality.

**COs4-** Acquaint knowledge about the culture techniques of fish and poultry.

**COs5-** Acquaint the knowledge about basic procedure and methodology of vermiculture.

**COs6-** Learn various concepts of lac cultivation.

**COs7-** Students can start their own business i.e. self-employments.

**COs8-** Get employment in different applied sectors

## Course Content

Content	Hrs
<b>Unit I</b>	<b>14</b>
<p><b>Chapter 1. Sericulture:</b></p> <ul style="list-style-type: none"> <li>• History and present status of sericulture in India</li> <li>• Mulberry and non-mulberry species in Karnataka and India</li> <li>• Mulberry cultivation</li> <li>• Morphology and life cycle of <i>Bombyxmori</i></li> <li>• Silkworm rearing techniques: Processing of cocoon, reeling</li> <li>• Silkworm diseases and pest control</li> </ul> <p><b>Chapter 2. Apiculture:</b></p> <ul style="list-style-type: none"> <li>• Introduction and present status of apiculture</li> <li>• Species of honey bees in India, life cycle of <i>Apisindica</i></li> <li>• Colony organization, division of labour and communication</li> <li>• Bee keeping as an agro based industry; methods and equipments: indigenous methods,extraction appliances, extraction of honey from the comb and processing</li> <li>• Bee pasturage, honey and bees wax and their uses</li> <li>• Pests and diseases of bees and their management</li> </ul>	
<b>Unit II</b>	<b>14</b>
<p><b>Chapter 3. Live Stock Management:</b></p> <ul style="list-style-type: none"> <li>• <b>Dairy:</b>Introduction to common dairy animals and techniques of dairy management</li> <li>• Types, loose housing system and conventional barn system; advantages and limitationsof dairy farming</li> <li>• Establishment of dairy farm and choosing suitable dairy animals-cattle</li> <li>• Cattle feeds, milk and milk products</li> <li>• Cattle diseases</li> <li>• <b>Poultry:</b> Types of breeds and their rearing methods</li> <li>• Feed formulations for chicks</li> <li>• Nutritive value of egg and meat</li> <li>• Disease of poultry and control measures</li> </ul> <p><b>Chapter 4. Aquaculture:</b></p> <ul style="list-style-type: none"> <li>• Aquaculture in India: An overview and present status and scope of aquaculture</li> <li>• Types of aquaculture: Pond culture: Construction, maintenance and management; carpculture, shrimp culture, shellfish culture, composite fish culture and pearl culture</li> </ul>	
<b>Unit - III</b>	<b>14</b>

<p><b>Chapter 5. Fish culture:</b></p> <ul style="list-style-type: none"> <li>• Common fishes used for culture.</li> <li>• Fishing crafts and gears.</li> <li>• Ornamental fish culture: Fresh water ornamental fishes- biology, breeding techniques</li> <li>• Construction and maintenance of aquarium: Construction of home aquarium, materials used, setting up of freshwater aquaria, aquarium plants, ornamental objects, cleaning the aquarium, maintenance of water quality. control of snail and algal growth.</li> <li>• Modern techniques of fish seed production</li> </ul> <p><b>Chapter 6. Prawn culture:</b></p> <ul style="list-style-type: none"> <li>• Culture of fresh and marine water prawns.</li> <li>• Preparation of farm.</li> <li>• Preservation and processing of prawn, export of prawn.</li> </ul> <p><b>Chapter 7. Vermiculture:</b></p> <ul style="list-style-type: none"> <li>• Scope of vermiculture.</li> <li>• Types of earthworms.</li> <li>• Habit categories - epigeic, endogeic and anecic; indigenous and exotic species.</li> <li>• Methodology of vermicomposting: containers for culturing, raw materials</li> </ul>	
<p>required, preparation of bed, environmental pre-requisites, feeding, harvesting and storage of vermicompost.</p> <ul style="list-style-type: none"> <li>• Advantages of vermicomposting.</li> <li>• Diseases and pests of earthworms.</li> </ul> <p><b>Chapter 8. Lac Culture:</b></p> <ul style="list-style-type: none"> <li>• History of lac and its organization, lac production in India.</li> <li>• Life cycle, host plants and strains of lac insect.</li> <li>• Lac cultivation: Local practice, improved practice, propagation of lac insect, inoculation period, harvesting of lac.</li> <li>• Lac composition, processing, products, uses and their pests.</li> </ul>

### Assessment

**Pedagogy:** Chalk and Talk, PPT, Group discussion, Seminar, Field visit

<b>Formative Assessment - Theory</b>	
<b>Assessment Occasion</b>	<b>Weightage in Marks</b>
House Examination/Test	$C1+C2=10+10=20$
Written Assignment/Presentation/Seminar	$10+10=20$
Total	40

## Skill Enhancement Course in Zoology

### Course Content

#### Semester:I

<b>Course Title:</b> Vermiculture <b>Course Code:</b> VEC5ZOO1	<b>Course Credits:</b> 2
<b>Total Contact Hours:</b> 56 Hours	<b>Duration of ESA:</b> 3 Hrs
<b>Formative Assessment Marks:</b> 20	<b>Summative Assessment Marks:</b> 30

#### Course Outcomes (COs):

At the end of the course the student:

**COs1-** Understands the importance of earthworms in maintaining soil quality. **COs2-** Learns that the vermicomposting is an effective organic solid wastemanagementmethod.

**COs3-** Gets acquainted with the importance of earthworms in agro-based economic activity.

**COs4-** Vermicomposting leads to organic farming and healthy food production. **COs5-** Vermicomposting may be taken up as a small scale industry bythe farmers andunemployed youth.

**COs6-** Get jobs in teaching institutions or vermiculture units as technicians.

**COs7-** Learn the concept of vermicomposting as bio fertilizers thus student can become and entrepreneur after completion of the course.

### Course Content

List of labs to be conducted		56Hrs
1	Collection of native earth worm species to study habit and habitat.	
2	Keys to identify different species of earth worm.	
3	Externals and Life cycle of <i>Eiseniafetida</i> and <i>Eudriluseugeniae</i> .	
4	Dissection of digestive and reproductive system.	
5	Study of vermicomposting equipments and devices.	
6	Preparation of vermibeds and their maintenance.	
7	Study of different vermicomposting methods.	
8	Harvesting, separation of worms, packaging, transport and storage of vermicompost.	
9	Vermi-wash collection and processing.	
10	Small scale earth worm farming for home gardens and studying the effect of vermicompost on garden plants.	
11	Budget and cost scenario of vermiculture (Project).	
12	Diseases and natural enemies of earth worms and their control measures.	
13	Role of vermitechnology in environmental protection.	
14	Economics and Marketing of vermicompost and vermi wash.	
15	Visit to vermiculture farm to acquaint with latest techniques.

**Pedagogy**

1. Demonstration
2. Assignment
3. Group discussion
4. Field visit
5. Use of Audio-Visual aids.

<b>Formative Assessment</b>	
<b>Assessment Occasion</b>	<b>Weightage in Marks</b>
Class Test	10
Attendance and Assignments	05
Visit to vermicompost unit and report	05
<b>Total</b>	<b>20</b>

**Scheme of Practical ExaminationI**  
**Semester BSc. Zoology**

Skill Enhancement course: Vermiculture

**Duration: 3 hours**

**Max. marks: 30**

1. Identify and describe the given system of the given specimen/chart 'A' given, with neat labelled diagram. (05 marks)
2. Identify and comment on the spotters B to E (Life cycle/Externals/Devices used in vermicomposting/ Vermicompost types) (5x5=25 marks)

## Semester II- Zoology Core Course I

### Content: Paper-II: Biochemistry and Physiology

<b>Course Title:</b> Biochemistry and Physiology	<b>Course Credits:</b> 4
<b>Course Code:</b> FSB470	<b>L-T-P per week:</b> 4-0-0
<b>Total Contact Hours:</b> 56	<b>Duration of ESA:</b> 3 Hours
<b>Formative Assessment Marks:</b> 40	<b>Summative Assessment Marks:</b> 60

#### Course outcomes:

The student at the completion of the course will learn:

**COs1-** To develop a deep understanding of structure of biomolecules like proteins, lipids and carbohydrates.

**COs2-** How simple molecules together form complex macromolecules.

**COs3-** To understand the thermodynamics of enzyme catalyzed

reactions. **COs4-** Mechanisms of energy production at cellular and

molecular levels. **COs5-** To understand various functional components of an organism.

**COs6-** To explore the complex network of these functional components.

**COs7-** To comprehend the regulatory mechanisms for maintenance of function in the body.

<b>Content</b>	<b>Hours</b>
<b>Unit I</b>	<b>14</b>
<p><b>Chapter 1. Structure and Function of Biomolecules:</b></p> <ul style="list-style-type: none"> <li>• Structure and Biological importance of carbohydrates (Classification with examples Monosaccharides, Disaccharides, Polysaccharides and Glycoconjugates).</li> <li>• Lipids Classification and Biological importance- (saturated and unsaturated Fatty acids, Tri-acylglycerols, Phospho lipids, Glycolipids and Steroids) Clinical importance of Lipids, HDL &amp; LDL, TG and Cholesterol</li> <li>• Proteins Structure, Classification and General Properties of <math>\alpha</math>-amino acids; Essential and non-essential amino acids, Levels of organization in proteins (Primary, secondary, tertiary and quaternary structure with Haemoglobin as an example) Simple and conjugate proteins.</li> </ul>	
<p><b>Chapter 2. Enzyme Action and Regulation</b></p> <ul style="list-style-type: none"> <li>• Nomenclature and classification of enzymes; Cofactors; Specificity of enzyme action.</li> <li>• Isozymes; Mechanism of enzyme action</li> <li>• Enzyme kinetics; Factors affecting rate of enzyme-catalyzed reactions; Equation of Michaelis-Menten, Concept of <math>K_m</math> and <math>V_{max}</math>, Enzyme inhibition</li> <li>• Allosteric enzymes and their kinetics; Regulation of enzyme action.</li> </ul>	
<b>Unit 2</b>	<b>14</b>
<p><b>Chapter 3. Metabolism of Carbohydrates and Lipids</b></p> <ul style="list-style-type: none"> <li>• Metabolism of Carbohydrates: glycolysis, citric acid cycle, gluconeogenesis, phosphate pentose pathway, Glycogenolysis and Glycogenesis</li> <li>• Lipids- Biosynthesis of palmitic acid; Ketogenesis, <math>\beta</math>-oxidation and <math>\omega</math>-oxidation of saturated fatty acids with even and odd number of carbon atoms</li> </ul>	
<p><b>Chapter 4. Metabolism of Proteins and Nucleotides</b></p> <ul style="list-style-type: none"> <li>• <b>Catabolism of amino acids:</b> Transamination, Deamination, Urea cycle, Nucleotides and vitamins</li> <li>• <b>Anabolism</b> -Peptide linkages</li> </ul>	
<b>Unit 3</b>	<b>14</b>

<p><b>Chapter 5. Digestion and Respiration in humans</b></p> <ul style="list-style-type: none"> <li>• <b>Digestion</b>- Structural organization and functions of gastrointestinal tract and associated glands.</li> <li>• Mechanical and chemical digestion of food; Absorptions of carbohydrates, lipids, proteins, water, minerals and vitamins; Physiology of trachea and Lung.</li> <li>• <b>Respiration</b> -Mechanism of respiration, Pulmonary ventilation; Respiratory volumes and capacities; Transport of oxygen and carbon dioxide in blood, Respiratory pigments, Dissociation curves and the factors influencing it; Control of respiration.</li> </ul>	
<p><b>Chapter 6. Circulation and Excretion in humans</b></p> <ul style="list-style-type: none"> <li>• Components of blood and their functions; hemopoiesis</li> <li>• <b>Blood clotting</b>: Blood clotting system, Blood groups: Rh-factor, ABO and MN</li> <li>• Structure of mammalian heart</li> <li>• Cardiac cycle; Cardiac output and its regulation, Electrocardiogram, Blood pressure and its regulation</li> <li>• Structure of kidney and its functional unit; Mechanism of urine formation</li> </ul>	
<p><b>Unit IV</b></p>	<p><b>14</b></p>
<p><b>Chapter 7. Nervous System and Endocrinology in humans</b></p> <ul style="list-style-type: none"> <li>• Structure of neuron, resting membrane potential(RMP)</li> <li>• Origin of action potential and its propagation across the myelinated and unmyelinated nerve fibers. Types of synapse</li> <li>• <b>Endocrine glands</b> - pineal, pituitary, thyroid, parathyroid, pancreas and adrenal; hormones secreted by them.</li> <li>• Classification of hormones; Mechanism of Hormone action.</li> </ul>	
<p><b>Chapter 8. Muscular System in humans</b></p> <ul style="list-style-type: none"> <li>• Histology of different types of muscle; Ultra structure of skeletal muscle; Molecular and chemical basis of muscle contraction; Characteristics of muscle twitch; Motor unit, summation and tetanus</li> </ul>

9. Chatterjee CC Human Physiology Volume I & 2, 11th edition, CBS Publishers (2016).

### Zoology Semester II Core Course Lab Content

<b>Course Title/Code:</b> Biochemistry and Physiology	<b>Course Credits:</b> 2
<b>Course Code:</b> FSB470	<b>L-T-P per week:</b> 0-0-4
<b>Total Contact Hours:</b> 56	<b>Duration of ESA:</b> 3 Hours
<b>Formative AssessmentMarks:</b> 25	<b>Summative AssessmentMarks:</b> 25

#### Course Outcomes (COs):

- COs1-** At the end of the course the student should be able to understand:Basic structure ofbiomolecules through model making. **COs2-** Develop the skills to identify different types of blood cells.
- COs3-** Enhance basic laboratory skill like keen observation, analysis and discussion.
- COs4-** Learn the functional attributes of biomolecules in animal body.
- COs5-** Know uniqueness of enzymes in animal body and their importance through enzyme kinetics

## Course Content

<b>List of labs to be conducted</b>	<b>56Hours</b>
1. Preparation of models of nitrogenous bases- nucleosides and nucleotides.	
2. Preparation of models of amino acids and dipeptides.	
3. Preparation of models of DNA and RNA.	
4. Qualitative analysis of Carbohydrates, Proteins and Lipids.	
5. Qualitative analysis of Nitrogenous wastes – Ammonia, Urea and Uric acid.	
6. Separation of amino acids or proteins by paper chromatography.	
7. Determination of the activity of enzyme (Urease)-Effect of [S] and determination of $K_m$ and $V_{max}$ .	
8. Determination of the activity of enzyme (Urease) - Effect of temperature and time.	
9. Action of salivary amylase under optimum conditions.	
10. Quantitative estimation of Oxygen consumption by fresh water Crab.	
11. Quantitative estimation of salt gain and salt loss by fresh water.	
12. Estimation of Hemoglobin in human blood using Sahli's haemoglobinometer	
12. Counting of RBC in blood using Hemocytometer	
13. Counting of WBC in blood using Hemocytometer	
14. Differential staining of human blood corpuscles using Leishman stain	
15. Recording of blood glucose level by using glucometer

### **TOPICS RECOMMENDED FOR SEMINAR/PROJECT REPORT**

1. Biochemical pathways, their evolutionary background and regulation.
2. Blood groups and their importance.
3. Vital enzymes for human body.
4. Essential and nonessential amino acids.
5. Important body lipids.
6. Significance of animal proteins.
7. Role of carbohydrates in animal body.
8. Nature of proteins and nurture of animal body.
9. Role of lipids in structural and functional organization of body.

**Scheme of Practical Examination**  
**II Semester BSc. Zoology**  
**Biochemistry and Physiology**  
**Course Code: FSB470**

**Time: 3 hours**

**Maximum marks:25M**

1. Biochemistry experiments by lots  
(Carbohydrates, Proteins & Lipids) **6 Marks**
2. Physiology experiments by lots  
(Nitrogenous wastes/ salivary amylase/ activity of urease enzyme). **6 Marks**
3. Differential staining of human blood corpuscles OR Estimation of blood glucose level **5 Marks**
4. Identify the spots A(Haemoglobinometer/ Haemocytometer/ Paper chromatography) **3Marks**
5. Model submission. **5Marks**

The candidate has to submit the duly certified record at the time of practical examination. The record is for the reference of the examiners, but not for assessment (since it is already assessed for IA)

**Assessment:****Weightage for assessments (in percentage)**

Type of Course	Formative Assessment / IA Marks	Summative Assessment Marks
Theory	40	60
Practical	25	25

**Pedagogy: Written Assignment/Presentation/Seminar**

Formative Assessment - Theory	
Assessment Occasion	Weightage in Marks
House Examination/Test	$C1+C2=10+10=20$
Written Assignment/Presentation/Seminar	$10+10=20$
Total	40

**Pedagogy: Written Assignment/Presentation/Record/Seminar**

Formative Assessment- Practical	
Assessment Occasion	Weightage in Marks
Internal assessment C1	10
Internal assessment C2	10
Class record	05
Total	25

## Open Elective Course Content

Semester: **II Zoology**

Course Title: <b>Parasitology</b>	Course Credits: <b>3</b>
Course Code: <b>FSB920</b>	
Total Contact Hours: <b>42</b>	Duration of ESA: 3 Hours
Formative Assessment Marks: <b>40</b>	Summative Assessment Marks: <b>60</b>

### Course Outcomes (COs):

At the end of the course the students will be able to:

**COs1-** Know the stages of the life cycles of the parasites and infective stages.

**COs2-** Develop ecological model to know population dynamics of parasite, establishment of parasite population in host body, adaptive radiations and methods adopted by parasite to combat with the host immune system.

**COs3-** Develop skills and realize significance of diagnosis of parasitic infection and treatment.

**COs4-** Understand about diseases caused by Protozoa, Helminthes, Nematodes and Arthropods at molecular level.

**COs5-** Develop their future career in medical sciences and related administrative services.

## Course Content

Content	42Hrs
<b>Unit – 1</b>	
<p><b>Chapter 1. General Concepts</b></p> <ul style="list-style-type: none"> <li>• Introduction, Parasites, parasitoids, host, zoonosis</li> <li>• Origin and evolution of parasites</li> <li>• Basic concept of Parasitism, symbiosis, phoresis, commensalisms and mutualism</li> <li>• Host-parasite interactions and adaptations</li> <li>• Life cycle of human parasites</li> <li>• Occurance, mode of infection and prophylaxis</li> </ul> <p><b>Chapter 2. Parasitic Platyhelminthes</b></p> <ul style="list-style-type: none"> <li>• Study of morphology, life cycle, pathogenicity, prophylaxis and control measures of               <ul style="list-style-type: none"> <li>• <i>Fasciolopsisbuski</i></li> <li>• <i>Schistosomahaematobium</i></li> <li>• <i>Taeniasolium</i></li> <li>• <i>Hymenolepis nana</i></li> </ul> </li> </ul> <p><b>Chapter 3. Parasitic Protists</b></p> <ul style="list-style-type: none"> <li>• Study of morphology, life cycle, pathogenicity, prophylaxis and control measures of               <ul style="list-style-type: none"> <li>• <i>Entamoebahistolytica</i></li> <li>• <i>Giardia intestinalis</i></li> </ul> </li> </ul>	<b>14</b>
<ul style="list-style-type: none"> <li>• <i>Trypanosomagambiense</i></li> <li>• <i>Plasmodium vivax</i></li> </ul>	
<b>Unit – 2</b>	
<p><b>Chapter 4. Parasitic Nematodes</b></p> <ul style="list-style-type: none"> <li>• Study of morphology, life cycle, pathogenicity, prophylaxis and control measures of               <ul style="list-style-type: none"> <li>• <i>Ascarislumbricoides</i></li> <li>• <i>Ancylostomaduodenale</i></li> <li>• <i>Wuchereriabancrofti</i></li> <li>• <i>Trichinellaspiralis</i></li> </ul> </li> <li>• Nematode plant interaction ; Gall formation</li> </ul> <p><b>Chapter 5. Parasitic Arthropods</b></p> <ul style="list-style-type: none"> <li>• Biology, importance and control of               <ul style="list-style-type: none"> <li>• Ticks (Soft tick <i>Ornithodoros</i>, Hard tick <i>Ixodes</i>)</li> <li>• Mites(<i>Sarcoptes</i>)</li> <li>• Lice (<i>Pediculus</i>)</li> <li>• Flea (<i>Xenopsylla</i>)</li> </ul> </li> <li>• Bug (<i>Cimex</i>)</li> <li>• Parasitoid (Beetles)</li> </ul> <p><b>Chapter 6. Parasitic Vertebrates</b></p> <ul style="list-style-type: none"> <li>• Cookicutter Shark</li> <li>• Hood Mocking bird and Vampire bat and their parasitic behavior and effect on host</li> </ul>	<b>14</b>
<b>Unit – 3</b>	
	<b>14</b>

### **Chapter 7. Molecular diagnosis & clinical parasitology**

- General concept of molecular diagnosis for parasitic infection
- Advantages and disadvantages of molecular diagnosis
- Fundamental techniques used in molecular diagnosis of endoparasites
- Immunoassay or serological techniques for laboratory diagnosis of endoparasites on the basis of marker molecules like *G.intestinalis*, *B. coli*, *E. histolytica*, *L. donovani*, Malarial parasite using
  - ELISA, RIA
  - Counter Current Immunoelectrophoresis (CCI)
  - Complement Fixation Test (CFT) PCR, DNA, RNA probe
