e-CONTENT DEVELOPMENT BY Dr R. SUHAS

Programme: MSc in Chemistry

Semester: III

Course: Spectroscopy

LMS: Google Classroom

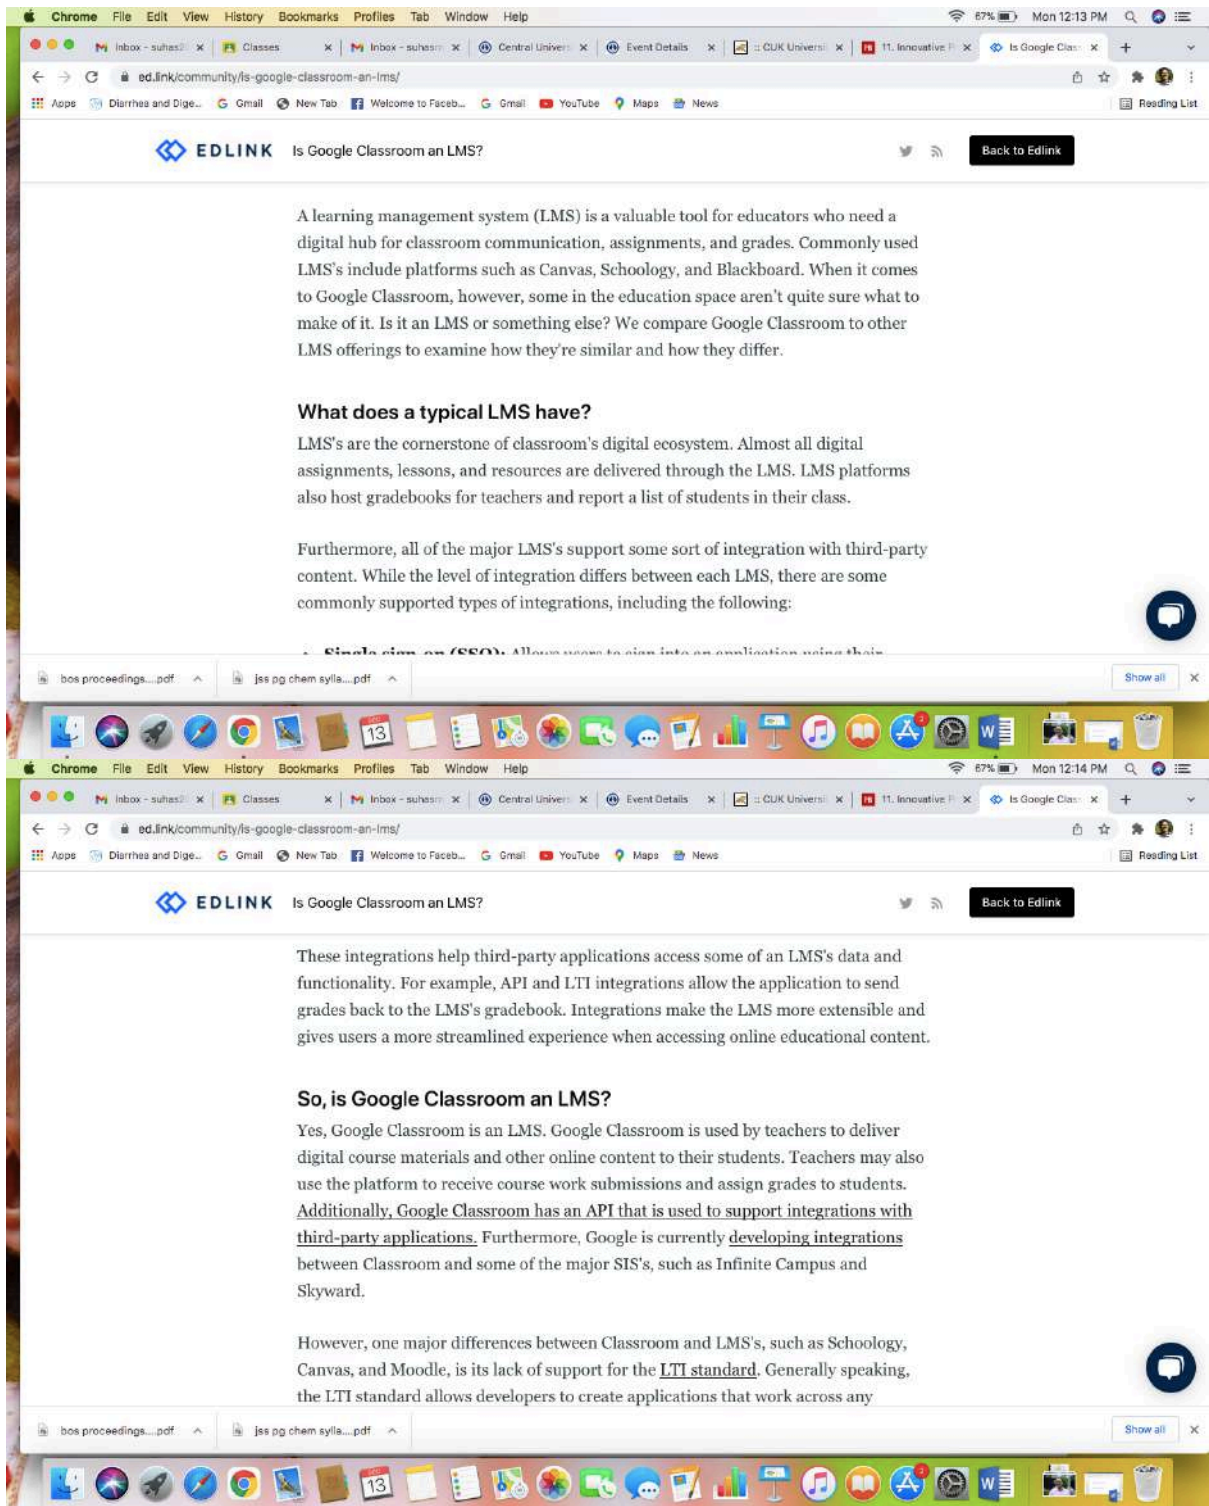

Other sites used: Google drive, you tube, Google form

The four quadrant approach for e-content development has been followed as shown below:

Particulars	Availability	Page No.
Text	Available on google drive	11-13
Video	Available on you tube links	13-14
Self-assessment	Done using google form	14-38
Learn more	Available at the end of the text in each module	39-42

Justification for using Google Classroom as an LMS

The screenshot shows a web browser window displaying an article on the Edlink website. The article title is "Is Google Classroom an LMS?". The author is Jordan Clark, and the article was published on 24 MAR 2020. The article text states: "Some in education aren't sure what to make of Google Classroom. It's similar to other learning management systems but lacks some distinct features. We discuss how Classroom compares to other platforms and if it is, indeed, an LMS." The browser's address bar shows the URL "ed.link/community/is-google-classroom-an-lms/". The browser's taskbar at the bottom shows various application icons, including Chrome, File Explorer, and Word.

Proof of Discussion Forum

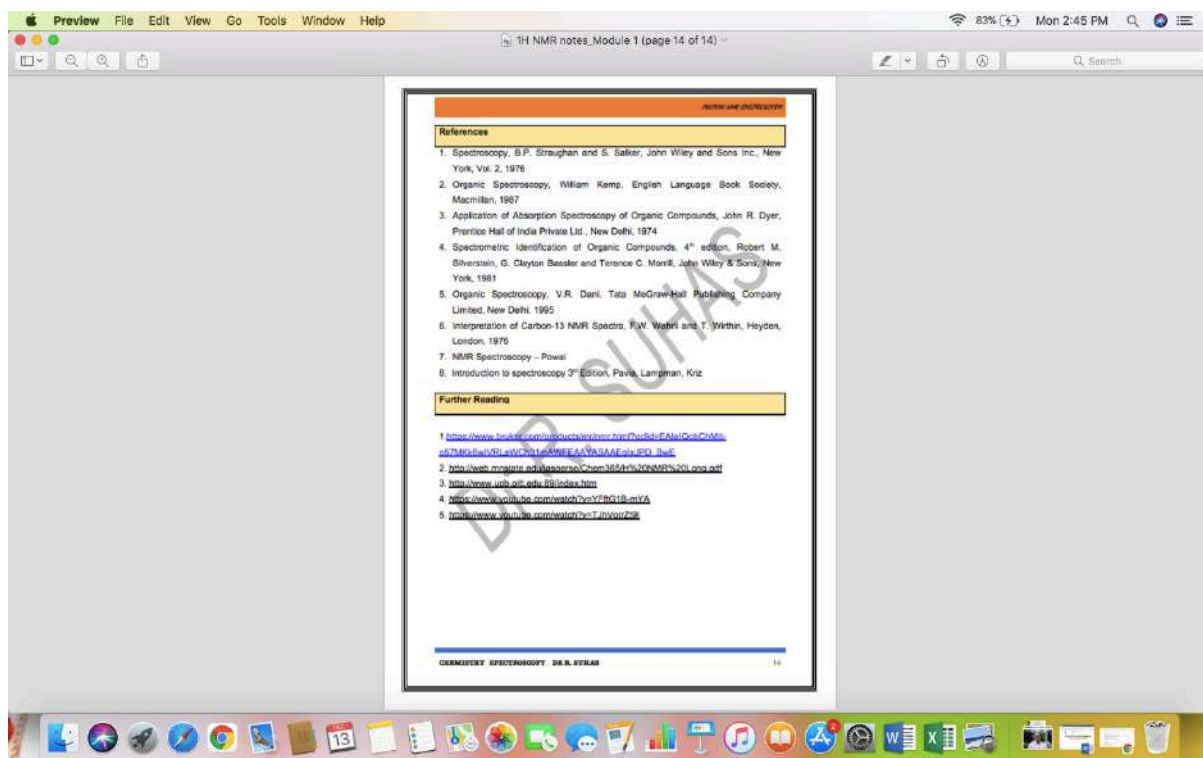

The image displays two screenshots of a Google Classroom discussion forum. The top screenshot shows a post titled "Mass Spectrometry_Module 3" by Suhas R, dated Nov 24, 2020. The post lists four learning objectives for students after studying the module: 1. Know about the details of the molecular ion, 2. Learn about the base peak, 3. Understand the concept of metastable ions, and 4. Learn the concepts of nitrogen rule and ring rule. A PDF titled "Mass spectrometry_Module ..." is attached. Below the post, there are two class comments: one from Bharath Shivaswamy asking about the formation of the base peak, and a response from Suhas R explaining it is based on the relative abundance and stability of the ion formed.

The bottom screenshot shows a post titled "Mass Spectrometry_Module 1" by Suhas R, dated Nov 17, 2020. The post lists three learning objectives: 1. Know about the mass spectrometry, 2. Learn about the principle of mass spectrometry, and 3. Understand the instrumentation of MS, which includes sub-points: a. Sample inlet system and b. Methods of generation of ions. A PDF titled "Mass spectrometry_Module ..." is attached. Below the post, there are two class comments: one from Sindhu Harish asking if complete samples are ionizable, and a response from Suhas R stating that yes, the whole sample is ionized.

The image displays two screenshots of a Google Classroom interface. The top screenshot shows a class page for "MSc III Sem Spectroscopy 2020-21". The page includes a "Stream" tab and a "Classwork" section. A post by Suhas R, dated Nov 17, 2020, is titled "Heteronuclear NMR and 2D NMR". Below the post, a comment by basavaraju B.M. (Nov 17, 2020) asks: "Sir with related to mass spectroscopy, in that what is state of matrix we use . and why we need to ionize the samples and in what way ionization helping to the mass spectroscopy". A reply by Suhas R (Nov 23, 2020) states: "Matrix can be either solid or liquid. Only ionized molecules can be detected in mass spectrometer." The bottom screenshot shows a post titled "13C NMR Module 2" by Suhas R, dated Nov 9, 2020. The post includes a list of learning objectives: "A student after studying this module should be able to 1. Solve simple problems on 13C NMR 2. Solve composite problems involving UV, IR, PMR and CMR". A PDF attachment titled "13C NMR notes_Module 2.pdf" is visible. Below the post, two comments are shown: one by Uditi Uthappa (Nov 11, 2020) asking "sir how can we predict compound structure from spectrum peak is there any trick??" and a reply by Suhas R (Nov 17, 2020) stating "Based on the nature and intensity of the peaks".

and Correction Based on the Zeeman Effect

- The Zeeman effect, named after Dutch physicist Pieter Zeeman, is the effect of splitting of a spectral line into several components in the presence of a static magnetic field.
- Application of Zeeman effect is based on the differing response of the two types of absorption lines to polarized radiation.
- The π line absorbs radiation polarized that is parallel to the external magnetic field.
- The σ lines, in contrast, absorb radiation polarized perpendicular to the field.

Polymerization is the process of addition of one or more monomer units to called polymerization.

Addition polymerization: addition polymer to the type of polymer which are formed by the addition of one or more simple.

Condensation polymerization: forming of two or more different types of monomer unit to form a polymer along with some by products.

4 sem C1 test.pdf

Number of average molecular weight polymer (M_n)

$$M_n = \frac{\sum n_i M_i}{\sum n_i}$$

n_i = number of moles of M_i
 M_i = molar mass of M_i
 M_n = 50 + 100 + 150 = 300
 n_i = 1 + 1 + 1 = 3
 $M_n = \frac{300}{3} = 100$

Weight average molecular weight = $M_w = \frac{\sum n_i M_i^2}{\sum n_i M_i}$

Example: Double bond Oxide

$\text{---CH}_2\text{---C}(\text{CH}_3)\text{---O---CH---CH}_2\text{---CH}_2\text{---C}(\text{CH}_3)=\text{CH---CH}_2\text{---}$

Physical Chemistry C1

It is a process which allows simple low molecular weight compound to combine and form a complex high molecular weight compound.

Two types of polymerization are:

- 1) Addition polymerization:

$$n \text{ CH}_2 = \text{CH} \longrightarrow \text{---CH}_2\text{---CH}_2\text{---CH}_2\text{---CH}_2\text{---}$$
 ethylene monomer poly ethane
- 2) Condensation polymerization:

110621.pdf

I a. when two or more monomer units are combined to form a polymer and the process is known as polymerization.

Addition polymerization: The addition of monomer units to form a polymer.

The process of change of a substance into another form by the polymerization is known as polymerization.

$$n \text{ CH}_2 = \text{CH} \longrightarrow \text{---CH}_2\text{---CH}_2\text{---CH}_2\text{---CH}_2\text{---}$$

Philip Larkin as a modern poet

- Though Larkin was offered the post of England's Poet Laureate in 1962, Larkin preferred to stay away from the limelight and consequently declined the offer
- Larkin's early poetry quite distinctly reflects the influences of W. B. Yeats and Thomas Hardy
- successfully captured the essence of post-war British society through his poems
- His poems highlight his ideal of England and the poet often mourns the loss of this ideal.

Depiction of female characters

- Women have remained subject to multiple oppressions by the construction of oppressive forms of race, gender and class.
- Through discursive de/normalization, behavior which is not defined as rational, scientific, objective or efficient, the cultural, patriarchal discourse has not only the culture patriarchy.
- To achieve equality, the status of women is de/normalization and oppression due to race, nationality, class and gender in a patriarchal society.
- Female characters are regarded as the subjects of double oppression by the construction of oppressive forms of race, gender and class. They are viewed just to serve men.

The screenshot shows the Google Classroom interface for a class named "II MSc-IV semester Ecology". The left sidebar contains navigation options: Home, Calendar, Teaching, To review, and Archived classes. The main content area features a header banner with the class name and a "Classcode" section displaying "vcbefqp". Below the banner, there are sections for "Upcoming" (with a "View all" link) and "Assignments" (showing an assignment by "Mughalrao A.M." due on 07/21/2024).

This screenshot shows the "Teachers" and "Students" lists for the same class. The "Teachers" section lists "Mughalrao A.M." as the sole teacher. The "Students" section lists four students: "ARTHAN T.", "Vishalika R.", "Anu", and "Arthana Arthana". Each student entry includes a checkbox and a vertical ellipsis menu icon.

Zoom Meeting

The screenshot shows a Zoom meeting with a shared slide. The slide content is as follows:

Components

As organisms evolved and became increasingly more complex, so did their pre-RCs. The following is a summary of the components of the pre-RC amongst the different domains of life.

The eukaryotic pre-RC is most complex and highly regulated pre-RC. In most eukaryotes it is composed of six ORC proteins (ORC1-6), CDS2, Dbp1 and a heterohexamer arguably arose via MCM gene duplication events and subsequent divergent

The slide also features a diagram of DNA with various proteins and complexes labeled, including ORC, CDS2, Dbp1, and MCM. The Zoom interface shows a list of 20 participants on the right, including Nijaga_JSSPGZo..., Anusha Raymond, Apoorva, Bindu Gowda, Chandana R, Diya H J, Eshwari B M, G Shivaleela, Jalaja, Jyothi K, madhu banavasi, Megha priya, Pooja Hosamani, and Prema hulageri. RESTRICTION SITE

- Each restriction enzyme identifies a specific sequence of nucleotides (4-8) and makes cut in both the strands of the DNA. Many of the restriction sites are palindromic sequences that is, it reads the same forward and backward. These palindromes can be
 - 1) Minor like - GTAATG
 - 2) Inverted repeat - GCATCC being complementary to CCATGG
- Inverted repeat palindromes are more common with greater biological importance than minor like palindromes.
- Once the restriction enzyme recognises the restriction site, it can generate either
 - Sticky ends - EcoRI, BamHI, HindIII etc.
 - Blunt ends - SmaI, EcoRV etc.
- Depending on the type of restriction enzyme.
- Different restriction enzymes that recognise the same restriction sequences

Title of the Course: Analytical Biochemistry–I

Topic: Gel filtration Chromatography

Presenter: Dr. Rashmi. R, PG Biochemistry, JSSCACS, Mysuru

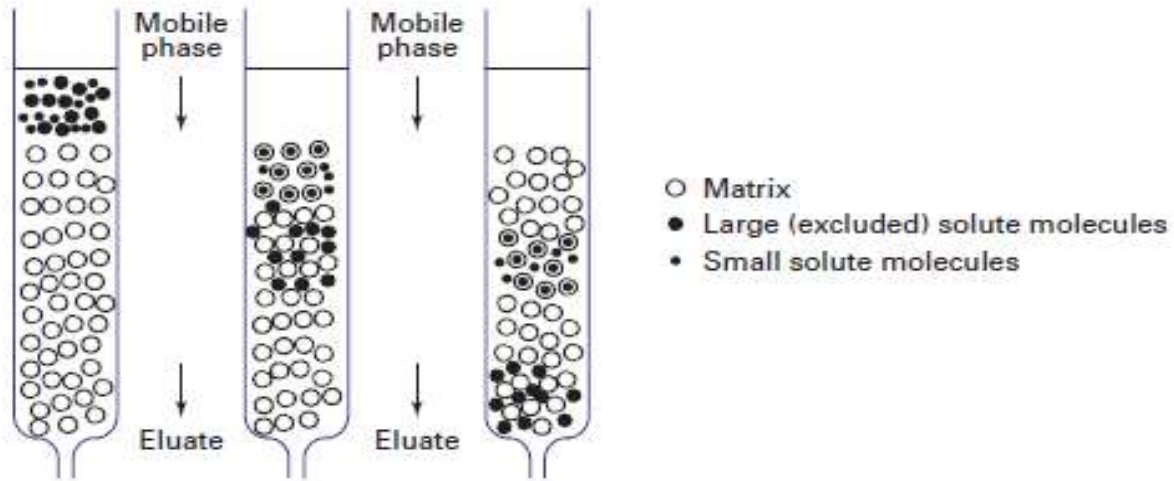

Fig. 11.14. Separation of different size molecules by exclusion chromatography. Large (excluded) molecules are eluted first in the void volume.

- o Gel Filtration Chromatography is widely applied for molecular size analysis, separation of components of a mixture, as well as for desalting.

1. PRINCIPLE OF SEPERATION

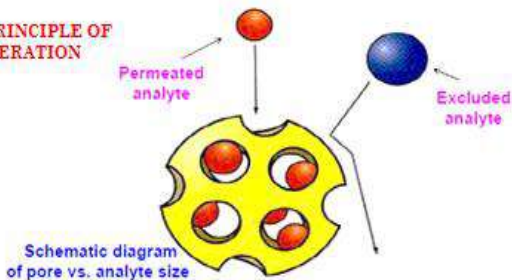

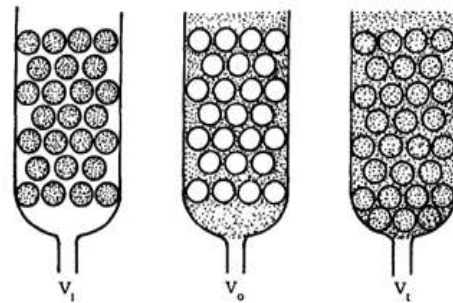

Figure Gel filtration chromatography. (a) Principle of the method. A resin bead is schematically represented as a “whiffle ball” (yellow). Large molecules (blue) cannot fit into the beads, so they are confined to the relatively small buffer volume outside the beads. Thus, they emerge quickly from the column. Small molecules (red), by contrast, can fit into the beads and so have a large buffer volume

Diagrammatic representation of–

- > **Void volume (V_o)** –volume of solvent outside the bead
- > **total volume (V_t)**

Title of the Course: Enzymology

Topic: Active site structure investigation

Dietary fibres

✓Dietary fibre is that part of plant material in the diet which is resistant to enzymatic digestion which includes cellulose, noncellulosic polysaccharides such as hemicellulose, pectic substances, gums, mucilages and a non-carbohydrate component lignin.

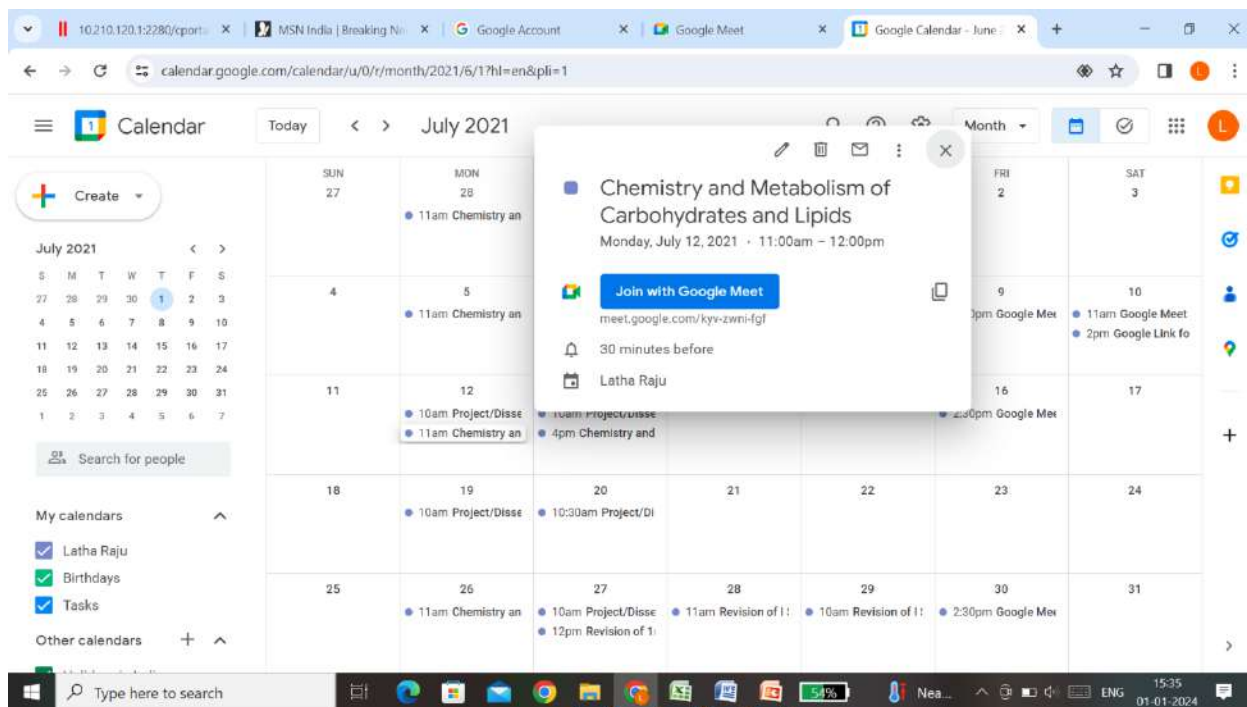

✓The diets rich in fibre such as cereals, nuts, fruits and vegetables have a positive effect on health since their consumption has been related to decreased incidence of several diseases.

✓Dietary fibre can be used in various functional foods like bakery, drinks, beverages and meat products.

✓Soluble and insoluble fibres make up the two basic categories of dietary fibre. Cellulose, hemicellulose and lignin- are not soluble in water whereas pectins, gums and mucilages- become gummy in water.

Functions and benefits of dietary fibre on human health

Functions	Benefits
Adds bulk to the diet, making feel full faster	May reduce appetite
Attracts water and turns to gel during digestion, trapping carbohydrates and slowing absorption of glucose	Lowers variance in blood sugar levels
Lowers total and LDL cholesterol	Reduces risk of heart disease
Regulates blood pressure	May reduce onset risk or symptoms of metabolic syndrome and diabetes
Speeds the passage of foods through the digestive system	Facilitates regularity
Adds bulk to stool	Alleviates constipation
Balances intestinal pH and stimulates intestinal fermentation production of short-chain fatty acids	May reduce risk of colorectal cancers

Bacterial and Algal Cell Walls Contain Structural Heteropolysaccharides

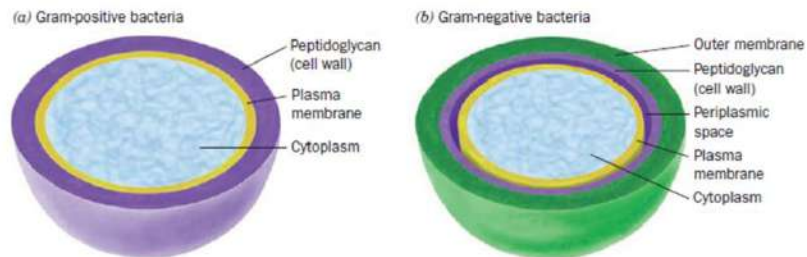

Figure 11-25 Schematic diagram comparing the cell envelopes of (a) gram-positive bacteria and (b) gram-negative bacteria.

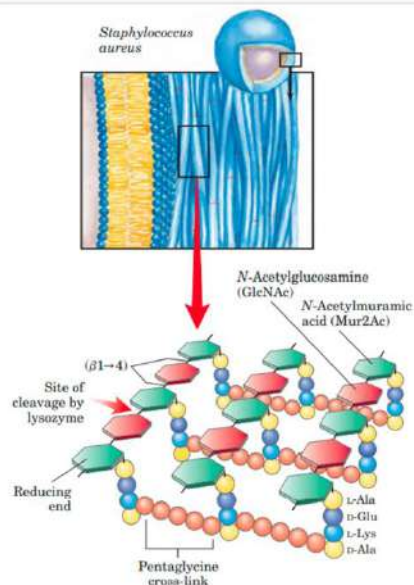

FIGURE 7-22 Peptidoglycan. Shown here is the peptidoglycan of the cell wall of *Staphylococcus aureus*, a gram-positive bacterium. Peptides (strings of colored spheres) covalently link N-acetylmuramic acid residues in neighboring polysaccharide chains. Note the mixture of

The rigid component of bacterial cell walls is a heteropolymer of alternating (β 1 \rightarrow 4) linked N-acetylglucosamine and N-acetylmuramic acid residues.

The linear polymers lie side by side in the cell wall, cross linked by short peptides, the exact structure of which depends on the bacterial species.

The peptide cross-links weld the polysaccharide chains into a strong sheath that envelops the entire cell and prevents cellular swelling and lysis due to the osmotic entry of water.

The enzyme lysozyme kills bacteria by hydrolyzing the (β 1 \rightarrow 4) glycosidic bond.

Gated ion channel
Opens or closes in response to concentration of signal ligand (S) or membrane potential.

Serpentine receptor
External ligand binding to receptor (R) activates an intracellular GTP-binding protein (G), which regulates an enzyme (Enz) that generates an intracellular second messenger, X.

Receptor with no intrinsic enzyme activity
Interacts with cytosolic protein kinase, which activates a gene-regulating protein (directly or through a cascade of protein kinases), changing gene expression.

Title of the course: HUMAN PHYSIOLOGY AND NUTRITION

Topic: Excretory System

Presenter: Dr. M R Savitha Prashanth
 Assistant Professor
 PG Biochemistry, JSSCACS

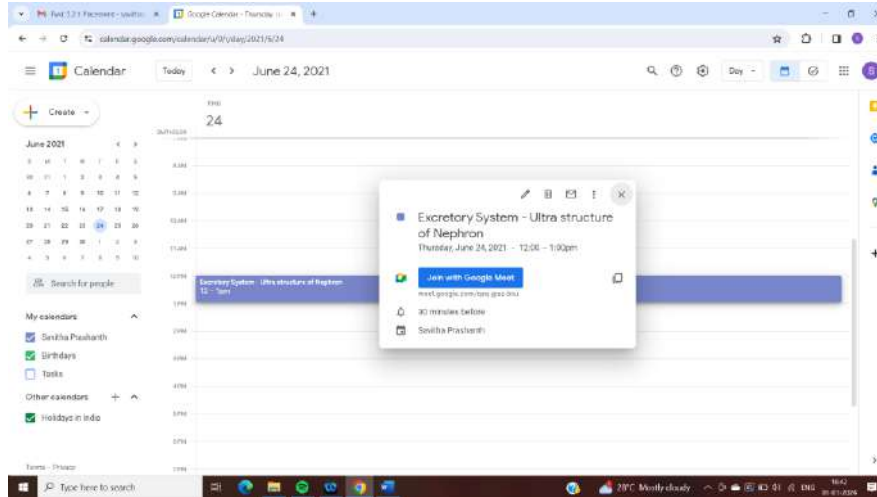

Figure 26.7 Relation of a nephron's structure to its three basic functions: glomerular filtration, tubular reabsorption, and tubular secretion. Excreted substances remain in the urine and subsequently leave the body. For any substance S, excretion rate of S = filtration rate of S – reabsorption rate of S + secretion rate of S.

Glomerular filtration occurs in the renal corpuscle; tubular reabsorption and tubular secretion occur all along the renal tubule and collecting duct.

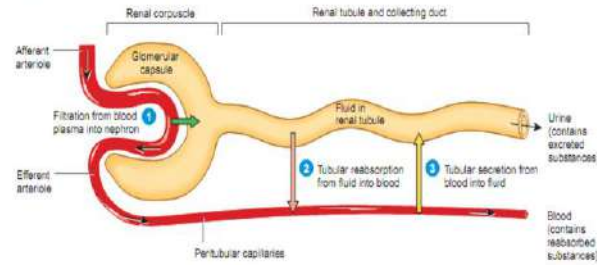

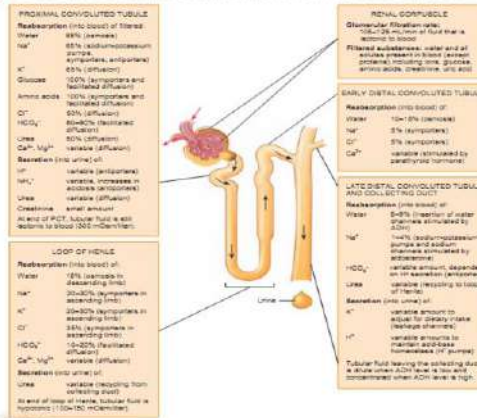

Figure 26.30 Summary of filtration, reabsorption, and secretion in the nephron and collecting duct.

Filtration occurs in the renal corpuscle; reabsorption occurs all along the renal tubule and collecting ducts.

Anatomy of the Liver

The liver is divided into two principal lobes—

A large right lobe and a smaller left lobe— by the falciform ligament, a fold of the mesentery.

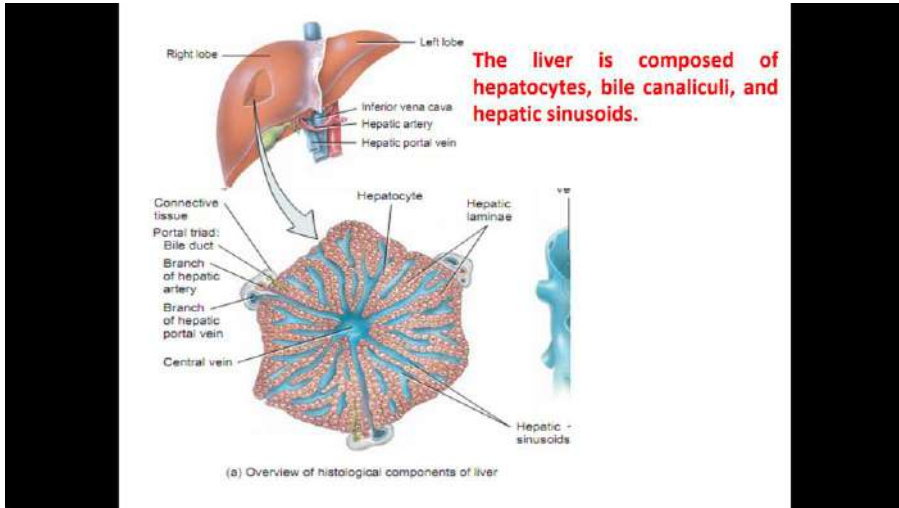

Right lobe include an inferior quadrate lobe and a posterior caudate lobe, based on internal morphology, the quadrate and caudate lobes more appropriately belong to the left lobe.

The falciform ligament extends from the undersurface of the diaphragm between the two principal lobes of the liver to the superior surface of the liver, helping to suspend the liver in the abdominal cavity.

The right and left coronary ligaments are narrow extensions of the parietal peritoneum that suspend the liver from the diaphragm.

The parts of the gallbladder include the broad fundus, which projects inferiorly beyond the inferior border of the liver;

The body, the central portion; and the neck, the tapered portion project superiorly.
