

JSS COLLEGE OF ARTS, COMMERCE & SCIENCE

An Autonomous college Affiliated to university of Mysore Re-

Accredited By NACC with 'A' Grade,

Ooty Road, Mysuru-570025

A PROJECT REPORT ON

“ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM”

Submitted for partial fulfillment for the award of the degree Of

BACHELORS IN COMPUTER APPLICATIONS

Submitted by

NAVYASHREE C M

MANASA C S

Under the Guidance of

Mr. CHETHAN M

Assistant Professor

Department of computer Science

JSS CACS

2022-2023

JSS COLLEGE OF ARTS, COMMERCE & SCIENCE

An Autonomous college Affiliated to university of Mysore Re-

Accredited By NACC with 'A' Grade,

Ooty Road, Mysuru-570025

CERTIFICATE

This is to certify that Manasa C S bearing Register Number JUA20033 has successfully completed the project work entitled "ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM" and submitted the report in partial fulfillment of the award of VI Semester Bachelors In Computer Applications by JSS college of Arts, Commerce and Science Mysore. during the academic year 2023. The work has been approved as it satisfies the Academic requirement in respect of project work prescribed for the VI semester BCA.

DECLARATION

We are **NAVYASHREE C M** and **MANASA C S** hereby declare that this term work entitled **“ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM”** submitted to JSS College of Arts, Commerce and Science, Ooty road Mysore (Affiliated to University of Mysore) is a record of original work done by me and my project partner under the supervision and guidance of **Mr. CHETHAN M**, Assistant Professor Department of Computer Science.

Candidate Name : **Navyashree C M**

Register Number : **JUA20039**

Signature of the Student :

Candidate Name : **Manasa C S**

Register Number : **JUA20033**

Signature of the Student :

Place : **Mysuru**

Date :

ACKNOWLEDGEMENT

I would like to express high regard to our college **JSS COLLEGE OF ARTS, COMMERCE AND SCIENCE, MYSORE** for grooming us all these years. The support given by respected principal **Prof. MP Vijayendra Kumar** is highly memorable.

Our sincere thanks to **Mr. VIDYASHANKARA SIR**, head of the department, Dept of Computer Science, JSS College, Mysore for her valuable support during the project.

We wish to express deep sense of gratitude and affection to our internal guide

Mr. CHETHAN M Assistant Professor, Department of Computer Science, JSS College, Mysore for her encouragement as well as supervision till the completion of our project.

Finally, we are deeply grateful to faculty members of CS Department for their Guidance and direction.

(NAVYASHREE C M)
(MANASA C S)

ABSTRACT

The determination of the project capacitates as “ONLINE DIANOSTIC LAB MANAGEMENT SYSTEM” is to develop a web application to computerize the Management of Diagnostic system that is user friendly simple, and cost-effective. It comes with the collection of information of patients, details of the diagnosis, etc. The main function of this system is firstly registered and then store the details of the patient and the details of the staff and get back these details as and when required, and also for the utilize these details purposely. System input holds the patient’s details, while system output is to get these details on the screen. The Online Diagnostic Lab Reporting System can be pass into using a username and password. And it is accessible by each level of a user according to their part. Every user can see this data that they are approachable. And only that user can add the data into database who has editing permission. The data can be recovers easily. The data are efficiently protected for personal use and makes clarifying of data very rapidly.

CHAPTER 1

INTRODUCTION

1.1 Overview of the Project

Online Diagnostic Lab Management System is web based technology which brings up various diagnosis work online. Here patients are first allowed to register on the website and also login using registered details. Once registered with their address and contact details, the patients may now see a variety of tests conducted by the lab along with their costs and also they take appointment of other person who are not registered. The patient will select the required test and book appointment after that lab center send a lab boy at registered address to collect a sample the cost of the test will be paid to the lab while the samples are taken as Cash On Delivery (COD). After successful testing the user now gets a notification of test result. The system allows admin to attach a copy of the report into the system and automatically shown on user side so user can downloads report.

1.2 Purpose

The main purpose of online diagnostic lab management system to provide a platform where patients can take the appointment online and get their blood test done at home. With the help of this project we are bringing the use of technology in the field of medical diagnosis where patients can avail all the diagnosis facilities at their door steps. Another purpose for developing this application is to generate the report automatically.

CHAPTER 2

LITERATURE SURVEY

2.1 INTRODUCTION

Every software development requires the survey process. The survey process is needed to get the requirement for the software. The survey also consists of studying the present system and also studying about the tools needed for the development of the software. A proper understanding of the tools is very much essentials. Following is an extract of the information of the material collected during literature survey.

2.2 LITERATURE SURVEY BASED ON PROJECT

1.Title: ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM

Author: Khawini

Year:2009

Designed an integrated web-based healthcare management system. The system contains main modules such as the patient module and appointment booking module. This manages the history of patient information (personal information, medical information, treatment information, billing information, and appointment booking information). It is an integrated, flexible web-based healthcare system tracking all patient, billing and appointment information.

2.Title: ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM

Author: Liu and Zhu

Year:2007

The use of health care system or online laboratory management system is to provide full patient health records, for appropriate diagnosis and regulation of appropriate treatment; Follow important medical information, insurance data, advice, drugs and special conditions.

3.Title: ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM

Author: Kopach

Year:2007

Developed a system that focuses on patient appointments can be made several months in advance. Once a patient wants an appointment to see a doctor, all they have to do is call the healthcare department and inform them of the desired date and time. If an appointment time is available within a day or two of the desired date, the patient's appointment will be scheduled.

4.Title: ONLINE DIAGNOSTIC LAB MANAGEMENT SYSTEM

Author: Lim

Year:2006

Developed a web-based healthcare system integrating components such as patient management, laboratory appointment booking management system online patient diagnosis, planning patient billing, appointment, home visit, and communications in one complete solution. These components are developed using portal technology. Healthcare portal serves as an integrated portal to the healthcare center website and provides users with a single point of access to healthcare providers. Squirrel

2.3 Existing System

A Diagnostic Center is a place where patients come up for various pathology test according to diseases. Diagnostic facilities like

- Consultation by Doctors on Diseases.
- Diagnosis for diseases.
- Providing treatment facility.

Various operational works that are done in a Diagnostic Center are:

- Recording information about the patients that come
- Generating bills.
- Recording information related a diagnosis given to patients.

These are the various jobs that need to be done in a Diagnostic Center by the operational staffs. All these works are done on papers.

2.4 Disadvantages of existing system:

- **Not user friendly:** The present system not user friendly because data is not stored in structure and proper format.
- **Manual Control:** All report calculation is done manually so there is a chance of error.
- **Lots of paper work:** Visitors maintain in the register so lots of paper require storing details. • **Time consuming**

2.5 Propose System

As Technology is growing rapidly we are also moving to a technical world where everything we want to be online. So with the help of this project we are bringing the use of technology in the field of medical diagnosis where patients can avail all the diagnosis facilities at their door steps. This project makes the diagnosis process easy and reduce the burden of patients. At a same time its help the diagnostic center to track all their patients details with their test reports. This access friendly software provides quick and effective services which helps the diagnostic center to increase their sales and profit.

2.6 Advantages of propose system:

- The system allows automate diagnosis system.
- Allows for faster service.
- Allows increased sales and profits for diagnostic labs.
- Easy, user-friendly GUI.
- Validation of data will be ensure only accurate valid and complete data stored in the database.
- Easy retrieval or data will be made possible by finding techniques.
- Report generation will help made it easy to analyze the performance.

CHAPTER 3

System Requirement and Design Requirement

The Software Requirement Specification (SRS) is a critical document that serves as the bedrock of the software development process. SRS includes not just a list of a system's requirements, but also a description of its key characteristics. These suggestions go beyond the IEEE standards. The recommendations would serve as a baseline for the execution of a contract between the client and the developer, offering clear vision of the product to be built.

One of the most important tasks in the development process is to define a system need. The challenge of determining what a particular software product accomplishes comes after a resource analysis phase. The users of the system, not the system solutions, are the focus at this stage. The requirement specification document's outcome outlines the software's purpose, as well as the desired system's attributes and constraints.

SRS is a contract between clients and developers that specifies the contents of the software product that will be generated. Because it contributes so much to the overall project plan, SRS should accurately and completely describe the system requirements.

The software being built could be a component of a bigger system or an independent system in and of itself. The interfaces between the system and software portions should be stated in the SRS if the software is a system component.

3.1 FUNCTIONAL REQUIREMENTS

A Functional Requirement is a description of the service that the software must offer. It describes a software system or its component. A function is nothing but inputs to the software system, its behavior, and outputs. It can be a calculation, data manipulation, business process, user interaction, or any other specific functionality which defines what function a system is likely to perform.

- The system should process the input given by the user only if it is an image file (JPG, PNG, BMP etc.)
- System shall shows the error message to the user when the input given is not in the required format.
- System should detect words present in the image.
- System should retrieve words present in the image and display them to the user.

3.2 NON-FUNCTIONAL REQUIREMENTS

A non-functional requirement is a requirement that specifies criteria that can be used to judge the operation of a system, rather than specific behaviors. They are contrasted with functional requirements that define specific behaviour or functions. The plan for implementing functional requirements is detailed in the system design. The plan for implementing non functional requirements is detailed in the system architecture, because they are usually Architecturally Significant Requirement.

- **Performance:** Handwritten words in the input image will be recognized with an accuracy of about 90% and more.
- **Functionality:** This software will deliver on the functional requirements mentioned in this document.
- **Availability:** This system will retrieve the handwritten text regions only if the contains written text in it.
- **Flexibility:** It provides the users to load the image easily.
- **Learn ability:** The software is very easy to use and reduce the learning work.
- **Reliability:** This software will work reliably for low resolution images and not for graphical images.
- **Security:** As the systems all the data are dumped at the server side the server provides the security to the unauthorized access of data.

3.3 HARDWARE AND SOFTWARE REQUIREMENTS

Table 3.1 Hardware Requirement

Client Side:

RAM	2 GB
Hard disk	20 GB
Processor	1.0 GHz

Server side:

RAM	2 GB
Hard disk	30 GB
Processor	2.0 GHz

Table 3.2 Software Requirement

Client Side:

Web Browser	Google chrome or any compatible browser
Operating System	Windows or any equivalent OS

Server Side:

Web Server	APACHE
Server-side Language	PHP5.6 or above version
Database Server	MYSQL
Web Browser	Google Chrome or any compatible browser
Operating System	Windows or any equivalent OS

3.4 Requirements analysis

APACHE

The Apache HTTP Server Project is an effort to develop and maintain an open-source HTTP server for modern operating systems including UNIX and Windows. The goal of this project is to provide a secure, efficient and extensible server that provides HTTP services in sync with the current HTTP standards.

The Apache HTTP Server ("httpd") was launched in 1995 and it has been the most popular web server on the Internet since April 1996. It has celebrated its 20th birthday as a project in February 2015.

PHP

- PHP stands for PHP: Hypertext Preprocessor.
- PHP is a server-side scripting language, like ASP.
- PHP scripts are executed on the server.
- PHP supports many databases (MYSQL, Informix, Oracle, Sybase, Solid, Generic ODBC, etc.).
- PHP is an open source software .
- PHP is free to download and use.

MYSQL

- MYSQL is a database server
- MYSQL is ideal for both small and large applications
- MYSQL supports standard SQL
- MYSQL compiles on a number of platforms
- MYSQL is free to download and use
- How to access MySQL: <http://localhost/phpmyadmin>

3.5 Design

Introduction:

Design is the first step in the development phase for any techniques and principles for the purpose of defining a device, a process or system in sufficient detail to permit its physical realization. Once the software requirements have been analyzed and specified the software design involves three technical activities - design, coding, implementation and testing that are required to build and verify the software.

The design activities are of main importance in this phase, because in this activity, decisions ultimately affecting the success of the software implementation and its ease of maintenance are made. These decisions have the final bearing upon reliability and maintainability of the system. Design is the only way to accurately translate the customer's requirements into finished software or a system.

Design is the place where quality is fostered in development. Software design is a process through which requirements are translated into a representation of software. Software design is conducted in two steps.

Preliminary design is concerned with the transformation of requirements into data

3.6 UML Diagrams:

Actor:

A coherent set of roles that users of use cases play when interacting with the use `cases.

Use case: A description of sequence of actions, including variants, that a system performs that yields an observable result of value of an actor.

UML stands for Unified Modeling Language. UML is a language for specifying, visualizing and documenting the system. This is the step while developing any product after analysis. The goal from this is to produce a model of the entities involved in the project which later need to be built. The representation of the entities that are to be used in the product being developed need to be designed.

3.7 USECASE DIAGRAMS:

Use case diagrams model behavior within a system and helps the developers understand of what the user require.

The stick man represents what's called an actor.

Use case diagram can be useful for getting an overall view of the system and clarifying who can do and more importantly what they can't do.

Use case diagram consists of use cases and actors and shows the interaction between the use case and actors.

- The purpose is to show the interactions between the use case and actor.
- To represent the system requirements from user's perspective.
- An actor could be the end-user of the system or an external system.

USECASE DIAGRAM: A Use case is a description of set of sequence of actions. Graphically it is rendered as an ellipse with solid line including only its name. Use case diagram is a behavioral diagram that shows a set of use cases and actors and their relationship. It is an association between the use cases and actors. An actor represents a real-world object. Primary Actor – Sender, Secondary Actor Receiver.

Use Case Diagrams:

Figure 3.1:- Admin

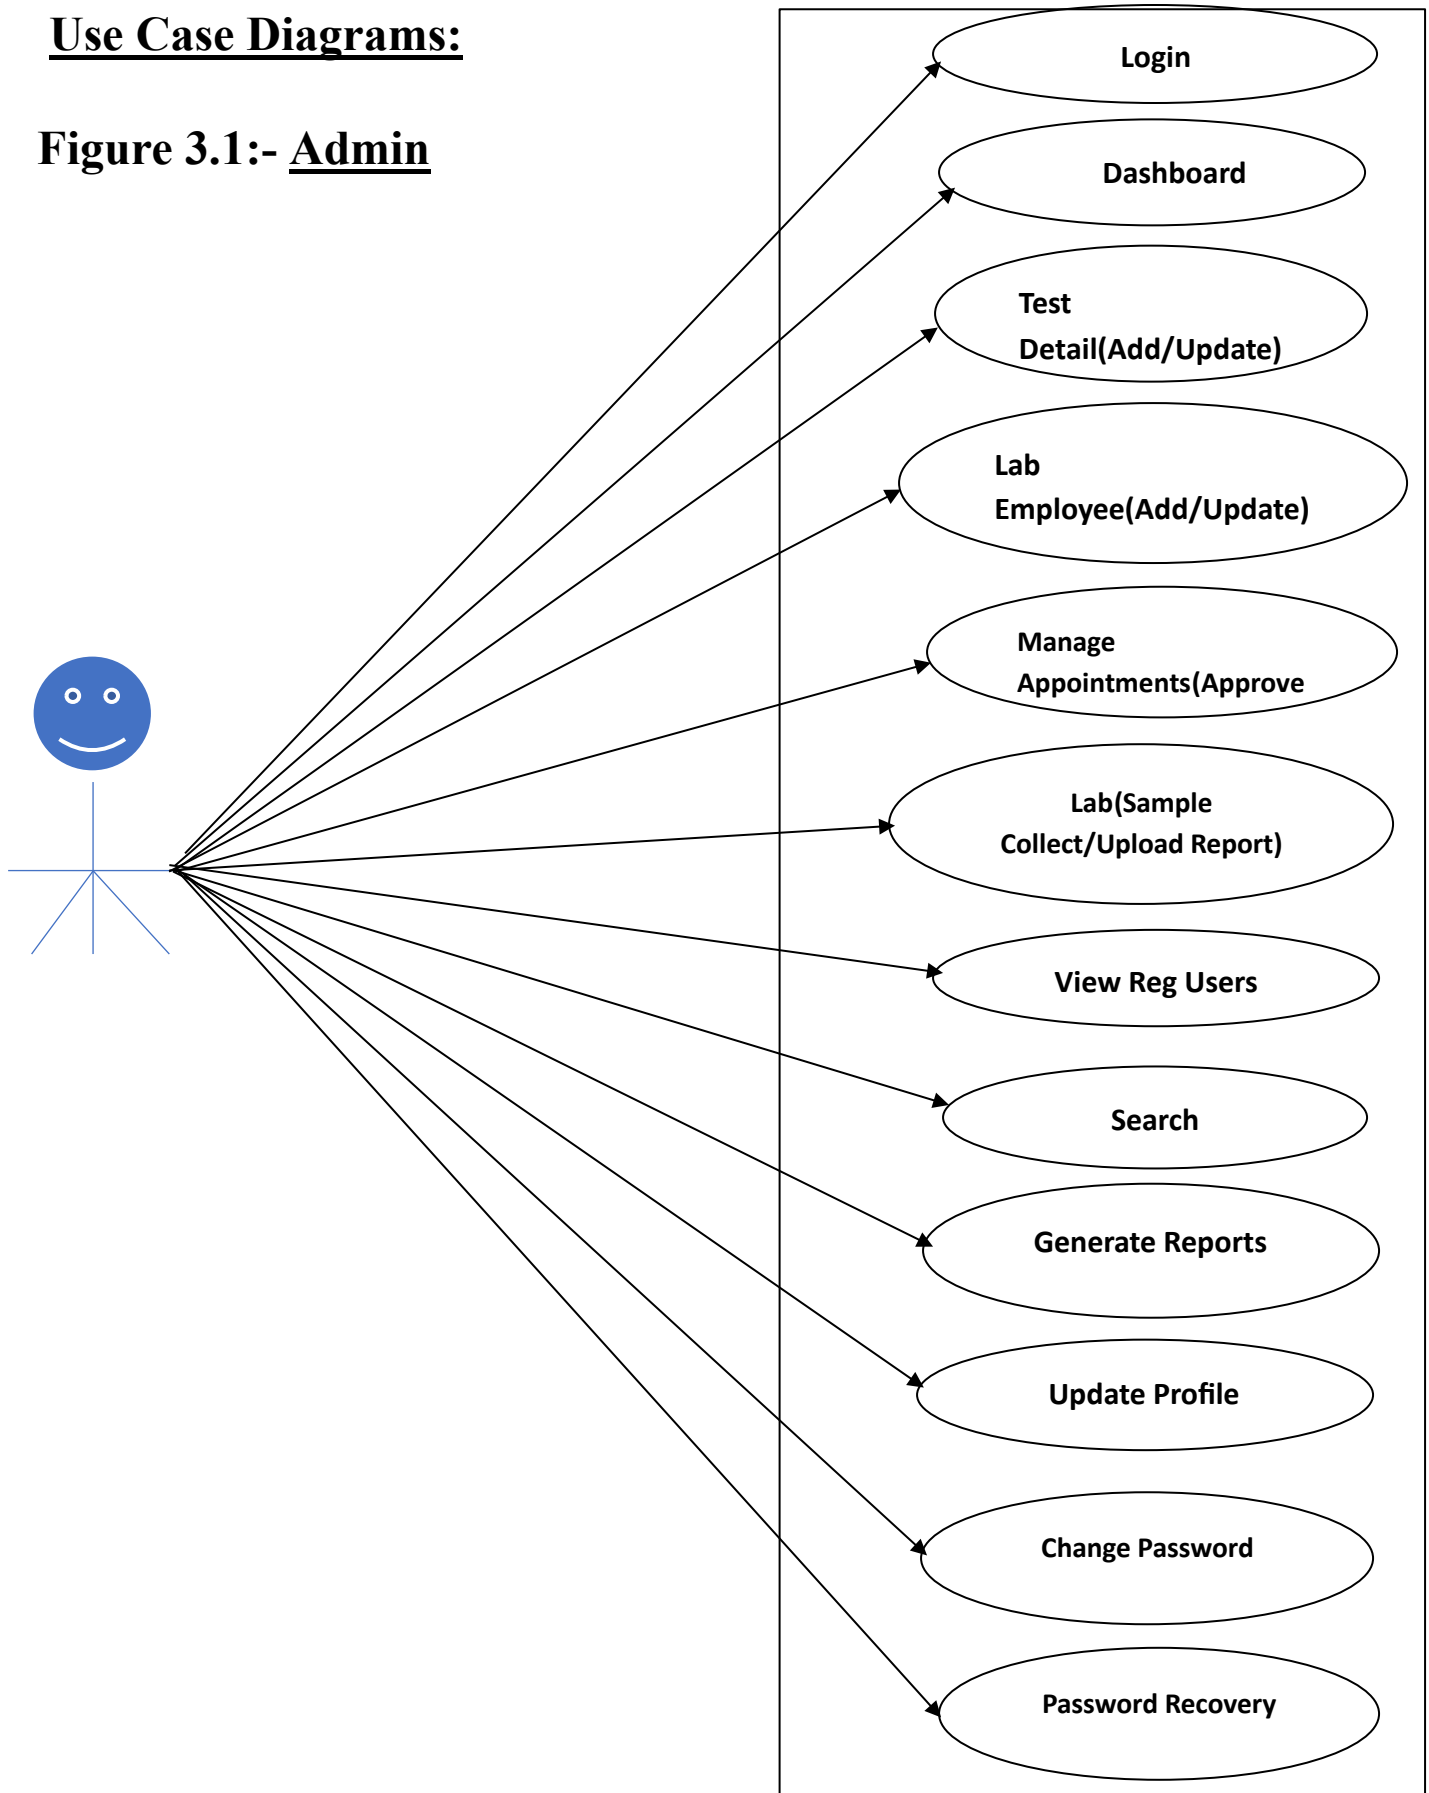

Figure 3.2:- Employee

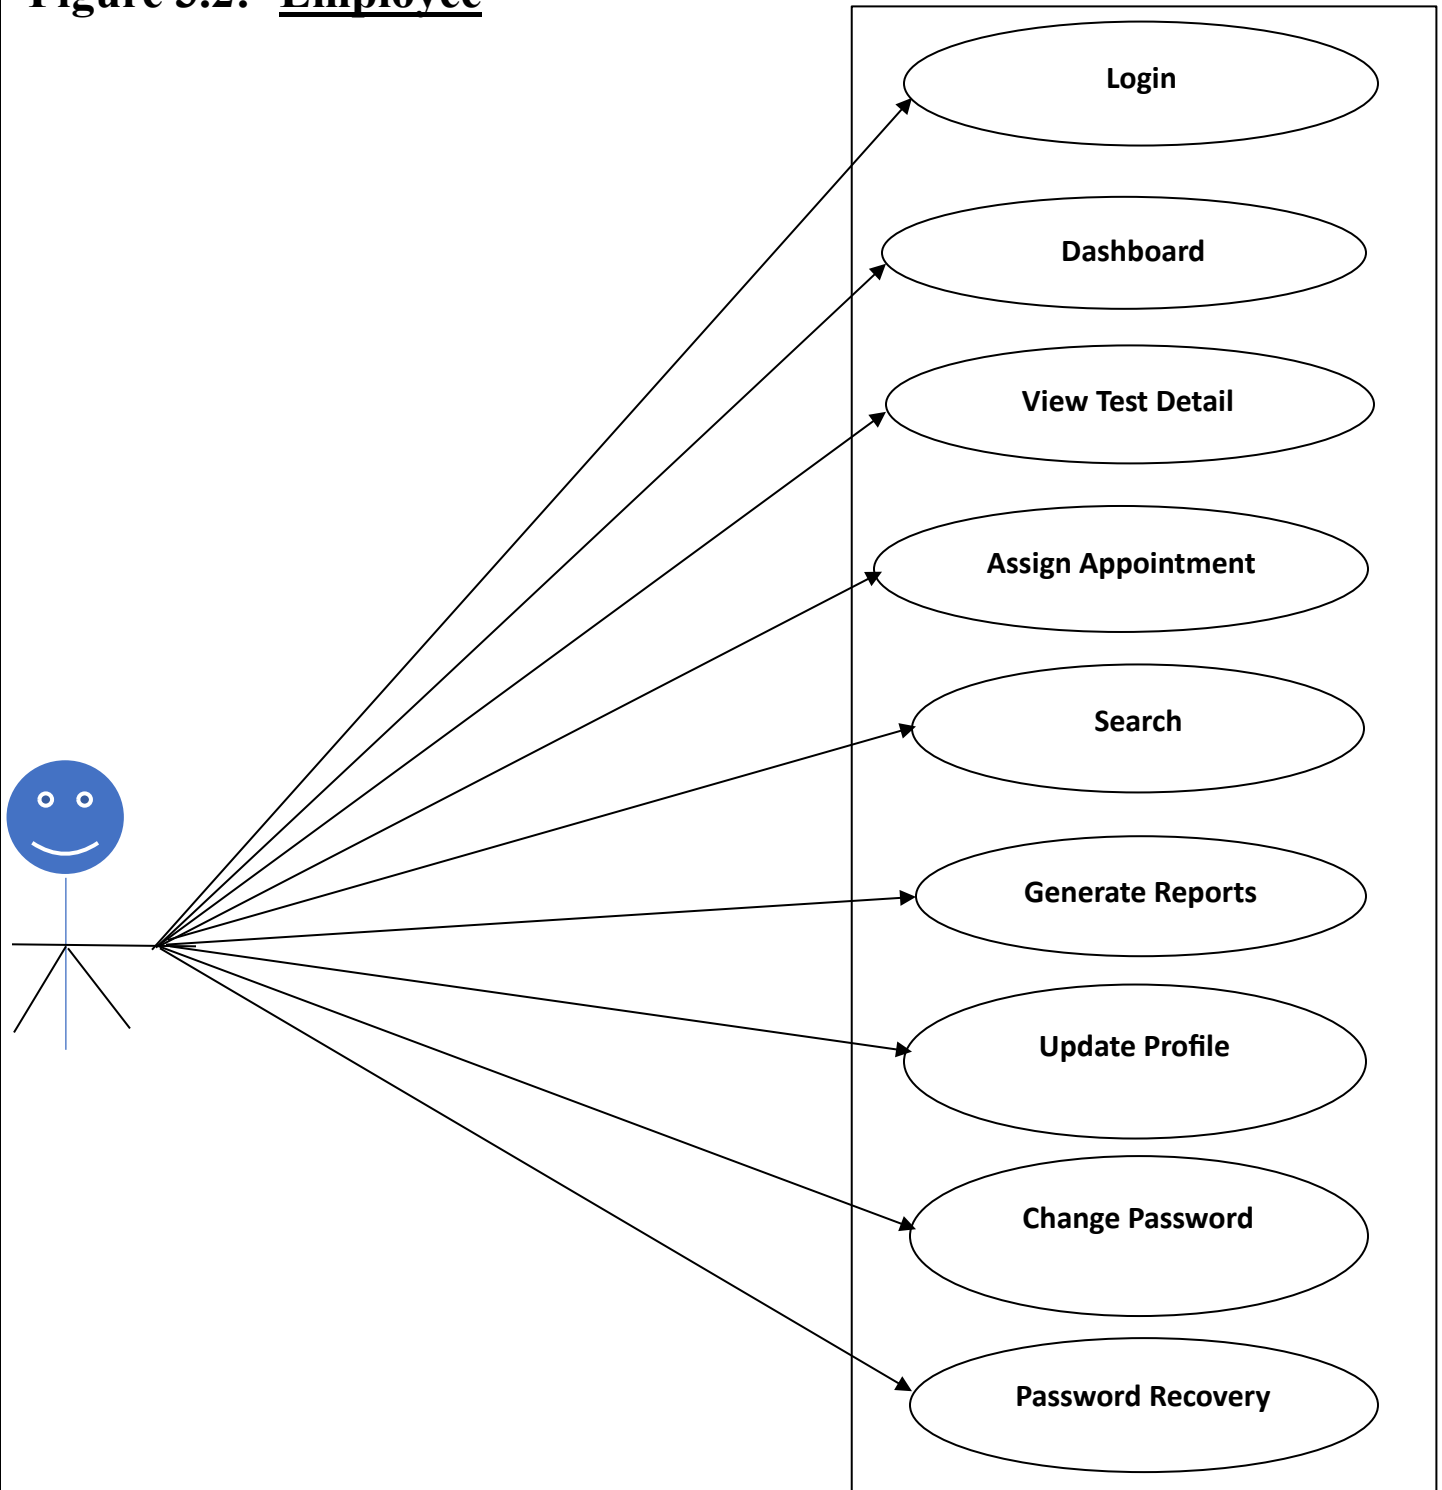

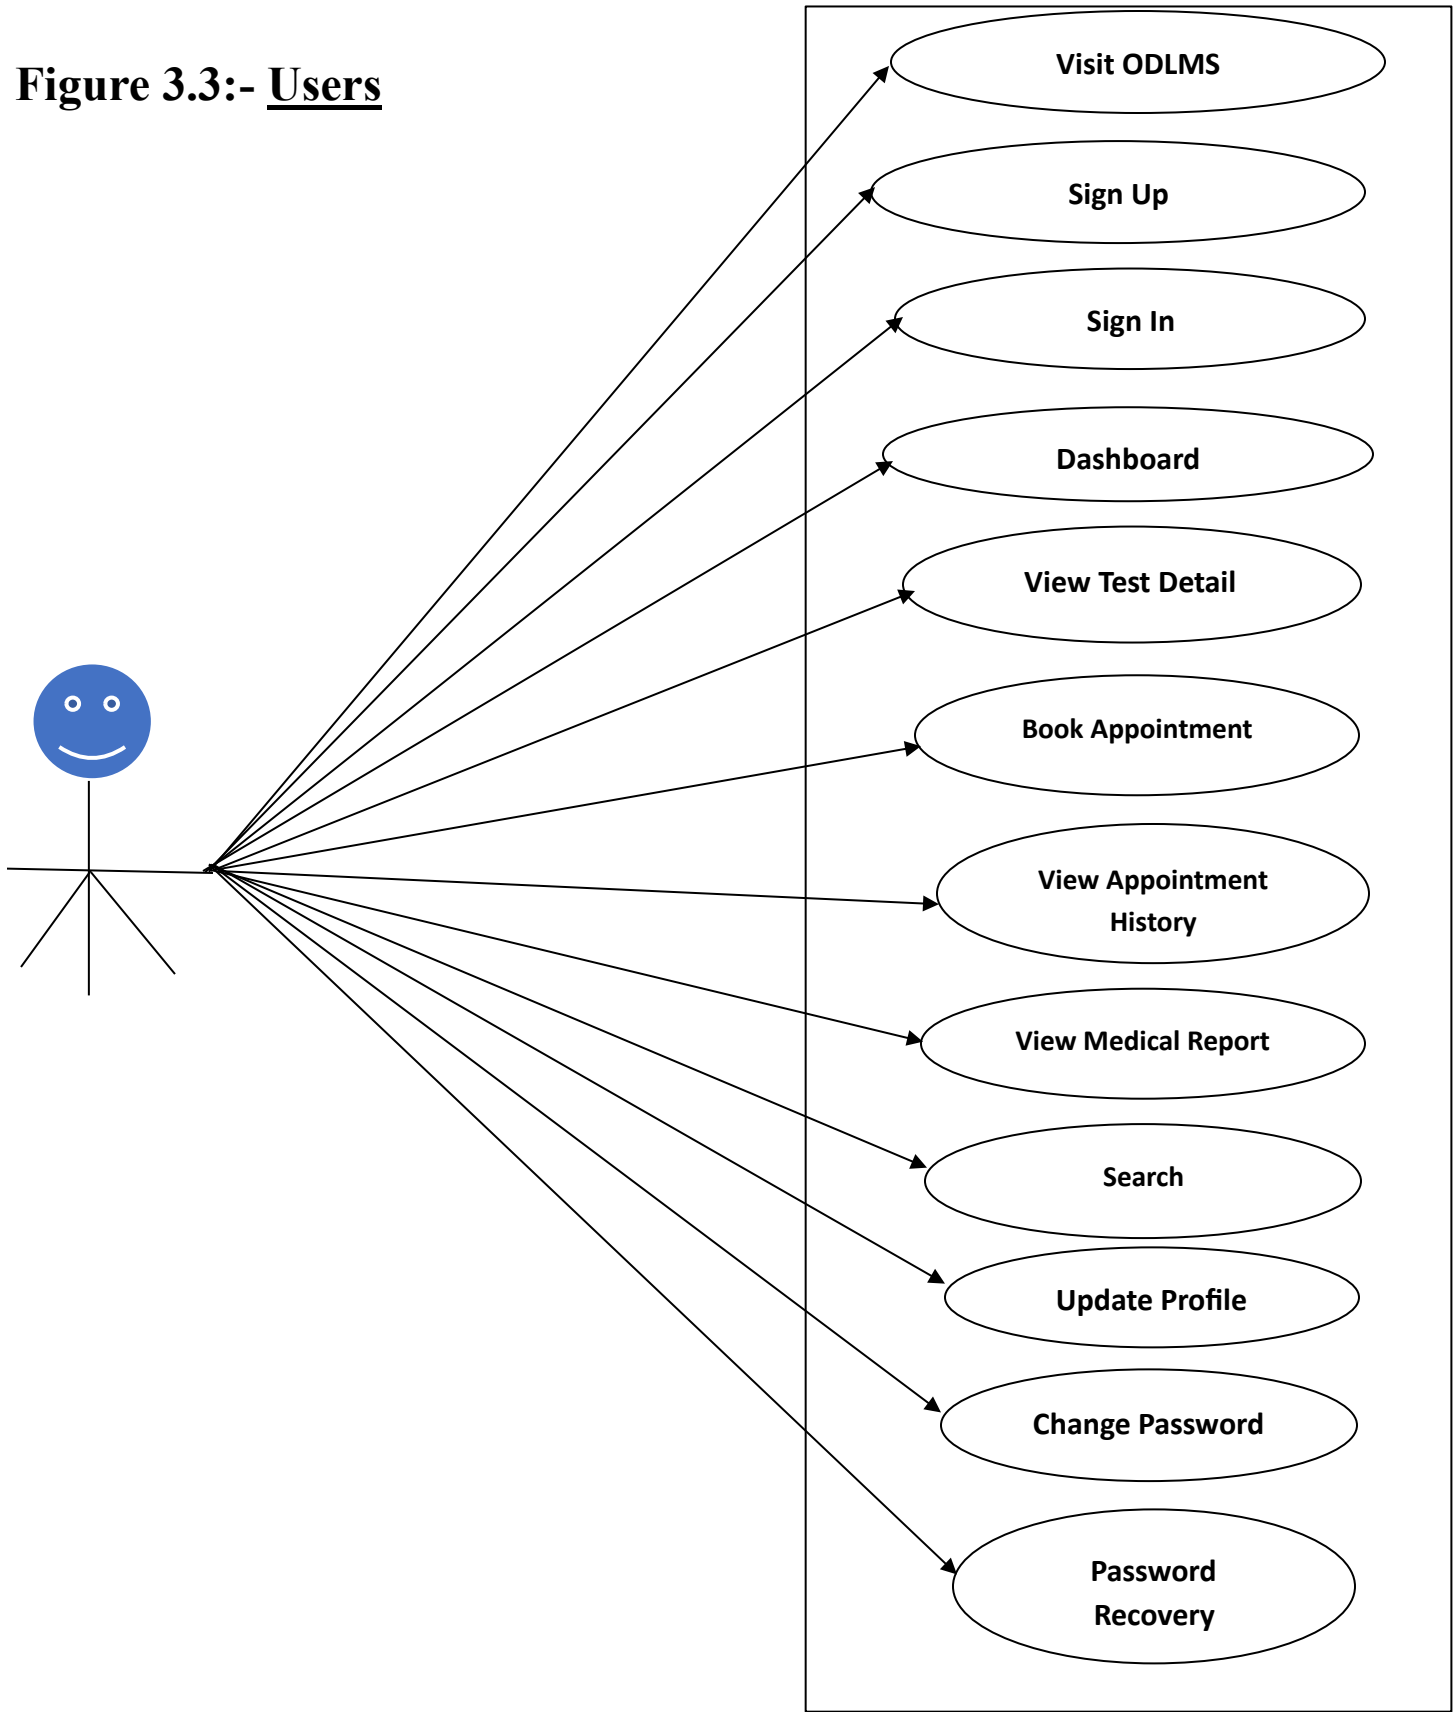

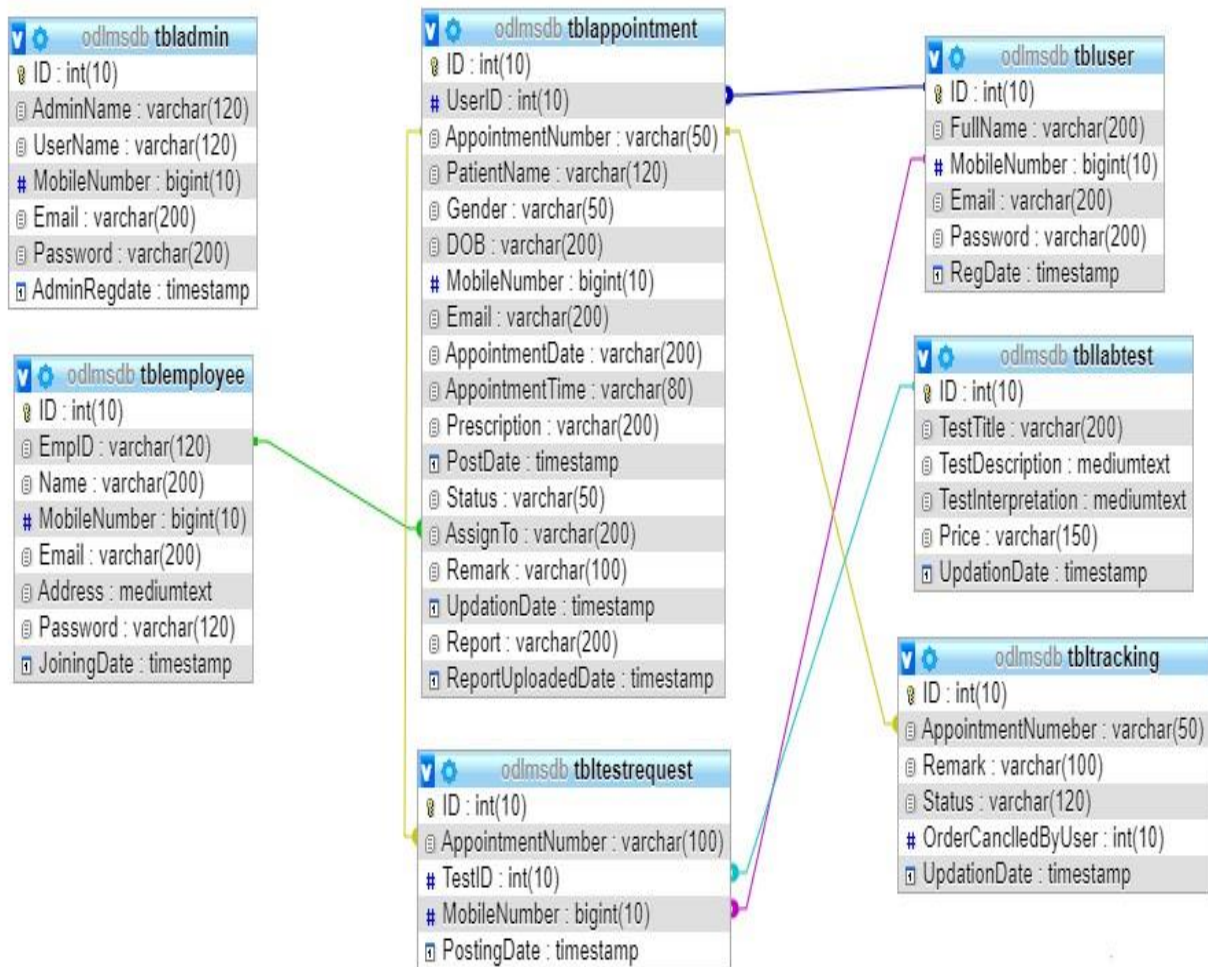

Figure 3.3:- Users

3.8 Class Diagram:

A description of set of objects that share the same attributes operations, relationships, and semantics

3.9 ER Diagram:

The Entity-Relationship (ER) model was originally proposed by Peter in 1976 [Chen76] as a way to unify the network and relational database views. Simply stated the ER model is a conceptual data model that views the real world as entities and relationships. A basic component of the model is the Entity-Relationship diagram which is used to visually represent data objects. Since Chen wrote his paper the model has been extended and today it is commonly used for database design for the database designer, the utility of the ER model is:

- It maps well to the relational model. The constructs used in the ER model can easily be transformed into relational tables.
- It is simple and easy to understand with a minimum of training. Therefore, the model can be used by the database designer to communicate the design to the end user.
- In addition, the model can be used as a design plan by the database developer to implement a data model in specific database management software.

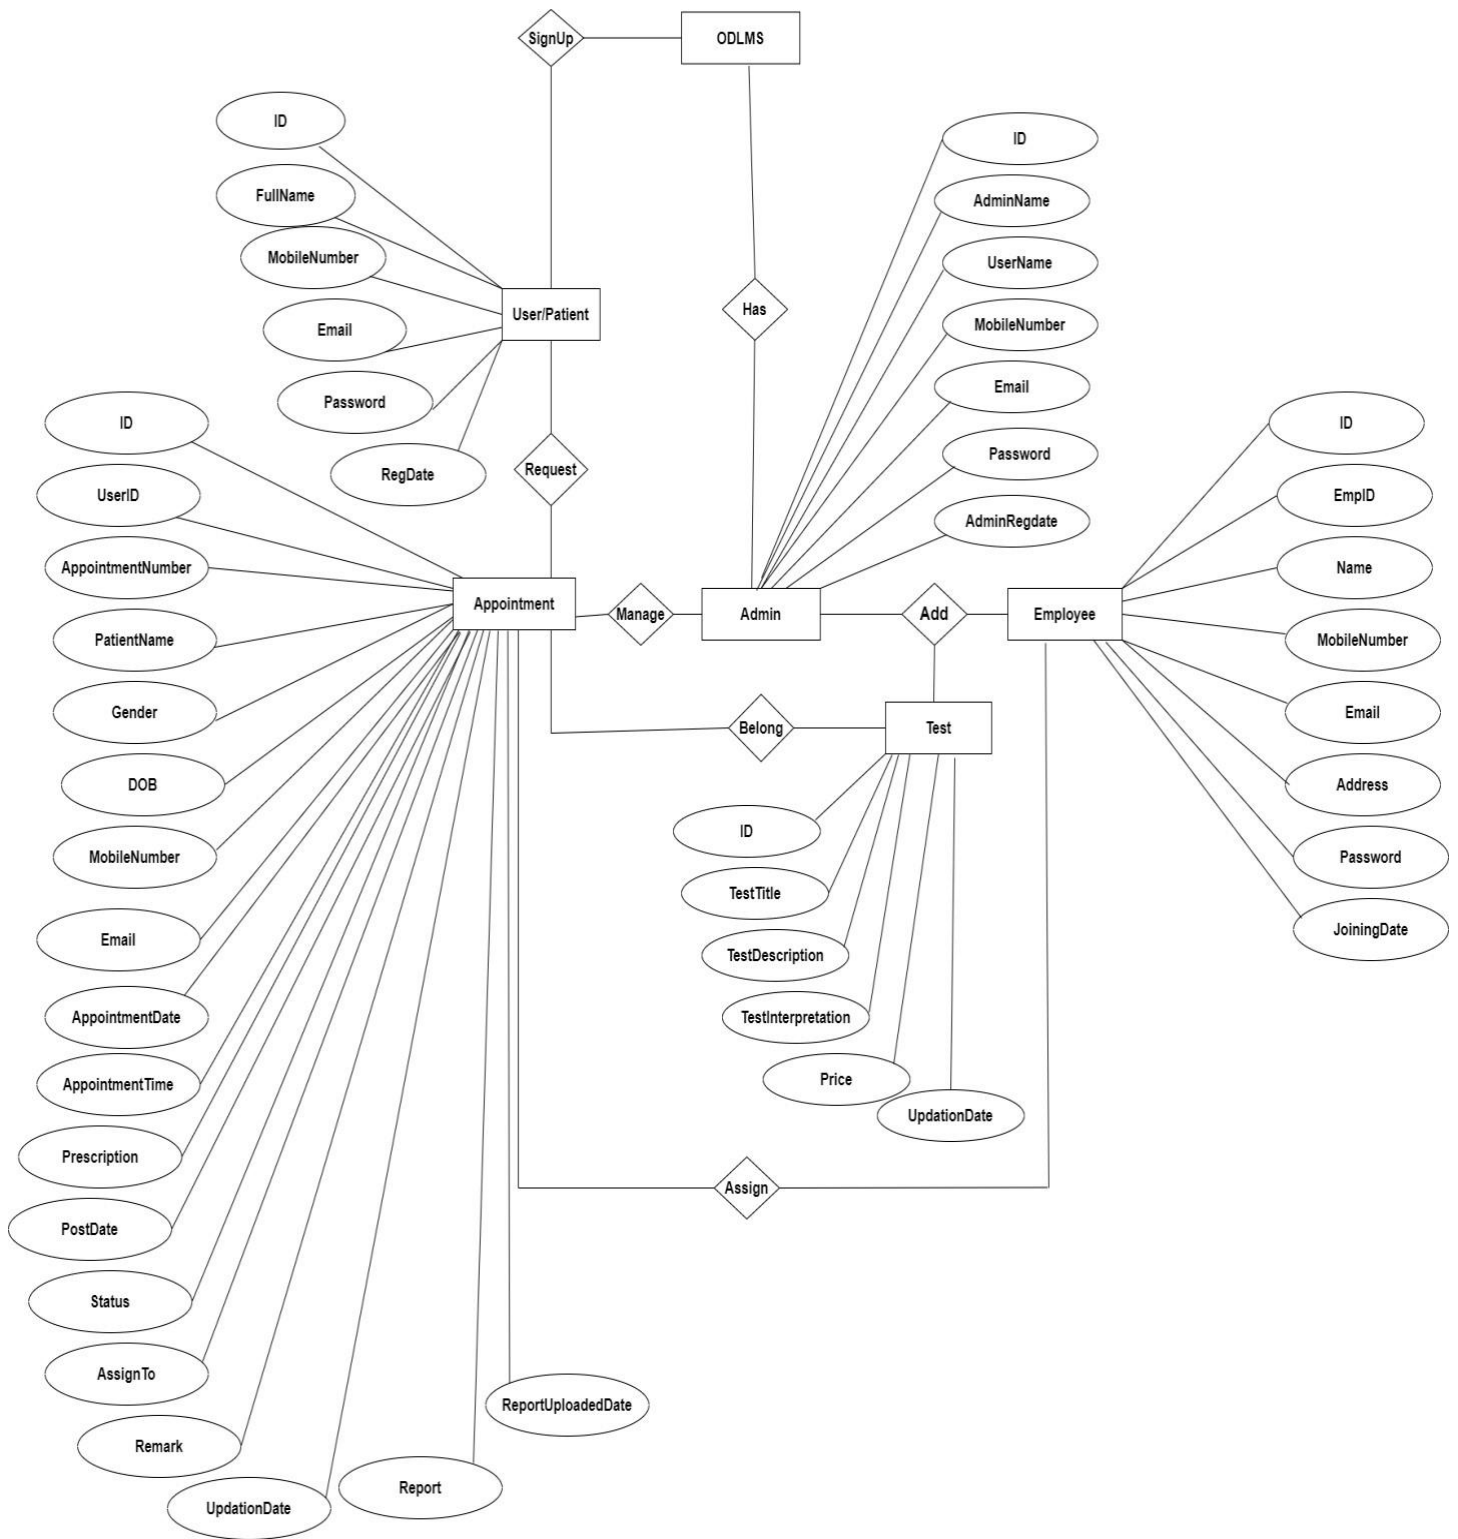

3.10 ER Notation

There is no standard for representing data objects in ER diagrams. Each modeling methodology uses its own notation. The original notation used by Chen is widely used in academics texts and journals but rarely seen in either CASE tools or publications by non-academics. Today, there are a number of notations used; among the more common are Bachman, crow's foot, and IDEFIX.

All notational styles represent entities as rectangular boxes and relationships as lines connecting boxes. Each style uses a special set of symbols to represent the cardinality of a connection. The notation used in this document is from Martin. The symbols used for the basic ER constructs are:

- **Entities** are represented by labeled rectangles. The label is the name of the entity. Entity names should be singular nouns.
- **Relationships** are represented by a solid line connecting two entities. The name of the relationship is written above the line. Relationship names should be verbs
- **Attributes**, when included, are listed inside the entity rectangle. Attributes which are identifiers are underlined. Attribute names should be singular nouns.
- **Cardinality** of many is represented by a line ending in a crow's foot. If the crow's foot is omitted, the cardinality is one.

Figure 3.4:- ER Diagram

3.10 MySQL Data Tables:

Table 3.3:- Admin Table:(Table name is tbladmin)

This store admin personal and login details.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	AdminName	varchar(120)	utf8mb4_general_ci		Yes	NULL		
3	UserName	varchar(120)	utf8mb4_general_ci		Yes	NULL		
4	MobileNumber	bigint(10)			Yes	NULL		
5	Email	varchar(200)	utf8mb4_general_ci		Yes	NULL		
6	Password	varchar(200)	utf8mb4_general_ci		Yes	NULL		
7	AdminRegdate	timestamp			Yes	current_timestamp()		

Table 3.4:- Appointment Table(Table name is tblappointment)

This table store the data of patient appointment and admin remark.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	UserID 	int(10)			No	None		
3	AppointmentNumber 	varchar(50)	utf8mb4_general_ci		Yes	NULL		
4	PatientName	varchar(120)	utf8mb4_general_ci		Yes	NULL		
5	Gender	varchar(50)	utf8mb4_general_ci		Yes	NULL		
6	DOB	varchar(200)	utf8mb4_general_ci		Yes	NULL		
7	MobileNumber	bigint(10)			Yes	NULL		
8	Email	varchar(200)	utf8mb4_general_ci		Yes	NULL		
9	AppointmentDate	varchar(200)	utf8mb4_general_ci		Yes	NULL		
10	AppointmentTime	varchar(80)	utf8mb4_general_ci		Yes	NULL		
11	Prescription	varchar(200)	utf8mb4_general_ci		Yes	NULL		
12	PostDate	timestamp			Yes	current_timestamp()		
13	Status	varchar(50)	utf8mb4_general_ci		Yes	NULL		
14	AssignTo	varchar(200)	utf8mb4_general_ci		Yes	NULL		
15	Remark	varchar(100)	utf8mb4_general_ci		Yes	NULL		
16	UpdationDate	timestamp			No	current_timestamp()		
17	Report	varchar(200)	utf8mb4_general_ci		Yes	NULL		
18	ReportUploadedDate	timestamp			Yes	NULL		ON UPDATE CURRENT_TIMESTAMP()

Table 3.5:- Employee Table: (Table name is tblemployee)

This table store the employee details.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	EmpID 	varchar(120)	utf8mb4_general_ci		Yes	NULL		
3	Name	varchar(200)	utf8mb4_general_ci		Yes	NULL		
4	MobileNumber	bigint(10)			Yes	NULL		
5	Email	varchar(200)	utf8mb4_general_ci		Yes	NULL		
6	Address	mediumtext	utf8mb4_general_ci		Yes			
7	Password	varchar(120)	utf8mb4_general_ci		Yes	NULL		
8	JoiningDate	timestamp			Yes	current_timestamp()		

Table 3.6:- Test Table: (Table name is tblabtest)

This table store the details of tests provided by lab.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	TestTitle 	varchar(200)	utf8mb4_general_ci		Yes	NULL		
3	TestDescription	mediumtext	utf8mb4_general_ci		Yes			
4	TestInterpretation	mediumtext	utf8mb4_general_ci		Yes			
5	Price	varchar(150)	utf8mb4_general_ci		Yes	NULL		
6	UpdationDate	timestamp			Yes	current_timestamp()		

Table 3.7:- Test Request Table: (Table name is tbltestrequest)

This table store the details of tests request.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	AppointmentNumber 	varchar(100)	utf8mb4_general_ci		Yes	NULL		
3	TestID 	int(10)			Yes	NULL		
4	MobileNumber 	bigint(10)			Yes	NULL		
5	PostingDate	timestamp			Yes	current_timestamp()		

Table 3.8:- Appointment Tracking Table: (Table name is tbltracking)

This table store the tracking details of appointment.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID 	int(10)			No	None		AUTO_INCREMENT
2	AppointmentNumeber 	varchar(50)	utf8mb4_general_ci		Yes	NULL		
3	Remark	varchar(100)	utf8mb4_general_ci		Yes	NULL		
4	Status	varchar(120)	utf8mb4_general_ci		Yes	NULL		
5	OrderCancelledByUser	int(10)			Yes	NULL		
6	UpdationDate	timestamp			Yes	current_timestamp()		ON UPDATE CURRENT_TIMESTAMP()

Table 3.9:- Register Users Table: (Table name is tbuser)

This table store the register user details.

#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
1	ID  	int(10)			No	None		AUTO_INCREMENT
2	FullName	varchar(200)	utf8mb4_general_ci		Yes	NULL		
3	MobileNumber 	bigint(10)			Yes	NULL		
4	Email	varchar(200)	utf8mb4_general_ci		Yes	NULL		
5	Password	varchar(200)	utf8mb4_general_ci		Yes	NULL		
6	RegDate	timestamp			Yes	current_timestamp()		

CHAPTER 4

Implementation and System Testing

After all phase have been perfectly done, the system will be implemented to the server and the system can be used.

4.1 System Testing

The goal of the system testing process was to determine all faults in our project. The program was subjected to a set of test inputs and many explanations were made and based on these explanations it will be decided whether the program behaves as expected or not. Our Project went through two levels of testing

1. Unit testing
2. Integration testing

4.2 Unit Testing

Unit testing is commenced when a unit has been created and effectively reviewed .In order to test a single module we need to provide a complete environment i.e. besides the section we would require

- The procedures belonging to other units that the unit under test calls
- Non local data structures that module accesses
- A procedure to call the functions of the unit under test with appropriate parameters

1. Test for the admin module

- **Testing admin login form**-This form is used for log in of administrator of the system. In this form we enter the username and password if both are correct administration page will open otherwise if any of data is wrong it will get redirected back to the login page and again ask the details.
- **Report Generation:** admin can generate report from the main database.

4.3 Integration Testing

In the Integration testing we test various combination of the project module by providing the input.

The primary objective is to test the module interfaces in order to confirm that no errors are occurring when one module invokes the other module.

4.4 Modules wise code:

-- phpMyAdmin SQL Dump

-- version 4.9.0.1

-- <https://www.phpmyadmin.net/>

--

-- Host: 127.0.0.1

-- Generation Time: June 19, 2023 at 07:13 AM

-- Server version: 10.3.15-MariaDB

-- PHP Version: 7.2.19

SET SQL_MODE = "NO_AUTO_VALUE_ON_ZERO";

SET AUTOCOMMIT = 0;

START TRANSACTION;

SET time_zone = "+00:00";

/*!40101 SET @OLD_CHARACTER_SET_CLIENT=@@CHARACTER_SET_CLIENT */;

/*!40101 SET @OLD_CHARACTER_SET_RESULTS=@@CHARACTER_SET_RESULTS */;

/*!40101 SET @OLD_COLLATION_CONNECTION=@@COLLATION_CONNECTION */;

/*!40101 SET NAMES utf8mb4 */;

View Test Detail

Test Name: HbA1c

Test Description::	Glycosylated Hemoglobin Test measures the percentage of glycosylated hemoglobin in blood which reflects the average blood glucose over a period of past two to three months (8 - 12 weeks).
Test Interpretation:	Interpreting HbA1c results Interpretations. Normal: Below 5.7% (39 mmol/mol approx.) Prediabetic: 5.7% - 6.4% (39 to 46 mmol/mol approx.) Diabetic: Above 6.5% (above 48 mmol/mol approx.) Less than 5.7% Glycated Hemoglobin indicates normal levels of blood sugar. Increased risk of developing Diabetes is found in Prediabetic patients with blood sugar level between 5.7% and 6.4%. Patients with a HbA1c level greater than 6.5% are usually diagnosed with Diabetes.
Price:	500

Online Diagnostic Lab Management System @ 2023

Figure 5.15:-View Medical Report

The screenshot shows the ODLMS (Online Diagnostic Lab Management System) dashboard. The user is logged in as Jagdish Mishra (jag@gmail.com). The dashboard menu includes Dashboard, View Test Detail, Book Appointment, Appointment History, and View Medical Report (which is currently selected). The 'View Medical Report' page displays a table with the following data:

S.No	Appointment Number	Patient Name	Mobile Number	Email	Status	Action
1	113776931	maansii	9876543567	maansii@gmail.com	Report Uploaded	

Below the table, the footer text reads: "Online Diagnostic Lab Management System @ 2023".

5.2 CONCLUSION:

Online Diagnostic Lab system is very much graceful and lively. Patients have to register to the portal by giving their details and then they can take appointment through online with minimal effort. Once appointment is confirm, diagnostic centre send the technician to patient address to collect the blood sample. Once test is done and test report is generated patient can download the report by logged in to the portal. This system can be implemented in diagnostic labs and clinics.

- Automation of the entire system improves the productivity.
- It provides a friendly graphical user interface which proves to be better when compared to the existing system.
- It gives appropriate access to the authorized users depending on their permissions.
- It effectively overcomes the delay in communications.
- Updating of information becomes so easier.
- System security, data security and reliability are the striking features.
- The System has adequate scope for modification in future if it is necessary.

5.3 Future Enhancement

When thinking about future research directions, it becomes apparent that the goal needs to be real clinical integration of the system. This implies a number of changes in the ways that research is done at the moment. It will become more important to offer the complete personalized service including diagnosis, medicines, treatments and combination menu; preparing data connection between the Laboratory Information System (LIS) and current system, so that the doctors is can send laboratory-text request and read the test result from the computer. Other than that, appointment reservation in clinics should be implemented. The orders will be connected with the pharmacy system to maintain correctness of the prescription and save waiting time. And, provide clinical decision support of patient care, particularly in the form of active alerts and reminders based on patient data.
